SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 719. An act to establish a national mining and minerals policy; to the Committee on Interior and Insular Affairs.

S. 1499. An act to name the authorized lock and dam numbered 17 on the Verdigris River in Oklahoma for the Chouteau family; to the Committee on Public Works.

ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 7206. An act to adjust the salaries of the Vice President of the United States and certain officers of Congress.

BILL PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on September 5, 1969, this day present to the President, for his approval, a bill of the House of the following title:

H.R. 11235. An act to amend the Older Americans Act of 1965, and for other purposes.

THE LATE HONORABLE EVERETT McKINLEY DIRKSEN

Mr. ARENDS. Mr. Speaker, I offer a resolution.

The Clerk read the resolution as follows:

H. RES. 532

Resolved, That the House has heard with profound sorrow of the death of the Honorable Everett McKinley Dirksen, a Senator of the United States from the State of Illinois.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased Senator.

Resolved, That a committee of thirty-two Members be appointed on the part of the House to join the committee appointed on the part of the Senate to attend the funeral.

The resolutions were agreed to.

The SPEAKER. The Chair appoints as members of the funeral committee the following Members on the part of the House:

Mr. BOGGS;
Mr. GERALD R. FORD;
Mr. ARENDS;
Mr. DAWSON;
Mr. PRICE of Illinois;
Mr. KLUCZYNSKI;
Mr. SPRINGER;
Mr. RHODES;
Mr. POFF;
Mr. BOB WILSON;
Mr. CRAMER;
Mr. GRAY;
Mr. COLLIER;
Mr. MICHEL;
Mr. SMITH of California;
Mr. DERWINSKI;
Mr. MURPHY of Illinois;
Mr. PUCINSKI;
Mr. ROSTENKOWSKI;
Mr. SHIPLEY;
Mr. ANDERSON of Illinois;
Mr. FINDLEY;
Mr. MCCLORY;
Mr. MORTON;
Mrs. REID of Illinois;
Mr. YATES;
Mr. ANNUNZIO;
Mr. BROWN of Ohio;
Mr. ERLENBORN;
Mr. TAFT;
Mr. RAILSBACK; and
Mr. MIKVA.

The Clerk will report the remaining resolution.

The Clerk read as follows:

Resolved, That as a further mark of respect to the memory of the deceased, the House do now adjourn.

The resolution was agreed to.

ADJOURNMENT

Accordingly (at 5 o'clock and 27 minutes p.m.), under its previous order, the House adjourned until tomorrow, September 9, 1969, at 11:45 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1120. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administrative efficiency of the Neighborhood Youth Corps program under title IB of the Economic Opportunity Act of 1964, Gary, Ind., Department of Labor; to the Committee on Education and Labor.

1121. A letter from the Comptroller General of the United States, transmitting a report on the effectiveness and administrative efficiency of the Neighborhood Youth Corps program under title IB of the Economic Opportunity Act of 1964, Kansas City, Mo., Department of Labor; to the Committee on Education and Labor.

1122. A letter from the Comptroller General of the United States, transmitting a report on the examination of the financial statements of the Federal Home Loan Bank Board for the year ended December 31, 1968; to the Committee on Government Operations.

1123. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting a copy of an order entered under the authority contained in section 13(b) of the act of September 11, 1957, pursuant to the provisions of section 13(c) of the act; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. TAYLOR: Committee on Interior and Insular Affairs. S. 1686. An act relating to age limits in connection with appointments to the U.S. Park Police; without amendment (Rept. No. 91–477). Referred to the House Calendar.

Mr. TAYLOR: Committee on Interior and Insular Affairs. H.R. 7066. A bill to provide for the establishment of the William Howard Taft National Historic Site; with amendments (Rept. No. 91–478). Referred to the Committee of the Whole House on the State of the Union.

Mr. TAYLOR: Committee on Interior and Insular Affairs. H.J. Res. 81. Joint resolution to provide for the development of the Eisenhower National Historic Site at Gettysburg, Pa., and for other purposes; with amendments (Rept. No. 91–479). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADAMS:

H.R. 13639. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Ways and Means.

By Mr. BETTS:

H.R. 13640. A bill to amend the Communications Act of 1934 to establish orderly procedures for the consideration of applications for renewal of broadcast licenses; to the Committee on Interstate and Foreign Commerce.

By Mr. BROYHILL of North Carolina:

H.R. 13641. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of certain materials to minors; to the Committee on the Judiciary.

H.R. 13642. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of salacious advertising; to the Committee on the Judiciary.

H.R. 13643. A bill to afford protection to the public from offensive intrusion into their homes through the postal service of sexually oriented mail matter, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. FINDLEY:

H.R. 13644. A bill to amend title 38 of the United States Code to permit certain active duty for training to be counted as active duty for purposes of entitlement to educational benefits under chapter 34 of such title; to the Committee on Veterans' Affairs.

By Mr. FULTON of Tennessee:

H.R. 13645. A bill to authorize the disposal of nickel from the national stockpile; to the Committee on Armed Services.

H.R. 13646. A bill to amend the act of April 14, 1910, relating to railway safety appliances, to require the Secretary of Transportation to prescribe reflecting devices or materials as a safety measure on all railroad cars, and for other purposes; to the Committee on Interstate and Foreign Affairs.

By Mr. GUDE:

H.R. 13647. A bill to authorize voluntary withholding of Maryland, Virginia, and District income taxes in the case of certain legislative officers and employees; to the Committee on Ways and Means.

H.R. 13648. A bill to authorize voluntary withholding of Maryland, Virginia, and District income taxes in the cases of officers and employees of the Architect of the Capitol or of the Botanic Garden; to the Committee on Ways and Means.

By Mr. HALEY:

H.R. 13649. A bill to provide additional assistance for the reconstruction of areas in the States of Alabama, Florida, Louisiana, Mississippi, Virginia, and West Virginia which were damaged by Hurricane Camille of 1969; to the Committee on Public Works.

By Mr. HANSEN of Idaho (for himself, Mr. DULSKI, Mr. HELSTOSKI, Mr. PUCINSKI, Mr. HALPERN, Mr. ZWACH, Mr. DENNEY, Mr. MCCLURE, Mr. ANDERSON of California, Mr. BIESTER, Mr. BOLAND, Mr. BUCHANAN, Mr. BURTON of California, Mr. CHAPPELL, Mr. CLEVELAND, Mr. COUGHLIN, Mr. COWGER, Mr. CRAMER, Mr. DELLENBACK, Mr. DEVINE, Mr. ERLENBORN, Mr. ESCH, Mr. FARBSTEIN, Mr. FEIGHAN, and Mr. FRIEDEL):

H.R. 13650. A bill to amend title 38 of the United States Code to permit certain active duty for training to be counted as active duty for purposes of entitlement to educational benefits under chapter 34 of such title; to the Committee on Veterans' Affairs.

By Mr. HANSEN of Idaho (for himself, Mr. GALLAGHER, Mr. GRIFFIN, Mr. HASTINGS, Mr. HATHAWAY, Mr. HOSMER, Mr. ICHORD, Mr. JACOBS, Mr. KEITH, Mr. KING, Mr. KLUCZYNSKI, Mr. KYL, Mr. MCCLORY, Mr. MCCLOSKEY, Mr. MCKNEALLY, Mr. MIKVA, Mr. MINISH, Mrs. MINK, Mr. MIZE, Mr. MORSE, Mr. PEPPER, Mr. POLLOCK, Mr. REES, Mrs. REID of Illinois, and Mr. ROBISON):

H.R. 13651. A bill to amend title 38 of the United States Code to permit certain active duty for training to be counted as active duty for purposes of entitlement to educational benefits under chapter 34 of such title; to the Committee on Veterans' Affairs.

By Mr. HANSEN of Idaho (for himself, Mr. ROONEY of Pennsylvania, Mr. SANDMAN, Mr. SEBELIUS, Mr. SHRIVER, Mr. TIERNAN, Mr. VANIK, and Mr. WAGGONNER):

H.R. 13652. A bill to amend title 38 of the United States Code to permit certain active duty for training to be counted as active duty for purposes of entitlement to educational benefits under chapter 34 of such title; to the Committee on Veterans' Affairs.

By Mr. JONES of Tennessee:

H.R. 13653. A bill to provide additional benefits for optometry officers of the uniformed services; to the Committee on Armed Services.

By Mr. MATSUNAGA:

H.R. 13654. A bill to amend title 38 of the United States Code to permit certain active duty for training to be counted as active duty for purposes of entitlement to educational benefits under chapter 34 of such title; to the Committee on Veterans' Affairs.

By Mr. MOLLOHAN:

H.R. 13655. A bill to provide additional assistance for the reconstruction of areas of the States of Alabama, Florida, Louisiana, Mississippi, Virginia, and West Virginia which were damaged by Hurricane Camille of 1969; to the Committee on Public Works.

By Mr. MORTON:

H.R. 13656. A bill to amend the act of September 21, 1965, relating to the Assateague Island National Seashore to permit Federal participation in the cost of maintaining certain bridge approaches; to the Committee on Interior and Insular Affairs.

By Mr. O'NEILL of Massachusetts:

H.R. 13657. A bill to authorize the Secretary of the Interior to study the most feasible and desirable means of establishing certain portions of the tidelands, Outer Continental Shelf, seaward areas, and Great Lakes of the United States as marine sanctuaries, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. PURCELL (for himself, Mr. REUSS, Mr. WYATT, Mr. MACGREGOR, and Mr. QUIE):

H.R. 13658. A bill to encourage the development of novel varieties of sexually reproduced plants and making them available to the public, by making protection available to those who breed, develop, or discover them, thereby promoting progress in the useful art of agriculture; to the Committee on Agriculture.

By Mr. SEBELIUS:

H.R. 13659. A bill to amend title I of the Housing Act of 1949 to extend, in certain pending cases, the period prior to approval of a neighborhood development program within a public improvement or facility must have been commenced in order to qualify as a local noncash grant-in-aid; to the Committee on Banking and Currency.

By Mr. SIKES:

H.R. 13660. A bill to provide additional assistance for the reconstruction of areas in the States of Alabama, Florida, Louisiana, Mississippi, Virginia, and West Virginia which were damaged by Hurricane Camille of 1969; to the Committee on Public Works.

By Mr. STAGGERS:

H.R. 13661. A bill to amend the Randolph-Sheppard Act for the blind so as to make certain improvements therein, and for other purposes; to the Committee on Education and Labor.

By Mr. STANTON:

H.R. 13662. A bill to amend the Tariff Schedules of the United States with respect to the rate of duty on whole skins of mink; to the Committee on Ways and Means.

By Mr. ULLMAN:

H.R. 13663. A bill to strengthen State and local tax systems by providing for a credit against individual income taxes for 40 percent of State and local taxes, and by authorizing the Secretary of the Treasury to enter into agreements providing for Federal collection of State income taxes; to the Committee on Ways and Means.

By Mr. WINN:

H.R. 13664. A bill to amend title 38 of the United States Code to permit certain active duty for training to be counted as active duty for purposes of entitlement to educa-

tional benefits under chapter 34 of such title; to the Committee on Veterans' Affairs.

By Mr. YATES:

H.R. 13665. A bill to amend title II of the Social Security Act to increase from $1,680 to $2,400 the annual amount individuals are permitted to earn without suffering deductions from the insurance benefits payable to them under such title; to the Committee on Ways and Means.

By Mr. ANNUNZIO:

H.R. 13666. A bill to amend title XII of the National Housing Act to provide, under the urban property protection and reinsurance program, for direct Federal insurance against losses to habitational property for which insurance is not otherwise available or is available only at excessively surcharged rates, to make crime insurance mandatory under such program, to provide assistance to homeowners to aid in reducing the causes of excessive surcharges, and for other purposes; to the Committee on Banking and Currency.

By Mr. DELANEY:

H.R. 13667. A bill to amend title 18 and title 28 of the United States Code with respect to the trial and review of criminal actions involving obscenity, and for other purposes; to the Committee on the Judiciary.

By Mr. DENNEY:

H.R. 13688. A bill to amend the Federal-aid Highway Act of 1968 to provide additional funds for highway safety programs by authorizing appropriations for such programs in an amount equal to 40 percent of the revenue collected from Federal taxes relating to alcohol; to the Committee on Public Works.

By Mr. ESHLEMAN:

H.R. 13669. A bill to amend the Social Security Act to require the public disclosure of all direct payments made to physicians and other medical practitioners under the medicare and medicaid programs; to the Committee on Ways and Means.

By Mr. JACOBS:

H.R. 13670. A bill to provide Federal financial assistance to opportunities industrialization centers; to the Committee on Education and Labor.

By Mr. MATSUNAGA:

H.R. 13671. A bill to amend the Internal Revenue Code of 1954 to allow an individual a deduction from gross income for certain expenses of employing housemaids, yardmen, and other household help; to the Committee on Ways and Means.

By Mr. PEPPER:

H.R. 13672. A bill to provide additional assistance for the reconstruction of areas in the States of Alabama, Florida, Louisiana, Mississippi, Virginia, and West Virginia which were damaged by Hurricane Camille of 1969; to the Committee on Public Works.

By Mr. TUNNEY:

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

228. By the SPEAKER: Petition of the State Council of West Virginia, Junior Order, United American Mechanics, relative to display of the American flag in public school classrooms; to the Committee on the Judiciary.

229. Also, petition of Henry Stoner, York, Pa., relative to amending the rules of the House; to the Committee on Rules.

SENATE—*Monday, September 8, 1969*

The Senate met at 11 o'clock a.m. and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Thou who are from everlasting to everlasting, come upon us this day with a vivid and intimate awareness of Thy presence, that we may know that neither life nor death, nor things present nor things to come shall ever separate us from Thy love, and that in Thee the temporal and the eternal have no distinction. Surround us with Thy love, impart to us Thy healing grace, and bring to us the ministry of hallowed memory and sacred recollection.

We thank Thee for Thy servant and our comrade, EVERETT MCKINLEY DIRKSEN, who has fought a good fight, kept the faith, finished his course, and is at rest with Thee. For the nobility of his manhood, the magnanimity of his spirit, the hospitality of his mind, and the inclusiveness of his friendship we give Thee thanks. For his massive mind, his matchless speech, his powers of persuasion, and his parliamentary skills we give thanks to Thee. For his elevated patriotism and his manly piety, for his grace and dignity in public service we give Thee thanks. For his prodigious energy spent in self-sacrificing public service, for his fortitude in suffering, and his witness to values which are everlasting we give Thee thanks. May the integrity of his manhood, the radiance of his character, his gentle but subtle humor, and his sense of the divine in all things human remain as an abiding legacy for all generations. May his golden voice now silenced on this side be lifted with the everlasting choirs invisible on the other side of the great divide. May the land he loved, the Nation he served, and the principles to which he was dedicated make this land more and more a foretaste of the kingdom whose builder and maker is God.

In Thy holy name we pray. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Friday, September 5, 1969, be dispensed with.

The VICE PRESIDENT. Without objection it is so ordered.

MILITARY PROCUREMENT AUTHORIZATIONS—UNANIMOUS-CONSENT AGREEMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unanimous-consent agreement which was entered to be effective today be vacated and applied to tomorrow.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

DEATH OF SENATOR EVERETT McKINLEY DIRKSEN

Mr. MANSFIELD. Mr. President, it is my sad duty to announce the death of Senator EVERETT MCKINLEY DIRKSEN at 4:52 p.m. on September 7. A great chair across the aisle stands empty.

At an appropriate time, the Senate will eulogize the late Senator. We shall set aside a day to dwell at length on the life and service of this decent man, this colleague of so many years.

In the first shock of his passing, the words do not come. It is too soon. The void has opened too suddenly. The emptiness is too complete. It is possible, now, only to sense the loss, to sense it in the profound sorrow which his death brings to us.

This is a time, then, not to eulogize, but to mourn. Nor is it a time to mourn for EVERETT MCKINLEY DIRKSEN, who has no need of it. Rather, it is a time to mourn for the Nation. It has suffered the grievous loss of a citizen-patriot and a distinguished political leader.

It is a time, too, to mourn for the State of Illinois, whose cities, towns, and prairies he loved so deeply, and whose praises he sang so well. His State is bereft of a dedicated son, a skilled legislator, and a pure personification in the Congress of the United States.

It is a time, too, to mourn for the Senate, the Senate in which he delighted completely and to which he gave his complete affection. The Senate has lost a Senate man. No longer will it draw new strength from the wellsprings of his wisdom. Yet, his death does not diminish the Senate. His uniqueness is the stuff of legends, and he leaves here a permanent imprint and an enduring echo.

It is a time, finally, to mourn for those who were tied to Senator DIRKSEN in personal association, for his colleagues in the Senate and the Government of the United States, for his family and friends. Time after time, and time again, those of us who knew him turned to him. We turned to him to share a pleasure or a concern. We turned to him for the sureness of his warmth, his graciousness, and his devotion, and we never failed to find it. We turned to him for that elusive flicker of human understanding, that unique spark which was EVERETT MCKINLEY DIRKSEN. It is gone now. So it is a time for mourning, a time for mourning what we have lost.

Mr. SCOTT. Mr. President, it will not be possible ever to replace, except in fond memories, the position held by the great leader of the minority party, a man whose memory will enlighten the recollection of all here present and of so many throughout the country.

Each day, as he came to the opening of the Senate, he had a bright and friendly comment. He added a spirit of accommodation and yet a spirit of full recognition of his responsibility as a Senator, as a citizen, and as the leader of his party.

As the distinguished majority leader has said, today is not the day for eulogy, but for mourning. But today is the beginning of a period in which we may have the opportunity to pay inadequate—altogether too inadequate—tribute to a great man, to a great leader, to a warm and compassionate man with a redeeming sense of humor who had perhaps one of the greatest of all qualities—the ability to view himself in due proportion as one of the creatures of the Lord Most High, and yet to recognize in that picture of himself the aspects of humor, the aspects of the presentation of position, and the aspects of the reaction of those with whom he dealt so well, so long, and so successfully.

Our grief is great for his family, one of whom is a distinguished colleague of ours. It is great for the Nation, for the State of Illinois, and for all those who knew him and loved him and worked with him. At the going down of the sun and in the morning we will remember him.

GUARD OF RESPECT FOR SENATOR DIRKSEN

Mr. MANSFIELD. Mr. President, for the information of the Senate, it is requested that Senators be prepared to form a guard of respect at approximately a quarter to 12 tomorrow, prior to the arrival of the casket containing our late, beloved minority leader.

ORDER FOR ADJOURNMENT TO 11 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate adjourns today it adjourn until 11 a.m. tomorrow.

The VICE PRESIDENT. Without objection, it is so ordered.

RESOLUTION ON DEATH OF SENATOR DIRKSEN

Mr. MANSFIELD. Mr. President, for myself and Mr. SCOTT, I send to the desk a resolution and ask for its immediate consideration.

The VICE PRESIDENT. The resolution (S. Res. 253) will be read.

The assistant legislative clerk read as follows:

S. RES. 253

Resolved, That the Senate has heard with profound sorrow and deep regret the announcement of the death of Hon. Everett McKinley Dirksen, late a Senator from the State of Illinois.

Resolved, That the President of the Senate appoint a committee, of which he shall be a member, to attend the funeral of the deceased Senator.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

The VICE PRESIDENT. Without objection, the resolution is considered and unanimously agreed to.

Pursuant to the second resolving clause, the Vice President appointed the entire membership of the Senate as the committee to attend the funeral of the deceased Senator DIRKSEN.

MEMORIAL SERVICES FOR SENATOR DIRKSEN

Mr. SCOTT. Mr. President, for myself and Mr. MANSFIELD, I submit a resolution and ask for its immediate consideration.

The VICE PRESIDENT. The resolution (S. Res. 254) will be read.

The assistant legislative clerk read as follows:

S. RES. 254

Resolved, That the Secretary invite the Members of the House of Representatives to attend memorial services for the Honorable Everett McKinley Dirksen in the rotunda of the Capitol on Tuesday, September 9, 1969, at 12 o'clock noon, and be it further

Resolved, That invitations be extended to the President of the United States and the members of the Cabinet, the Chief Justice and Associate Justices of the Supreme Court of the United States, the Diplomatic Corps (through the Secretary of State), the Chief of Staff of the Army, the Chief of Naval Operations of the Navy, the Chief of Staff of the Air Force, the Major General Commandant of the Marine Corps, and the Commandant of the Coast Guard to attend the memorial services in the rotunda of the Capitol.

The VICE PRESIDENT. Without objection, the resolution is considered and unanimously agreed to.

ADJOURNMENT UNTIL 11 A.M. TOMORROW

The VICE PRESIDENT. The clerk will read the last resolving clause of the resolution (S. Res. 253) submitted by the Senator from Montana and agreed to by the Senate.

The assistant legislative clerk read as follows:

Resolved, That as a further mark of respect to the memory of the deceased, the Senate do now adjourn until 11 a.m. tomorrow.

Thereupon (at 11 o'clock and 12 minutes a.m.), the Senate adjourned until tomorrow, Tuesday, September 9, 1969, at 11 a.m.

EXTENSIONS OF REMARKS

THOSE WHO HAVE SERVED KNOW WE MUST REMAIN STRONG

HON. W. C. (DAN) DANIEL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. DANIEL of Virginia. Mr. Speaker, if you were planning to erect a dike to hold back floodwaters from your property, you would be well advised to seek out one experienced in such matters and draw on his knowledge to insure that your dike would do the job that it is designed to do. Likewise, should a farmer face the loss of his livestock to predators, he would seek advice and counsel from friends and neighbors who had successfully dealt with similar threats.

The American Legion membership is made up of those who have proudly served their country in periods of national peril. Legionnaires have faced this country's enemies in two World Wars, the Korean war and the Vietnam war. They are experienced "dike builders"—they are the ones who have dealt successfully with the threats of "floodwaters" and "wild animals," whose purpose it was and is to destroy our country.

Those who have served know we must remain strong.

At their national convention in Atlanta, Ga., on August 26, 27, 28, 1969, the Legionnaires expressed grave concern over and vigorous opposition to, plans to reduce our military strength in the face of threats to our national security.

These veterans whose patriotism and loyalty is a matter of record are equally as concerned over attempts to downgrade the military and efforts to malign those of the industrial complex who have enabled our country to maintain its deterrent military strength.

The American Legion Convention Committee on National Security presented two resolutions on this subject which were unanimously adopted:

OPPOSE MILITARY REDUCTIONS

Whereas, it has been announced that Members of Congress have notified the Secretary of Defense, Melvin R. Laird, that he will be required to:

1. Eliminate 100,000 men from the Armed Forces;

2. Deactivate 100 fighting ships of the U.S. Navy including the recently reactivated battleship *New Jersey;* and

3. Reduce some hundreds of thousands of flying hours from the U.S. Air Force; and

Whereas, the American Legion deplores this rash and hasty action and feels that this cannot be the will of the Congress; and

Whereas, the American Legion applauds the thought of the economy minded Congressmen but recommend that their efforts be directed to fields less hazardous to our national security; and

Whereas, the reports are prevalent that Russia is increasing the strength of its Mediterranean fleet; tensions increasing in the Middle East between Israel and Egypt; fighting continues on the borders between Russia and China; and

Whereas, despite every concession by our country, the Paris negotiations have produced no meaningful discussions and despite our halt to the bombing in Southeast Asia, no reciprocal reduction of guerrilla attacks upon our forces have been made by North Viet Nam, and casualties continue to mount; and

Whereas, Castro remains only 90 miles from Florida and in other countries throughout the world are threatening peace and freedom; now, therefore, be it

Resolved, by The American Legion in National Convention assembled in Atlanta, Georgia, August 26, 27, 28, 1969, that they view with alarm this threat to reduce our military strength in men, ships and training and vigorously oppose such reduction, and be it

Further resolved, that the Congress study carefully any reduction in our Armed Forces which may endanger our national security.

MILITARY-INDUSTRIAL COMPLEX

Whereas, the strength of the nation depends not only on the number and quality of the men available to fight for it, but also upon the scientific, technological and productive capacity of the nation's industries; and

Whereas, a harmonious relationship must exist between the military and industrial organizations to design, develop and deploy necessary weapons systems in support of our national security; and

Whereas, in two world wars the United States helped bring victory to the free nations by serving as the "arsenal of democracy" because management and labor united in a vital contribution to the effectiveness of our gallant comrades in arms; and

Whereas, many statements regarding the "military-industrial complex" have been made to the citizens of our country in biased and undocumented form in the attempt to downgrade our national security posture; and

Whereas, no modern military power can be created or maintained without sophisticated and vast industrial productive capabilities; and

Whereas, through the investment of private capital, efficient management and loyal workers, the great industrial corporations of America doing research, development and production for aerospace, naval and ground forces as well as for our space program, are an indispensable national resource which would have to be created if it did not already exist; and

Whereas, the maligned military-industrial complex is composed of workers, technicians, scientists and managers, united in support of their brothers and sons serving our country in all our military forces; now, therefore, be it

Resolved, by The American Legion in National Convention assembled in Atlanta, Georgia, August 26, 27, 28, 1969, that we cannot accept any philosophy that would downgrade or destroy the private enterprise relationship between the military and industry that has made this nation great and has kept it free; and we express our unending gratitude to all who have contributed to the industrial efforts which have supported our armed forces in war and at times of international tension; and, be it

Further resolved, that we urge the press, radio and television media as well as others who attract public attention and help mould public opinion to make every reasonable effort to present to the American people a fair and undistorted picture of the essentiality of cooperative efforts between our military forces and private enterprise so necessary to the survival of the nation and the protection of freedom throughout the world.

CLAUDE PEPPER HAS SEASONED VIEWS ON CRIME

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. HOWARD. Mr. Speaker, the so-called "crime issue" is one that is on the minds of most persons in this country today. There are those who cry aloud, wring their hands, and do little to help alleviate this problem.

On the other hand, there are persons, such as the distinguished gentleman from Florida, Representative CLAUDE PEPPER, who quitely—and efficiently—work hard to solve this problem.

Those of us who have had the privilege of working with Mr. PEPPER know of his outstanding abilities, his capacity to work hard, and above all, his willingness to tackle tough problems and come up with sensible solutions.

Last week, Mr. James J. Kilpatrick, writing in the Washington Star, called attention to the outstanding work being done by Mr. PEPPER as chairman of the House Select Committee on Crime. I commend it to my colleagues for reading. CLAUDE PEPPER has served his country well, both in the Senate and in the House. Those of us who are concerned about crime owe Mr. PEPPER a note of thanks for the work he is presently undertaking on the problem of crime.

The Washington Star article follows:

CLAUDE PEPPER HAS SEASONED VIEWS ON CRIME

Thirty years ago, when Claude Pepper was serving in the Senate, conservatives used to regard him with horror. He was a liberal's liberal, with a tabasco tongue and a fiery eye. In 1950, when defeat knocked him off, we shed no tears. But time has mellowed the old "Red" Pepper. He'll be 69 next week (September 9). He's now serving his fourth term in the House—one of only a few score men in history to serve first in the Senate and later in the House—and he's doing an especially able job in the field of crime and punishment.

With no further introduction, as they say on the chicken salad circuit, let me offer the floor to the gentleman from Dade County, chairman of the House Select Committee on Crime. He is thinking aloud on some dismaying truths that have emerged from six weeks of hearings:

"We didn't need these hearings for the purpose of discovering that crime exists. We all know too well that the fear of crime pervades the nation, and that political candidates are being elected on the law and order banner. The real message from our hearings is that despite this omnipresent fear and the public outcry for law and order, we are doing relatively little to meet the crime problem.

"A real paradox exists. While we all clamor for the control of crime, most actions that

must be taken are apparently among the lowest priorities for governmental action. During the past decade, juvenile crime has had an alarming increase out of all proportion with the increase in over-all crime. Arrests of juveniles for narcotics offenses has increased 800 per cent, yet Federal expenditures for juvenile delinquency prevention and control received a mere $5 million appropriation last year.

"In a recent column touching upon the problem of recidivism in crime, you noted the shocking fact that many prisoners serve six or eight terms. We can agree, I'm afraid, that some of these are beyond even the best of training programs. We need to concentrate more effort on the first offender, developing some vocational as well as moral standards that will encourage him to go straight.

"Our nation has no national or sensible programs for corrections and rehabilitation. Our correctional programs are largely a relic of another age. They just do not correct. We have been told by many experts that youthful offenders would be better off—and so would society—if they were never caught. It is an abomination that a society that consecrates human values could permit the sordid and inhuman practices that take place in some of these institutions.

"There is no more important matter in the entire criminal justice system than the matter of corrections and rehabilitation. Until recently, the problem had been ignored by the federal as well as state and local governments. Now I understand that the administration is about to unveil a new proposal for the establishment of a national corrections program, apparently under the aegis of the Federal Bureau of Prisons, with the entire program being under the control of the Department of Justice.

"I have grave reservations. Perhaps the time has come for Congress to create a new independent agency which could focus entirely on new approaches in the area of corrections. Such an agency could lead the states, counties and cities out of the medieval grip of penology in which our local jurisdictions appear to be mired.

"I suppose that the heart of our difficulties in meeting the crime problem is symptomatic of what besets our society and our nation. We are confronted with the monumental national problem of determining priorities for federal action. The time for major corrective action is long overdue. The crime problem can be met only by resigning ourselves to a massive Federal effort involving a large Federal expenditure. Local communities have generally reached the limits of their financial resources. . . ."

The prospect of massive federal outlays in an area of state and local responsibility holds small appeal, but Pepper is plainly right. Those in Congress who holler most loudly of crime must back up their words with new infusions of money.

MISSOURI BEAUTY

HON. RICHARD H. ICHORD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. ICHORD. Mr. Speaker, I wish to pay tribute to those beautiful and talented Miss America pageant queens who were among a troupe of beauties who staged the third annual overseas "Miss America—USO Show" in Vietnam this summer.

I think it is especially fitting that they should be honored now following the selection of the new Miss America for 1970 in Convention Hall at Atlantic City this past weekend.

I am especially proud to point out that among the beauties who comprised the troupe in Vietnam was Miss Missouri for 1969, Miss Kathi Goff of DeSoto, in the Eighth Congressional District.

Miss Goff is the daughter of Mr. and Mrs. Russell E. Goff, Star Route West, DeSoto.

In the group which toured Vietnam for 22 days, besides Miss Goff, were Miss America, Miss Judith Anne Ford of Belvidere, Ill.; Miss Arkansas, Helen Rose Jennings; Miss Nevada, Sharon Jane Davis; Miss New Jersey, Linda Ann Wilmer; Miss New York, Patricia Burmeister; Miss Minnesota, Charlotte Ann Sims; and traveling companion, Mrs. Irene Bryant, official chaperone to Miss America.

The musical revue, "24 Hours a Day," featured group and solo numbers by the seven cast members.

Miss Missouri, Miss Arkansas, and Miss New Jersey are pop singers; Miss Nevada and Miss New York are classical singers; Miss Minnesota is a dancer; and Miss America is a champion gymnast and excellent dancer.

A willingness to entertain our servicemen in Vietnam, the desire to play their part in sustaining morale in Vietnam, the beauty and the talent—all this is worthy of commendation.

Miss Goff is most worthy of the honor, Miss Missouri.

WHERE OUR MONEY GOES

HON. SAM STEIGER

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. STEIGER of Arizona. Mr. Speaker, the Federal Government can find the most inane ways to spend money. The spot VISTA promotion for television is a prime example as the KOOL editorial shows:

In an editorial presented last month, we pointed out that the Federal Government spends some 400 million dollars a year on motion picture films, more than all the major Hollywood studios spend on feature films. We also pointed out that a good deal of this was wasted money.

Here's a prime example of that waste. In 1967, the Office of Economic Opportunity commissioned Sun Dial Productions of New York City to produce a 16 mm color film for use as a recruiting device for VISTA, Volunteers in Service to America. More than two-thirds of the film was shot in Allenville, telling the story of Allenville's struggle for a decent water supply, and how two young men entered into VISTA service to aid the cause. The remainder of the film was shot in Stanfield, Arizona. The cost of producing the thirty minute film was forty thousand dollars.

If that money had been applied towards correcting the problem, instead of exploiting it for propaganda purposes, Allenville could have had a new water system two years ago; generous Arizonans would not have had to donate more than twenty-seven thousand dollars to match federal funds for a system, and the government could have saved about ten thousand dollars. Even worse, the film itself was not altogether truthful. However, the VISTA people in Washington are proud of the film and feel the taxpayers' money was well invested. They point out that it has been seen by more than two hundred thousand people.

We might point out that the thirty minute film we presented on this and the CBS Television stations in Tucson and Yuma did not cost the taxpayers a cent. It told the truth and was available to the television sets of the more than a million people who live in the coverage areas of the three Arizona stations that carried the film.

DR. MONTESSORI'S WAYS OF REACHING YOUNG MINDS

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. COHELAN. Mr. Speaker, in Italy early in this century, Dr. Maria Montessori, while she was doing advanced research in connection with her successful medical career, decided that her real vocation lay in teaching children.

The philosophy behind the methodology which she developed and which bears her name, is that children from birth to 6 years have a tremendous learning capacity, as well as an unusual and spontaneous urge to learn. The play materials and teaching methods that she developed take advantage of this learning instinct and desire.

Here in Washington, the New City School, using Montessori principles and operating in the parish hall of St. Paul's Episcopal Church, is endeavoring to bring these unique educational benefits to a diversified group of children in the inner city—to rich, poor, black, white, English-speaking, and non-English-speaking alike.

An account of this experiment, led by its director-teacher, Mr. Walter Hardesty, is given by Mr. Hardesty in the January-February 1969 issue of Southern Education Report. I include this article in the RECORD and recommend its careful review by my colleagues:

DR. MONTESSORI'S WAYS OF REACHING YOUNG MINDS

(By Walter Hardesty)

(NOTE.—Walter Hardesty, director-teacher of New City School, left a promising career in government to become a teacher of small children in 1964. He tells more about himself in this article.)

Maria Montessori, born in 1870, was the first woman to get the degree of doctor of medicine in Italy. But her reputation was in education. She established an approach to teaching children, especially the younger ones, that has borne her name over the decades.

In Washington, D.C., New City School is a new venture in Montessori teaching in an unusual neighborhood eight blocks from the White House. It is in the parish hall of St. Paul's Episcopal Church, just off Pennsylvania Avenue. Three blocks from the school,

the avenue passes into Georgetown, the exclusive restored section of the capital.

New City seeks to be a place where rich and poor, black and white, English-speaking and Spanish-speaking children can come together to work and learn. The school may seem at first glance to be in an unlikely setting. But within a block are some rather run-down streets. Within a few blocks are pockets of poverty the equal of impoverished areas anywhere in the city. This is one of the few spots in Washington where a neighborhood school is likely to draw a real mixture of races, economic levels and backgrounds.

Five of us have committed ourselves to New City School, betting our teaching talents and risking our incomes to find out whether a dream of faith and hope can become flesh and blood—or, as some might believe, whether it is just a wish-dream.

We are committed to taking half of our children from homes able to pay little or nothing toward the cost of their children's tuition, whether or not we can raise the scholarship money in advance. To make up the difference we are at present dependent on contributions from small organizations, such as churches, and from individuals. Because we are small ourselves, we do not have the extra measure of strength we would need to sell the city's board of education on supporting us. The board has turned down similar proposals in the past. Perhaps this will change soon; there now is a new board, chosen in November elections, the first elected school board in Washington in over half a century.

Already, raising money has become a critical problem. We have only one class going, but we have raised only four of the ten $575 scholarships we need to pay the tuition of the poor. Next year will be tougher. Even before then we may have two classes going for children 2½ to 6½ years old. Lydia Mosher, who began her teaching with junior-high science and spent four years teaching it in District of Columbia public schools, may open our second class in February or March after she completes her Montessori training. And we hope to be adding three classes under the direction of Sanford Jones, who is to open our first class for children 6 to 9, Martha Jones and Elizabeth Hall.

Having pieced together some savings, a scholarship and some loans, these three are now doing advanced Montessori study in Italy. For the past five years, they have run their own school in suburban Annandale, Va. But they have found themselves spending more and more spare time in the city.

In 1966, Sanford founded a summer enrichment program for 25 inner-city children in the same room we now use as our first classroom. In 1968, he turned it over to Mrs. Mosher, a Howard University graduate who is an old hand in working with poor youngsters. Late afternoons and evenings Lydia and her husband, Peter, may often be found working with from two to two dozen youngsters in the Mosher basement. Next year, with all of us teaching, our total scholarship needs will be $28,825.

What we want to do at New City is to try Montessori work with pretty much a public-school population. It is not exactly the same in every respect, though. Our children start at age 2½ instead of five or six. Toilet training is the only prerequisite. Another difference is that the parents choose our school, albeit for a variety of reasons. Some want their children to be with children a little different from themselves, feeling it is a part of learning. Some especially want Montessori schooling. Some come seeking a good school of whatever sort. Some mainly want to be free of the children for a couple of hours each day.

The parents do make a commitment, though, before the child is enrolled. They promise to feed the children and get them to and from school, for we provide only a light snack and no transportation at all. But once the child is in, we try not to eliminate him for his parents' failures. Two children regularly arrive hungry and have to be given a light breakfast in spite of their mother's assurances that she is going to feed them every morning. In November, when the weather got a bit chilly, the same two boys stopped coming. The mother felt they could not stand the four-block walk in the cold, and had a very legitimate concern about the responsibility of the older brothers and sisters charged with accompanying them. We were able to arrange transportation with a generous parent of another child who was willing to stop by for them.

Like all Montessori schools, ours is nongraded. Children two to six work together in our first classroom. Interestingly enough, nongraded classes beginning at age 2 were part of a recent prescription to remedy Washington's school problems. The study, completed over 18 months ago by Dr. Harry Passow of Columbia University for the board of education, gave us more than a little satisfaction. We hope we will be able to do something that the school system will find valuable when it is ready to move in this direction.

While Dr. Montessori was doing advanced medical studies with children she concluded that her real vocation was teaching children. Working more from her own fresh observations than from textbooks or educational theories, she carved out a new understanding of the child. From this understanding she created an elaborate group of materials for the child to use in learning, and she devised a complementary set of teaching techniques for introducing the materials to the pupil.

Dr. Montessori's approach recognizes the power to learn and the urge to learn of the very young. It is as up-to-date in this respect as the contemporary work of Jean Piaget, J. Mc.V. Hunt, and Jerome Bruner. Montessori said the child from birth to 6 has an absorbent mind, with capacities that are different from those of the adult. Witness the child's facility for learning language—his own or any to which he is exposed. The doctor noticed how the child accomplished this prodigious feat, how he did this extremely difficult work, without strain. No adult can duplicate it.

At the same time, she appreciated the child's weakness and dependence. She recognized that the child cannot absorb, cannot make apart of himself something to which he is not exposed. He is still dependent on parents or teachers or recreation workers for the range and variety of experience available. What we do not make available he cannot use.

The Montessori experience is that the little ones can take in—eagerly want to take in—far more than we give them in most homes and schools.

What we give, then, and how much we give are very important. But even more crucial is how we give it. We would not expect, for example, that the little child would learn to speak French in the manner of the university student (though the university student could do worse than approach French more in the manner of the child). Given this, we can guess that there will be big differences in the way the small child approaches and can receive the process of addition, in the way he comes to master writing.

The Montessori materials with which we work are the creation of a lifetime of effort by a woman who had an enormous gift for putting what the child wanted to learn into a form he could explore and exploit. Any parent who has had to put to bed a tired but kicking and resisting infant knows how urgently he wants to see, hear, smell, taste, touch and manipulate his environment in as many ways as he possibly can. Our materials are intended to give the child a constructive outlet for all of this.

In our classroom, the materials the child uses provide what he wants and what he can absorb from a wide range of human activities. In working with these things, the child finds he has keys for developing his understanding of the larger world beyond the classroom. For example, take the Montessori bells. They sound the familiar eight notes: *do, re, mi . . . do,* beginning with middle C. When the child is ready, the sharps and flats are added.

The preschool child's experiences with the bells provide a key to the understanding of music, of the structure of musical language. Starting on this only a few years later, at the age of 7 or 8, a child would no longer have the same capacity to internalize his experience, to make it so completely a part of himself. Like the bells in music, the sandpaper letters, which are large letters cut out of sandpaper and mounted on cardboard, give the child one of the keys he needs for breaking the code of the written language and relating it to the spoken language he already knows.

Watching the great wealth and variety of work in a well-run Montessori program, one is reminded of the films of such schools as Florida's Nova School [SOUTHERN EDUCATION REPORT, *March-April, 1966*], where 30 or 40 children of different ages and with different interests work in almost as many different projects as there are children, all in the same room and all at the same time.

Even so, for many reasons, Montessori work is not a panacea. A Montessori class does not take the place of a good home. One child at New City School comes from a home where he obeys because he fears a beating. He is 4½. When he first came, he spent most of his time disrupting the other children. When I picked him up to extract him from his mischief, he started swinging at me. I said, "Nobody is going to hurt you here," and he relaxed. Now he doesn't swing on me anymore, and when we are sitting around reading a story he heads for my lap or that of my assistant, Tom Lennon. A child like this one at age 4½ requires constant attention from an adult during his first three or four months at school. Unless the school is fortunate enough to afford him that kind of special handling, he may have to be dropped, or the teacher may have no choice but to use the same approach used at home.

Neither is the Montessori classroom a substitute for a good playground, or a neighborhood lot, or just a back yard or alley where children can come together and play with one another. Where these things fail or are not part of the environment, something like a playschool is needed.

One little girl who came to me where I taught last year was quite intelligent, but never became as fully absorbed in her work as she might have. She had little opportunity to be with children outside the school and was just too excited with the chance to play and talk. Ideally a school would meet the needs of children both for learning and for play experiences. In practice, many Montessori schools confine their work largely to the schooling, that particular part which they do best.

At New City we may offer a limited day-care program to a few of our children beginning next fall if we can arrange it. Dr. Montessori's first school, in the poor San Lorenzo quarter of Rome, was for the children and is very much admired by those who especially care.

Since Dr. Montessori began her work with poor children and is very much admired by those especially concerned with the poor, such as Frank Reissman, author of *The Culturally Deprived Child,* how is it that Montessori is so middle-class now? In the Washington area, for example, only about 50 of 1,500 children in Montessori schools come from economically poor homes.

Wealthier people seem to have seen some-

thing they wanted, and they had the means to get it. The poor have not known about the opportunity, or could not afford it if they did. Partly this is because opportunities are not equal in our society. The capabilities of our public schools are not what we wish they were.

At New City School, we can do a little to set right these large-scale wrongs. We work from the Montessori approach because it seems to us the best means of giving these children, middle-class or poor, a key part of what they need.

All of us started from backgrounds other than early childhood education. Sanford and Martha Jones were concert pianists and music teachers. Elizabeth Hall was a member of the founding faculty of the New School for Music Study in Princeton and developed and directed a music readiness program for young children there from 1960 to 1964. Lydia Mosher's university major was botany and she taught science in Washington's public schools. I did management work with the National Aeronautics and Space Administration before going into preschool teaching, and then to Montessori.

Persons from professional education backgrounds as well have come to an appreciation of Montessori. One such person was a teacher named Ilene Detlor, whose training was in early childhood education at American University. When she came to work with us in a little school we had started for poor children before Head Start was available, we thought she was great, but she became very discouraged about her teaching in her second year after we installed a Montessori teacher in the next classroom. Ilene came to admire greatly the Montessori teacher's work. As Ilene put it, Sandra Sklar "knew where to take a child. . . . She knew how to make the most of the child's interest. . . . To a two-year-old, everything is a game, anyway, so why not give him an enormous amount of information in the games he plays?"

Ilene felt so strongly about trying to teach without Montessori training that she has dropped out of teaching until she can arrange to get the training She can make an excellent Montessori teacher because she is also aware of some of the pitfalls in Montessori work. She points out that if the teacher feels pressured to "get Montessori results," it doesn't work. It is true that children in our schools often display spontaneously a surprising maturity, but the teacher who insists that the child begin by behaving like an adult is about as likely to get good results as is the psychologist or minister whose counsel to the troubled soul is, "Just be serene and wise."

At New City School we, like each teacher wherever he is, employ our training in a unique situation. Since our training was at the Washington Montessori Institute where most teachers are preparing to work with middle-class children, the poorer children provide the best test of our ingenuity and imagination in adapting the work to their style of learning.

Not that Montessori work is intrinsically better suited to the wealthier. At some points it seems better suited to the poor. For example, the poor, who in our case are all black children (as are about half of our middle-class children), seem to get more freely and directly involved than middle-class children. This works out beautifully for the poor because we work from the experience to verbalizing about it. And it is from manipulating real objects and working with each object many times and in different ways that the child forms in his own mind the concepts, the abstractions, that are built into the materials.

For example, the child who has worked out a pretty good understanding of the numbers from 1 to 10 and can read the corresponding symbols can be shown one tiny round bead that makes "one unit." A string of 10 of these beads on a straight wire makes "one ten." A row of 10 of these strings forms a square, "one hundred." Ten of the squares together make a cube, "one thousand." If he has several of each category in front of him and if he has learned that the tiny bead is "one unit" and the big cube is "one thousand," the child can as easily get "five thousands" as he can "five units." In addition he can soon read the number 5,000 because he has now had a concrete experience that makes it meaningful. The thousands are just the ones with three zeroes after, the hundreds the ones with two zeroes, and so on. His next step is to read 5,672, which he reads as "five thousands, six hundreds, seven tens and two units." And this he matches with the actual quantities of beads.

The concreteness of what we do, which fits well with the learning style of all children but especially with that of the poor, might lead one to think the poor child has the edge. But there is a hitch. Unlike the middle-class child, he has had few or no experiences that give him any reason to get into the learning of the numbers 1 to 10 in the first place. Even if he counts aloud from one to ten, which he may have learned from skipping rope, he is slow to match the words to concrete objects.

In math and language work, conceptualizing and verbalizing are indispensable. The distinction is clearer if we note that in doing the practical tasks involved in caring for the room, in polishing the bells, in sweeping, or in pouring milk at snack, all tasks requiring minimum verbalizing, the poor child has no handicap. Unless his home life is unstable, he is the most apt child in this type of work.

Just the other day, one of the younger children wet his pants. Tom and I were both engaged with other children so we referred the problem to an older child, a boy of 4½ years from one of the poorer homes. He assisted the other fellow in a very professional way, checking with me again to let me know that the socks were wet, too, and the bag of dry clothes I had given him was without socks.

We are still left, though, with the problem of helping the poorer child get into the work that requires verbalizing and conceptualizing. Here we are working from two directions. First, we go ahead with the work the child can do well and enjoy. Again, this is the practical work. Polishing badly tarnished silver, for example, produces a big improvement. This type of work involves the child and heightens his capacity for concentration. It also introduces the child to the notion of getting a result through a sequence of operations, a notion equally useful in writing a word as a sequence of sounds.

The second way of approaching the economically poor child with the concept-building materials is to work through the middle-class child. The poorer child becomes interested as he observes the activity of the middle-class youngster who does these more academic things more eagerly. Before long, he comes to want to do them himself, and asks the other pupil or one of us adults to show him or let him help.

Cross-fertilization occurs in both directions. Often, a middle-class child, especially one who is verbal beyond his power to understand, or is hyperactive, or is given over too much to withdrawal into fantasy, gets a good lesson in settled work on a practical task from a poorer classmate. In this instance, the middle-class child is very much helped because his problem is that he cannot do anything much so long as he remains unsettled.

We make still another adaptation of Montessori materials and techniques in doing the language development work in ways that meet the unique preparation and style of the poorer children. Occasionally this seems to bring us into conflict with the Montessori method narrowly conceived.

For example, the best Montessori classes develop a remarkable capacity for the enjoyment of quiet order in which 30 or so youngsters are working at individually selected projects or in groups of two or three with only occasional direction from the teacher. At New City School, where this sort of quiet is just beginning to come after several months work, the quiet may be punctuated with the near-shouting of a child who is learning which is a *big* cube of pink tower, which is a *bigger* one, and which is the *biggest* of all. The child may be responding to Tom Lennon's urging to "say it louder."

Tom is doing this because we have found that a child who cannot or will not learn the words at all if he hears and speaks in a quiet voice will work with gusto when the volume is turned up. We got the idea of doing it louder after reading about the work of Carl Bereiter and Siegfried Englemann at the University of Illinois. (*See "Tupelo Follows Through,"* Page 22.)

Another way of helping the poorer child to reach the takeoff point in language is special use of our games with the parts of speech. In one, the preposition game, the child puts the toy pig *at* the trough, the chair *on* the table, the picture *across from* the mirror, or whatever. With the middle-class child, who already knows a lot about the structure of the majority dialect, these games may sometimes be done only as reading work after he begins to read. In contrast, the poorer child may require lots of preparation before he is ever asked to give the proper response in playing the game aloud.

Those of us doing Montessori work are convinced of its value to the child in his struggle to make himself a man. At the same time, we recognize that a large-scale application of the work around the country is not possible at this stage.

We are working by bits and pieces to make Montessori advantages available to children whose families cannot pay for it. At New City there is no charge for children from families of three or more children with less than $5,000 annual income. This is not rock-bottom poverty, but neither is it much to live on in a large city.

There are a few other schools trying to do much the same thing we are doing. One is the Midtown Montessori School, which two other teachers and I got going in Washington last year. Another is St. Paul the Apostle School in New York City. A third, operated by the Day Care Association of Atlanta, may have had to close for lack of funds by the time this article is printed.

In Atlanta, a new teacher-training operation has opened this year under the direction of Margaret Stephenson, who is considered the foremost authority on Montessori in the United States. It complements the work of the Washington Montessori Institute and other training centers in California and in Philadelphia. Even so, the number of teachers trained this year will be only about 130. This report does not cover teachers trained by nonaccredited "Montessori" training courses or the schools that employ these teachers, some of whom are quite capable but many of whom are not thoroughly prepared.

If more Montessori schools for the poor can open, we will soon have enough children that experimental situations can be created and some valid research done to measure the effects of our work.

Of the 130 new teachers available next year, very few will find jobs, in the South or elsewhere working with disadvantaged children. Many more could be attracted by the right kind of opportunity, for many each year express great concern for the children from

less fortunate circumstances, but few find such a possibility. Perhaps some situations could be established in housing projects, or as a part of existing day-care programs.

As the new teachers go out, they will do well to avoid the pitfalls into which some of us have fallen in the past. One pitfall is to be impatient. We have seen excellent results achieved by children working with more experienced teachers—teachers whose understanding had worked its way from their brains into their flesh and blood and bones. In our urgency to do great things too, we are likely to be impatient, with our children and ourselves, in getting the children to do what we know they are capable of. Ironically, in focusing too much on the end to be achieved, we break up the process which makes it possible. We pressure the children to act like Montessori children before they are Montessori children. We forget that an able teacher and a stable population of children should be expected to show developed Montesssori work only after three years or more.

Another common mistake we make in Montessori practice is to take too narrow a view of our work. We see ours as the most comprehensive and widely practiced way of meeting the needs of the young child's mind, and a case can be made that it is. But this does not mean that other approaches have no contributions to make.

A close look at the work of O. K. Moore and his talking typewriters, or of Bereiter and Engelmann in developing verbal abilities of disadvantaged children 4 and 5 years old, or of Martin Deutsch in developing comprehensive approaches to teaching poor children in New York City, turns up little we Montessorians can quarrel with. We share the same experience of the astonishing learning powers of the child and we have a common commitment to providing him the means to develop himself. Appreciating and understanding the work of these people or of just plain good teachers in local public and private schools will deepen and enrich our own work.

Some of the pitfalls into which we slip may be unique to situations in which we try to work with the poor. Many of us are not prepared for it, by background or experience. Few of us are from poor backgrounds ourselves. Margaret Stephenson suggests to many middle-class trainees concerned about the poor that they first work three or four years with middle-class children as preparation.

Perhaps here a solution is for a few local communities to plan, with the advice of a Montessori consultant, to establish and fund a pilot program. Each community could chose, ideally, two or three local persons gifted in working with children and teaching and could sponsor them in the training course. Perhaps men would be better than women, because when a man gets married and raises a family he does not interrupt his career. And perhaps younger persons without previous teacher training and experience, other things being equal, might make better choices. In her first project in Rome, Dr. Montessori chose as an assistant a young woman of 17, who was open to a new way of doing things.

Not long after Maria Montessori began her work with the children in that slum tenement that housed her first Children's House, those who came to observe from over the world went away talking of the "new" children. Dr. Montessori had been offered the job of working with them by a building manager who wished to keep the children busy doing something other than damaging his property. She had tried her first experiments in teaching them to read in response to the appeals of the children's illiterate parents. From this start grew a great life work.

Our children are living in a different place, a different time, and a different culture. Nevertheless, Montessori's work has much to teach us that we can use in giving the child, whatever his background, what he needs to take his place as a man in 20th Century America.

A BETTER ALTERNATIVE TO REVENUE SHARING

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. ULLMAN. Mr. Speaker, today I am introducing legislation that would create a new instrument to expand Federal financial assistance to our hard-pressed cities and States. The Federal Government is already helping, of course, through its categorical grant-in-aid program, now costing about $25 billion a year.

This program is overcomplicated. It needs to be simplified and modernized to be more responsive to the needs of our communities. But it is, and is likely to remain, the backbone of the Federal assistance effort.

The new instrument we are seeking would be a supplement to this grant program. President Nixon has proposed a system of revenue sharing that would return about $500 million in Federal tax revenues to the States in its first year of operation, fiscal 1971. This figure would rise to about $5 billion a year by the middle of the 1970's.

I have grave reservations about this plan for several reasons. Most importantly, I do not favor another direct handout from Washington. This approach can only serve to make the States and cities more dependent than ever on the Federal Government. What we must do is establish a new system that will motivate State and local governments to become more self-reliant, more in control of their own resources.

I am introducing today a bill that would achieve this goal. I propose to institute a tax-credit system that would allow the taxpayer to claim 40 percent of the income taxes he pays to State and local governments against the tax bill he owes to Washington.

This effective reduction in Federal income taxes would ease the competition for the taxpayers' dollar now faced by State and local government. These governments could then pick up the added revenues in their tax schedules at no extra cost to the taxpayer.

At the same time, we would maintain the basic integrity of our fiscal structure and strengthen the present shaky partnership among the Federal, State, and local governments.

There are many other persuasive arguments for adopting this alternative approach to revenue sharing. A number of these are set out in an excellent paper appearing in a recent issue of the "Virginia Law Weekly." The author of this paper, Mortimer M. Caplin, is a distinguished former Commissioner of Internal Revenue and Virginia Law School professor of tax and corporate law. Mr. Caplin is currently in private law practice in Washington. I commend his argument to the attention of the Congress:

CAPLIN SUGGESTS REFORM IN STATE TAXATION POWER

(By Mortimer M. Caplin)

One of these days, the war in Vietnam will come to an end. At that happy time, the nation is expected to turn its gaze upon itself and set about the task of healing internal wounds long left to fester. Close and careful reexamination will be inevitable for much of our domestic policy and policy-making apparatus, including our tax system.

In recent years, tax reform proposals of many sorts have already begun to proliferate—some with widespread roots and ramifications, and reaching into areas that have little ostensible relation to tax policy in the narrow sense. Examples are found in the "new economics," with the enactment of short range tax rate changes to counteract fluctuations in our national economy; investment credits to induce private business to modernize its machinery and equipment; a variety of income tax incentives aimed at encouraging the private sector to help solve our many urban problems. Such proposals testify to the conviction of economists, tax experts, and political scientists, that tax policy will be a major force in pointing the direction of new domestic programs in the post-Vietnam period.

The prevalence of this conviction is hardly surprising. The end of the war should free up not only our national attention but a great deal of potential revenue, which could be allocated in an almost infinite variety of ways. Our decisions on how and in what amounts to make these tax allocations will reflect revealingly our national values and our felt priorities among the many competing goals to be achieved in the 1970's.

PREDICTS ROLE QUESTIONING

Perhaps first on the list of domestic concerns will be questions on the respective roles to be assumed by federal, state, and local governments. Currently we are experiencing a widespread attitude of doubt over the omniscience and omnipotence of the federal bureaucracy. Creative federalism, it seems, will soon be in vogue (again), if it is not so already. And, of course, tax policy must figure prominently in any comprehensive thinking along these lines.

It is no secret that state and local governments are today experiencing a crisis of revenue, and that even the relatively modest functions they now fulfill are being placed in jeopardy. If, as talk from many quarters would indicate, the post-Vietnam tendency is to be toward fragmentation of national problems—toward state and local handling of "local" problems—the fiscal squeeze in the states must be diagnosed and eased. State and local governments must be placed on a sounder financial footing to permit them, not only to solve their present problems efficiently, but to take on the new tasks to be assigned to them.

DISCUSSES TAX POLICY

To achieve this goal, it is only natural to look to the enormous revenue-raising potential of the federal government. Placing a portion of this potential at the service of the states would be the logical consequence of the proposed shift of responsibilities to them from the federal government.

I have elsewhere maintained that "our tax laws are fundamentally a mechanism for raising revenue; we should be sparing before we use them for any other purpose—whether for regulatory purposes or to accomplish social and economic objectives." Caplin, *Federal Tax Policy—The Need for Reform*, 56 Georgtown L.J. 880, 889 (1968). I still subscribe to that view. But now as then, I favor use of our tax laws to achieve nontax goals when two preconditions are met: (1) the objective is one of over-riding importance to our society, and (2) it is one whose achievement can be most effectively realized

through the tax mechanism. Implicit in this second condition are the requirements that tax incentives should be better able to achieve the desired result than alternative governmental programs, and that they should be able to accomplish this result without substantially higher costs or waste of resources.

REVIEWS TRADITIONAL AID

Our present system of taxation (and spending) at the federal level takes into account the legitimacy of the financial needs of the states and their subdivisions. But traditional tax and spending aids to the states have always produced a certain uneasiness. In recent years, they have come in for increasing criticism, and it seems unlikely that they will be adequate for raising state and local revenues to desired post-Vietnam levels. The conviction seems to be growing that these devices are too costly, too inefficient, and less effective than other alternatives which are available, though yet untried.

Traditionally state and local governments have been given fiscal assistance in three principal ways: (1) the federal income tax exemption for interest on state and municipal bonds, (2) the deduction for state and local taxes, and (3) the system of outright federal grants for specific purposes (so-called categorical grants).

NOTES ABUSE IN BOND FINANCING

Unfortunately, exempt bond financing, a primary tool of revenue raising at the local level, has been abused. A trend has developed in recent years for state and local governments to place their exempt bond power at the disposal of private business concerns—by first issuing bonds, then using the proceeds to build industrial plants, and finally selling or leasing the plants to businesses for a price that reflects the lower interest rate paid by the state or municipality. As Assistant Treasury Secretary Surrey has pointed out, such industrial development bond financing presents the enormous disadvantage of costing the federal government more in lost revenue—from tax-free interest in the hands of otherwise high-bracket taxpayers—than the after-tax savings achieved by the private concerns through lower lease costs and lower purchase prices (taking into account, too, lower income tax deductions).

CITES ALTERNATIVE PLAN

The Heller-Pechman proposal is, in my judgment, a fairly novel and radical one. Perhaps the best way of bringing out its strengths and weaknesses is to set forth briefly an alternative plan devised for some, but not all, of the same purposes. I refer to the proposal studied at some length by the Advisory Commission on Inter-Governmental Relations involving a federal income tax credit for income taxes paid to states (and perhaps to local governments). A similar plan has been supported by the Committee for Economic Development.

The Commission's analysis, as contained in its *Report on Federal-State Coordination of Personal Income Taxes*, starts with the conclusion that the states have need of a tax source with strong revenue growth potential in an expanding economy. For many reasons—principally tax fairness, aid to the poor, flexibility, and freedom from tax competition among the states—the income tax would be a very logical source. In addition, income taxes remain today the largest virtually untapped source of state and local revenues. The difficulty, however, is with the already noted federal presence in the income tax area, which has caused hesitation among state and local policymakers to consider an income tax. In the Commission's view, this presence is so overwhelming that it induces states to look elsewhere for revenue.

ENCOURAGES STATE TAXATION

With an eye to encouraging state-local adoption of income taxes, the Commission urges the federal government to take a large step toward permitting states to choose freely among the various available tax sources. This would take the form of a federal income tax credit of some 30 to 50 percent of income taxes paid at the state and local levels. (The credit would be optional, with the federal deduction of 100 percent of state-local income taxes paid still being available to taxpayers whose marginal tax rates exceed the 30 to 50 percent figure.) The credit would reduce the net income tax payable to the federal government and the states would thereby be stimulated to pick up the difference by raising their own income tax rates.

The potential of more funds for state-local use is only partly the purpose of the credit. State and local taxes are already deductible in computing federal income taxes, and in recent years this deduction has been equivalent to an average credit of some 25 percent. The Commission estimates that the additional cost (above the nearly $1 billion cost of the present deduction) to the United States Treasury would approximate only $1 billion. But the income tax credit would, in the Commission's view, have a tremendous psychological and political impact. By distinguishing state-local income taxes from all other forms of taxation—and by giving such taxes a high degree of visibility through lower federal income tax liability—the credit would permit a state to make a thoroughgoing review of its tax policy. An ultimate aim would, of course, be to induce more states to adopt income taxes as the principal means of raising their revenue. If this were achieved, the total amounts collected by the states under the optional credit system could readily approach the $6 billion now cited as the result of the Heller-Pechman plan.

It is obvious that these two plans—revenue sharing and state income tax credits—have almost no superficial features in common, although the general goals of both are similar: to place the states and local governments on sound financial footing now and for the unpredictable variety of tasks that lie ahead. With both proposals going off in other directions in some of their aspects, what can be said of the merits of one plan as against the other?

PREFERS TAX CREDITS OVER REVENUE SHARING

My own inclination is to regard the tax credit device as more traditional, more familiar to tax legislators, more readily acceptable to Congress from a budgeting standpoint, and, for these reasons, more practicable. Use of a tax credit as an incentive to foster particular activities is, after all, a concept that has appeared numerous times in the history of federal taxation. The existing foreign tax credit is merely one example. Moreover, the tax credit here proposed is more in line with traditional concepts of states' rights and independence than the Heller-Pechman plan. Under the credit device there would truly be no strings attached to the new revenue flowing into state and local coffers. There would be almost total independence from the federal government in revenue planning and revenue use.

The credit plan, therefore, has great political appeal—despite the ironic fact that it benefits low income states (whose Congressional contingent might be strongly attracted to the states' rights doctrine) far less than the Heller-Pechman plan, which clearly involves a redistribution of revenue wealth among the states. Also, the credit device bears the esthetic (and perhaps too idealistic) feature of carrying through to its logical end an apparently growing belief—that states and local governments should begin to bear the principal burden of handling and resolving domestic problems that beset the nation. Finally, this plan would (1) allow for differences among the states with respect to particular local needs and (2) permit relatively simple adjustments at the state level to meet any special or sudden crisis or condition.

Finally, the deduction for state and local taxes is criticized for being ineffective as a relief against the sales tax, which for the poor is the most onerous of all state and local taxes. This tax is paid in such small bits and scraps that taxpayers can rarely show how much they have actually expended in the course of a year. Although the Internal Revenue Service provides tables for a state-by-state approximation of sales taxes paid, the estimates consistently tend to be on the conservative side.

As for the system of categorical grants, there are few subjects in the entire area of inter-governmental relations that can arouse such emotion. Detractors contend that, like all handouts, federal grants fail to encourage initiative and independence at state and local levels. Since the more than 400 federal grants generally require monies to be spent for specific purposes—subject to various conditions including periodic accountings—the further point is made that these grants involve too much federal interference with state and local programs. And then, the federal grant system—currently involving distributions in excess of $15 billion each year—is a cumbersome one for the federal government (especially Congress) to handle. It involves constant administration and frequent revision, and constitutes a great incentive for Congressmen to spend a large part of their time in the rolling of logs.

True, all the returns on categorical grants are not yet in—and it may be too early to consider their discard in favor of a smoother and more efficient mechanism. Also, in some areas today, close federal supervision of state and local government is critically necessary. But it seems clear that a categorical grant system cannot do the entire post-Vietnam job. From a fiscal point of view, such a system is the very antithesis of the political philosophy that would encourage independence and innovation at state and local levels. In brief, the notion of expanding the categorical grant system—thereby further complicating the administration of this system—is not a very appealing one.

If state and local governments are to handle effectively their present tasks and yet assume new duties—in the areas of urban problems, poverty, violence and crime, housing, education, job-training, transportation, airports, pollution, and so forth—they will need other tools. Means to raise revenue, efficiently and without undue delay as widely varying needs become apparent, must be made available. Prevailing types of federal aid to state and local governments are not directed toward this goal, while many of the reform proposals made in recent years are. Two of these proposals, very different in some major respects, are of special interest.

One, a revenue sharing plan, has been supported by two eminent authorities on federal taxation and fiscal policy, Walter W. Heller and Joseph A. Pechman. The proposal is concisely outlined in a little booklet published by the Brookings Institute and entitled *Questions and Answers on Revenue Sharing*. Briefly, the proposal runs as follows: the federal government would distribute 2 per cent of its individual income tax base to the states on a permanent basis. In other words, two percentage points in each tax bracket would be collected by the federal government on behalf of the states. The remaining 12 to 68 percentage points would continue to be allocated on the federal level. Since the federal individual income tax base, by itself, is currently in excess of $300 billion, the proposal would result in at least $6 billion of distributable funds, even if (as the authors propose) the corporate income tax base is not taken into account.

These sums would be held in trust, similar to payroll taxes for social security purposes and motor vehicle and gasoline taxes for the

highway program. The trust funds would be regularly distributed to the states on a per capita basis (although the authors would allow for some modification of this formula to provide higher payments to states with low populations and a high incidence of poverty). The distribution would be, in the authors' terms, with "few strings" attached, although there would be some requirements for the states to fulfill. In particular, the revenue-sharing formula would include some provision for a portion of these funds to be passed through to local governments. Moreover, the states (and probably the local governments) would be charged with submitting annual audits on the monies received, as well as assurances that all applicable federal laws, such as the Civil Rights Act, have been complied with in the activities financed with these funds. Finally, the distributions to the states would be for their general purposes, as determined by them, except that the funds could not be used for purposes covered by categorical federal grants already in existence.

A relatively new section of the Internal Revenue Code, § 103(c) (signed on June 28, 1968), has attacked the most egregious abuses in this area by simply withdrawing the exempt status of interest on state-municipal obligations issued for the direct or indirect benefit of a private business. But the statute does not apply in many situations, and, in particular, not to obligations "issued as part of an issue, the aggregate face amount of which is $1 million or less, and substantially all of which are to be used . . . for the acquisition, construction, reconstruction, or improvement of land or property of a character subject to the allowance for depreciation." As Surrey has noted in commenting upon this section, "the ability to issue blank checks up to $1 million is still a nice thing in this world." Further, an even newer section of the Code (signed on October 24, 1968) would permit tax-free interest for state-municipal industrial bond issues of up to $5 million, provided that certain additional qualifications are met.

CRITICIZES DEDUCTIONS POLICY

The deduction for state and local taxes is disadvantageous for different reasons. First of all, this deduction is only available to federal taxpayers who itemize their deductions. Because of this, the deduction is virtually lost upon many wage earners, especially in low income groups, who tend not to itemize. Moreover, because the deduction is available for numerous types of state and local taxes, it is criticized by some as failing to guide the states toward one type of tax—namely, the income tax.

Among commentators with less of a preference for the income tax, it is recognized that the highly visible federal presence in the income tax area makes it both psychologically and politically difficult for states to choose this type of tax. For this reason, they argue persuasively that the federal deduction for state and local taxes should at least seek a neutral position among competing tax sources—by (1) granting tax advantages to state and local income taxes and (2) thus dispelling to some extent the cloud hanging over this type of tax at state and local levels. Support for this position is obviously based upon the conviction that the income tax—even if not necessarily the best type of tax in all situations—is a highly desirable and fair tax, and one that is readily adaptable to state and local needs.

QUESTIONS INVASION OF STATE CHOICE

On the negative side, the credit proposal is subject to the charge that the federal government should not interfere in the states' choices among competing sources of taxation. It was on this ground that some members of the Commission on Inter-Governmental Relations based their dissent to the Commission's conclusions. This objection, however, may be merely a matter of presentation. If the Commission's proposal is stripped of the paean to the income tax and, instead, presented simply on the ground of permitting states to choose freely among alternative tax sources, it should be more saleable as a political matter.

In contrast, the Heller-Pechman plan constitutes a far more extensive alteration of traditional concepts of taxation. Whether or not it is characterized as a plan with "few strings," under it the federal government would call many of the important shots. The federal attempt to ensure fiscal independence of local governments vis-a-vis the states would almost surely be met with the charge that the federal government—whether through its tax system or otherwise—has no business in thrusting itself to this extent into the states' internal policies. Further, the requirements of audits and compliance with federal laws might be likened to features currently criticized in the categorical grants system. Beyond this, it is difficult to see how the feature of the Heller-Pechman plan providing for redistribution of revenue wealth from high-income-low-population states to low-per-capita-income states could avoid sharp controversy in the Congress. Worth noting, too, is the administrative burden of the Heller-Pechman plan as compared with the income tax credit approach. Any plan in which revenue flows into and out of one pocket before reaching its final destination in another is bound to prove more costly than a similar plan under which revenue is collected directly by its intended final recipient.

Perhaps the safest observation about these two proposals is that the ultimate choice between them depends not merely on straightforward considerations of wise tax policy; rather, the basic political concepts underlying our entire federal system are deeply involved. Before adoption of the credit device, one of the major questions to be answered is whether the states are now prepared to make good and beneficial use of a greater degree of financial independence. In considering the Heller-Pechman proposal, one of the principal hurdles is whether it has any chance at all of proving attractive to Congress.

The federal-state policies of the past—involving, as they have, a limited amount of fiscal independence for the states, with resulting public criticism when that independence has been fettered by federal rules and restrictions—must be closely examined and evaluated. My own view is that—until we give them the means and the freedom to prove themselves—we cannot conclude that there is only a shallow measure of responsibility in state and local governments, or that those governments lack responsibility.

There is no reason to consider the two proposals—federal-state tax sharing and state-local income tax credits—as mutually exclusive, or as involving abandonment of the existing system of financial aid to the states. Nor is there any reason to consider the currently projected mathematics of these proposals to be immutable. Other alternatives exist, too, such as a complete revamping of the categorical grants system. Of course, the possibility exists that a study in depth will lead to the conclusion that all current federal responsibilities should be maintained at the federal level. And then there are the new proposals for supplanting or supplementing government programs through tax incentives to private industry.

In any event, immediate focus on determining the best alternatives is demanded if we are to solve the many domestic problems pressing in on us from all sides. The subject is not one for tax and fiscal experts only, but for all those who are interested in the potential of our federal system. Both political parties, as well as several of our leading newspapers, have begun to treat the question frequently and with growing concern. There is nothing particularly arcane about the desire to strengthen the financial stance of the states with an eye toward propelling them forward. And the hows and whys of the endeavor seem to lie as much in the field of the political scientist and sociologist as in that of the student of taxation.

PORT CHICAGO, A LESSON IN IRONY

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. WALDIE. Mr. Speaker, after an expenditure of some $20 million to acquire the homes of more than 3,000 persons in the town of Port Chicago, Calif., the Navy has informed me that it is cutting back the ammunition outloading operations at the Concord Naval Weapons Station and that more cutbacks are in store.

These operations, Mr. Speaker, are the ones that the Navy cited as the reason for the Port Chicago acquisition, largest condemnation of residential properties in our country's history.

An excellent editorial in the Pittsburg, Calif., Post-Dispatch accurately reflects the feeling of the people in this area and I insert this editorial in the RECORD:

LESSON IN IRONY

The stunning suggestion that Concord's Naval Weapons Station may be cut back sharply or even mothballed is a lesson in irony, one that must arouse keen resentment and bitterness among those forced to sell their homes in Port Chicago.

Indeed, the announcement comes while the little town is in the process of being bulldozed following the Navy's $20 million purchase to create a so-called "safety" buffer.

While details are sketchy, it now appears the expected withdrawal of troops from Vietnam has eased the war emergency status of shipping from the station. Apparently only the war emergency justified shipping ammunition to all the services through Concord since the Navy says it is cheaper to do so via a similar North Carolina facility.

The big question, of course, is how far the Navy may cut back the Concord station, assuming re-evaluation determines this is necessary. The Contra Costa facility, be it remembered, is the county's largest employer. So there is a worry the Navy may eliminate that payroll in full or in part while retaining its location for some future emergency.

Significantly, the Navy announcement from the capitol said further reductions at the Concord facility might be expected if exports to the Air Force and Army continue to be shifted to the East Coast. At the same time, the station's new commanding officer made the flat statement, "there is no plan whatsoever, no thought of the Navy as far as I know, of trying to move this kind of operation. It's just impractical."

And, he added, "As long as we have a fleet, we're going to have Concord." Further, the captain noted that 11 ships homeported at Concord, would continue to supply the Navy and thus the safety buffer still would be needed.

There is something about all this that is reminiscent of the dogmatic attitude we faced last year when the Navy won its long

fight to buy up Port Chicago. And now, as then, the tone sets the stage for a defense of the land holdings, no matter whether a cutback may be minor, sizable or a mothball job.

We are reminded, of course, that Pittsburg's Camp Stoneman posed a similar problem, on a far smaller scale. When reductions came, the first local effort was to continue the camp for the understandable, albeit selfish reason, that it represented employment.

A committee flew to Washington in this attempt. When that failed it became clear the Army intended both to close the camp and hold its land which was sizable acreage for a community of this size and located squarely in its geographic heart.

The same committee that had worked to continue the camp then went into action to remove it in entirety, so that the acreage could be freed for development. This was a reasonable goal but it took another trip to Washington and a couple years' work to achieve.

Similarly now, Contra Costa will have to be vigilant to make sure it does not find itself with a mothballed facility and thousands of choice industrial acres left idle, unproductive and off the tax rolls. The military are experienced squatters and we do not expect to see them easily persuaded to let go of any part of the land, no matter how severe the cutback.

It is true, of course, the Navy so far has only proposed to re-evaluate the Concord operation. Cong. Jerome Waldie, however, has claimed the Navy means to mothball it and we have every reason to believe the Congressman speaks from his on-the-scene Washington vantage point.

The possibility, in the wake of the $20 million spent last year to eliminate Port Chicago, cannot but leave both the evicted residents and Contra Costans angry and disgusted. For there are few in this area, rocked fiercely by that 1944 blast, who are convinced the Navy's "safety" buffer is any "safety" buffer at all.

Too, it remains an ironic footnote to reflect that even as the town is being levelled, the Navy—unless something has changed very recently—continues to operate under the same hazards that all but wiped it out in 1944. This time the means is to a far greater area of the county than 25 years ago.

And now, of course, the final irony is that, after all the arguments and the heartaches and the dollar cost, there is a possibility the station could be mothballed.

Under the circumstances, the Navy should be expected to come up with some good answers. The weapons station was called "temporary" in World War II. Last year it was labelled "permanent" to support the "safety" buffer argument. This year it could be mothballed.

The war situation is responsible for the variation in part. But not entirely. And we, for one, are going to be extremely interested in hearing the Navy's explanation, as well as its justification for hanging on to 12,000 acres of prime land.

DEATH OF FORMER CONGRESSMAN DONALD C. BRUCE

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. ADAIR. Mr. Speaker, I was shocked to learn last Sunday of the sudden and unexpected passing of our former Indiana colleague, Donald C. Bruce. Don served in the House during the 87th and 88th Congress. As a member of both the House Education and Labor Committee and the House Committee on Un-American Activities, Don Bruce quickly developed a reputation as a Republican who fought hard for principles of sound constitutional government as he understood them. As a former radio and television announcer, Don Bruce was an outstanding speaker and became much sought after by Republicans across the Nation for that reason.

Don Bruce was a man of courage and would not be dissuaded from speaking out on issues when he thought the policy of the U.S. Government was wrong. He was one of the few Members of this body to actively oppose the intervention by the U.S. Government in the Congo. He further challenged the policy of the United States as regards Cuba and was accused by some of being a warmonger, until former President Kennedy announced our blockade of Cuba and the presence of Soviet missiles there.

Above all, however, the safety and well being of the United States came first with Don Bruce. In this respect, he was an ardent foe of Godless communism and all that it stands for. It is with a great deal of sadness that we note the passing of our former colleague and above all a good American. Our hearts go out to his surviving wife, Hope Bruce, and her children in her hour of sorrow.

SOLDIER—STATESMAN—FRIEND

HON. WILLIAM L. DAWSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. DAWSON. Mr. Speaker, with my distinguished colleague from the State of Illinois, and from all sections of our great country, I join you today in special tribute to the memory of our former distinguished colleague, Barratt O'Hara—soldier, statesman, and friend.

Barratt's inspiring and impressive biography has been eloquently placed upon the RECORD of this House today, and having known him well over a long number of years, I proudly attest to the outstanding qualities manifest in his life which have so impressed all those whose paths crossed his. I would only add my personal salute to his great courage in fighting the just cause of freedom among all peoples of this earth.

It is truly a tribute to our system of government that this outstanding gentleman was repeatedly chosen by his constituents to represent them in the Halls of Congress for so many years, and that Barratt O'Hara met this responsibility in the finest American tradition.

Mr. Speaker, the Democratic banner waves more vigorously because it has been borne proudly by men of the caliber of Barratt O'Hara. His children, grandchildren, and great-grandchildren can take comfort in the knowledge that Barratt was truly a soldier, statesman, and friend. To the members of his family, I extend deep and sincere sympathy and I share their great loss.

THE CONGRESSIONAL INTERN PROGRAM

HON. JOHN V. TUNNEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. TUNNEY. Mr. Speaker, great is the danger to a nation when her young people seem to no longer have faith in her government. Great is the danger when those to whom the baton of leadership must soon be passed, reject both the baton and those who have run with it this far. The estrangement of many young people in modern America poses just such a danger to this country.

On a daily basis young Americans voice this disenchantment with their Government. Why is it that so many view with such distaste the actions of those elected to govern our country? Certainly, our actions as elected officials are not perfect—much of the criticism leveled at us is, no doubt, legitimate. Yet, why such vociferous opposition and such extensive estrangement?

Mr. Speaker, I would submit that a great deal of this disaffection for our activities here is, in fact, attributable to ignorance and detachment. I mean ignorance in the sense of a lack of information. And as for detachment, I am certain that we all realize that our average age of 52.6 is not conducive to excessive communication with the under-30, "turned-on" generation. Yet, Mr. Speaker, 53 percent of the people whom we represent in this Nation are under 30 years old.

I believe that ours is the soundest and fairest form of government man has developed. I believe that our actions in Washington seldom are reprehensible—and are often even enlightened; for I also recognize the immense complexities of the problems which beset us and the Nation. I also believe, given the facts, the vast majority of young Americans would concur with me.

How, then, I ask, are today's students to meet and come to know what we here face every day? I firmly contend that if more young people could actually participate in their Government—experience government, face the complexities of governing—they would be less estranged, for they would have shared with us the frustrations which we must face.

Since 1965 when the House authorized each Member to employ annually, on a temporary basis, a student congressional intern, each summer the Hill has been alive with active young people. They have not only worked hard and accomplished much for the offices in which they were employed; they have also experienced government. This is why the congressional intern program is so important.

The students who have come here in the summer have seen Congress in action. As they performed their assigned duties they have encountered the same roadblocks and frustrations with which we are confronted. They have worked with complexity—in "the system"—and in addition to problems, they have no

doubt experienced the satisfaction we feel when we can claim a real accomplishment.

So, these students—perhaps 1,000 each summer—benefit from their experience. In most cases they become less estranged; familiarity with our governmental process wears away at the bewilderment and distrust. Understanding, or perhaps wonder that we accomplish what we do, replace estrangement. Best of all, this education does not stop with these 1,000. Rather, they return to their homes and campuses from all over the Nation. Their friends ask about their summers—their jobs, what they saw, what they did, whom they met. The word spreads, it really does.

It is through such positive experiences that our young people will learn and begin to believe. A press release from my office will not convince the students at U. C. Riverside that the establishment in Washington cares about people. By coming to Washington, though, the men and women with whom the future of this country will soon be entrusted will begin to appreciate that they should not drop out—but should climb aboard and in that way change course if they feel it needs to be changed.

A logical conclusion, then, is that we should expand the intern program; get two paid students in each office; get the colleges to send them for a semester as part of a course; have a year-round program. I fully recommend such innovation. The money would be well-invested; for in years to come the dividends would be overwhelming.

However, reality dictates that the time is not ripe for expansion. In the past 2 years, for varied reasons, funds for the congressional summer intern program have been cut from legislative appropriations.

My office has been fortunate in that it has been possible for me to provide sufficient funds from personal resources and by soliciting private donations to hire a summer intern for 3 months each summer. However, there have been from three to six other students working in my office during these months; and they have either received very modest stipends through their colleges' intern programs or else have had sufficient financial resources to assure their own support.

The result of this situation is clear—the majority of students who are here in the summer are from relatively affluent economic backgrounds. Students from poorer families and students who must work in the summer to put themselves through school the following year are deprived of the opportunity of participating, even if they are both eager and capable.

I wish to commend the efforts of my colleague from California, the Honorable JOHN MOSS. Last week an admirable report on the congressional intern program, produced by him and his staff, appeared in the CONGRESSIONAL RECORD. This survey should further convince every Member of the importance of next week's appropriations for this program.

Restoration of the funding provisions of resolution 416 will be testimony to our belief in the leaders of tomorrow. It is not only for the students who will directly benefit that we should appropriate the funds, however. I believe we must do it for ourselves, and for the survival of our form of government.

AN AGE OF ANARCHY AND REVOLUTION

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. HÉBERT. Mr. Speaker, I would like to bring to the attention of my colleagues an article written by Henry Zac Carter, president of Avondale Shipyards, Inc., which appeared in that company's news journal Avondale Salutes.

I have known and have been a close personal friend of Zac Carter for many years. He is one of the most respected individuals in the Greater New Orleans area as well as in the State of Lousiana.

Zac Carter has my utmost respect because he has demonstrated through the years that he is one of those rare persons who is endowed with an intellectual prowess which enables him to grasp and comprehend a current issue or event and bring it into clear focus.

In his article "An Age of Anarchy and Revolution," Zac Carter has expressed his concise view of civil unrest in this country, a view in which I concur completely.

I insert it at this point in the RECORD:

AN AGE OF ANARCHY AND REVOLUTION

(By Henry Zac Carter, president, Avondale Shipyards, Inc.)

We are plunging headlong into an age of anarchy and revolution that can, and must be, stopped if we are to preserve this nation. In a country that, since its inception, has advocated peace, equality and freedom there are elements now at work which must be stopped by whatever legal means necessary. Constituted authority is being challenged by crime on our streets, mob violence, disorderly demonstrations and destruction on our campuses. Where these affect the safety or rights of the American citizen it is the responsibility of our elected or appointed representatives to stop such action and to punish the offenders to the fullest extent of the law.

No man deserves to live in fear. To be harassed or intimidated is beyond the basic concepts of this nation . . . and apathy on the part of any one in authority to protect our citizenry is a violation of our civil rights.

It is time that we also look at the structure and actions of the Supreme Court of this land. In recent years this body has taken it upon itself to be an agency of reform. Its members apparently believe that all of the social problems of America can be settled by judicial decree.

I strongly protest appointments to the bench of this highest court in the land on a lifetime basis or of those having inadequate judicial experience. Men grow old and senility is not unknown to even the highest intellect. Decisions must be handed down but let these decisions be in accord with the best interests of the people rather than upon any abstract findings that could be injurious rather than beneficial.

Apathy and excuses on anyone's part must be discouraged. We speak too often of a generation gap and of people deprived. Let us be logical. Only 4% of our student population is in revolt . . . let us also consider the other 96% who are attempting to gain an education.

The seizure practices of our student rebels is ominous in that it can overflow into the community. If we excuse the practice of seizure, and do not penalize those who are involved, it is reasonable to assume that the same tactics will soon be adopted by non-student groups. Businesses could be taken over by employees, the military would be vulnerable and customers may take over retail stores. This is socialism and, if allowed, its adoption could mean the end of capitalism in the United States.

Again relating to violence, responsible leaders must be developed among the black community. Too often this group is being used by the politician, dissident elements advocating revolution, and by personally ambitious persons in their own ranks. This element deserves our help but help only if force is not used to achieve a goal.

Violence has never been the American way of life and, if we are to preserve that life, we must eliminate those factors which produce it. Respect and support of an intelligent police force is essential. These people are employed for our protection and, conversely, they are also deserving of our protection. In no instance should the upper hand be given to the criminal or lawbreaker.

In this matter we all have something at stake. This is our country, our children, our neighbors. Too often we detach ourselves from the problems around us. The feeling is that it is happening to someone else, that it is not our problem.

Let me say that any concept that stipulates the overthrow of our country is wrong. We have laws that protect us but, strangely enough, these laws are not being enforced. At such times we must weigh the possibility that we are becoming a nation of politicians rather than statesmen. Laws must be enforced.

Yes, we are on our way to revolution and anarchy but there is still time to elminate these subversive elements.

SALUTE TO THE EMPLOYEES OF THE MILAN ARMY AMMUNITION PLANT

HON. EDWARD JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. JONES of Tennessee. Mr. Speaker, the employees of the Milan Army Ammunition Plant, Milan, Tenn., most of whom are my constituents and reside in the Eighth Congressional District, have recorded a most enviable safety record of 9,160,000 man-hours without a lost time injury.

This achievement entitles the Milan Army Ammunition Plant and its operating contractor, the Harvey Aluminum Sales, Inc., to claim an industry record for this type plant—shell assembly. This is due to many combined efforts but I would like to especially commend the employees in the plant and their outstanding plant manager, Mr. Frank C. Bryant.

It is my sincere opinion that this record should be recognized as a tribute to the thousands of west Tennesseans who loyally work each day in support of our Nation's servicemen, and I am,

therefore, taking this means of bringing it to the attention of my colleagues and the Nation.

THE NAVAJOS, FAIRCHILD, AND THE GOVERNMENT DEMONSTRATE A FORMULA FOR PROGRESS

HON. ED FOREMAN

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. FOREMAN. Mr. Speaker, on Saturday, September 6, I had the pleasure of attending the formal dedication ceremonies of the new Fairchild Camera and Instrument Corp. Semiconductor Plant at Shiprock, N. Mex., on the Navajo Reservation. Under the direction of the Navajo Tribal Council and its progressive chairman, Mr. Raymond Nakai, and with the assistance of a loan from the Economic Development Administration, this modern manufacturing facility was constructed to house the most advanced semiconductor electronic assembly equipment in the world.

The talents of the Navajo people extend beyond imagination. From these peoples come some of the finest craftsmen in the world—silversmiths, artists, and weavers. A Navajo woman weaves a perfectly patterned rug without ever seeing the whole design until the rug is completed. Weaving, like all Navajo arts, is done with unique imagination and craftsmanship, and it has been done that way for centuries.

Building electronic devices, transistors, and integrated circuits, also requires this same personal commitment to perfection. Therefore, it was very natural that when Fairchild Semiconductor needed to expand its operations, its manager looked at an area of highly skilled people living in and around Shiprock, N. Mex., a city of 8,000 people located in northwestern New Mexico on the vast Navajo Reservation.

Since 1965, Fairchild's Shiprock manufacturing and training operation has grown to almost 1,200 men and women, making Fairchild the Nation's largest non-Government employer of American Indians. All but 24 of the 1,200 are Navajo; in fact, of 33 production supervisors, 30 are Navajo.

The success of this operation can be easily measured in terms of growth and expansion. However, the real value of this progress lies in the creation of meaningful jobs for those who have not had jobs—jobs which keep them in the land they love and among the people they know. Most importantly, here is the vivid demonstration of the success of the cooperative efforts of the Federal Government and free enterprise industry working together in the development of individual initiative, achievement, excellence, and a better standard of living for mankind.

There are other similar Government-free enterprise cooperative efforts in successful operation in New Mexico utilizing the talents and skills of the Navajo, the Zuni, the Laguana, and others who have the ambition and will to work to improve themselves. We have the people with the desire to achieve and the space and resources to grow and develop—we invite and welcome others across the Nation to join us in the Land of Enchantment as a neighbor and partner in the progress of tomorrow.

Mr. Speaker, the Farmington Daily Times of September 5, 1969, has presented this successful human development story in an editorial, "A Gamble Which Paid Off," and I include it herewith in the RECORD for the review of our colleagues:

A GAMBLE WHICH PAID OFF

The new $1.1 million Fairchild Semiconductor plant which will be dedicated at Shiprock Saturday signifies the industrialization of a sleeping giant.

Staffed almost entirely by Navajos, the plant operates on a 24-hour-a-day basis, manufacturing transistors and integrated circuits that find their ways for use in computers, stereo equipment, communication satellites, and Apollo programs.

The delicate assembly work is ideally suited to Navajo skills developed through their long history of weaving and jewelry making. In addition to assembly jobs, the plant offers machining and tool and die making opportunities and has an extensive plant support services staff. Recently, in an attempt to increase employment opportunities for men, Fairchild initiated a new product assembly area utilizing the skills of a number of Navajo men.

The 34,000-square foot plant represents an imagination and belief in the potential of Indian Americans.

The plant, which operates on a $6,000 a month lease from the Navajo Tribe, also provides on-the-job training opportunities sponsored by the Bureau of Indian Affairs.

What started out as an apprehensive partnership has developed into a mutual admiration society.

Fairchild keeps its assistant personnel director, a Navajo, busy on weekends visiting Navajo chapter houses in the area explaining the plant's mode of operation, its employment requirements, and its general place in the community. Paul Driscoll, plant manager, refers to the employes as "very special people", whose industriousness and desire to learn is unmatched.

On the other hand, the employment has not only enabled the Indians to raise their standard of living, but they have found that age and education have little bearing on their ability to perform this useful work.

The employment record, officials say, also refutes old cliches about the inability of Indians to work at steady jobs.

The fact that Fairchild has gone from 50 to 1,200 employes in less than four years, is an indication of a basically successful and stable operation.

And certainly the plant's annual payroll of $4.3 million, much of which is spent in San Juan County, has given the area a tremendous economic boost.

If success can be described as finding jobs for those who have not had jobs and jobs which can keep employes in the land they love, among the people and way of life they know best, then Navajo-Fairchild plant is a huge success. The participants are to be commended for their foresightedness and their willingness to gamble on a venture which paid off.

LINCOLN POLICE REPORT

HON. ROBERT V. DENNEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. DENNEY. Mr. Speaker, during the congressional recess, I received a copy of annual 1968 report of the Lincoln, Nebr., police department. In this report of the activity of Lincoln police during the last year, the various aspects of police-community relationships were illustrated in an educational and interesting manner. In fact, one of the important uses for this bulletin is to assist the police in an extensive educational program for the city youth—a program which helps to explain why Lincoln experienced an increase of less than 1 percent in juvenile contacts last year after 2 successive years where there was an increase of 33 percent each year.

Lincoln is the largest city in the First Congressional District of Nebraska, the district that I represent. I am, therefore, quite concerned over the progress that Nebraska's capital city makes in stemming the growing tide of criminal actions.

It is distressing to note that Lincoln has kept up with the times in compiling a 35-percent increase in major crime during 1968. But on the positive side, the Lincoln police have cleared 30.3 percent of the 2,180 major offenses reported, an outstanding effort when compared to a national clearance rate for major crime of 20 percent.

The annual report outlines the services division and its role in making effective law enforcement. The approximately 3,000 sets of fingerprints taken, the 42,000 meals served to prisoners, and the 50,000 requests for police assistance processed by communication all help to tell the story of hard work behind the story of arrest in the newspaper.

Pictures of a policeman "frisking" a suspect, directing traffic, working his dog, and locating the parents of a lost boy all bring the policeman's work into perspective for school students who see him only as a man in a blue uniform.

Mr. Speaker, it is readily apparent that we can fight the crime of the future by fighting the criminal of the future, and we can do that best by building a relationship of respect and friendship between today's youth and the police. The city police department of Lincoln, Nebr., recognizes this fact and, therefore, it in turn deserves recognition.

RECOMMENDATIONS OF THE 55TH LEGISLATIVE ASSEMBLY OF THE STATE OF OREGON

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mrs. GREEN of Oregon. Mr. Speaker, on behalf of my distinguished colleague from the Second District, AL ULLMAN, and myself, I would like to submit some of the recommendations of the 55th Legislative Assembly of the State of Oregon to the Members of the House of Representatives for their consideration. The joint memorials, passed in the 1969 session, call for action by this body on issues of importance not merely to Oregon but to the Nation. The draft, water pollution, use of fish, timber, and wildlife resources, industrial development: these all spell

crucial decisions on where this country is going, and how we are going to get there. To have these Oregon Senate proposals heard, I am presenting a summary of their substance:

CHANGING THE DRAFT—SENATE JOINT MEMORIAL 6

To establish a selective service system based on a lottery in which all eligible persons are subject to the draft for 1 year after they reach 18 years of age. However, they may elect to defer the 1 year during which they will be draftable for a period of 4 years. This measure, designed to assuage present dissatisfaction with draft procedures, would relieve the duration of uncertainty as to jobs, education, and personal decisions.

STAVING OFF POLLUTION—SENATE JOINT MEMORIAL 11

To authorize money adequate to support the Clean Waters Restoration Act of 1966. In this way, the Oregon Senate feels, the Congress could show an increased measure of faith in the State and local efforts made under the Water Quality Act of 1965 and the Clean Waters Restoration Act of 1966. With such action, a more successful attack may be waged against the pollution of our Nation's waters.

WILDLIFE HABITAT PRESERVATION—SENATE JOINT MEMORIAL 4

To direct the Secretary of Agriculture and the Secretary of the Interior to accelerate programs to rehabilitate or preserve critical wildlife habitat on Federal lands administered by the U.S. Forest Service and the U.S. Bureau of Land Management. For accomplishing this, the legislature also asks that the Congress appropriate the necessary funds.

FISHERY DEVELOPMENT—SENATE JOINT MEMORIAL 5

To provide for adequate funding for full operation of the 21 hatcheries in the Columbia River fishery development program. Natural propagation of salmon and steelhead trout has declined drastically due to construction of more dams and water-usage projects; support for special fishery development is the only hope for preserving these important species.

LET US HAVE SOME DEFERENCE TO THE TAXPAYER

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. SNYDER. Mr. Speaker, as a longtime advocate of fiscal responsibility and governmental expenditure cuts, I wish to make a few remarks about what I consider to be questionable policies on the part of the administration.

When we were asked to extend the 10-percent surtax I have grave misgivings over whether it was right and just to vote for extension of an already-burdensome tax when we had no promises from the administration that there would be accompanying or commensurate decreases in Federal expenditures. I voted against the extension. A short time thereafter my worst fears were confirmed when a series of proposals were brought forth which I considered to be unwarranted, unnecessary, and extravagant expenditures for Congress to approve. I refer to such things as the John F. Kennedy Cultural Center and increases in overly huge governmental schemes of social experimentation.

My feeling is that there should be a definitely established hierarchy of areas in which cuts can and should be made. For instance, I believe that, before capital expenditure cuts are made in public works, we should cut military waste, social experiment programs—especially those with low cost-benefit ratios—foreign aid projects, farm subsidies—for nonproduction—and such things as rent subsidies.

I do not make these remarks because I have any pet projects which are threatened by the proposed reduction in Federal construction. Rather, I make them because I think that I am speaking not only for what I consider to be the best interests of my constituents, but for the interests of all American taxpayers as well.

It must be perfectly clear that I am forthrightly and unequivocally in favor of cutting the budget. However, I do believe that it represents poor judgment to talk about increasing foreign aid and welfare outlays while cutting back on the only tangible asset which the taxpayer realizes from the tax dollars he obediently sends to Washington.

The things which the President threatens to cut back on with this recent announcement—highway money, floodwall money, flood retention basins, dams, and reservoirs—are hardly adequate, much less luxurious, and are the only fixed assets which the guy who pays the taxes gets for his money.

New budget requests made since January 1, 1969, for additional authority for foreign assistance governing loans, grants, and credits total $10,028,000,000. The administration is asking for over a billion dollars more than was appropriated for foreign aid last year.

The newly proposed welfare reform will cost, at the very least, an additional $4 billion.

I honestly cannot conceive of having to go to my constituents and tell them that the badly needed construction projects in their area have been curtailed while we continue to add to the welfare rolls and ship our wealth overseas. I think that the people of Kentucky and America have the right to demand some consideration. They do not request extravagant outlays for dubious undertakings.

In the Fourth District of Kentucky, right now, there are several badly needed construction proposals—the Southwest Jefferson County Floodwall, the Dayton Floodwall, the Eaglecreek Reservoir, and the Falmouth Dam. These projects are vital and long in coming. It will be difficult for me to tell my constituents that the Federal Government is increasing welfare and foreign aid while they suffer water shortages, disastrous floods, and innumerable other tangible discomforts and inconveniences.

It will be impossible for me to explain to the people of northern Kentucky that, while the traffic congestion tightens its choking grip on them because of the absence of the Circle Freeway and the C. & O. bridge replacement, the Government is exporting $20.5 million to the Ryukyu Islands and other little heard of corners of the world.

Again, spending cuts are necessary, desirable, and vital to America. But we must approach this problem with a realistic set of priorities. Let us have some deference to the taxpayer.

Let us give him something for his money. Let us let him see some tangible results for the billions that he pays out annually—either in construction or actual services. In light of this, I wish to express my grave misgivings over the President's announced cutback in Federal construction.

I see no other course but to express strong objection and present vigorous opposition to this unrealistic and unjust policy.

TAX-EXEMPT STATUS OF MUNICIPAL BONDS SHOULD REMAIN AS INCENTIVE TO PROGRESS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. EVINS of Tennessee. Mr. Speaker, in the recent Tax Reform Act (H.R. 13270) passed by the House, the bill was considered under a closed rule with no opportunity to offer amendments.

This precluded consideration of amendments on several important provisions, including a provision which related to the tax-exempt status of municipal bonds.

The Nashville Banner in a recent editorial outlines basic objections to any change in the tax-exempt status of municipal bonds, pointing out that the removal of such status would place an unbearable premium on necessary and traditional financing of local improvements and projects.

It is certainly my hope that this provision relating to municipal bonds in the Tax Reform Act will be corrected in the Senate.

The Banner editorial follows:

[The Nashville Banner, Aug. 26, 1969]

IN TAXPAYER INTEREST—TAX EXEMPTION BELONGS ON STATE, MUNICIPAL BONDS

Metropolitan Nashville, and the State of Tennessee—among the host of those jeopardized by it—are strongly opposed to the Federal measure (HR 13270) which proposes to remove the tax exempt status traditionally granted municipal, state, and county bonds. So, surely, are the other 49 states, and 17,325 city and county governments. If not, they should be.

As discerned by those warning of its consequences, this maneuver, in the name of "tax reform," would put an unbearable premium on this necessary and traditional funding

operation—not only on future bond issues, but those already in existence. It would not militate toward tax relief or equity, but impose the added cost load on every taxpayer, large or small.

The "reform" claimed is illusory. As pointed out by Metro Finance Director Joe E. Torrence, regardless of arguments about "a few wealthy people who get by without paying an income tax because of their holdings of tax-exempt bonds, if this legislation goes through it will create a tremendous tax burden on all local taxpayers." It could cost municipal governments as much as two interest points, and "might make it impossible in some cases to go on the bond market with municipal bonds."

In testifying strongly against the ruinous legislative blow contemplated, Mayor Beverly Briley is speaking for more than Metro Nashville. As president of the National League of Cities, he is spokesman for the hundreds of municipalities represented therein—and his warning is apt. It is a blow both to the fiscal foundations of government at these levels, and to the time-honored concept of mutually-respected sovereignty. Note his reminder:

"The immunity of states and local governments and their agencies from federal taxation in the interest of their legitimate functions is vital for the preservation of our dual-sovereignty system of government. As important as the interest savings may be to local governments, and as important as the revenue loss may be to the federal government because of the tax-exempt character of municipal bonds, these factors are secondary to the preservation of the sovereignty of our states and the integrity of our local governmental system."

It is no secret, certainly, that the Federal Government in recent decades has preempted much of the tax field. It was in the state and local government interest—in the light of that—that President Nixon has proposed his revenue-sharing program. The financial benefits of that could be more than wiped out by this maneuver on the part of Congress. Worse, it would load on the whole taxpayer constituency—state by state and community by community—a burden they haven't borne before.

That isn't "reform" in the sense that term has been used by way of long standing promise. It is ASSAULT on every thinning pocketbook.

It is a maneuver of recklessness warranting resistance by every state and local government; and, beyond that, by every member of Congress—in both branches—employed to represent them.

THE RELUCTANCE OF UNCLE SAM'S BUREAUCRATS TO FIGHT POVERTY WITH "THE PILL"

HON. BOB ECKHARDT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. ECKHARDT. Mr. Speaker, Dr. Sar A. Levitan is one of the Nation's foremost experts on poverty and manpower problems. An article by Dr. Levitan and Mrs. Judith W. LaVor of the George Washington University Center for Manpower Policy Studies is most informative and brings hard facts into an area which has too frequently been dominated by myth; that is, the area of large families, the poor, and birth control. I recommend this article as basic reading; it follows:

THE RELUCTANCE OF UNCLE SAM'S BUREAUCRATS TO FIGHT POVERTY WITH "THE PILL"

(By Sar A. Levitan and Judith W. LaVor)

(NOTE.—Sar A. Levitan is director of The George Washington University Center for Manpower Policy Studies, and Mrs. Judith W. LaVor is a research assistant with the Center.)

The vast majority of the American public favors birth control, and there is general agreement that it is the most effective antipoverty tool per dollar spent. Nonetheless, federal support of birth control programs is extremely limited and has proceeded haltingly. Whatever progress has been made in this direction must be largely credited to pressures by President Johnson and Congressional willingness to appropriate funds. The blame for the slow progress of birth control programs for the poor must be placed at the feet of federal officials who have circumvented or prevented their expansion. This failure on the part of bureaucracies to adjust to changing conditions is another illustration of the ability of federal agencies not only to disregard public sentiment, but to stymie Presidential prodding and Congressional intent.

THE EFFECTIVENESS OF "THE PILL" IN FIGHTING POVERTY

There is a high correlation between family size and the incidence of poverty. Mollie Orshansky, known for her development of poverty statistics, reached the obvious conclusion that "the larger the family, the greater the poverty hazards for children. . . . The poverty rate for all families with 5 or 6 children is three and a half times as high as for families with 1 or 2 children."

Risk of poverty increase with family size

[Percent of families in poverty, 1966]

Number of children:	
1	9.3
2	10.3
3	12.8
4	18.6
5	27.7
6 or more	42.1

Even if couples elect to have larger-than-average families, an argument can still be made for promoting birth control because many children born to poor families *are* unwanted and are frequently a cause of poverty. The misery of many families might have been prevented with an effective birth control service. Despite popular myths, the desire to limit family size is almost universal, cutting across social, geographic, economic and racial lines. Studies indicate that low-income couples want fewer children than those with higher incomes, and nonwhites want no more than whites. The poor are well aware of the connection between excess fertility and poverty, but their aspirations are frequently unrealized.

There were approximately 8.2 million women of childbearing age (15 to 44 years) in 1966 who were poor or near poor. It is estimated that about 5.3 million of these women were fertile and were neither pregnant nor seeking pregnancy. These women would have benefited from birth control services. "Medically indigent" women are frequently unaware of or unable to afford contraceptive devices, and their fertility rate during the first half of this decade was 153 births per thousand compared with 98 per thousand among more affluent women. If the poor and near poor had access to and understanding of contraceptive techniques equal to that of the nonpoor, their fertility rate could have been expected to decline to the same level. Based on these calculations, unwanted births in low-income families could have been reduced by about 450,000 in 1966.

The reduction of birth rates among the poor would have many positive effects. There would be fewer children born into poor households, and fewer households would be driven into poverty because of unwanted children. This would, of course, reduce the number of the poor, help keep people out of poverty, and arrest the accelerating costs of relief.

A well-known illustration of the effects of such an effort is the family planning program established in 1961 by the Mecklenburg County, North Carolina Departments of Health and Welfare. After four years in operation, the program was cited as an outstandingly successful effort, and there were no reported pregnancies among the more than 1,500 women who participated on a continuing basis. The Aid to Families with Dependent Children caseload for the county had been rising at a rate of about 300 children a year before the inception of the program. After a year of operation the number leveled off, and after six years the number of children receiving AFDC was smaller than it was at the beginning of the program. This occurred despite the rapid population growth of Mecklenburg County. With an approximate patient cost of less than $25 per year and an annual AFDC cost of more than $300 per child, the cost effectiveness of the birth control program is obvious.

The cost of providing birth control services to all low-income women is not large in relation to total antipoverty and welfare expenditures, but at the present time less than a fifth of the five million needy women receive these services. Joseph Kershaw, OEO's first antipoverty planner, concluded that "family planning . . . is probably the single most cost-effective antipoverty measure." The projected cost of providing a patient with a medical examination and contraceptive devices is about $30 annually; a comprehensive program would cost about $150 million.

Decreased welfare costs are only a part of the total savings that accrue from birth control programs, and AFDC payments are only one of the many direct and indirect costs of poverty. Dollar savings are far from being a major justification for birth control assistance. The primary goal is the reduction of human misery, and many benefits of lower fertility among the poor cannot be measured in terms of dollars and cents.

For instance, birth control programs can substantially improve the health of many of the poor. By making physical examinations available to low-income women, the presence of cervical cancer and other diseases can be detected and treated. Family planning can also eliminate the health hazard of frequent pregnancy, draining the mother's energy, causing anemia, and contributing to high maternal death rates. Availability of birth control services, while not a substitute for realistic abortion laws, would also reduce considerably the number of deaths caused by badly performed abortions. No statistics are available, but it is estimated that more than a million women (many of whom are married and already have children) obtain illegal abortions in the United States resulting in thousands of deaths each year.

The health of children can also be substantially improved by birth control. HEW has confirmed that spacing of children reduces the incidence of premature births, physical defects, mental retardation, and infant mortality. An additional benefit of fertility control is that children in smaller families are less likely to be candidates for a life of poverty than children in larger families.

CHANGING ATTITUDES TOWARD BIRTH CONTROL

The reluctance of federal officials to fund birth control programs reflects persistent prejudices and a disregard for the facts. Diverse groups have nourished these prejudices. Self-styled spokesmen for relief recipients,

for example, have charged that birth control programs are a plot against mothers on relief. This allegation is just as much a myth as the image of welfare mothers breeding children to increase their monthly checks. In fact, only 14 percent of the five million women needing birth control services are on welfare, and welfare payments hardly provide a minimum standard of living.

Some resistance to birth control services has been voiced by militants who see it as a plot to reduce the black population, but in fact Negroes account for only 30 percent of the potential clientele, and the program is totally volitional. More significantly, the Negro community, especially women with low incomes who would benefit most from the services, have given no support to the militant rhetoric and have staunchly upheld what birth control programs they now have. There is little doubt that the poor would take advantage of accessible birth control services.

Resistance to expanded birth control programs has come from segments of the public other than the poor, but it is diminishing. For at least a decade a majority of American females of childbearing age has approved of birth control, and the consensus has increased rapidly in recent years. In 1965, 85 percent of white and 82 percent of nonwhite women approved of fertility control. The largest increase in approval between 1960 and 1965 was registered among southern Negro women and white Catholic women with a college education. Approval among the former group increased from 60 to 79 percent, and among the latter from 52 to 70 percent. These figures are for unspecified contraceptive methods; the rhythm method alone is almost universally accepted.

This changing public attitude has had its effect on both presidents and Congress in recent years. President Eisenhower considered birth control a private matter unfit for public discussion, much less for federal support. His views later changed and he observed that it is the obligation of the government to consider "the plight of those unborn generations which, because of our unreadiness to take corrective action in controlling population growth, will be denied any expectations beyond abject poverty and suffering."

Advocates of birth control found a staunch and consistent friend in President Johnson. He felt that poor as well as rich families should "have access to information and services that will allow freedom to choose the number and spacing of their children within the dictates of individual conscience."

Congress has shown its support for expanded birth control programs on several occasions. It earmarked, in the Social Security amendments of 1967, 6 percent of the maternal and child health appropriations of HEW's Children's Bureau for family planning. In addition, it extended Medicaid coverage to birth control services, and required that they be offered to AFDC mothers. In the same year Congress instructed the Office of Economic Opportunity, which had taken a hesitant lead in providing birth control services to the poor, to place greater emphasis on its program. These actions received bipartisan support and marked the demise of major opposition to birth control in the legislative branch.

THE GRUDGING ANTIPOVERTY WARRIORS

Responsibility for the slow implementation and financing of birth control programs rests with two agencies: the Department of Health, Education, and Welfare and the Office of Economic Opportunity. These agencies assigned low priority to birth control and failed to allocate adequate resources. HEW provided even more of an obstacle by refusing to acknowledge the need for birth control. Even when Congress specifically earmarked money for this purpose, HEW lagged in spending it. While OEO did initiate federal birth control programs for the poor, it hardly assumed the leadership that befitted its experimental and advocate position in the war on Poverty. Although OEO responded more actively than HEW to pressures to fund birth control projects, its activities left much to be desired.

By funding a family planning program for Corpus Christi, Texas, in December 1964, OEO became the first agency to take even a timid step into federal involvement in domestic birth control programs. But the agency from its beginning tended to soft-pedal these programs. Some observers claimed that top OEO officials objected to them on religious and moral grounds, and indeed there was a evidence that they feared the reactions of church groups. One wag suggested that birth control was not actively supported because instant success could not be claimed. OEO itself has rationalized its timidity on the ground that excessive zeal in this area would open the agency to criticism and place its other programs in jeopardy. This argument is not persuasive in light of the demonstrated effectiveness and the increased public acceptance of birth control. Moreover, OEO did not shrink from funding controversial projects in other areas, but exercised more caution than was justified in supporting birth control projects.

Whatever the reasons for its hesitancy, OEO allocated during its first five years only 0.9 percent of its total Community Action Program funds to family planning projects, showing a caution unsupportable by Congressional and public opinion. In response to Congressional inquiries. Sargent Shriver, OEO's first director, admitted that his agency was receiving more applications than it could fund. But still he refused to recommend that family planning funds be increased or to reallocate funds from other programs. Nonetheless, OEO could not ignore the mounting Congressional pressures, and funds allocated to birth control projects slowly rose. By the middle of 1969 the number of projects had risen to 168 at a cost of nearly $13 million, but this amount included funds for research as well as for direct services to the poor. Expenditures are expected to reach $15 million in fiscal 1970.

OEO's gingerly approach to birth control was reflected not only in the skimpiness of allocated funds, but also in the regulations imposed on grantees. Contrary to the usual OEO policy of trying to secure maximum feasible visibility for its activities, the agency prohibited grantees from using OEO funds to advertise the program, thus forcing project administrators to rely upon local resources to publicize it. This approach was out of character with OEO's usual policy and led one sympathetic columnist to observe that OEO permitted only whispering about its birth control activities. Local contributors often assumed the costs of advertising in the mass media, and this was counted as a part of the local share needed to offset the federal grant. Initially, OEO tried to further restrict the use of family planning funds by prohibiting the issuance of contraceptives to unmarried women. The regulation was rather weakly enforced in most cases; grantees were reportedly encouraged by some OEO officials to circumvent the instructions and juggle bookkeeping entries to show that non-federal money was being used to supply materials to unmarried women while federal funds were used only for married women. The unrealistic restriction drew considerable public criticism, and in 1966 the community action agency in the nation's capital rejected an OEO family planning grant because its directors and neighborhood groups viewed the prohibition as objectionable and unenforceable. When Congress stepped in and placed greater emphasis on family planning in 1967, it instructed OEO to leave the requirements and eligibility criteria of family planning projects to local communities, thus nullifying many of the initial program restrictions.

OEO's community action agencies received all family planning grants with the option of running them or delegating them to other agencies. Planned Parenthood-World Population, with its experience in running programs, was the major delegate agency. More than a fifth of the organization's $15 million annual budget comes from OEO. Planned Parenthood used OEO funds to open neighborhood family planning clinics in the areas of greatest need.

Reflecting the lack of coordination and enthusiasm at the national level, there was little cooperation among the local agencies involved in birth control. One exception, and a possible model for other communities, was the OEO-funded Los Angeles birth control program in which 10 area agencies banded together to provide a single organized program for the area.

HEW TRIES TO IGNORE SEX

While OEO was being pushed into sponsoring birth control programs, HEW continued to resist, ignoring public concern about birth control as long as possible. The funds earmarked by Congress specifically for it amounted to $12.5 million in fiscal 1969, and are scheduled to rise to about $21 million in three years; additional coverage is available under the Medicaid program, and services must be offered to welfare mothers. But HEW has been unable—some charge that it has been unwilling—to effectively utilize these resources and develop a large-scale birth control program. A 1967 report, prepared for HEW by a team of experts headed by Oscar Harkavy of The Ford Foundation and released by HEW Secretary John W. Gardner, documented the agency's recalcitrance in this area. The report pointed out that in the sprawling HEW bureaucracy, less than 10 professionals were assigned full-time to family planning. In December 1967, Secretary Gardner appointed a Deputy Assistant Secretary to coordinate all federal birth control programs. But the effect of this office on the development of birth control progams remains uncertain since it is isolated from program operations and is inadequately staffed, though Secretary Robert Finch has indicated a strong commitment to expand HEW birth control programs.

Until recently any birth control services provided by HEW funds were minute and anonymous; there are no data to support the agency's claim that in 1968 it served one million women. The best guess of knowledgeable public and private officials is that fewer than one million women were being served by *all* programs. HEW's claim is further tarnished by the fact that it has had no reporting or data-keeping system whatsoever for birth control.

States are now required to submit timetables for extending state-wide family planning services in their maternal and child health plans. The Social Security amendments require that such services be available to all medically indigent women by 1975. It remains to be seen whether HEW will have the will or the personnel to monitor the plans and provide the necessary assistance to communities attempting to develop programs.

Perhaps the most serious obstacle to an expanded birth control program has been the attempt of Children's Bureau physicians to use family planning funds to provide the equivalent of comprehensive maternal and child health care. The physicians responsible for program content urge, if not insist, that family planning projects include social and counseling services, nutrition experts, various types of nurses, and nearly every type of medical and paramedical personnel. Given this orientation, one wonders how much emphasis will be placed on actually providing needed birth control services, and indeed how much of the funds earmarked by Congress

will actually be spent on them. The broader type of family planning advocated by HEW officials is undoubtedly beneficial to those receiving it, but the focus of the already meager birth control funds should be on wider distribution of "the pill."

In addition to HEW's Children's Bureau, the Public Health Service is responsible for getting birth control services to American Indians and Alaskan natives. Its performance for these special groups has been no better than the efforts of the Children's Bureau. It is apparent that HEW finds it difficult to operate service programs that place it in direct contact with potential public controversy; however, the agency is able to perform on a sizable scale and without qualms in the more abstracted area of research. The National Institutes of Health's Center for Population Research studies all aspects of contraception and has made grants to universities and other private research groups to find safer, more convenient ways to control fertility. With an annual budget of $6.5 million, the Center has also performed research, filling gaps that the drug industry left unattended lest new products reduce profits. The willingness of NIH to subsidize birth control research has not been manifested by the Children's Bureau, the Public Health Service, and OEO in the area of direct birth control services for the poor.

DELIVERY OF SERVICES

Birth control programs must, to be effective, be implemented in neighborhoods where the need exists. Contraceptive services are often provided to postnatal patients in hospitals and to women in pediatric clinics and health departments; it now remains to make delivery of these services to the poor a major program. There is evidence that the response to easily accessible neighborhood family planning clinics is greater than to centralized clinics offering a variety of psychological, social, and counseling services. OEO's community action agencies often provide family planning in neighborhood multi-service centers or set up small decentralized clinics specifically for birth control information and service. While this kind of setup is workable in well-populated areas, rural areas and small towns pose a problem. Service to these areas could be achieved relatively inexpensively by equipping mobile vans, staffing them with minimal personnel (a physician plus a nurse or trained subprofessional), and sending them out to the countryside. The vans could be utilized in urban areas as well.

The accessibility of facilities does not guarantee use unless the poor are reached and advised about the availability and content of services. The OEO programs use subprofessional residents of the areas to be served for this function. Popular outreach methods include door-to-door informational campaigns, group meetings, and in some cases even the utilization of male workers to inform and encourage support from the local men. Ancillary services such as transportation and babysitting are often provided to make it easier for women to attend the clinics.

A birth control clinic can be established nearly anywhere as long as there are separate rooms for reception, examination, and nurse consultations. The cost of equipment is not great and the bulk of the funds is spent on personnel. The services of a physician and a nurse are required; subprofessionals perform other tasks such as education, interviewing, outreach, and maintenance. With these facilities adequate services and health precautions can be provided; any more would be of peripheral value, and some irrelevant.

One problem that is inevitable in relation to any expansion of health services is the critical shortage of physicians. Perhaps eventually certain professional standards will have to be modified to allow registered nurses or medical interns to perform the necessary simple examinations and to prescribe contraceptive devices. While this would most likely arouse charges of "cheating the poor," services by credentialed professionals are not necessarily synonymous with high quality medical care. There is little evidence that years of medical and postmedical schooling are needed to provide birth control assistance. Adequate training programs should be established for all professional and subprofessional personnel involved in the delivery of birth control services.

WHAT WILL THE NIXON ADMINISTRATION DO?

Federal officials charged with the responsibility of funding birth control efforts managed to ignore Congressional mandates and repeated urgings by President Johnson. Foot-dragging, if not outright sabotage, characterizes the activities of many federal health officials who should be concerned with family planning. As a result, birth control programs currently serve less than a fifth of the potential clientele. If birth control programs for the poor are to be expanded, pressure from Congress must continue, backed by adequate appropriations, and the President must provide leadership both inside and outside the government to insure that birth control services will be available to all.

The early months of the Nixon administration do not justify optimism that the federal government will provide the active leadership and resources needed for effective birth control. The new administration has shown an inclination to avoid controversial welfare issues and to expand programs in aid of the poor only in response to pressures generated in connection with specific issues.

While the President finally broke his silence on the issue in mid-1969 with a population message to Congress, he has yet to make clear his specific intentions. Nixon called for increased contraceptive research, personnel training, and challenge the lack of federal coordination and commitment to birth control services to all who need them, but his only concrete action was to recommend a Commission on Population Growth and the American Future to "study" the problems of population. The commission is a tried and true method of avoiding action and "coordination" is no substitute for an increased commitment of resources. One wonders if birth control will receive the promised and needed priority.

Public and Congressional pressures will still be needed to prod the President into assuming a more active role in the expansion of federal birth control programs. It is hoped that President Nixon will consider the present demands and expand services to all those who need them, instead of establishing commissions to delay facing the problems.

TRAGIC DEATH OF A CHAMPION—ROCKY MARCIANO DIES IN PLANE CRASH

HON. FRANK ANNUNZIO

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. ANNUNZIO. Mr. Speaker, I rise today to pay tribute to the late Rocky Marciano who died tragically in a plane crash on August 31, 1969—the eve of his 46th birthday. All over the world, from Paris, to Rome, to America, his death is mourned by all who knew of his legendary career in the world of boxing.

Rocky, who was world heavyweight boxing champion, retired undefeated after winning 49 fights—43 of them by knockouts. He won the world heavyweight title in 1952 by a 13-round knockout of Jersey Joe Walcott, and successfully defended his crown six times before his retirement. He was elected to boxing's Hall of Fame in 1959.

The world has suffered the loss not only of a great fighter but a great man—for Rocky possessed a dauntless courage, boundless humility, and a heart full of kindness and love for his fellow man. It was these qualities that endeared him not only to his friends, but to those he defeated in the ring.

Rocky Marciano earned the genuine admiration and deep respect of all who knew him, and his career was an inspiration to our youth. Those of us who had the privilege of knowing him as a friend for so many years deeply mourn his passing, and our hearts go out to his bereaved family.

Mrs. Annunzio joins me in extending our deepest sympathies to his wife, Mrs. Barbara Marciano, to his daughter, Mary Ann, and to his son, Rocky Kevin, on their great loss.

In the Washington Post on September 2 an article appeared on the life and accomplishments of Rocky Marciano. It accurately portrays the life of an outstanding champion who possessed great strength and integrity. The article follows at this point in the CONGRESSIONAL RECORD:

FORMER HEAVYWEIGHT CHAMP DIES AS PLANE FALLS IN IOWA

Rocky Marciano, the only heavyweight boxing champion to retire undefeated, was killed on the eve of his 46th birthday.

He died with pilot Glenn Belz, 37, and Frank Farrell, 23, both of Des Moines, Iowa, in the crash of a single-engine Cessna plane Sunday night on a farm near Newton, Iowa.

The plane struck a tree. Mr. Marciano's body was pinned beneath the main wreckage and a piece of debris pierced his skull. All three men were killed instantly, according to the county medical examiner.

They were en route to Des Moines from Chicago for a party at a steakhouse to celebrate Mr. Marciano's birthday. A flight service official said Belz notified him about 10 p.m. EDT that he was going to land at the Newton airport and gave no indication that he was in trouble.

RETIRED IN 1956

The crash apparently occurred a short time later. Mr. Marciano had planned to fly to his home in Fort Lauderdale, Fla., yesterday for a birthday party with his wife, Barbara; his daughter, Mary Ann, 16, and his 17-month-old son, Rocky Kevin.

Mr. Marciano announced his retirement on April 27, 1956, after winning all 49 of his professional bouts, 43 by knockouts. His last bout was against Archie Moore, former light-heavyweight champion, on Sept. 21, 1955. He knocked out Moore in the ninth round in his sixth title defense.

CONSIDERED COMEBACK

Mr. Marciano was knocked down only twice, by Moore and by Jersey Joe Walcott, from whom Marciano won the title with a 13th-round knockout on Sept. 23, 1952 at Philadelphia.

His fight with Walcott was regarded as the best heavyweight bout since Jack Dempsey knocked out Luis Firpo of Argentina in the second round in 1923.

Mr. Marciano revealed in 1966 that he considered making a comeback in 1959, after Ingemar Johansson of Sweden won the title from Floyd Patterson, but abandoned the idea after several sessions of training in private convinced him that he could not get into proper condition.

Although he weighed 13½ pounds at birth in Brockton, Mass., the oldest of six children born to Italian immigrants, he was the second shortest and second lightest heavyweight champion at 5-foot-11 and 185 pounds. Bob Fitzsimmons was a half-inch shorter and weighed 162. Marciano did have the shortest reach, 68 inches.

WORE DOWN OPPONENTS

But he was blessed with stamina, trained almost constantly and wore down many of his opponents with his clubby arms and powerful fists.

He was 23 years old when he fought his first professional bout knocking out Lee Epperson in Holyoke, Mass., in the third round. Mr. Marciano won his first 16 bouts by knockouts, nine of them in the first round.

He fought in Washington during that streak, stopping Gil Cardione in the first round on Sept. 30, 1948.

FIGHTS GROSSED $4 MILLION

Mr. Marciano's fights grossed $4,003,580. His purses, before taxes and his manager's cut, for seven championship bouts totaled $1,460,338.

He knocked out former champion Joe Louis on Oct. 26, 1951, in a nontitle bout and Louis retired after that, except for exhibition bouts.

Besides Louis and Moore, Mr. Marciano twice defeated Ezzard Charles, another former champion, once by decision and later on an eight-round knockout. Both victories came in title bouts in New York.

He was elected to Boxing's Hall of Fame in 1959.

In 1946, a year before he began his boxing career, Mr. Marciano was given a tryout as a catcher by the Chicago Cubs' baseball club, but although he hit well he did not throw well enough.

The son of a shoemaker in a city known for that industry, Mr. Marciano quit school at 14 to augment the family income and worked at digging up streets, dishwashing, candy making and truck driving before he turned to boxing.

Al Weill, who had managed other boxing champions perceived potential in Mr. Marciano's strength despite his awkwardness and promptly put him to work under Charlie Goldman, a trainer of note.

WEILL CHANGED HIS NAME

At birth Mr. Marciano was Rocco Francis Marchegiano and it was Weill who changed his name. A friend of his father, Peter, sent the parent a pair of boxing gloves with a card on which was printed, "Hail to the Champ."

There was no hint that the prophecy would be fulfilled until he served with the Army in Wales in World War II and was urged by friends to cut down to size a bully in the camp. He was selected because he was so rough in football and baseball games.

He had not boxed previously but he knocked out the bully in two rounds. When Mr. Marciano returned to the United States he began sparring at Ft. Lewis, Wash. After his discharge he boxed as an amateur and later persuaded Weill to handle him.

He used to thumb his way from Brockton, Mass., to New York City, to save money.

Although Mr. Marciano was frugal, he lost money in several investments after he retired from boxing. But he was believed to have retained the bulk of his ring earnings and associated income, which was estimated to total about $1.7 million.

DEATH MOURNED IN EUROPE

Boxing, being an international sport, Mr. Marciano's death was big news in Paris, Rome and elsewhere in Europe. In Ripa Teatina, Italy, where his parents were born, many of the 3,000 inhabitants gathered in the town square to mull over the news. Condolences were offered to a cousin.

In Chicago former champion Cassius Clay/ Muhammad Ali said, "He was so great and so popular and yet he never showed conceit. I got to know him when we were filming a computer fight not long ago, but Rocky will never get to know how it comes out. For a guy his age he was in just as good a shape as me (27). For a week after that I couldn't lift my arms because the body punches were for real."

"SADDEST NEWS" FOR LOUIS

Who would have won a real fight between them? Clay was asked.

"Marciano would never say that he could beat me," Clay said, "and I won't say I could beat him. It would have been a real fight."

In Charlotte, N.C., Joe Louis said, "This is the saddest news I have ever heard. When he defeated me I think it hurt him more than it did me. He sent a message to my dressing room saying he was sorry. He just had a good heart."

Mr. Marciano's body was taken to Brockton for a requiem mass at 10 a.m. Thursday. It will then be taken to Fort Lauderdale, for another. Burial there is set for Saturday.

GEORGE L. GOLDMAN, BENEFACTOR

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. BOLLING. Mr. Speaker, on September 1, I and thousands of other Kansas Citians lost a dear friend. There are few men of whose death such a statement can be honestly made. But the more than a thousand people who attended George L. Goldman's funeral prove the accuracy of that statement.

The Kansas City Star editorial which follows tells of George Goldman's remarkable life and contributions to his fellow men:

GEORGE L. GOLDMAN, BENEFACTOR

In describing the remarkable George L. Goldman and his never-ending good deeds, a friend once spoke of him as a lamplighter who in his walk through life "made life brighter and more secure for many others." It was a modest but accurate way of summing up this native Kansas Citian who died yesterday at the age of 80. He was an outstanding civic leader, business executive, philanthropist, fund raiser extraordinary, benefactor of youth organizations and athletic programs and even a one-man ecumenical movement.

There was another side of George Goldman that was most prominent in his earlier years. Along with being a star basketball player who eventually was named to the Missouri Sports Hall of Fame, Mr. Goldman was an excellent singer. His fondness for show business led him into the production of minstrel shows in the 1920s and 1930s. He once estimated that he had staged more than 100 of these events, all for benefits of one kind or another.

It was in this same period that he served as an alderman and councilman. As president pro tem of the city council, he functioned as acting mayor. In that capacity the tall, distinguished-looking Mr. Goldman welcomed Queen Marie of Romania and Charles A. Lindbergh to Kansas City. Lindbergh came here to dedicate the Municipal Air Terminal in 1927. The farsighted George Goldman had envisioned the potential of aviation for this community and had worked to establish the convenient airport site.

Although Mr. Goldman was not a seeker of recognition, he was honored publicly many times. He was proudest, perhaps of a Benemerenti medal bestowed on him by Pope Pius XII for distinguished service to the church. Mr. Goldman, of the Jewish faith himself, had been president of the Catholic Youth Organization. With his brother and jewelry firm partner, Fred Goldman, he had built an athletic field that later became the C.Y.O. stadium. Mr. Goldman was as generous in assisting Protestant churches and their activities as he was in supporting Jewish and Catholic undertakings. His foremost purpose was for the people to work together regardless of creed or race.

When he was invited to meet with other civic leaders in the interest of a new enterprise or one that was in difficulty, there was a tendency to "let George do it." George Goldman, ever gracious and gentle, invariably responded. His interest in helping Indians near Grand lake in Oklahoma, a favorite fishing place of his, led to his being named a member of the Cherokee nation. An appropriate Indian name for him would have been "Chief Great Heart." For George Goldman, the bachelor who did so much for this community's young people, was a grand human being as well as one of our finest citizens.

NATIONAL FOREST TIMBER SUPPLY ACT

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. McMILLAN. Mr. Speaker, an excellent article which dramatically points out the need for intensive management of our national forests appeared recently in the Oregonian, a highly respected and authoritative newspaper in the Nation's No. 1 timber State. Written by Mr. Herbert Lundy, editor of the Oregonian, the article describes the devastating losses of timber caused by fir bark beetles, and warns that further losses can be expected unless Congress is convinced that "intensive forest management is good business for everyone." That means commercial timber operators, outdoor conservationists, the U.S. Forest Service, and most importantly the American taxpayer.

Mr. Speaker, such intensive modern management of our national forests is the purpose of the proposed National Forest Timber Supply Act which I have introduced along with more than 60 colleagues in the House. The need for this legislation arose from our concerns in meeting the housing needs of our country both in the next decade and the years beyond. The Forests Subcommittee of the Committee on Agriculture, of which I have the honor to serve as chairman, has held extensive hearings on this legislation which has been substantially revised to meet certain concerns raised by conservation groups about the effect on multiple use. My subcommittee will meet next week to consider this legislation in executive session and hopefully we will have this much needed program ready for your consideration in the near future. I urge my colleagues to read Mr. Lundy's most perceptive comments which I would like to submit for the RECORD.

The article follows:

FIR BARK BEETLES MAKE CASE FOR INTENSIVE FOREST CARE

The House Appropriations Committee has just added $6.9 million to the U.S. Forest Service budget in recognition of industry demands for intensified management programs. It isn't a drop in the bucket of need. In fact, the federal government is many years behind in its politically-hamstrung management of its multi-billion-dollar timber resource.

The rangers and supervisors of the Forest Service know what needs to be done but they don't have the money and manpower to do it. Let's have a look at a recently visited section of the Gifford Pinchot National Forest across the Columbia River in Washington.

There is a resurgence of the Douglas fir bark beetle in the Wind River district, particularly along the ridges girding the Little White Salmon River. This "bug" is always present in forests. It seems to get out of hand after a couple of dry summers followed by blowdowns and snowbreaks. The flying beetles multiply in green down timber and attack standing timber as well, particularly healthy second-growth. The beetles penetrate the bark and lay their eggs. The grubs bore around the tree and girdle it and the tree dies.

About 120 million board feet of standing timber in the Wind River district—2.4 per cent of the inventory—are infested by the bark beetle. The only way to stop the spread and save the infested timber and the adjacent forest is to log it out of there pronto. This infested timber is worth about $12 million. But even by selling more than the allowable cut—borrowing some from other districts—the rangers can't get it all out in time.

And this 120 million board feet, covering about 2,000 acres in scattered patches, are only a part of it. The Douglas fir bark beetle is also on the warpath this summer in the Mt. Baker, Mr. Hood, Umpqua, Rogue River and Siskiyou national forests. The total of the infected timber is around one billion board feet.

The beetles are raising hob with multiple use management programs. Normally, timber sales would be plotted to log out old growth fir while second-growth is maturing. Clear-cuts would be carefully plotted with concern for scenic values, water supplies and nature of the terrain. In the Wind River district, under beetle pressure, large areas scheduled for partial logging have to be clear-cut, and old growth timber is being left so that infested immature timber can be removed.

Some outdoor lovers who scream "desecration" at the sight of large clear-cuts on hillsides visible from stream or recreation road might stop to consider that foresters don't always have a choice in the matter.

So what has this to do with long-range management? The bark beetle, which is immune to sprays and other controls, would not reach epidemic proportions if forests could be managed acre by acre. Thinning would give the remaining firs the vigor to resist the beetles by "pitching out."

But to ever attain that foresters' Valhalla, complete management, would require a vast road system placing every tree within reach of tractor or high line. Most of these roads would be rough, ungraveled access tracks, but they must lead to more substantial truckroads. Timber buyers can't afford to build all these roads if they are permitted to take out only a few of the trees in a plot. And the Forest Service doesn't have the money to do it.

All these factors lead to emergency clear-cutting in areas which shouldn't be clear-cut, with consequent disturbance of other forest values and economic loss in timber.

Will there ever be a time when the very able and dedicated foresters can manage their domains on an acre-by-acre basis for the highest values?

Perhaps. But not in decades unless commercial interests and outdoor conservationists quit fighting each other and the Forest Service and convince Congress that intensive forest management is good business for everyone.

THE COURTESIES OF THE FBI

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. WALDIE. Mr. Speaker, as a member of the Select Committee on Crime I have been participating in a series of most informative and, I think, important hearings on the problem of crime in this Nation.

With the sole exception of one Federal agency, the Federal Bureau of Investigation, our committee has had the excellent cooperation of public and private agencies and individuals representing these agencies.

The Director of the Federal Bureau of Investigation informed our committee that it was not his or the Bureau's policy to appear before open session hearings. I found this policy to be unfortunate indeed, and, in fact, a hindrance to the operations of this committee. I publicly stated my opinion of this policy and it was given widespread exposure.

Among the comments on this issue were those expressed in an editorial in the Antioch Ledger in my district.

I would at this time like to insert this editorial in the RECORD:

FBI CHIEF OFFERS CONTRADICTION

"Arrogance and condescension have no place in law enforcement.

"Departments seeking means to improve their public image should check their courtesy ratings.

"Courtesy is basic to good public relations.

"While it may be in danger of becoming a lost art in some segments of our complex society, courtesy must be an ingrained habit of every law enforcement officer.

"He should always have 'time for courtesy.'"

The foregoing quote, the words of J. Edgar Hoover, director of the Federal Bureau of Investigation, were printed in the Aug. 1, 1969, FBI Law Enforcement Bulletin.

We must question the meaning of those words in the light of what happened late last week.

Hoover not only refused to testify before the Crime Committee of the House of Representatives, but also refused to permit any of his subordinates to testify.

Our own Congressman, Jerome Waldie, is a member of that committee, and he was justifiably miffed at this snub from the number one man in law enforcement in this country.

How, asked Congressman Waldie, could his committee do its job "without the cooperation of the top law enforcement agency in the federal government?"

"This also concerns me," said Waldie, "because I think any executive agency has a responsibility to assist a congressional committee."

We join Congressman Waldie in asking why a department so concerned with its "public image" and "public relations" would refuse to answer questions posed by representatives elected by the public?

This is the type of action that breeds the arrogance which Hoover preaches against.

We believe that the FBI has little to hide, but this cavalier attitude toward a duly authorized body makes us wonder.

Waldie, for instance, said he wanted to ask how much of the FBI budget goes to fighting internal subversion and how much goes to battling crime.

He wanted to ask why was a new office created in the Justice Department to over-see the federal anti-narcotics effort instead of using the FBI.

These don't seem to be unreasonable questions to us.

We hope Hoover re-considers his position.

For as he says himself, "The good will and assistance of the public are his (the police officers) most valuable assets."

We might add the same from Congress is rather vital to the FBI.

OUR OVERALL NAVAL STRENGTH

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. ABBITT. Mr. Speaker, much concern has been voiced in recent months regarding the relative strength of the United States and the Soviet Union in the matter of naval strength. It is a matter of considerable concern that while we are in the process of reducing our naval forces, Russia apparently is increasing its overall strength. It is, of course, true that our overall naval strength is still greater than that of the Soviet Union but serious questions are now being raised as to the dangers to which we might be submitting ourselves by any unilateral reduction which we might make regardless of the circumstances.

I wish to call to the attention of the Members of the House a very fine editorial which appeared in the Wednesday, August 27 edition of the Richmond News Leader, Richmond, Va. The editor has raised some very vital questions and included in his editorial some pertinent information.

I, therefore, wish to include with my remarks the editorial entitled "We're Losing" and commend this to the reading of Members of the House. The editorial is as follows:

WE'RE LOSING

If the United States Navy were to lose ten percent of its ships and personnel in battle and if the enemy were then recognized as the world's dominant sea power, the American people would be stunned. Yet last week's announcement of such an impending loss stirred hardly a ripple on our somnolent summer scene. The Navy, we learn, is to be decimated as a result of a $3 billion Defense Department budget cut imposed by Congress; the fleet will shortly be reduced from 900 to 800 ships on active duty and Navy personnel will be axed by 72,000 men, down to 700,000. In the confusion of our time, many befuddled liberals now regard the so-called military-industrial complex, once hailed as the arsenal and guardian of free men everywhere, as a greater menace than the Communists.

This Naval disaster dramatizes and confirms a revolution in world seapower wherein the United States has drifted from unchallenged supremacy to second place behind the Soviet Union.

During the past eight years, our govern-

ment has concentrated its attention and resources on the war in Vietnam—a war that it refuses to win and that the Communists find profitable to continue. While we have thus been bogged down, the Russians have raced ahead for the big payoff in naval and nuclear superiority.

Already the United States and its NATO allies are being challenged by Russian naval might in the Mediterranean. With more than 60 ships there, Soviet strength is greater than the United States Sixth Fleet. Meanwhile, Communist influence and Russian naval support bases have been extended from Syria and Egypt in the Middle East all across North Africa to Algeria, in a vast pincer designed to strangle Western Europe.

RUSSIANS HOLD

Admiral H. G. Rickover, the father of our nuclear submarine fleet, recently warned that the Soviets now have by far the largest submarine force in the world—about 375 submarines, all built since World War II. We have 143, including 61 diesel submarines, most of which are of World War II vintage. Thus the Russians now have a net advantage of about 230 submarines and will launch 28 new undersea units this year. By comparison, the United States will launch only one or two new subs. Admiral Rickover estimates that by the end of 1970, the Soviet Union will gain a numerical lead over the United States in *nuclear* submarines. *Next year!*

Russian superiority is not confined to submarines. The Soviets have armed their destroyers and other surface vessels with surface-to-surface atomic missiles having a range of 100 miles or more. We have no surface vessels carrying atomic missiles.

Admiral Rickover goes on:

"In the single year of 1968, the Soviets put to sea a new type ballistic missile nuclear powered submarine as well as several new types of nuclear attack submarines—a feat far exceeding anything we have ever done. It is estimated that by 1974 they will have added about 70 nuclear-powered submarines to their fleet, whereas we will add but 26—thus further increasing their superiority."

UNITED STATES MORE VULNERABLE

The submarine has become the blue-chip weapon of the atomic age. Its mission is no longer restricted to sinking surface ships. The Polaris-type submarine, with its long-range, nuclear-tipped missiles, brings the principal cities and military installations of the enemy homeland into its crosshairs. Clearly, in warfare's new dimension, geography has made the United States much more vulnerable than the Soviet Union, largely shielded from the open seas by other nations; the American people are concentrated in major cities along the Atlantic, Gulf and Pacific coasts—now all but defenseless against instant destruction from submarine-launched hydrogen bombs.

Apparently very little thought has been given the fact that the wide oceans, which once isolated us from foreign foes, have become broad avenues of peril. Small wonder that our Central Intelligence Agency is so concerned about Kremlin plans to have fleets of missile submarines prowling permanently all along U.S. coasts—enemy units always on the move, units that cannot be tracked by radar or by sight. Small wonder the Pentagon is concerned that the Russians are expanding their Cuban naval installations in order to provision their missile submarines stationed off our shores.

LOOKING DOWN A GUN

We shall soon be looking down a Communist gun barrel. The 15–20 minute warning period that the Pentagon once counted on with any missile fired from the Soviet Union will be so greatly reduced by the presence of nearby enemy submarines that no response may be possible before all our retaliatory missiles and our cities are destroyed in a surprise sub-based missile attack. In such eventuality, only our own missile submarines could respond. But the Soviets may gamble that their extensive antiballistic missile (ABM) defenses would neutralize this potential punishment. Our military leaders, who have recognized this unthinkable threat, have spoken only in guarded terms for fear of panicking the public.

Instead of reducing the Navy, the Nixon Administration and the Congress should forthwith embark on a crash program to construct not fewer than 75 nuclear submarines equipped with Poseidon missiles. We should also concentrate on developing more effective anti-submarine warfare techniques. For, if this is to be the arena where Russia plans to win World War III, we dare not be unprepared.

The stakes could not be higher. The Soviet Union is bidding for nothing less than world control through either blackmail, subversion or military conquest. Our own goal is more modest: It is simply national national survival.

BIDS FAREWELL TO "CHUCK" JOELSON

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. SISK. Mr. Speaker, I should like to join my colleagues in bidding a fond farewell to my good friend "CHUCK" JOELSON. Since he joined our ranks in 1961, this House and the Nation have benefited immeasurably from his vision, creativeness, and his tenacity in pursuing legislative goals he knew to be in the best interests of our citizens.

His thorough training as a lawyer, followed by a distinguished career as a public servant in New Jersey municipal and State councils, fitted him admirably for the outstanding job he has done in his all too brief service in the House. While we shall miss his wise counsel, the judicial bench of New Jersey will become enriched by acquiring it.

None of us can ever forget his brilliant leadership in the recent successful effort to increase the appropriations for educational programs. With these additional funds, it is not beyond possibility that an even greater number of our youth can now prepare themselves to become the well-informed, active, useful citizens of "CHUCK" JOELSON'S stamp that America needs if it is to continue to grow and prosper.

And aside from his official duties, "CHUCK" was the ideal gentleman with whom to be in contact during our day-to-day pursuits. He is possessed of a charming wit and sense of humor, conscious at all times of the amenities, giving of his wide knowledge freely, without pretense or ostentation.

During an average number of terms served in the House, by an average number of Representatives, who come in contact with a very large number of colleagues, past, present, and in the future, all who have so served will remember "CHUCK" JOELSON as much more than an average man.

GI BILL FOR QUINCY'S 126TH

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. FINDLEY. Mr. Speaker, in May of 1968, the 126th Supply and Service Company—the National Guard unit at Quincy, Ill.—was activated, and in mid-September they departed to begin their service. In many cases, a tremendous personal sacrifice was made by these men, who were compelled to leave families, jobs, and education behind. Yet, willingly, they went because their country had called them. Most went to Vietnam. Duc Tho, Long Binh, Da Nang—they lived in the places that made tragic news here in the United States. Some received special awards for outstanding performance—all served with distinction. Now, over 1 year after they were activated, the men of the 126th have returned home.

Unfortunately, these men will not qualify under the GI bill for the same educational benefits as members of the Regular Armed Forces. For Regulars, all time including time spent in basic training is counted for purposes of educational benefits. For reservists and guardsmen the period of active duty for training prior to the activation of the unit does not count.

Whatever can have been the original basis for such a distinction, there is no justification for it today. The men of the 126th served their country with pride. The courage and conviction, determination and devotion that they displayed under great handicaps—psychological as well as physical—in a strange and distant war put them among the front ranks of all of our military men. They should be accorded the same treatment, the same benefits, as those of the Regular Army at whose side they stood in Vietnam.

To correct the inequity in the present law, I am today introducing a bill which provides that reservists and guardsmen who are called to active duty and serve at least 6 months during the period of the war in Vietnam, may include their prior active duty for training in determining eligibility for educational benefits under the GI bill. This is the very least that we can do for those who have given so much for their country.

Text of bill follows:

H.R. 13644

A bill to amend title 38 of the United States Code to permit certain active duty for training to be counted as active duty for purposes of entitlement to educational benefits under chapter 34 of such title

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (a)(3) of section 1652 of title 38, United States Code, is amended by striking out "and section 1661(a)" and inserting in lieu thereof "of this subsection and subsection (a) of section 1661 (except as provided in the last sentence thereof)".

Section 2 Subsection (a) of section 1661 of title 38, United States Code, is amended by adding at the end thereof the following new sentence: "For the purposes of this chapter and subject to the limitation in subsection (c), if a veteran serves for a period

of active duty pursuant to a call or order thereto issued to him after August 4, 1964, as a Reserve or a member of the National Guard or Air National Guard or any State, and is an eligible veteran as a result of such duty, any period of not more than 6 consecutive months of full-time duty performed by him after January 31, 1955, for the purpose of obtaining initial military training pursuant to his Reserve, National Guard, or Air National Guard obligation shall be deemed to be active duty."

A LOOK AT DDT

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. COHELAN. Mr. Speaker, both the scientific and government communities have recently been voicing their concern about the use of DDT and the effects of the chemical on our natural environment. How dangerous is the chemical, and is its continued use necessary?

Dr. G. K. Kohn, a noted scholar in the area of agricultural chemicals, attempts to answer these questions in a statement he delivered recently at the Thorne Ecological Foundation's Seminar on Environmental Arts and Sciences, held at Aspen, Colo.

Dr. Kohn shows what the discovery and use of DDT has meant to the improvement of world health and agriculture, but he also scrutinizes the hazards of the continued use of the chemical.

He urges further research into the effects of DDT; he suggests that safer pesticides be substituted for DDT where and whenever possible; and he advises that the Government consider regulations that would protect the Nation's total environment.

Both supporters and opponents of the continued use of DDT will find Dr. Kohn's article informative and helpful. His views are not necessarily those of any group on this issue. And it is because of Dr. Kohn's independence that I find his statement so interesting.

Dr. Kohn, who has written several articles dealing with agricultural chemicals, is well known among his colleagues as an authority in the area.

He served as chairman of the Symposium on Decontamination of the Environment at the 1968 meeting of the National American Chemical Society, and he is also a member of the executive committee of the pesticide section of the Agricultural and Food Division of the A.C.S.

I include Dr. Kohn's article on DDT in the RECORD at this point:

VALUES IN CONFLICT A LOOK AT DDT AND THE CHLORINATED HYDROCARBONS*

(By G. K. Kohn)

INTRODUCTION

It is not my purpose to debate nor to proselytize nor to sell. I will however, try to provide some facts and to point out some distinctions between what is meant in the world of science as "hard" fact or data, and logical conclusions therefrom and for want of a better term, "soft" data and the speculations derived from such data. Whereas all other sciences tend to isolate and particularize, ecology by definition, is concerned with universals, with the interrelationships of life and environment in their totality. My remarks then do not reflect the approach of industry, of pesticide manufacture, even of any particular science. I hope they transcend these and include; value systems, science, ethics and citizenship, at least this is the spirit with which I intend them.

In outline then, I will try to cover:

I. The History of DDT and Its Development.

II. Some Significant Physical, Chemical and Biological Properties of DDT.

III. What DDT Has Accomplished In: (a) Agriculture; (b) Public Health.

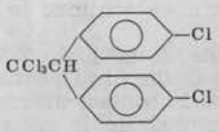
IV. Undesirable Consequences From DDT, True and Questionable.

V. A Holistic Approach to the Use of DDT and The Chlorinated Hydrocarbons.

Like many others, I participated in the early experiments with chlorinated hydrocarbons. As a GI in the hold of an army transport, a new flea and louse powder was provided all of us with which we dusted ourselves, our bedding and clothing and with which we probably avoided typhus and greater and lesser scourges and started our personal accumulation of chlorinated hydrocarbons in our body fat.

HISTORY AND PROPERTIES OF DDT

The first important point in this brief history is to emphasize that in the days of our scientific innocence, the discovery of the entomological consequences of DDT was regarded by the leaders of the Swedish Scientific World and most of the World's scientific community as well as deserving of the highest award for scientific achievement.



Let us now define DDT and examine its properties.

Pesticides have been utilized by man from the time of early recorded history and it might be well to emphasize here that the discovery of agriculture by prehistoric man was perhaps the first serious excursion by man to the area of massive ecological upset. More serious and pertinent to these discussions was the discovery of the organic pesticides and particularly of the chlorinated hydrocarbons which date roughly to the time of World War II.

DDT was first synthesized by a German Chemist Beidler in 1874 where it remained on some laboratory shelf and as a literature reference until World War II.

A Swiss Group headed by Paul Mueller discovered the insecticidal properties of DDT in 1939. For this discovery the Nobel Prize was awarded Dr. Mueller in 1948.

Chemically, DDT is Dichlorodiphenyltrichloroethane. It is conventionally represented as this:

pp' DDT

The technical product is a white waxy crystalline material with a slight, not unpleasant odor. It is a mixture of compounds and the active ingredient, the isomer above, comprises 85–90% of the product.

Listed below are those physical and chemical properties that account for its being the subject of discussion today:

PERTINENT PHYSICAL AND CHEMICAL PROPERTIES

1. It is very soluble in oils, fats, organic solvents.

2. It is very insoluble in H_2O about 1 part per billion.

3. It easily 'steam' distills from water.

4. Although of low volatility, enough distills from plant and soil surfaces to be carried by air currents.

5. It tends to form stable aerosols.

SOME BIOLOGICAL FACTS FOLLOW

1. It affects the nervous system of arthropods.

2. The mechanism of its action is not understood.

3. It is relatively safe to mammals. Its acute and chronic mammalian toxicity has been measured for many species.

4. It is generally toxic to fishes—usually at levels considerably above its solubility in H_2O.

5. It concentrates in fatty tissues. Through this partitioning it accumulates in higher and higher concentrations in those predator animals that are at the top of any given eco system. Hence, it is highest in species such as man, Coho Salmon, carnivorous birds, particularly those that feed on marine life, etc.

6. It degrades, but slowly, in most biological systems. It is acted upon by liver enzymes. However, because of its storage in body fats, only small quantities are made available at any one time for detoxification mechanisms. In mammals loss of hydrochloric acid, (DDE) and formation of a water soluble acid does occur along with other transformations. Most of us have reached a steady state for DDT concentration in our tissue. The level in body fat in the U.S. is, on the average, 12 ppm. It is lower in most other parts of the world but higher in a few.

7. Because of the stability of DDT and a wide spread usage, insect resistance to DDT is a fact. It is requiring higher and higher doses in programs for insect control. Adaptations are resulting probably for other animal species also.

As a consequence of the physical, chemical and biological properties we can establish some ecological facts and consequences.

1. The half life of DDT in the total biosphere is roughly 5 to 10 years. This is an estimated average for soil, air, sea and living species therein.

2. DDT has been produced at roughly the rate of 100 x 10^6 lbs. per year (U.S.) (186 x 10^6) maximum rate during the last decade. [Prod. is diminishing now, 30 x 10^6 lbs. used in U.S. in 1968, 2.5 x 10^6 in Calif.] It therefore has accumulated in the environment. It is in the soil, the seas and to a lesser extent in the air. It is found as indicated previously, in highest concentrations in those species that are at the top of their eco systems.

PUBLIC HEALTH ASPECTS

It is not necessary to dwell at length before a group such as this on the use of DDT in the areas of public health. Yet some mention must be made if we are to examine the problem in its totality. DDT has unquestionably saved millions of lives. It has reduced the incidence of typhus (Naples, World War II, for example), malaria, yellow fever, encephalitis, etc.

Of 1.6 billion people living today in previously known malarious areas, 632 million, 39.5% are now living in malarious free environment. 618 million, another 38.6%, are living in protected areas where programs are going on currently (1). Such statistics can be multiplied. They merit consideration.

One might ask, Yes these lives have been saved as the disease incidence has been reduced, but at what cost? This is a proper question, but the above statistics and many similar ones must appear in the equation which deals with its solution.

AGRICULTURAL ACCOMPLISHMENTS

We now come to the agricultural use of DDT. The figures cited for agricultural productivity in the U.S. are objective and I believe impartial. The increase reflects the impact of scientific technology on agriculture

*Presented at Thorne Ecological Foundation, Seminar on Environmental Arts and Sciences June 27–July 2, 1969, Aspen, Colorado.

and are the result of an integrated attack that includes genetics of plant breeding, chemical pesticides, fertilizers, agricultural engineering, etc., etc.

Let us look at some productivity figures (2). We will compare productivity for the years 1947–51 with the period 1962–66. These are the years when DDT and the chlorinated hydrocarbons were first mass introduced and later when they were employed at maximum rates. We do not claim total dependence for these changes on the pesticides, but they certainly contributed in varying degrees to this most remarkable record.

	Unit	Yield, per acre 1947–51	Yield, per acre 1962–66
Crop:			
Corn	Bushel	36.5	68.1
Wheat	do	16.0	25.9
Potato (white)	Hundred weight	137.6	198.0
Cotton lint	Pound	279.6 (760.0)	499.8 (1,100.1)
Rice	do	2,211.6	4,073.8
Live stock:			
Dairy cows (milk)	do	5,194.0	8,122.0
Poultry (eggs)	Number	169.0	216.0

Some of you here have ancestors who migrated to America because starvation was rampant in Ireland in the 1840's. No medicine—pesticide existed at that time for the control of Phytophora infestans, the organism responsible for potatoe late blight. Excellent chemicals now exist that effectively control this disease and contribute largely to yield increase. The cotton increases more directly reflect the impact of DDT and the chlorinated hydrocarbons.

These are U.S. average figures. In California where intensive chemical, pesticidal, and fertilizer use is employed, the parenthesized figures are the comparative cotton yields in the chart. Where more intense scientific agriculture is practiced, the yields are always much higher.

These figures are from a USDA bulletin published in Jan. 1969 and entitled, "An Analysis of Agricultural Research in Relation to Increasing Demands for Agricultural Products". The results reflect in themselves, a great research triumph. Let it be known that the one area, in addition to the freedom of our institutions, where America truly leads the world, where the communist world is most lagging and most envious is in the area of Agricultural productivity and not industrial or military might.

SOME UNDESIRABLE CONSEQUENCES OF DDT; TRUE AND QUESTIONABLE

There is no doubt about the persistence of DDT in the environment and its spread to the whole biosphere. These are 'hard' scientific facts. We will try to distinguish now between such facts and evidence that establish at best a 'prima facie' case and at worst are interpreted incorrectly and with misleading conclusions. The concentration in part per million (ppm) of DDT and metabolites in the tissue of certain hawks, the Peregrine falcon, many fish species, and man, among others, is fact. The population reduction of certain bird species to the point of extinction is undeniably true.

What has not as yet been conclusively established, is whether DDT truly is the sole causative agent for these tragedies. [I personally am inclined to believe that it contributes to them but by no means has unequivocal scientific proof been achieved.] One can publish population figures and DDT concentrations found for any given species or group of species. In almost all of these investigations, DDT and its metabolites are the only chemicals searched for in the analysis, yet bird species have been dwindling long before the advent of DDT. Is it not man and the total degradation of the environment more directly the cause? We will have more to say about this later. It is hard fact that DDT concentrates in the tissue of the peregrine falcon. Also, it appears that shell thickness and the viability of their embryos have been diminished. It is equally a hard fact that hens and turkeys subjected to high concentrations of DDT evidence no lessening of shell thickness or of their embryo viability. This can be interpreted as either just another case of species specificity or it can throw doubt as to the causative mechanism.

In another area, papers have been published making the claim that DDT and its metabolites are carcinogens and mutagens. If one subjects an organism to abnormally high concentrations of a chemical (usually unnaturally introduced) then one can observe tumors and perhaps the not well understood phenomenon of chromasome breaking. This is a far cry from a reasonable definition of a substance as a carcinogen or a mutagen. In fact, caffeine produces so called mutagenic effects at lower concentrations and in more species than does DDT. [Since the group that includes coffee and tea drinkers embraces most of the world's population and since most mutations are undesirable, one should be concerned about Mankind's and the world's future!] Seriously, quantitative relationships are required for valid scientific conclusions and precise definitions. Let me describe the interaction between a biological system and a chemical to illustrate this requirement of quantitative relationships.

In the diagram below, the chemical for this species is biocidal, is pathological and is an essential nutrient depending upon the quantitative relationships. (3)

Conclusion of chemical in tissue (dry weight) parts per million:	
Death	3,000
Disease	1,000
Healthy growth	200
Disease	30
Death	0

In this case the chemical is the element Manganese, the biological species includes much plant life and is numerically reasonably accurate for the bean plant. DDT is never a nutrient. But this example refers to the nature of scientific experimentation and the interpretation of the results therefrom. One requires, then, quantitative relationships in the descriptions of biological interactions.

A HOLISTIC APPROACH TO DDT AND THE CHLORINATED HYDROCARBON

It is my intention to emphasize what must be considered, if action is contemplated regarding DDT and the persistent chlorinated hydrocarbons. There is a hierarchy of priorities.

The greatest contribution to the destruction of our environment is prolific man. Much of government planning and economic planning in particular, by business and government, is based on the belief in ever increasing populations. For ecologists this means ultimate disaster. Our influence must be exerted to reverse this trend. What was, at one time, a religious commandment taken from the story of creation on the sixth day—"Be fruitful and multiply and replenish the earth and subdue it—", is today just plain evil, unless it is considered in a qualitative rather than a quantitative way. This dominated the ethics of our pioneer ancestors. It presently requires drastic revision. There will have to be regulation, by agreement, or by law, to control population. Until this occurs, the need for agricultural productivity will continue to increase—as will the need for pesticides.

From personal experience, I can report that for ten years, most research (and all of mine and my colleagues') has been directed to supplant the persistent chlorinated hydrocarbons with less persistent, but equally effective, chemicals and even new methods of crop protection. This is a difficult and complex problem and there are boundaries and parameters within which we must operate. One of these is the cost of food. What proportion of our population would be satisfied with a doubled food bill? Most would not and for the poor, this condition would be intolerable. There are costs for ecological benefits and we must be willing to face them. Until population is stabilized at a given level—and preferably until it is reduced, palliative measures are required. These must take into account food needs, the farmer and agricultural economics, the environment and its preservation, industry and government.

I would advocate for the immediate future, the following:

1. A measured orderly reduction of the use of DDT and the chlorinated hydrocarbons governed by a sound administrative procedure and manned by experts from agriculture, science, including ecology, industry and government. There should be, whenever possible, the preferential use of less persistent pesticides for insect control both for agriculture and public health.

2. I would advocate increased funds for research both to increase productivity and to study more thoroughly the ecological consequences of the measures to be adopted. More work is needed to establish scientifically and quantitatively, the interaction of DDT, chlorinated hydrocarbons and all environmental chemicals toward biological systems.

3. Regulatory agencies FDA, USDA, Health, Education and Welfare have done admirably in (1) protecting the consumer from potentially dangerous levels of pesticides, (2) in protection of the farmer for the growing of his crops and (3) in protection of the general public health. A new dimension to this regulatory authority must be added that protects (4) all the public from the degradation of their common environment. Ultimately this is a UN problem but the start should be with our own regulatory agencies. Policing of the environment is as essential as policing of crop residues.

4. Finally, I would emphasize again, the tremendous need to educate the world and to concern people—in high and low places of the need for population control. This is the fundamental problem and ecologists should provide some leadership in this campaign.

(3) This chart was derived from data found in: Diagnostic Criteria for Plants and Soils, Div. of Agricultural Sciences, Univ. of Calif. p. 594, 1966.

(4) Early residue analyses frequently did not distinguish between pp' DDT its isomers and principal metabolites. In this discussion, the term DDT includes all the chlorinated residues. DDE is one of the most persistent metabolites.

VA HOSPITAL CARE PRAISED

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. BROWN of California. Mr. Speaker, I think that we have all had, from time to time, letters relating to instances where individuals were dissatisfied with

the treatment they have received in one of the veterans hospitals administered by the Veterans' Administration. We also know that these incidents almost universally arise out of misunderstandings, human mistakes, fatigue, staff shortages caused by budget limitations, and any number of other similar reasons that become more than understandable when you think that the VA operates the largest hospital chain in the world—and the number of complaints is minimal.

Today, however, I wanted to call the attention of my colleagues to just the opposite kind of letter. This is a letter of high praise for the treatment received by the late Frank M. Allen, Sr., while he was a patient in the Los Angeles VA Center. The letter follows:

DEAR CONGRESSMAN BROWN: On August 23 my father, Frank M. Allen Sr., passed away at Wadsworth Veterans' Hospital, Sawtelle, after an illness of more than 15 months. Knowing your interest in veterans' affairs I want to express to you the very sincere thanks of my entire family for the wonderful care extended to my father during the long period that he was a patient at the Sawtelle nursing home, Building 113. The doctors, including Dr. Rosenbloom, the nurses, therapists, the other hospital aides were always extremely patient, kind and genuinely considerate both to my father and to members of his family.

I would appreciate it if you would relay my appreciation to the proper administrators within the Veterans Administration both for the care my father received while living and for the dignified manner in which they made arrangements for and conducted the military services at the cemetery following his death.

Sincerely,

FRED D. ALLEN,
Editor, Northeast Newspapers.

I think that we too often forget the wonderful and massive job that is being done in our veterans hospitals throughout the Nation. This extends beyond normal hospital care for sick persons, to affiliation with medical schools, nursing home care, and some of the most sophisticated care and research in kidney diseases, spinal cord injury, open heart surgery, and many other fields.

UNJUST? PHOOEY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. DERWINSKI. Mr. Speaker, the justifiable concern over the adverse effect of the House-passed tax bill on the issue of municipal bonds is effectively explained in an editorial in the August 21, La Grange Citizen, which is proper interpretation of the issue:

UNJUST? PHOOEY

The congress of the United States, now passing through its perennial tax-reform mood, is considering lifting the income tax exemption on municipal bonds.

"How unjust it is," the argument runs, "that the income tax is imposed upon the wage-earner and in those who invest in stocks while the earnings from public bonds are exempt."

Let's give this one a closer scrutiny.

Municipal and school district bonds sell at a lower rate of interest because of this tax-exempt provision. Remove it, and the interest rate would greatly increase.

Major civic improvements are required both by the growth of a community and by the obsolescence of existing facilities. The principal way to finance them, and to extend the cost over several years, is to issue bonds.

Except at ruinous interest rates, this could no longer be done.

The interest charges are met from local levies and the result would be a steep increase in real estate taxes.

From such an arrangement, how could the "average" taxpayer derive any advantage?

A MODEL CITY FOR INDIAN LANDS

HON. FRANK E. EVANS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. EVANS of Colorado. Mr. Speaker, a development project covering portions of Colorado, Arizona, New Mexico, and Utah is under consideration by the Four Corners Regional Commission. The project involves the building of an ultramodern city of 250,000 with the latest techniques of housing, transportation, education, and business. The development, initially planned by former Four Corners Federal Cochairman Orren Beaty, is designed to help the Navajo and Ute Mountain Indians to fully enjoy the benefits of the 20th century.

I include an article published in U.S. News & World Report on June 23 outlining the main features of the development project and I commend it to my colleagues' attention:

A MODERN CITY FOR INDIAN LANDS

A new way of life for tens of thousands of Indians and other Americans is promised in a revolutionary plan drawn up for four Southwestern States. The key: an ultramodern city of 250,000 on what is now barren desert. It's designed to bring a twentieth-century boom to a region with problems rooted deep in the past.

On this rolling desert, where you can drive for miles without seeing a soul, one of the biggest development projects in U.S. history—to include an entirely new city—is being planned.

Covering 288,000 square miles—about 8 per cent of America's land area—the program for the Four Corners Economic Development Region is to include:

An ultramodern city of 250,000, with the latest techniques in housing, transportation, education and business.

A variety of recreation areas, including ski resorts, tourist ranches, and Indian villages and archeological ruins.

A network of new roads and airports that would convert one of the most inaccessible areas of the U.S. into a center of commerce and tourism.

Agricultural projects to make more abundant use of land that is now mainly devoted to sparse grazing.

The work would cost a total of more than 1 billion dollars in both public and private funds.

The plan was developed by the Westinghouse Electric Corporation for the Four Corners Regional Commission, run jointly under the U.S. Department of Commerce and the States of Arizona, Colorado, New Mexico and Utah. The proposal is just being made public.

The project's purpose: to pump new life into one of the most desolate yet beautiful areas of the U.S.—the mountains and valleys of the Southwest.

A UNIQUE MONUMENT

Center of the development is a sunny, nearly uninhabited plateau where the four States meet—the only such four-point intersection in the nation. The monument marking the site is about 300 miles southwest of Denver and about the same distance northeast of Phoenix. Here the huge Navajo and Ute Mountain Indian reservations converge.

It was primarily for the mostly impoverished Southwestern Indians and their non-Indian neighbors, many of whom are equally poor, that the project was conceived. It is designed to provide tens of thousands of people with better jobs, housing and living conditions.

"Our idea," says W. D. Brewer, Federal Cochairman of the Four Corners Regional Commission, "is to bring the twentieth century to the Indian, instead of forcing him away from his lands into faraway big cities."

The program is also intended to serve as a model for the entire country in such fields as air pollution, water conservation and urban living.

The development grew out of discussions between U.S. Government officials, including Orren Beaty, former Federal Cochairman of the commission, and residents of the four States who wanted to improve rural conditions.

The commission, created in 1967, hired Westinghouse to study the vast region—one of the most sparsely settled in the U.S. Eighteen per cent of the area's population of 2 million is of Spanish or Mexican origin, about 8 per cent is Indian, and the rest are mainly English-speaking Americans of European ancestry. At the center of the region however, Indians predominate.

The company's survey revealed that the area has an official unemployment rate of more than 6 per cent, nearly double the national average. Some federal officials believe that actual unemployment in the region—counting all those out of work both on and off official lists—is closer to 23 per cent.

There is little manufacturing; agriculture does not provide an adequate living for many, and there are relatively few roads, railroads and airports.

But investigators found important assets, too. The area contains some of the most spectacular scenery in the world—from snow-covered peaks to sand-and-sagebrush deserts.

Thousands of tourists a year come to enjoy the sights—especially the Indian cliff-dwellings at Mesa Verde, Colo., and elsewhere—and travel experts say that more would come if access and facilities were better.

The region was also cited for its largely untapped source of labor. Executives at three plants for light manufacturing which moved into the Navajo Reservation have found that Indian workers are skillful, patient and productive, more than justifying the operations.

URBAN TESTING GROUND

The planners concluded that "a dramatic focus of new activity in the area could best be provided by a new town."

They urged that the community should be not just another city, but a radically new testing ground for novel approaches to urban problems. Their idea was that the benefits would spill out to the entire four-State region.

The city is planned to be somewhere near Four Corners. Preliminary designs call for the community to be divided into "clusters"—residential areas composed of both apartment buildings and individual houses, light-industrial parks, an education area where grade and high schools and possibly a university would be located, and commercial centers.

Other related schools in the area would include vocational training centers designed especially for Indians.

Designs call for the city to have a variety of architecture, ranging from high-rise buildings to low blocks patterned after Indian cliff dwellings.

One proposal provides for stores and offices to be located in one or more clusters, without any specific downtown area. The entire city may be centered around a park, with other open areas throughout the community.

Planners have also suggested a ban on cars in at least some parts of the city. There would be heavy emphasis on public transportation—possibly provided by moving walkways and overhead rail systems. Parking lots may be located at the edge of town—although this and other features may be changed.

WATER AVAILABLE

Engineers report that a water supply—ordinarily one of the biggest problems in the dry Southwest—should be easy to provide. The region sits atop vast underground reserves, and it may be possible to tap the nearby San Juan River. In any case, it is intended that virtually all water in the city would be repurified and recirculated, thus avoiding much of the normal loss.

Employment for 100,000 workers in the city's vicinity, according to plans, would be provided mainly by manufacturers, the recreation industry, service firms, and federal installations.

It is thought that construction could start within the next year or two, with parts of the city functioning by the early '70s.

Planners foresee that the majority of the new population will come from throughout the U.S., and that Indians would comprise a minority of the urban population. Most Indians, it is believed, would prefer to live on their reservations and commute to the city.

Nevertheless, it is argued, there would still be big advantages to the Indians in having a city located close to their homes. The new community is expected to provide the Indians with challenging, well-paying jobs and a variety of educational, medical and cultural benefits now generally lacking on the reservations.

Several smaller "satellite towns" may be established near the city, alongside existing communities such as Farmington and Gallup, N.M., and Cortez and Durango, Colo. Commission officials believe all these cities would grow under the impact of the project.

The city is also expected to become the hub of a large complex of summer and winter resorts. The plan calls for more tourist facilities of all kinds, plus co-ordinated promotion efforts by the four States.

In the process, many new roads and airports are to open up the area to agricultural and mineral development as well. The project includes the construction of new dams, irrigation programs and soil-improvement facilities.

Various ways of financing the development have been advanced. Some planners advocate setting up a joint public and private company, somewhat like the Communications Satellite Corporation, with stock sold to the public.

Other money is to be sought from federal agencies and Congress.

Some work is already under way. A number of roads, medical facilities and schools have been built, and more are under construction or budgeted.

"NOT LIKE LOS ANGELES . . ."

Reaction to the plan so far is mostly favorable. Typical of feelings in the area is that of Raymond Nakai, chairman of the Navajo Tribal Council at Window Rock, Ariz., who says:

"A model city with a limited population—not like Los Angeles or New York—would be good.

"We would like to see the Navajos involved in the planning because we have a lot to contribute."

The Indian leader, who is the head of a fast-growing tribe of 125,000 on a reservation the size of West Virginia, is confident that the Navajos would be willing to provide land for the project if it benefits them.

Mr. Nakai says he personally favors an ultramodern city, not one modeled after Southwestern Indian architecture.

Both the Navajo and Ute Mountain tribes, which own much of the land at the center of the project, say they will take all necessary precautions through their lawyers that their rights are thoroughly protected.

"There will be no Manhattan Island swindles pulled on us," insists one Indian official.

Some opposition to the new city is predicted in neighboring communities which are apprehensive about what the development would do to them.

Farmington's Mayor Boyd F. Scott expresses doubts about some of the plan—particularly where the new city would get its water. He also believes the commission should concentrate harder on assisting the area's existing cities.

"But I doubt," he says, "that there would be any organized opposition here to the new city."

Backers of the project, including Senator Frank E. Moss (Dem.), of Utah, believe Congress will approve substantial funds for the development, especially if industry joins in.

Commission officials know that work has only begun in their effort to reshape America's Southwest. But they are confident that the development will be a success, no matter how hard the fight.

Says New Mexico's Governor David F. Cargo, State Cochairman of the commission: "If this works out—and I believe it will—this will be the biggest thing that ever happened to the region. The whole nation will benefit from what happens here."

PRESIDENT NIXON'S WELFARE PROPOSAL

HON. DONALD W. RIEGLE, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. RIEGLE. Mr. Speaker, about 1 month ago, President Nixon addressed the Nation to present his plans for a major overhaul of our system of public assistance. At that time, his initiative in this area was praised by most Americans who have long sought a change to our present welfare system which has served to perpetuate dependency rather than to encourage self-sufficiency.

On August 11, the Detroit Free Press issued a major editorial statement that thoughtfully analyzed the importance, content, and implications of the President's plan. Although I was unable to bring this editorial to the attention of my colleagues before the August recess, I insert it into the RECORD at this point so that this critical discussion can become part of the public dialog on welfare reform:

MR. NIXON'S NEW PLANS SPEAK TO NATION'S NEED

President Nixon's Friday night address to the nation was a remarkable document. The rhetoric was traditional Republican, but the message itself was more radical than virtually anything done by the Johnson administration.

To say this is not to say that there is any gap between the two. Indeed, the only way to encourage hard work and thrift, to discourage the centralization of power, and to protect government's fiscal condition may well be to do what Mr. Nixon has done—to embrace sweeping social reforms.

For that reason, Mr. Nixon will find little dissent from his bill of indictment against the present welfare system. It is indisputably expensive. Without question it encourages sloth, destroys dignity and perpetuates itself. It fosters illegitimacy and the desertion of families by the father. It encourages people to move from states with low welfare payments to the crowded big cities and the wealthier states.

The welfare system is better than letting people starve, but it fails to fulfill many of its goals and is in fact self-defeating.

So in its place Mr. Nixon would offer a program of "family assistance" which would be based on income level and on the agreement by the applicant to an obligation to accept work if it is available. Though Mr. Nixon draws a distinction between this and the guaranteed annual income, his distinction is more apparent than real. Unless a super-bureaucracy is to be created to police the acceptance of responsibilities by the poor, the system will simply provide a basic floor under the income of every citizen.

By permitting each individual to keep the first $60 a month he earns above his guarantee, and by forcing him to forfeit only 50 cents of benefits for each dollar of earning thereafter up to a higher level, the system will indeed encourage work.

At the same time Mr. Nixon would establish a federal floor under assistance payments. It may be ironic that he does this even as he calls for decentralization of power, but it is essential that it be done. The federal minimum will end the disparities in how the poor are treated across the country; it will provide one less incentive for the rural poor to move to the cities.

A federal floor may mean that those of us in the states that have tried hard to help the poor will subsidize other states that have been unwilling or unable to do as much. If so, it is worthwhile. It may also, at least ultimately, relieve the governments of states like Michigan from some of the heavy costs of welfare, transferring some of that burden to the federal government.

The reorganization of the job training programs is long overdue, and it tells something about how Mr. Nixon's "new federalism" will work. He is accepting broader responsibilities for the federal government in financing programs to help people, but he would transfer far more of the responsibility of administration to the states. It is an essential distinction, given the allocation of tax resources between the states and the federal government.

Mr. Nixon's concept of federalism reaches its zenith in the idea of tax sharing with the states. He would supplement all the forms of categorical aid with broad grants to the states. This means that schools, for instance, eventually would be getting aid for education, not aid for some specific project.

Anyone familiar with the travail of local government can tell you that this kind of assistance is precisely what is needed—something that will help government meet its fundamental obligations.

It was, then, a sweeping set of proposals that President Nixon laid out, directed, at least in principle, to some of our most fundamental needs. Unfortunately, Mr. Nixon is likely to be caught, as was his predecessor, in a gap between what we decide we should do and what we have money for.

Funds are short; Mr. Nixon does not expect any of this to be done before fiscal '71.

Quite apart from the administrative pitfalls in anything so new and so broad, we may fall short of his hopes simply because the federal government does not have the money to make the new programs work.

But he has made a start, and a good start at that. We are still a long way from welfare reform. The people, though, want reform, and Congress should know it by now. They are finally getting reform of taxes, and they can, if they demand it, get reform of welfare too.

THAT CONTROVERSIAL DEPLETION ALLOWANCE

HON. CHARLES E. WIGGINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. WIGGINS. Mr. Speaker, few subjects caused more controversy than the action recently taken by the House in reducing the oil depletion allowance from 27½ to 20 percent.

Personally, I believe that all tax incentives should be constantly reviewed in the light of present day realities and accordingly supported the committee recommendation as reasonable under today's circumstances. All of us, however, should be willing to listen attentively to the arguments of those who feel that our action may have been improvident.

For the purpose of providing the Members with a reasoned statement in support of the oil depletion allowances, under unanimous consent, I insert in the RECORD the recent remarks of Mr. James Marine, made over radio station KPOL concerning this controversial topic.

Mr. Marine's statement follows:

THAT CONTROVERSIAL DEPLETION ALLOWANCE

I happen to have a slight interest in a company that owns, among other things, a petroleum company, and so I have a more-than-passing interest—and, admittedly, a more-than-passing bias—in efforts to reduce or even repeal outright the depletion allowance now given to all petroleum and other mineral companies. I am aware that practically everybody, it seems, considers the depletion allowance some form of give-away and would love to see it abolished—if only because everybody is in favor of slugging somebody else with higher taxes.

But—even discounting my admitted personal interest—I also am aware that the petroleum companies' side of the story is getting very scant coverage; their side, however, has some reasonable arguments, and they should be heard. For the fact is that petroleum companies—despite this alleged tax break—pay proportionately higher taxes than, for example, manufacturing companies, and earn a lower return on their investments. The fact also is that we undoubtedly would not have the vast reserves of oil and gas we now have if it hadn't been for the depletion allowance, and the cost of oil and gas would be considerably higher.

The depletion allowance was instituted back in 1926 for two purposes: first, to compensate mineral companies for the obvious fact that their capital—minerals—inevitably being depleted and cannot be replenished like other people's capital, and, second, to encourage mineral companies to take the huge risks and spend the billions of dollars needed to seek, acquire and produce their products, by giving them something comparable to the capital-gains inducement all other companies and individuals now receive.

There's no question that this encouragement—like many other forms of economic pump-priming—has been effective. The petroleum industry estimates, for example, that the nation's oil and gas reserves would be about one-third below what they are now, if oil companies had not received this stimulus—and that could be uncomfortable if only because petroleum currently is the source of about 70% of all the energy used in America.

Furthermore, the depletion allowance—all dramatic war-cries notwithstanding—has not made the petroleum industry any healthier than the rest of the industry.

As a matter of fact, petroleum companies pay a higher percentage of gross revenues in direct taxes, even excluding sales and excise taxes, than do manufacturing companies—about 20% higher. And—again despite alleged windfall—the return on book investment and the return on invested capital average about 10% *less* for petroleum companies than they do for manufacturing companies.

So, even if you think the petroleum companies are getting an undeserved tax break, it isn't doing them much good.

Now, as I said in the beginning, since I have a slight personal interest in all this, you can, if you wish, take my enthusiasm with a comparable dash of salt—but the facts remain the same, regardless of whatever emotionalism can be generated over the idea of socking big business. And socking big business is the popular thing to do these days.

There are two other facts that also bear considering. If the depletion allowance is reduced, exploration for petroleum undoubtedly will go down, and the retail price of gasoline—which has risen only 10% in the past 40 years, exclusive of taxes—undoubtedly will go up.

These results may be worth the satisfaction of reducing tax incentive for the petroleum industry, and if they are, fine, go ahead and reduce that incentive; at least it would give a break to all the people who don't drive and who don't use oil or gas someplace in their homes.

WEST MIFFLIN OFFICER KILLED

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. GAYDOS. Mr. Speaker, 1st Lt. R. Michael Arnovitz, a brave young man from West Mifflin, was recently killed serving his country in Vietnam.

I wish to honor his memory and commend his courage and valor, by placing the following article in the RECORD:

WEST MIFFLIN OFFICER KILLED—LATEST CASUALTY IN VIET WAR

A West Mifflin Army officer, whose first child was born only five weeks ago, has been killed in Vietnam, it was learned today.

He is First Lt. R. Michael Arnovitz, 23, husband of Gail Griffiths Arnovitz of Elizabeth and son of Dr. and Mrs. Erwin Arnovitz of 300 Park Ave., West Mifflin.

Lt. Arnovitz had been in Vietnam since the end of April and was reported killed Aug. 30.

The officer's wife gave birth to the couple's first child, David, five weeks ago. Lt. and Mrs. Arnovitz were married in December of 1967.

Lt. Arnovitz attended Valley Forge Military Academy and was graduated from the University of Pennsylvania in June of last year.

PROPOSED EXTENSION OF THE WEST FRONT OF THE CAPITOL

HON. OGDEN R. REID

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. REID of New York. Mr. Speaker, I have noted with considerable chagrin that the proposed extension of the west front of the Capitol has again become a matter of perilously immediate concern.

It is my understanding that a House Appropriations Subcommittee has been asked to provide $2 million to prepare contract specifications for the project—which is now expected to cost a total of $45 million.

I have objected to the plans to extend the west front and add some 4.5 acres of floor space since they were first put forth in 1966. I have introduced legislation in each Congress since then to establish a Commission on Architecture and Planning for the Capitol so that any further construction on this building and surrounding grounds will be consistent with its historical heritage and artistic tradition and, what is perhaps more important, will be based on the advice of experts.

My objections are no less strong today and I would briefly list a few of the reasons that this $2 million request is particularly inappropriate:

First. The President has, on the very day that this request was made known, revealed plans to cut back Federal construction work by 75 percent in the interest of curbing inflation. It does not seem quite right that the Congress should consider itself an exception to this decision.

Second. In 1967, the American Institute of Architects issued a report presenting further evidence that the Capitol should be restored in its present form, rather than be extended and substantially altered. The AIA concedes that the building needs to be structurally repaired—and I surely agree that steps should be taken as soon as economic conditions permit to repair the obvious defects in as close to the original manner as possible. But if additional facilities for visitors and additional working space for Members and staffs is necessary, quarters other than the most historic building in the Nation should be found. I might add that optimum utilization of facilities recently built and renovated on Capitol Hill might indicate that the competing space problems of several groups can be solved without costly and drastic alterations. Those of us who have occasion to pass a very lovely—but utterly functionless—park atop the new—and excessively costly—underground garage often wonder at the several possibilities for expansion that exist in that facility.

Third. Finally, the AIA report of 1967 indicated that the Capitol was not, as some have alleged, slipping downhill. It seems highly doubtful that our historic working rooms are going to crumble on top of us before the war in Vietnam is ended, before the 10 million hungry in this Nation are fed, before the 6 mil-

lion substandard housing units are replaced, before meaningful employment is guaranteed for all, before education of quality is available to all children—in short, before all the truly human needs of our people are met.

This Congress has confused the priorities of this Nation for too many years already; let us not compound the error by spending money on unnecessary and damaging construction of the Capitol when there are some of our constituents who lack adequate shelter for themselves and their families.

I include with my remarks an article from the Washington Post of September 5, 1969, concerning this matter. Also an article from the New York Times of the same date:

[From the Washington Post, Sept. 5, 1969]

HILL LEADERS PUSH CAPITOL EXTENSION

(By David R. Boldt)

House Speaker John W. McCormack (D-Mass.) has requested the House Appropriations Committee to provide money for the controversial extension of the Capitol West Front, it was learned yesterday.

An Appropriations Subcommittee will hold a hearing Monday on a $2-million request for funds to prepare contract specifications for the project. The funds could be included in the legislative branch budget for the current fiscal year. The total price tag on the extension has been estimated at around $45 million.

Disclosure of the move to get started on the extension project came on the same day that President Nixon ordered a 75 per cent reduction in new contracts for federal construction.

The hearing is likely to be the opening episode in a repeat of the legislative battle royal that resulted in the shelving of plans for the extension in 1966. There had been a tacit agreement since then that the plans wouldn't be revived until the Vietnam War was over.

McCormack is one of five members of a commission on the extension of the Capitol that also includes Vice President Spiro Agnew, House Republican Leader Gerald R. Ford, Senate Republican Leader Everett M. Dirksen and Architect of the Capitol J. George Stewart.

The commission is understood to have acted several weeks ago after receiving a report showing continued deterioration of the West Front, which includes the only remaining portion of the original Capitol. The report was part of a continuing study being done by Thompson and Lichtner Co., a Brookline, Mass., engineering concern.

The extension would basically involve building a 44-to-88-foot addition to the West Front, which faces the Washington Monument, to house committee rooms, restaurants, auditoriums and offices.

[From the New York Times, Sept. 5, 1969]

PLAN TO EXTEND THE CAPITOL'S WEST FRONT IS REVIVED

WASHINGTON, September 4.—Congressional leaders have decided to go ahead with the multimillion-dollar extension of the west front of the United States Capitol, which had been delayed because of the Vietnam war.

The disclosure of their decision, which is subject to approval by the House and Senate, came as President Nixon was working on details of a 75 per cent cutback in Federal construction work.

The Congressional leaders will ask a House Appropriations subcommittee next Monday for $2-million to prepare plans for the project. Five years ago, the cost was estimated at about $35-million.

An engineering survey delivered to Congress Aug. 29 showed that the cracked stone bearing walls have moved horizontally and vertically with changes of temperature and other weather conditions.

The west front was pronounced unsafe years ago, along with the east front, which was subsequently extended and rebuilt in marble at a cost of $24-million. An engineering company that studied the west front in 1964 noted rapid deterioration and recommended the $35-million extension as the best way to save it.

The plan touched off a controversy. The American Institute of Architects, among other groups, opposed the project, contending that the original structure should be repaired and preserved for its historical value.

In the ensuing argument, the project was shelved by Congressional leaders because of the Vietnam conflict.

Temporary timber, in place since 1964, is shoring up key spots along the cracked sandstone of the west front.

LOS ANGELES COUNTY JOINS ANTISMOG SUIT

HON. BOB ECKHARDT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. ECKHARDT. Mr. Speaker, recently, joined by 18 of my colleagues, I wrote to Attorney General John Mitchell expressing concern about reports that the Department of Justice was considering entering into a consent decree compromising its antitrust action against the major automobile manufacturers over air pollution control devices.

The Los Angeles Board of Supervisors will intervene in the lawsuit on behalf of the public along with ASH, an organization which has fought cigarette advertising for so long.

I am inserting a copy of an article from the New York Times announcing the intervention of the Los Angeles Board of Supervisors along with a copy of the motion to intervene by ASH.

These actions are commendable and are examples of what each of us, in our respective capacities, can do to make this planet a cleaner and healthier place to live.

The above-mentioned material follows:

LOS ANGELES COUNTY JOINS ANTISMOG SUIT

LOS ANGELES, September 5.—Officials announced today that Los Angeles County would intervene in the Federal Government's pending smog antitrust suit against the automobile industry "to prevent the suit being swept under the rug."

The original action was brought by the Department of Justice's Antitrust Division in the United States District Court here last January. It sought an injunction to end the principal car manufacturers' alleged conspiracy to delay development of antismog equipment.

There had been unofficial reports lately to reach a settlement of the action short of trial.

County Supervisor Kenneth Hahn said at a news conference that county counsel were preparing a formal application to join in the action and to press not only the demand for an injunction but also a plea for monetary damages, which the Federal authorities had not sought.

Mr. Hahn said $100-million would be asked as compensation for obstruction of the county's $60-million antismog program, for the consequences of "inadequate" fume suppressing equipment on cars back to 1953, and for "large sums" spent by the county to treat people, particularly indigents, for smog-induced ailments.

[U.S. District Court, Central District of California]

UNITED STATES OF AMERICA, PLAINTIFF, V. AUTOMOBILE MANUFACTURERS ASSOCIATION, INC.; GENERAL MOTORS CORPORATION; FORD MOTOR COMPANY; CHRYSLER CORPORATION; AND AMERICAN MOTORS CORPORATION, DEFENDANTS

(Civil No. 69–75–JWC, filed January 10, 1969)

MOTION TO INTERVENE

Petitioner ASH, pursuant to Rule 24(b)(2) of the Federal Rules of Civil Procedure, respectfully moves this court for permission to intervene for the purpose of opposing any application to terminate this action by a consent decree. In support of this motion petitioner respectfully submits a pleading setting forth the claim for which intervention is sought, an affidavit of its counsel and chief executive officer, and supporting documents, and states as follows:

(1) The instant civil action is the result of a two-year investigation by a federal grand jury aided by six Justice Department investigators. Originally the investigting attorney recommended that criminal indictments be sought against some or all of the defendants but this suggestion was rejected for reasons not directly related to the strength of the case.

(2) The court will recognize—and may almost take judicial notice—that an action of this type against all of the major automobile manufacturers in the country for their alleged responsibility for a great share of the blame for the injury to human health caused by air pollution and for many millions of dollars in economic injury resulting from automobile air pollution involves very important political considerations and may result in significant economic and political pressures. For these reasons the action was not filed until the very last days of President Johnson's administration.

(3) It has been reliably reported by eighteen Members of the United States Congress that there are "persistent and disquieting reports that the Justice Department is about to compromise one of the most important antitrust cases affecting the health and welfare of the American people" and that "the entire incident will be covered over by a legal deal arranged between the [Justice] Department and the AMA's [Automobile Manufacturers Association] Washington counsel."

(4) This action involves many important and vital considerations of the public interest above and beyond the violation of the antitrust laws in the manufacturing area, and these important and vital interests may not be adequately represented by the Department of Justice. As noted by the above mentioned eighteen Members of Congress:

"The automobile is responsible for the dumping of more than 90 million tons of pollutants into the atmosphere each year, more than twice as much as any other single pollutor. . . . The automobile accounts for 91 percent of all carbon monoxide, 63 percent of all unburned hydrocarbons and 48 percent of the oxides of nitrogen emitted from all sources. . . . Doctors, in a single year, advised 10,000 people to move away from Los Angeles because of the harmful effects of air pollution. . . . Air pollution—of which motor vehicles account for approximately 50 percent nationally—contains serious toxic substances associated with higher rates of

illness and mortality from emphysema, lung cancer."

(5) Because of the seriousness of these charges and the important public interest considerations involved, it is imperative that there be a public trial of all of the facts and that civil penalties be imposed by the court. Without such a trial and the presentation of evidence which only the Government can gather and adequately present, the rights of millions of people whose health has been adversely affected by the action of the defendants, and the rights of many more who have suffered and can establish direct economic injury as a result of the defendants' actions will be adversely and irrevocably affected. It is for these reasons that ASH now petitions the court for permission to intervene.

(6) ASH is a nationally known, non-profit, tax-exempt organization formed to take and participate in legal actions concerned with important problems of health, safety, and public welfare so that important segments of the public interest will be adequately represented in court cases and administrative proceedings involving these areas. Its Sponsors include many of the country's most prominent physicians and health educators as well as other influential citizens from many walks of life. Its most noteworthy activities to date have been in the area of smoking where it was responsible for successfully defending the decision of the Federal Communications Commission requiring free time for the antismoking messages on radio and television [Banzhaf v. F.C.C., 405 F. 2d 1082 (1968)]. ASH has filed and prosecuted over a dozen actions in its own name before the Federal Communications Commission and has filed a number of complaints with the Federal Trade Commission. ASH acts on an informal basis as a spokesman and legal action arm for numerous health organizations. Its activities have been reported in most major newspapers and news magazines including Time and Newsweek, and it has been praised editorially in a number of leading publications such as the Christian Science Monitor, Saturday Review, and the New England Journal of Medicine for its legal activities in the public health field.

(6) For all of the above stated reasons, ASH now respectfully petitions the court for permission to intervene for the purpose of opposing any move by the parties to settle this action by a consent decree which would avoid a trial and withhold information of vital interest to millions of those who suffered as a result of the actions of the defendant auto companies. In support whereof is attached, as required by 24(c) F.R.C.P., a pleading setting for a claim in the nature of a class action on behalf of those whose health has been injured by the actions of the defendants.

(7) Petitioner respectfully advises the court that it does not seek to intervene for the purpose of participating in the normal prosecution of the action or in any way delaying the proceedings except in so far as it will oppose, by argument and the presentation of authorities and information, the approval by the court of a consent decree. Pursuant to 24(b) F.R.C.P. this court must consider whether such intervention would "unduly delay or prejudice the adjudication of the rights of the original parties." It is respectfully suggested that the effect will be just the opposite; that the plaintiffs, the citizens of the United States, may not be completely and adequately protected with respect to all of their rights by the Department of Justice and that petitioners intervention for this limited purpose will further protect these rights and promote the just administration of justice.

For all the aforesaid reasons, petitioner ASH respectfully requests the court to grant its request to intervene for the purpose of opposing the settlement of this action by consent decree and to order that a copy of all further papers be served upon it as a party. Should this motion be opposed, petitioner respectfully requests the opportunity to reply with additional argument, information, and authorities.

Respectfully submitted.

JOHN F. BANZHAF III,
Attorney for Petitioner ASH.

U.S. District Court, Central District of California

UNITED STATES OF AMERICA, PLAINTIFF, V. AUTOMOBILE MANUFACTURERS ASSOCIATION, INC.; GENERAL MOTORS CORPORATION; FORD MOTOR COMPANY; CHRYSLER CORPORATION; AND AMERICAN MOTORS CORPORATION, DEFENDANTS.

(Civil No. 69–75–JWC, Filed: January 10, 1969)

COMPLAINT OF INTERVENOR ASH

Intervenor ASH, on behalf of itself, its Trustees, Executive Director, and all other Americans whose health has been adversely affected by additional air pollution caused by the acts of the defendants hereinafter alleged, and on behalf of all Americans whose right to a clean and healthy environment has also been denied thereby, joins this civil action against the defendants named herein and alleges as follows:

[Petitioner ASH adopts as its own all of the allegations made by the complainant, the United States of America by the Department of Justice, in its complaint filed on January 10, 1969.]

Respectfully submitted.

JOHN F. BANZHAF III,
Attorney for Petitioner ASH.

AFFIDAVIT AND CERTIFICATE OF SERVICE

John F. Banzhaf III, being duly sworn, deposes and says:

(1) I am an attorney and a member of the Bars of New York and the District of Columbia.

(2) I am the Executive Director and legal counsel of ASH.

(3) I have prepared, read, and am familiar with the attached Motion to Intervene and the statements therein are true to the best of my knowledge and belief.

(4) I have today served upon the defendants a copy of the attached Motion to Intervene together with all attachments by mailing a copy to each of the following by first class mail, postage prepaid:

Lloyd Cutler, Esq., Attorney for AMA, 900 17th St., N.W., Washington, D.C.

Chief Counsel, Chrysler Corp., P.O. Box 1919, Detroit, Mich. 48231.

Chief Counsel, General Motors Corp., 3044 W. Grand Blvd., Detroit, Mich. 48202.

Chief Counsel, American Motors Corp., 14250 Plymouth Rd., Detroit, Mich.

Chief Counsel, Ford Motor Company, The American Road, Dearborn, Mich. 48121.

Mr. Hollander, Dept. of Justice, Washington, D.C.

JOHN F. BANZHAF III.

Sworn to before me on this 4th day of September 1969 in the District of Columbia.

SAMUEL E. LUDERMAN,
Notary Public.

HUGE TRACTOR-TRAILER COMBINATIONS RAISE QUESTIONS ON TRUCK SIZE GOALS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. EVINS of Tennessee. Mr. Speaker, the Nashville Banner in a recent editorial reported that huge three-trailer rigs are undergoing experimental use in the State of Washington.

The Banner considers this significant in view of the fact that the trucking industry generally is pushing for two-trailer combinations.

Because of the interest of my colleagues and the American people in this most important subject, I place the editorial in the RECORD.

The editorial follows:

HIGHWAY BOXCARS: NEXT, TRIPLE RIGS?

The Des Moines Register notes editorially that:

"Mammoth 94-foot-long, three-trailer rigs are plying Interstate 5 in Washington state. In a 90-day trial, the Washington Highway Commission has granted special permits allowing nine triple-bottom tractor-trailer combinations on that state's busiest Interstate highway—from the Oregon border through Tacoma and Seattle north to Canada."

There is more surprise at the permission granted than at the industry's enlargement of vehicle plans on its drawing-board; for use, note it, on highways, built at public expense, for public safety and convenience. It is significant, surely, that this thrust for three-trailer rigs (correspondingly longer) occurs while the industry still is pushing for legalization of the two-unit highway train beyond the few states where they now are legal.

In Tennessee, for example, the proposal encountered stiff resistance—by concerned citizens and the state, itself—when sponsors brought it before the legislature this year. That was predicated on the idea of extending the legal limit (in Tennessee) from 55 to 65 feet, and permit the tandem rigs. Even in Congress, where a 70-foot limit has been suggested as a federally-authorized maximum, that measure has not cleared the House Public Works Committee.

Ostensibly there is a federal area of responsibility on standards requisite to highway use on the Interstates—and some concern, surely, for what outsize vehicles will do to considerations of safety and maintenance costs. Yet out in Washington state, the experiment goes on, with 94-foot-long, three-trailer rigs.

The Register appends its own pertinent paragraph:

"Judging by past performance, the trucking interests pushing triple-bottoms will try to pick off other states one by one, if their experiment in Washington wins approval there."

POWERPLANT SITING AUTHORITY SUGGESTED FOR CALIFORNIA

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. HOSMER. Mr. Speaker, my office has received numerous inquiries concerning a letter sent by Representative HOLIFIELD and myself to the Governor of California under date of August 5. Because of this interest I have asked that it be reproduced below:

AUGUST 5, 1969.

Re: Power Plant Siting in California.

Hon. RONALD REAGAN,
Governor of California, The Capital, Sacramento, Calif.

DEAR GOVERNOR REAGAN: The need for coordinated, long-range planning for thermal power plant sites is becoming critical nationwide, but nowhere is this need more obvious and more urgent than in California. The decreasing availability of waterfront

property, the shortage of condenser cooling water, the rising cost of land and the unique seismic problems of the state, combined with the rapidly growing demand for electricity, make California's problem increasingly acute.

But in almost every state, indeed in every region of the country, some or all of these same circumstances are combining to create similar siting complications. As evidence of the growing national concern over the availability of power plant sites, the Joint Committee on Atomic Energy recently cited several reports on the subject.

The committee quoted the President's Office of Science and Technology:

"The need for coordinated planning to identify the prime sites that will best satisfy the many economic and environmental requirements for future plants is rather obvious."

Ex-Chairman Lee White of the Federal Power Commission:

"Electric utilities can no longer select a site for a generating plant exclusively on the basis of where it fits most effectively from the point of view of system design."

And McGraw-Hill's *Electrical World* magazine,

"One of the utility industry's most pressing needs is for a long-term policy approach that will assure the availability of generation plant sites in the decades ahead."

Then concluded that in its eyes, the problem has already passed the "worrisome" stage and is becoming critical. The Joint Committee then added its own warning:

"Therefore, the committee urges that the Nation's electric utilities and appropriate agencies of the government at all levels redouble their efforts and join forces to establish realistic, long-range plans for the selection and utilization of sites for large generating facilities so as to best meet the dual public demand for electric power and environmental protection."

In California siting problems plague every new thermal power plant—oil, natural gas or nuclear—but are particularly critical as to nuclear plants because of special and stringent siting requirements imposed by the Atomic Energy Commission. We believe that nuclear power will necessarily play an increasingly larger role as California's future electric power source. This is because of (a) the anticipated economic improvements in the current generation of light water reactors (b) the advent of the highly efficient and economic fast breeder reactors, and (c) the deep public concern over air pollution. Thus, if California is to remain a low-cost power area—indeed, even if its rapidly increasing power demands are to be met at all—nuclear plant siting must be given a high priority.

It is toward this end that this letter is written.

California faces an extraordinary growth in electrical power demands during the next 20–30 years—possibly amounting to five times present requirements. In many ways, the state's prospective electrical power needs are similar in magnitude to the water needs which faced the southern portion of the state earlier in this century. The courage and foresight of the Metropolitan Water District planners solved Southern California's water shortage problems for decades. Then later similar courage and foresight carried to fruition the Statewide Water Plan to satisfy even more expanded needs. As we see it, similar imaginative pioneering effort in the area of power plant siting is required to assure adequate electrical power for the future growth of the state and for the necessities of its citizens.

We note with approval that the state, through its Resources Agency, has evidenced concern for elements of the siting problem by establishing a Power Plant Siting Committee and adopting a policy statement of objectives and principles regarding location and operation of thermal power plants. It is also the policy of the state to encourage the use of nuclear energy, recognizing that such a use has the potential of providing direct economic benefit to the public by helping to conserve fossil fuel reserves and promoting air cleanliness.

The Power Plant Siting Committee, composed of representatives of the Departments of Conservation, Fish and Game, Harbors and Watercraft, Parks and Recreation, Public Health, Water Resources, State Lands Division, Air Resources Board, Water Resources Control Board and the Regional Water Quality Control Boards, is charged with assuring that State policy with respect to the location and operation of thermal power plants is carried out. That policy is to enhance the public benefits and protect against or minimize adverse effects on the public, on the ecology of the land and its wildlife, and on the ecology of state waters and their aquatic life. Also, it is state policy that the public's opportunity to enjoy the material, physical and aesthetic benefits of these resources should be protected to the greatest extent feasible.

However, neither the State Policy on Thermal Power Plants nor the Power Plant Siting Committee directs itself toward supplying the need for sites on which massive amounts of new generating capacity can be located. The focus of State Policy and of the Committee is on assuring that power plant sites proposed from time to time, as individual electric utilities locate them, are not unduly offensive to aesthetics and to the environment. This is done on a plant-by-plant basis, with the Siting Committee exercising something of a veto over a utility's plans. Clearly what is called for is a statewide program aggressively to assure that sufficient numbers of suitable power plant sites actually become available to meet the state's requirements through the end of this century. Such a task may involve not only ascertainment and acquisition of locations which are physically and economically suitable for power plant construction, but also exercise of the governmental powers of the state to resolve conflicting demands (a) for preservation and conservation, and (b) for necessary and adequate electric power generating capacity.

To accomplish this, we feel that a three-faceted program is needed.

First, the state should establish a Power Plant Siting Authority, either on a statewide or, if necessary, interstate or regional basis, which is capable of assuring that the long-range need for sites is fulfilled.

Second, the Siting Authority should assess the state's electrical load growth to the end of this century, inventory the available sites for such future growth and, if there is a deficit, identify, purchase and develop sufficient land suitable for the installation of power plants to meet the deficit, which land would be permanently set aside as "Power Parks."

And, *third*, the Siting Authority should possess and exercise the power to resolve any conflicts which may arise between the public's need for electric power and other public values.

We believe that such a program would assure the state of adequate power plant sites, particularly nuclear power plant sites, for the foreseeable future and would serve as a model for other states and regions of the nation. Further, we believe that only such a program can provide such assurance in California because the special situations we face.

POWERPLANT SITING AUTHORITY

We envision that the proposed Power Plant Siting Authority would not only acquire and develop necessary Power Parks to meet needs to the year 2000, as previously suggested, but assuming the success of its efforts, continue its basic functions thereafter. Depending on any number of contingencies it may have to select and obtain locations outside as well as inside the state, in which event it would be desirable to engage in cooperative efforts with neighboring states.

It is to be noted that the development of any particular Power Park may require expenditures in addition to mere property acquisition.

For instance, provision of adequate cooling water or cooling towers for the park in its fully developed configuration may require installation at the time the first generating unit is constructed of cooling facilities in excess of immediate need in order to achieve overall economies in providing cooling facilities at time of full utilization.

Or, to make a particular park at a seaside location acceptable it may be most economic to install common protection against great tidal waves for all later generating stations at the time an initial unit is installed.

As another example, to make a location acceptable at all, considering certain seismic conditions against which engineered safeguards can be devised, it might be desirable for the Siting Authority rather than the individual installing utilities to bear the cost of incorporating the safeguards in each plant when it is built. The same would be true for extra engineered safeguards appropriate for metropolitan siting. These extra costs then would be shared rateably by all the state's utilities in the form of a single standard charge for site use, irrespective of its actual location or characteristics.

Our thought is that siting is a statewide problem and that no particular electric utility, whether it be publicly or privately owned, should be allowed to pre-empt the cheap and easy sites to the disadvantage of other electric utilities and their customers who would have to pick up the cost of more expensive sites in the form of higher electricity rates. To forestall such inequities we foresee the Siting Authority calculating its total capital and operating costs for all the Power Parks it maintains and levying a standard annual use charge sufficient to recover same, applicable throughout its complex and varying as to a particular utility only as to the amount of capacity it installs in the complex. This non-profit charge would be calculated to fully return to the Authority its capital and operating costs and could be adjusted at annual or other convenient intervals as these costs escalated or diminished.

In carrying out its responsibilities the Siting Authority will require suitable financial powers, including the power to tax and to issue public obligations. It will also need the power of condemnation, as well as certain quasi-judicial powers to resolve conflicts involving the highest and best use of particular locations and resources.

It will be essential for the Siting Authority to monitor technological progress in power generation and the transmission of electricity as such progress may affect size, location, cooling and other characteristics of plant sites. We have in mind such concepts as man-made and floating island siting, underground and underwater siting, multipurpose siting, cryogenic transmission techniques, engineered safeguards against various physical hazards and the like.

POWER PARKS

It is apparent from the difficulties already encountered by electric utilities both in Northern and Southern California that there are precious few areas remaining in the state suitable, from geologic, environmental, population and other technical standpoints, for large power plant complexes or even single plants. Therefore, if the state's utilities are to keep pace with the public's demand for more and more electric power, it is imperative that a common effort be made to identify and set aside those few areas before they become dedicated to other uses.

We believe that concentration of the state's future power capability in a few large

"Power Parks" would permit the use of land areas which might not be economically feasible for a single facility. In part, we are thinking of inland rather than beachfront siting. Inland locations would preserve beachfront areas for recreational and residential uses and probably would attract less public opposition. In addition, it is possible that the cost of a few miles of cooling water inlet and at-sea outlet conduits, although considerable, could be satisfactorily absorbed in a complex of the magnitude under consideration. Undoubtedly this would be prohibitive for a single plant or a small complex.

It is worth noting, as an aside, that the basic concept of ocean cooling water transmission to areas away from the beach front also has a potential for solving pressing cooling water requirements for other industrial and residential needs without further aggravating the potable water supply problem.

We are unable to specify the number of Power Parks which would be required to meet the State's electrical needs through the year 2000. That depends on the size, location and surrounding population density of the areas selected, the size of the parks themselves, estimated load growth and similar factors. This figure will not be known until our site deficit is estimated and a physical review of potential generation locations is made.

ADVANCE SITING CONCEPTS

A most important area of activity for the proposed Siting Agency would be monitoring developments in siting techniques and other concepts which may affect power plant site requirements, size and location. It is certainly not too early to begin serious consideration of some of the more advanced ideas in this area, and perhaps the Siting Authority might be granted some authority to encourage them financially.

The Bolsa Island Nuclear Power and Desalting Project, which was proposed for construction on a man-made island off the coast of Southern California, is one example of the type of siting concepts the future will bring. Despite the demise of that project, we still firmly believe that a demonstration of reactor siting on made-made, offshore islands is a matter of some urgency, particularly in California and other more populous coastal states. We feel that multi-purpose use of such islands for activities, in addition to electric generation and desalting, such as for airports, harbors, yacht basins, industrial parks and the like would optimize their cost-effectiveness.

There are a variety of other siting schemes which should be carefully explored with a view toward the day in the not too distant future when all suitable onshore and nearshore sites are filled.

Other concepts which bear examination include floating power plant islands or ocean bottom siting substantially decoupled from the seabed and possibly constructed by tunneling from the shore.

Should progress with extra-high voltage cryogenic technology make possible very long line transmission accompanied by only moderate line losses and only tolerable probabilities of interruption, then the radius of search for suitable generating site locations will be extended commensurately and the matter of cooperative arrangements with other states will loom larger than now.

We believe that Power Plant Siting Authority and Power Park concepts deserve careful consideration by all parties in California which ultimately will be involved, particularly your office, all public and private electric utilities and the California Power Plant Siting Committee, which undoubtedly has gained some experience and expertise which would be helpful. These are obviously bold ideas, but California's exploding population will make it a critical area of congestion, pollution and increasing need for water and power. It is not a day too soon to plan for big solutions to the big problems we can foresee.

The subject of this letter being a state responsibility rather than a federal one, we thus bring it to your attention for such initiative as you judge proper. However, as concerned California citizens, as Members of Congress, and particularly as members of the Joint Committee on Atomic Energy, we stand ready to be of whatever assistance we can.

Very truly yours,

CRAIG HOSMER.
CHET HOLIFIELD.

BARRATT O'HARA

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. DELANEY. Mr. Speaker, it was with deep sadness that I learned of the passing of our distinguished former colleague, Barratt O'Hara.

His was a legendary life, and an era vanished with his death. At the age of 13 he was on a mission to Nicaragua with his father, and joined the Smithsonian expedition to explore the Central American jungle in search of a canal site. Exploration by others later resulted in selection of the Panama route. At the age of 15, aflame with youthful patriotism, he ran away from home to become chief scout for the 33d Michigan Brigade, which followed Teddy Roosevelt's Rough Riders into Cuba during the Spanish-American War.

Following the war, he returned to graduate from high school, attended the University of Missouri, and later received a law degree from Kent College.

The St. Louis Chronicle hired him as sports editor when he was 20, and he later transferred to Chicago where he became Sunday editor of the Examiner. He edited and published "Chicago magazine," wrote a history of boxing, and became the youngest Lieutenant Governor of Illinois at the age of 30. Briefly, he served as president of a Hollywood motion picture company, but cut this career short to enlist in the Army during World War I. He served with great distinction, was later commissioned as a major, and became judge advocate general of the 15th Division.

Following World War I, he devoted his talents to the practice of law and was recognized as one of the outstanding lawyers of his day. He defended some 300 murder cases of which fewer than 30 of his clients were convicted, and none were executed. The renowned Clarence Darrow once said:

I am envious of only one thing in the world—I wish I had the courage of Barratt O'Hara.

His distinguished career as a Member of this body began at the age of 66. During his 18 years in Congress he demonstrated a keen understanding of the Nation's problems, and was a dedicated defender of the rights of man. He was a tenacious but gracious adversary, and a man of charm, profound wisdom, and gentle humor. He will be sorely missed.

I extend my heartfelt sympathy to the members of his family.

THE PRICE OF CLEAN AIR

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. ROYBAL. Mr. Speaker, the Los Angeles Times has been one of the outstanding pioneer leaders in the effort to organize a truly national program to eliminate the dangerous impurities in the air we breathe, and to create the kind of clean, wholesome atmosphere we want for ourselves and for our children.

For that reason, I am happy to include in the RECORD at this point an excellent editorial which appeared in the Times recently, entitled "The Price of Clean Air."

The Times editorial writer accurately points to the key element in our national struggle for clean air: the overriding power of an aroused public opinion demanding that effective action be taken by both industry and Government to win the fight against continuing contamination of the environment in which we live.

The article follows:

THE PRICE OF CLEAN AIR

"The main battle against smog has been won."—Charles M. Heinen, chief engineer, emission control and chemical development, Chrysler Corp., April 9.

"The peak output of automobile-produced smog in Southern California definitely has passed—and will never be as high again."—Dr. Fred Bowditch, director of emission control, General Motors, Aug. 5.

"The third consecutive smog alert was called Friday in the Los Angeles Basin as a blazing sun continued to cook pollutants in the air."—The Times, Aug. 23.

There is a kind of grim irony in the recent public concern over the potential threat from transportation and storage of military poison gases.

City dwellers throughout the nation already are slowly poisoning themselves by inhaling the air polluted by automobiles. The threat is actual and still unabated.

Nowhere is the peril of auto-caused air pollution more serious than in the Los Angeles Basin.

At least 10,000 persons leave each year on the advice of their physicians. The millions that remain simply suffer and complain that "something must be done."

Something has been done. But not enough and not quickly enough.

Although emission control regulations have brought about a reduction in the total amount of hydrocarbons and carbon monoxide, experts say the skies over Los Angeles will not be substantially cleared of pollutants until 1980.

That timetable, however, could be accelerated—if smog sufferers would pay the price.

Air pollution control can be as strict as the people want it to be. California demonstrated that public pressure is stronger than all the auto industry lobbyists when it forced Detroit to install smog control devices.

Congress also was responsive to the collective outrage of Southern Californians who demanded that this state be allowed to set tougher emission standards than the federal requirements.

Although Detroit complains, it will comply with the increasingly stringent regulations set by the Legislature for new cars in the 1970 model year and subsequently. No industry wants to give up its biggest market.

But even with improved devices, the fight against smog moves slowly because a majority of the cars in the Los Angeles Basin still have no exhaust control system at all.

The total of motor vehicles in the basin, moreover, increases by nearly 10% every year.

To achieve a substantial improvement in air quality, therefore, every one of the more than 4 million cars and trucks in Los Angeles County must be equipped with an emission control device in proper working order.

This would mean that every owner of a pre-1966 vehicle would have to assume not only the initial cost of such a device but also the expense of maintenance and at least annual inspection. In Los Angeles County alone, the total price would amount to hundreds of millions of dollars.

The Legislature mandated installation of control equipment on used cars but only if two acceptable devices were available and if their cost did not exceed $85. Neither condition has been met.

Much more must be done to develop feasible inspection of the control systems installed at the factory. Unlike the crankcase blowby, these devices cannot be properly inspected with a quick look under the hood.

So long as the public insists on buying big cars with excessive horsepower, the fumes they produce can be reduced only by better control equipment subject to periodic maintenance and inspection—until there is a major breakthrough in engines or fuel.

Detroit says that turbine or steam engines or one powered with natural gas are not yet practical and may never be. Oil companies similarly offer little encouragement that pollution can be reduced by modifying present fuels.

Perhaps. But if the public outcry were loud enough, more action would be motivated in industry—and in government. Why is not the federal government doing more independent research in these two areas?

The ultimate cure was proposed by State Sen. Nicholas Petris (D-Alameda) when he proposed that the internal combustion engine be outlawed in California in 1975.

Not long ago, his bill would have drawn nothing but laughter from his colleagues. This year it passed the Senate and had support in the Assembly before being defeated.

Life without one—or two or three—cars seems unthinkable to most Southern Californians. But life may be unbearable if auto-caused air pollutants are not drastically curtailed, and before 1980.

The air can be made cleaner, just as other kinds of environmental pollution can be controlled. But smog will not diminish until the public demands—and supports—corrective action.

H.R. 6967 AND H.R. 8769—NEWSPAPER PRESERVATION ACT

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. FRIEDEL. Mr. Speaker, my bill, H.R. 6967, and one which I cosponsored with a number of my colleagues, H.R. 8769, are both identical to H.R. 279.

As a general rule, I favor the antitrust laws and frown upon making exceptions to them. First, because I think exceptions tend to make bad law, and second, because I feel the antitrust laws serve the important function of preserving and promoting competition in our economic system.

However, I believe in this instance, a strong case can be made for exempting joint newspaper operating arrangements from the antitrust laws without doing harm to free competition.

As Members are well aware, these bills will affect primarily those two newspaper cities where one of the papers is in financial difficulties and likely to cease publication unless it can enter into a joint operating arrangement with its healthy rival, and thus preserve two independent voices for the particular city or area serviced by these papers.

While opponents may argue that this legislation will permit these two papers to set identical advertising and circulation rates, I think we must be practical. Look around you, in nearly every city, where the service and coverage offered are comparable, even though the competing papers are printed and published independently their rates are comparable if not identical and legally so. This is so because no law prevents a business from independently deciding to revise its rates to match those of its competitor. It would only be illegal if they conspired to set the prices as I understand it.

I am no lawyer and I am sure there are other legal aspects to be considered with which I am not familiar, but it seems to me as a nonlawyer that what these bills propose to do detracts little from the antitrust laws in exchange for preserving an independent editorial voice.

Perhaps the strongest motivation for advocating this legislation is my belief, based on what I have been told, that joint operating arrangements will preserve jobs. Where the weaker of the two papers would be likely to cease publication and go out of business, thus eliminating all the jobs that paper created, a joint operation will act to save those jobs, or most of them, which otherwise would have been lost.

Independence of the press has played a large role in helping us maintain our individual freedoms in this country and I believe passage of this legislation will aid in continuing that tradition.

For these reasons, I hope the House will give this legislation its favorable consideration.

SENATOR WILLIAMS ADDRESSES NATIONAL ZIONIST ORGANIZATION

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. RODINO. Mr. Speaker, on Sunday, August 31, 1969, Senator HARRISON A. WILLIAMS, JR., Democrat, of New Jersey delivered a major address to the 72d National Convention of the Zionist Organization of America. In a sensitive and realistic manner, Senator WILLIAMS has called upon the United States and the world "to unite with Israel in the pursuit of peace."

The address follows:

ADDRESS BY SENATOR HARRISON A. WILLIAMS, JR.

Early this summer, I visited Yad Vashem, the memorial to the six million. The horror of an insane mind's solution to the "Jewish Problem" was brought home very hard. So was the realization that for thousands of years the world has pursued similar solutions to the "Jewish Problem." Whether it was Pharoah or Hitler, the Roman Empire, or the Spanish Inquisition, none has succeeded. The will of the Jewish people to survive as a people has overcome.

Here we are in 1969, witnesses to another effort to destroy the Jewish State. Terrorists, harbored by the surrounding Arab states, daily take their heavy toll of civilian lives. Only last week, Jerusalem was subjected to the first mortar attack since the six-day war. Now Nasser and Hussein have called for a holy war, a war whose sole purpose, and let no nation be fooled, whose sole purpose is the destruction of Israel.

With this as the background, we meet here in Los Angeles for the seventy-second national convention of the Zionist Organization of America. The ZOA honors, tonight, a military hero who has fought in three wars in twenty years to defend the Jewish State. On the other hand, the ZOA invites a United States Senator, who is not Jewish, to be a guest speaker.

This, I think, is appropriate. You have a right to hear from the non-Jewish world what our response will be to the latest solution of the "Jewish Problem."

In short, before I dwell on particulars, our response must be a resounding, wholehearted commitment to the continued existence of a secure Israel. Our efforts to solve the Middle East crisis must be centered on one basic premise—Israel's right to life as a state. The other issues, as important as they are, can be solved, perhaps they can even be negotiated. But life itself; the continued integrity of the State of Israel, must be non-negotiable.

As I see the Middle East crisis, in 1969, we must be concerned with three major goals. These goals, succinctly stated are Peace, Security and Development.

During my short stay in Israel, several opportunities arose to discuss the issues of peace with the Prime Minister, Mrs. Meir, with the Foreign Minister, Abba Eban, and with several others, both high government officials and ordinary vitally concerned citizens.

On one thing, more so than anything else, Israel speaks with one clear voice. Peace cannot be achieved in the Middle East by the imposition of the will of the Soviet Union, the United States, Great Britain, France, any combination of these countries, or any or all of the United Nations. Peace can only be arrived at in Israel when Israel and her Arab neighbors sit down at the peace table and negotiate an across-the-table peace—when Israel and her neighbors both sign the document which assures the secure and continued existence of Israel on the eastern shores of the Mediterranean.

As one reflects on this key position, it becomes more clearly obvious that no other possibility can serve the prospects of peace. We should have learned that lesson a long time ago. Twice before, Israel has permitted other nations to establish the armistice terms in the Middle East. Twice before other nations have "guaranteed" those armistice and cease-fire terms. Twice before, those guarantees have been demonstrated to be worth no more than the paper on which they were written.

It seems to be obvious that the United States, and the Soviet Union—if it will, can play a very useful role in helping to establish and maintain the peace of the Middle East. That role, however, cannot extend to the imposition of the terms of a peace in that area of the world. The United States and the Soviet Union can foster an atmosphere of peace.

For example, the Soviet Union, which now apparently, and for some time, has been the leading influence in several countries of the Middle East, can easily control Nasser's warlike intentions by controlling the armaments he receives. The complete reliance Nasser places on Soviet weaponry was pointed out

by Mrs. Meir when she reminded me that every Israeli killed both during and since the six-day war, was killed by a Russian weapon.

The United States, on the other hand, will do more to foster peace in the Middle East by clearly and unequivocally announcing and reiterating its unreserved commitment to the continued integrity of the State of Israel than by trying to be a power broker in the area. We should have learned our lessons. We raised Hussein on the pedestal of visiting royalty, and continue to curry favor with him. But he still calls for a holy war.

Let the United States and the Soviet Union agree that Israel must continue to exist. Let the United States and the Soviet Union agree that the parties to the dispute must sit down at the peace table to resolve their own differences. And let the United States and Soviet Union agree that they will do all that they can to help all the nations of the Middle East to thrive in peace, not in war.

One cannot help but wonder at the gross folly of mankind. The Soviet Union has just spent $1 billion in aid to Egypt. Has that aid improved the living conditions of even one human being in Egypt? No, it has not.

That aid, had it been for economic development, could have improved the lot of millions of underprivileged people, an admirable goal. It also would have been a giant step forward in securing peace in the Middle East. It would have offered Egypt the opportunity to feed on the nourishment of economic development rather than on the poisons of bigotry and hatred.

Some have argued that there cannot be a peace until Israel has withdrawn to her pre-1967 borders. Others argue that there cannot be a withdrawal until there is peace. This appears to me to be a fruitless battle of words and slogans.

In the first place, let us analyze the geography and people involved. We are talking about five different locations.

First there is the Golan Heights, left uncultivated for twenty years and used by Syria for only one purpose—namely, to bombard peaceful Israeli farming settlements in the valley below.

Then there is the Sinai Peninsula. Its mineral resources have been minimally exploited by European and American companies. But Egypt's only use for it was as a military threat against Israel, using Sharm-el-Sheikh to seal off the Gulf of Elat.

We move up the Mediterranean Coast to the Gaza Strip: refuge for Palestinean Arabs and natives of Gaza, owing no allegiance to any of the Arab nations. Indeed, the Arab nations will do nothing and have done nothing to improve their lives.

The West Bank of the Jordan, presents a somewhat different problem. First, we must remember that until twenty years ago, it was not part of Jordan, because Jordan did not exist. It is inhabited by Palestinean Arabs, most of whom have no political allegiance to the Bedouin kingdom across the river. It also comprises the idea and population which could benefit most directly from economic ties to Israel.

Last, is the Holy City. If the world, including the Arab world, has an interest in that city, its interest is in the assurance that there will be open access to all holy places, for all religious denominations. I think the world would do well to remember that only since the city was unified two years ago, under Israeli control, has there been that free access.

The fire at the mosque ten days ago is being used by Cairo, Amman and Damascus to demonstrate that the old city of Jerusalem must be returned to Arab hands. If one could blame the ruling government for such things as fires, then the Arabs have no great claim. For, this same mosque was in flames five years ago, as was the Church of the Holy Sepulcher in 1949.

As unfortunate as the fire was, and it is a loss, not just to the Moslem world, although Moslems are most directly affected, it must be recognized for what it is—an act of an admitted arsonist who attempted the same act two years ago. He was neither an Israeli nor a Jew, though that should be irrelevant.

What is to be done with these territories lying within the cease-fire lines? Recently, the local press in the United States has noted the dispute in Israel over the Labor Party platform regarding the return of conquered territories. This dispute has been fomenting for some time in Israel. Yet the Press in this country tends to make the dispute larger than it is. What I mean is that there does not appear to me to be that much disagreement between Golda Meir and Abba Eban on the one hand, and Moshe Dayan on the other.

Mrs. Meir's position, for example, has not changed since I spoke with her back in May. She said then, as she says now, that Israel will not return Jerusalem; that Israel will never again subject itself to the indefensible position under the Golan Heights, and that regarding all the other conquered territories, as she put it, "Israel will not give back any territory which gives her enemies a natural advantage over Israel."

Her differences with Moshe Dayan appear to be more of a difference in negotiating style and tactics than a difference, necessarily, in the needs of Israeli security. For example, I find it difficult to conceive of the possibility that Mrs. Meir would be any more willing than Moshe Dayan to return control over the Straits of Tiran to Egypt, unconditionally. Yet, Moshe Dayan says so now, Mrs. Meir would rather sit down at the bargaining table without having made that a prior condition to bargaining.

I believe each position has its bargaining advantages and bargaining disadvantages. More important, however, I think, is the realization that Israel in refusing, as she undoubtedly will, to return the Straits of Tiran to Egyptian control, is taking a position which is absolutely vital to her future existence as a secure state in the Middle East.

The same can possibly be said for the Golan Heights. It would be inappropriate, and perhaps even improper for this Senator to suggest that should or what should not be bargainable from Israel's position. I can only reflect on my own feelings, as well as the feelings one must get from residents of the area, as I looked up at the Golan Heights and then looked down from the bunkers to the valley below.

From those bunkers, the Syrian soldiers had clear view and clear range on all of the farming settlements in the valley. And, one should note that that's all there is in that valley—peaceful farming settlements. One man I met, a Moroccan refugee, had had his house shot out from under him three times, yet he doggedly insisted on staying in his "home." Israel, obviously, will never put her farmers in that position again.

The point is really very simple. The only interest the Arab nations have had in the past in these areas has been as a military and political threat to the existence of the State of Israel. If the Arab nations are willing to live in peace with Israel, they will be able to negotiate secure borders. If the Arab nations are not willing to live in peace with Israel, neither the United States nor any country should be agreeable to allowing the Arab nations to use those areas once again to threaten Israel.

Peace, not war, must be our theme. Economic development, not wanton destruction, must be our goal.

When I met with Mrs. Meir, just 3 months ago, she made one comment that has lodged itself in my mind. She said: "No one likes having the only decent flat in a bad neighborhood." She was saying that Israel, rather than fighting with her neighbors, would rather join with them in developing the area.

So many mutual benefits could be derived from joint Israel-Arab efforts in development. Many of the benefits would be of greater significance to the Arabs, at least initially, than to the Israelis.

One typical example came to mind as I travelled through Gallilee up to the Golan Heights. To get up to the Heights, you have to cross the "green line." What an appropriate description. Looking down at the valley from the burnt-out Syrian bunkers, you see a sharp dividing line running the full length of the valley. On one side, the Israeli side, the valley is green. Vegetation abounds. Irrigation canals criss-cross the land. On the other side, the land is a pale brown. Although a river runs through this formerly Syrian territory, no crops had been planted.

It is painful to think of what might have been, had the leadership of the Arab countries stopped their war posturing and worked with Israel on land reclamation projects, on projects to develop and control the Jordan River.

One can only imagine the inestimable benefits to be derived by all the nations of the Middle East from Israel's efforts to harness solar energy and to desalinate the area's water supply.

Peaceful relations and joint economic and social development could convert the Middle East from a wasteland into a productive, fertile, habitable land able to support its millions of inhabitants.

And Israel has been ready and willing, indeed even anxious to undertake these joint programs. Israel's alternative is to help to make the entire neighborhood decent. What can the United States, and the Soviet Union, if it will, do to foster such development?

As a United States Senator, one thing comes to mind immediately. A bill has just been introduced which all of us must join in supporting. It offers the realization of a dream, not only Israel's dream, nor a dream for the Middle East, but for all of mankind: aid in Israel's desalination project. The funds were part of the budget sent up to Congress by the outgoing administration. They have not been included, however, in the revised budget. I trust the Congress will rectify that judgment.

The bill would authorize a $40-million investment by the United States. I say investment, because that's just what it is; an investment in peace and prosperity. Israel is already succeeding in the desalination of 10% brackish waters. If she can improve on that, and convert saltier waters, the entire wasteland can be regained.

Israel has proven that it can be done; on a smaller scale. The United States now has the opportunity of investing in an expansion of this vital program for the benefit of man.

Let's get on with the labors of peace, instead of the agonies of war. Let the United States take the lead in bringing overwhelming moral and political pressure to bear on Nasser, Hussein and the other Arab leaders to compel them to give up their goal of politicide and to meet the Israelis in direct, across-the-table peace negotiations.

Let the United States, unilaterally, if necessary, demonstrate its faith in the Middle East's future, a future premised on the continued existence of Israel, by investing in her efforts to benefit mankind.

With the new session of the United Nations General Assembly only two weeks away, let the word go forth that the United States is wholeheartedly committed to the continued existence and integrity of a secure, and I stress the word secure, Israel; a State of Israel which can be freed from the ever-present needs to defend her right to exist and can direct her energies to the improvement of her neighborhood, her entire neighborhood.

Let the United States, and the world, for once, unite with Israel in the pursuit of peace.

TRIBUTE TO MISS ESTHER LAZARUS

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. FRIEDEL. Mr. Speaker, I take this opportunity to commend a resident of my congressional district, Miss Esther Lazarus, of 1 Warrenton Road, Baltimore, who retired as director of the Baltimore City Department of Social Services, after 31 years of devoted public service.

The unselfish and dedicated service of this great lady was outlined in a letter to the editor in our Baltimore papers, by Mrs. Inge Falk Barron, of 2100 West Rogers Avenue, Baltimore, Md., which I believe very graphically points out the wonderful service Miss Lazarus rendered to the people of the city of Baltimore. To Miss Lazarus, I extend my own best wishes for health and happiness in her well-earned years of retirement.

I insert Mrs. Barron's letter at this point in the RECORD:

BALTIMORE, MD.

To the EDITOR.

DEAR SIR: An important era has come to an end in the City of Baltimore and the State of Maryland. Esther Lazarus is retiring as the Director of the Baltimore City Department of Social Services after thirty-one years of devoted public service. It is of course impossible to thank her adequately or give her the recognition she so richly deserves for everything that she has done, nor would she expect this. To her the knowledge that she has served to the best of her ability and has been useful to our community is enough.

Therefore this message is addressed to the community because it may be helpful to everyone to know a little more what the years of Miss Lazarus' directorship have meant to some of us who have been privileged to know her. It may inspire all of us toward a higher standard of excellence no matter what our vocation may be and more important, it may re-awaken in each of us the spirit of compassion and the reverence for life which is inherent in every human being. Her inspiration may lead to a renewal of our youthful idealism and enable all of us to work together to make this a better society for everyone.

Miss Lazarus has administered the Department over the past three decades under circumstances that might have broken the spirit of the staunchest man during periods of unprecedented social, political and economic upheavals. The fact that she has been able to adjust to these changes and to provide the kind of leadership that has anticipated many of them, speaks to her eternal youth and to her greatness. She has made the Baltimore City Department, with the help of a devoted and a loyal staff, into one of the most outstanding institutions in our nation.

Miss Lazarus is a woman small in stature—but with gigantic courage and goodness of heart. She is one of the truly great humanitarians of our times—a woman who cares deeply about all people and who unselfishly devotes all of her energies working for the dignity of man and a better world for everyone.

Esther Lazarus can indeed stand tall in the company of our great national heroes for she has contributed as much to the progress of man's quest for human rights and freedom as the most famous of them. She has fought fearlessly for the right of every human being to live his life in dignity—free from want and oppression. She has battled constantly against discrimination and has been a pioneer in gaining civil rights for all people. She was an advocate for the poor and the dependent long before it became fashionable. She has encouraged client participation long before it was demanded by the more vocal groups. She has stood up courageously to Governors, Mayors, legislators, bureaucrats, boards, committees, taxpayers and even the press and has sought equal rights and privileges for all people. She has pleaded for an end to poverty and has asked for a decent standard of living for all. She has patiently tried to explain the-much-criticized-welfare-program by putting the blame where it belongs—on society!

And yet she has never shirked the responsibility of trying to administer an archaic public assistance system that nobody likes and that is recognized by everyone as being in need of major reforms. She and her staff have always followed the rules and regulations of State and Federal policy but at the same time have worked hard to try to change them. Often they have succeeded. She has been a pioneer and an innovator and many of her ideas have won national and international recognition. She has inspired many people in the profession to become more effective in their jobs, and former alumni of the Baltimore City Department of Social Services are scattered all over the nation. Many follow her philosophy. It is indeed fortunate that she will be able to continue to inspire young social workers and administrators in her new role as a teacher at the University of Maryland School of Social Work.

Miss Lazarus has received many honors and much acclaim and like all great persons she has evoked extreme emotions in people. There are many that love and revere her; there are those who do not. She has often been misunderstood and attacked severely by critics as a symbol of the welfare system. If this has ever affected her she has never shown it. In fact she is equally unconcerned about praise or criticism because she always knows she is doing her very best and that is all that can be expected of any person.

Miss Lazarus is leaving us a great legacy: To her successor, Mr. Maurice Harmon, she is leaving a challenging position, difficult to fill, but with the opportunity to be of great service to many people. To her staff she is leaving a tradition of excellence and a blueprint of plans and ideas that need to be crystallized before being put into practice. To the Mayor and the City Council she is leaving a Department that is outstanding in the nation, staffed by public servants who for the most part truly care about the people they serve and who are committed to the principle of helping people to help themselves. To the community she is leaving a Department that will continue to provide idealistic leadership and fight for social reforms. To all of us she is leaving the challenge to finally realize our own responsibility for the failure of society to serve all of its citizens and the inspiration to carry on her work to bring about the necessary changes. But most of all she is leaving us her faith in the basic goodness of human beings, her firm belief in the dignity of man and her trust that the people of Baltimore and in the State of Maryland have really begun to care what happens in our society and will work hard to make this the kind of community where all people shall have the opportunity to live productively and play their part in bringing about better things for themselves and for their children.

Let us all be worthy of that trust!

Sincerely,

Mrs. INGE FALK BARRON.

MASS TRANSIT TRUST FUND

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. ROYBAL. Mr. Speaker, when the National Governors Conference on September 2 unanimously supported a trust fund approach to financing urban mass transit systems, I believe the Governors made a significant contribution to the growing national dialog on the vital subject of providing adequate rapid transportation for our citizens who live in major metropolitan population centers.

Few will disagree that mass transit needs a dependable, long-range method of financing, with an assured Federal commitment as a funding guarantee, similar to that provided by our outstanding highway trust fund.

I have supported this approach, and my bill, H.R. 9143, would establish a mass transit trust fund along the lines of the concept endorsed by the National League of Cities and the U.S. Conference of Mayors.

So, I was encouraged to read a fine editorial in a recent issue of the Los Angeles Times, entitled "Transit: A $10 Billion Answer," which also supported this position.

Because of the importance of this question, I include in the RECORD the Times' editorial:

TRANSIT: A $10 BILLION ANSWER

(NOTE.—Issue: The Administration transit program looks good on paper. But can systems be built without trust fund financing?)

President Nixon's proposal to drop $10 billion in public transportation fareboxes both pleased and disappointed officials of local government.

Although no other administration has offered so comprehensive a support program, the means of financing mass transit systems has stirred growing controversy.

Mr. Nixon's own party generally has held that developing alternatives to the private automobile is primarily the responsibility of local jurisdictions. House Republicans even opposed the modest transportation assistance program now in effect.

The Administration bill, however, declares that rapid urbanization "has made the ability of all citizens to move quickly and at reasonable cost an urgent national problem."

Local officials liked the Administration's rhetoric but not the results of White House arguments over financing the 12-year program. The mayors wanted a trust fund, similar to the means of paying for the interstate highway system. What they got was something called "contract authority."

The President's program, in essence, would commit Congress to the spending of $10 billion in 2–1 matching grants to local jurisdictions for capital outlay and research projects. Funding, however, would be subject to congressional appropriation each year.

Such a plan may look good on paper, the mayors contend, but it provides no basis for the kind of long-term bond financing needed for the building of transit systems. The same argument was made by Transportation Secretary John Volpe, who also pushed for a transit trust fund.

The Times believes that adequate public transportation is so important an urban need that Congress should establish a trust fund to assure stable financing.

As President Nixon himself said "Until we make public transportation an attractive alternative to private car use, we will never be able to build highways fast enough to avoid congestion."

Some of the revenue now going into the highway trust fund for use in urban areas, therefore, should be diverted to the financing of transit system construction. Taxes on highway users would be well spent if they slow the proliferation of vehicles and make city and suburban freeways less congested.

Even with proper financing, the $10 billion program cannot ease all the traffic jams of a nation whose cities will have another 100 million population by the year 2000. California, for instance, could only expect a maximum of 12½% of the available funds in one year—hardly a bonanza for Los Angeles, San Francisco, San Diego and other cities.

Yet federal help could be a significant factor in accelerating the Southern California Rapid Transit District's more flexible approach to mass transit, which involves more innovative use of buses as well as other transportation modes.

Congress should act this year on effective financing for alternatives to the private automobile—and the concrete, congestion and fumes it causes.

DON BRUCE: A RARE COMBINATION

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. BRAY. Mr. Speaker, the recent passing of our friend and former colleague, Hon. Donald C. Bruce, shocked and saddened all who had known him and valued his friendship.

The following tribute, which appeared in the Indianapolis News of September 5, 1969, and was written by M. Stanton Evans, is a moving eulogy to a man who will be sorely missed:

DON BRUCE: A RARE COMBINATION

(By Stan Evans)

The many friends of Donald C. Bruce were stunned this week to hear of his passing at the youthful age of 48.

His death is a staggering loss for all who believe in the essentials of limited government and a want firm defense of its principles. No spokesman for the cause of freedom was more eloquent or persuasive in its behalf. To lose a voice like this is a blow to libertarians and conservatives not only here but elsewhere throughout the country.

Bruce was well-known to Indianapolis citizens not only as a two-term congressman who compiled an outstanding record but as a long-time radio broadcaster and public speaker in our city. He rose to prominence as a keen student and opponent of Communism and as a forceful advocate of the free American system and its constitutional balances. His record in Congress was among the best.

Don's passing is particularly hard to believe not only because of his age but because he was a big and active man whose energy seemed inexhaustible. He would generally lose weight during campaign seasons but seldom showed signs of fatigue or illness. This writer saw him less than two months ago at a political gathering and he seemed in all essential respects to be the Don Bruce of old, his zest for tackling the issues before the nation unabated.

What most people will remember about Don was his unparalleled ability to discuss tough questions with a force and clarity which had enormous political impact. During his congressional campaigns he would do something few other political figures are able to do: Simply sit down in front of a television camera for five minutes and talk directly to the viewers at home, without script or notes.

The sense of timing which allowed him to conduct these sessions within the allotted span of minutes had of course been sharpened by years as a broadcaster. His powers of expression were formed from years of study and a keen intelligence which sorted the data in philosophical perspective. But the effect he had on an audience rose from his own sense of dedicated mission—an urgent concern for America which he transmitted to his listeners.

Don was a rare phenomenon in politics. He based his campaign style and his voting record, not on what he thought was expedient, but on a well-formed understanding of political and economic principle. He stressed this notion in his campaigns for office, which surely must rank among the most issue-oriented in political history. His voting record in Washington was by the same token one of the most consistent ever compiled—a monument to his knowledge and integrity alike.

I remember a radio debate in which Don was asked his qualifications to represent the people of Indianapolis in Congress. Rather than giving the usual replies about how much "aid" he could bring into town, or what he was going to do to assuage this or that interest group, Don cited his study of the free enterprise economics of Ludwig Von Mises and F. A. Hayek.

To find a man who combines philosophical depth with ability to transmit his convictions to the public is unusual in any time or place. It has become even more unusual of late, as "pragmatic" politicians vie with one another to offer the public, not what they consider to be right and just, but what they think is politically useful. Philosophical concern sometimes is not very popular.

Don Bruce, through his remarkable combination of talents, succeeeded in making it popular. He demonstrated that the electorate of a large metropolitan area would respond strongly to the cause of conservatism if it were presented clearly by a man who knew the issues and was not afraid to speak out on them. Whatever the "pragmatists" may think, Don showed conclusively that principle makes good politics.

MARYLAND MARINE KILLED IN VIETNAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. LONG of Maryland. Mr. Speaker, Lance Cpl. Michael L. Harp, a fine young man from Maryland was recently killed in action in Vietnam. I wish to commend the courage of this young man and to honor his memory by including the following article in the RECORD:

PASADENA LANCE CORPORAL KILLED LEADING FIRE TEAM

A Marine lance corporal from Anne Arundel county has been killed in Vietnam, the Defense Department announced yesterday.

Lance Cpl. Michael L. Harp, 19, of 1109 Brandon Shore road, Pasadena, was killed by enemy small arms fire last Thursday while on a search and clear operation with about 200 other marines 5 miles northwest of An Hoa in Quang Nan province.

Corporal Harp was the leader of a four-man "fire team."

He arrived in Vietnam on March 5, 1969, and was a member of E Company, 2d Battalion, 5th Marine Regiment, 1st Marine Division.

Corporal Harp enlisted for four years in July, 1968, following his graduation from Northeast High School.

According to his father, Corporal Harp planned to attend college and study oceanography after his four years in the Marines. Mr. Harp had sent his son several books on oceanography after he arrived in Vietnam.

Corporal Harp was stationed at An Hoa. He was promoted to Lance Corporal two days before he was killed.

He was a member of the track team and the Inter-Act Club, a service club, in high school.

SURVIVORS NAMED

He enjoyed hunting, fishing, and water skiing on the Patapsco River, which his home overlooks. He also enjoyed photography. A roll of film arrived at home yesterday which he wanted processed and returned to him in Vietnam.

Corporal Harp is survived by his parents, Mr. and Mrs. Charles K. Harp; a step-brother, Raymond Johnson, of Baltimore; and a half-sister, Mrs. Leslie Kingery, of Baltimore.

He is also survived by a brother, Marine Cpl. David Harp, of Cherry Point, N.C.

EPIC WAS THE VOYAGE

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. RODINO. Mr. Speaker, recently the Newark, N.J. post office paid poetic tribute to the Apollo 11 astronauts with a narrative poem entitled "Epic Was the Voyage," written especially for the occasion by Newark's poet laureate, Larry Pendleton.

In having this tribute printed in the official special orders of the Newark post office department, Postmaster Joseph J. Benucci said:

This is man in his finest hour. We of the Newark Postal District are deeply privileged to so honor our valiant astronauts on the successful completion of their history making flight and walk on the moon.

The poem follows:

EPIC WAS THE VOYAGE

(By Larry Pendleton)

Ho! The Sea of Tranquility
Where Man did not hold sway
Until two daring Astronauts
Walked on the moon that day . . .

Nations gasped and gaped in awe
The impossible had been done
Three valiant Voyagers roared thru space
Beneath the scorching sun . . .

Their Lunar module touched-down on moon
The Solar Winds moaned low
Silence filled Time's Great Halls
As they muttered "it is so" . . .

It was an Epic Voyage
All mankind thrilled to see
Puny Man a giant in deed
From moon to earthbound sea . . .

We hail our mighty Astronauts
Our voices raised on high
Almighty God consented
And man vanquished the skies . . .

"Quo Fata Ferunt"

RALLY MARKS STRIKE ANNIVERSARY

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. BROWN of California. Mr. Speaker, 4 years ago a brave group of Americans began a small struggle which now has become a major crusade for human rights and dignity.

From out of the hot, dry, dusty grape orchards of California, the founders of the United Farm Workers Organizing Committee struck against the growers. That strike now enters its fifth year.

The 4 years have been hard. At times, there was anything but encouragement. But, the strike has lasted, and the victories have been significant. Hopefully, settlement will come soon, and the grapeworkers will have won their rights to decent wages and better living and working conditions.

Yesterday, nearly 1,000 residents of the Washington area gathered at the Monument grounds to celebrate the anniversary of the strike's beginning. Among the participants were Members of Congress, who, like myself, have long supported the position of the grapeworkers. Carl Bernstein of the Washington Post was also there, and I would like to insert his story of the rally at this point:

GRAPE STRIKE RALLY ATTRACTS 500—WALKOUT ENDS 4TH YEAR

(By Carl Bernstein)

Five hundred supporters of the California table-grape boycott—Catholics, Protestants, Jews, agnostics and atheists—drank Paisano wine from gallon jugs yesterday during an ecumenical Communion service atop the L'Enfant Plaza Safeway.

"Oh Lord, grant that the business executives and the people who control the agribusiness may find the courage and conviction to do justice," intoned the Rev. Richard McSorley of Georgetown University leader of the service.

"Hear us, Lord," responded the shirtsleeved congregation gathered in and around the L'Enfant Plaza fountain, directly above a Safeway store that, like all of the chain's outlets here, has refused to remove California table grapes from its shelves.

TWO-HOUR PROGRAM

The bread-and-wine service, following a rally at the Sylvan Theater in observance of the fourth anniversary of the United Farm Workers' strike in the California vineyards, was almost as solemn as the earlier gathering had been enthusiastic.

At the outdoor theater on the Washington Monument grounds, the crowd heard two hours of speeches and folk singing in support of California's migrant workers demanding the right to bargain collectively under the UFW's banner.

Urged to sit under yesterday's hot sun as "a reminder of how grape workers feel in the vineyards," the crowd cheered wildly as Rep. James O'Hara (D-Mich.) told them:

"No longer will we permit the California grape growers to treat our seasonal workers as a subhuman species. . . . The food on our table is covered with the blood and sweat of our farm workers. But we will win this struggle for human dignity."

NO GRAPES AT ALL

Former City Councilman J. C. Turner, who is chairman of the Greater Washington Central Labor Council and cochairman of the Washington Don't Buy Grapes Committee, called on the Nixon administration "to quit buying so many grapes."

"No grapes at all," the crowd chanted back, mindful of an earlier assertion by a strike leader that the Defense Department last year increased the shipment of grapes to soldiers in South Vietnam by 350 per cent.

The rally on the Monument grounds recalled the atmosphere of labor union picnics from another era as the crowd cheered the speakers, sang "We shall Not be Moved" and exhorted strangers not to eat "scab grapes."

The throng was diverse, with boycott supporters drawn from the ranks of organized labor, the old left, the new left, liberal Catholic lay organizations cosponsoring the rally, Mexican-Americans (most of the California migrants are of Mexican descent), the Southern Christian Leadership Conference (another cosponsoring organization), a Zionist youth group ("Habonim Says Don't Buy Grapes," said their sign), and unaffiliated people like the woman who said, "I'm here because people have a right to earn a decent living."

MARCH TO PLAZA

After a prayer by Msgr. George L. Gingras invoking "the God of justice to support the cause of freedom from servitude and the nobility of honest work," the crowd began the march to L'Enfant Plaza.

At the head of the procession were former City Council chairman Walter E. Fauntroy, women in blue-and-white caps from Local 1199 of the Drug and Hospital Workers Union, the Rev. Channing E. Phillips, Rep. Don Edwards (D-Calif.), Father McSorley and other supporters of the Washington boycott that has cut grape consumption here by 10 to 15 per cent, according to proponents.

"No more grapes on tables/no more grapes in the stores/the growers will have to surrender/and we won't have to fight any more," the group sang as they passed the Agriculture Department.

"What about wine, man?" one marcher wanted to know. "That's okay, just table grapes," he was told.

The boycott supporters crowded into the glistening new plaza, then fell silent as Father McSorley began the service with readings honoring Cesar Chavez, leader of the California strike, and the late Sen. Robert Kennedy, who journeyed to California in support of the migrant workers.

"Recall my death and resurrection," Father McSorly continued. Prayers were offered for Safeway, for other grape sellers, for "the grapes of wrath," for peace, for the grape strikers. Then the bread was broken and passed around to all, the greeting "Peace" exchanged as the wine was passed from hand to hand. In the fountain, those who had been frolicking in the water stopped to wash down the bread, then joined hands as the congregation sang "We Shall Overcome."

EPIC WAS THE VOYAGE

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. MINISH. Mr. Speaker, it is with justifiable pride that I place into the CONGRESSIONAL RECORD a poem written by Larry Pendleton, of Newark, N.J. The poem, "Epic Was the Voyage," conveys the grandeur of the astronauts' moon landing.

Mr. Pendleton, who works in the Newark post office, has authored many other poems about various topics, some of which I have seen and admired. I am pleased to be able to make his excellent poem a part of the RECORD:

EPIC WAS THE VOYAGE

(By Larry Pendleton)

Ho! The Sea of Tranquility
Where Man did not hold sway
Until two daring Astronauts
Walked on the moon that day . . .

Nations gasped and gaped in awe
The impossible had been done
Three valiant Voyagers roared through space
Beneath the scorching sun . . .

Their Lunar module touched-down on moon
The Solar Winds moaned low
Silence filled Time's Great Halls
As they muttered "it is so" . . .

It was an Epic Voyage
All mankind thrilled to see
Puny Man a giant in deed
From moon to earthbound sea . . .

We hail our mighty Astronauts
Our voices raised on high
Almighty God consented
And man vanquished the skies . . .

"Quo Fata Ferunt"

TRIBUTE TO THE LATE BARRATT O'HARA

HON. L. H. FOUNTAIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. FOUNTAIN. Mr. Speaker, after a distinguished career as a member of the bar, as a public servant elected to high office in his State, and as a patriot always ready to spring to the defense of his country, the late Barratt O'Hara came to this House as a Member of the 81st Congress, here to further serve his country with distinction.

Those of us who knew him, and I am happy to count myself in that number, knew him to have a strong right arm in defense of the underdog. We knew him to have the great gift of being able to disagree without being disagreeable. We knew him to be a doughty antagonist on occasion and a sympathetic friend.

The career of the former Member was studded with signal honors and great achievements. From the age of 15 when he fought valiantly in the Cuban War for Independence, through service in World War I, and through a remarkable career as defense counsel to the end of his life, Barratt O'Hara dedicated himself to the principals of right and justice.

His polished oratory, delivered without notes, contributed much to the deliberations of the 81st, 83d, 84th, 85th, 86th, 87th, 89th, and 90th Congresses. I was extremely fond of Barratt O'Hara. I considered him a good friend. We chatted together often.

I extend my deepest sympathy to his family. It is indeed a privilege to join in

paying tribute to the memory of this distinguished former Member of the Congress.

GEORGE AND THE DRAGON

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. DERWINSKI. Mr. Speaker, Washington-based journalists and, I presume, the reading public are accustomed to the continuous foreign policy harangues of the junior Senator from Arkansas. I was most impressed, therefore, to read a report on the appearance of AFL–CIO President George Meany before the Senate Foreign Affairs Committee written by Msgr. George Higgins in the August 15 New World, the publication of the Catholic Archdiocese of Chicago.

The article follows:

GEORGE AND THE DRAGON

(By George G. Higgins)

George Meany, president of the AFL–CIO, has—I almost said "enjoys" the reputation of a man who always says exactly what he thinks, especially to Presidents, Cabinet members, Senators and other political bigwigs.

Meany was running true to form when he appeared recently before the Senate Foreign Relations committee, and took on its chairman, Sen. William Fulbright, in a heated colloquy which lasted about three and a half hours.

The good Senator, who has mercilessly badgered many a Cabinet member on the issue of Vietnam and gotten away with it, finally met his match in Mr. Meany.

I admire Meany for bearding the Arkansas lion in his own privileged den and refusing to be intimidated by his line of questioning.

While I find Mr. Meany's foreign policy too inflexible in certain respects and while I would be inclined to support almost any move to end the war in Vietnam short of outright surrender, I find Senator Fulbright's policy equally inflexible and perhaps even more doctrinaire in its own sophisticated (some say supercilious) way.

When I noted above that I admire Mr. Meany for locking horns with the Senator, I was not referring to the substance of their debate on foreign policy, but rather to the way they carried on the argument.

In my opinion, the Senator argued his case very tendentiously, and, for this reason I am glad that Meany slapped him down in a way that no Cabinet member or other government spokesman would have dared to do under similar circumstances.

The Senator had a perfect right to disagree with Meany's approach to foreign policy, but he had no right to say that heavy government subsidy of the AFL–CIO foreign policy activities through the American Institute for Free Labor Development was a reward for Meany's "ardent, ardent" endorsement of Lyndon Johnson's war policies.

This accusation strikes me as being a rather cheap way of suggesting that Meany is a groveling sycophant. If Fulbright actually believes this, I am afraid he doesn't understand George Meany very well and hasn't the slightest notion of what makes him tick.

Mr. Meany's foreign policy may be good, bad or indifferent, but it's his own policy, and it's not for sale to any Administration.

Senator Fulbright would have discovered this himself if he had ever become Secretary of State and had foolishly tried to bargain with Meany on the issue.

He would have discovered that Meany, rightly or wrongly, was prepared to stick to his guns regardless of what anyone else, including the President, the Secretary of State, or even the chairman of the Senate Foreign Relations committee might think about the matter.

Senator Fulbright overstepped the bounds of Congressional propriety and Congressional immunity in suggesting, rather insultingly, that Meany was a Johnson lackey and that Johnson himself was a deliberate bribester in the field of foreign policy.

Moreover, if the Senator thought that Meany, out of deference for the Senate committee and its august chairman, would take all this lying down, he has something to learn about the American political process.

Senators may be able to bulldoze hapless government officials when they have them on the witness stand, but thanks be to God they can't intimidate private citizens of Meany's caliber—men who, right or wrong, have the courage of their convictions and are not respectors of persons.

STORM TRACKERS DESERVE THANKS

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. BENNETT. Mr. Speaker, the purpose of my remarks today is to emphasize the last two paragraphs of the following editorial from the August 28 edition of the Florida Times-Union to the effect that many men in the Navy and the Air Force, with true heroism, risked their lives to provide the information and warning which saved the lives of many thousands of persons in the recent Hurricane Camille. My father once supervised the National Hurricane Center when it was established in Jacksonville, Fla., many years ago, so in paying tribute to these military heroes in the hurricane war, I do so with knowledge of what I speak of. The editorial reads as follows:

STORM TRACKERS DESERVE THANKS

There were some unfortunate implications which could be drawn from Vice President Spiro Agnew's comments on Hurricane Camille. We feel certain that these were unforeseen and unintended but they should be cleared up to erase any idea that the Jacksonville-based Hurricane Hunters did not perform their hazardous tasks in the efficient and fearless manner that has marked their performance since they were formed.

Agnew was sent by President Nixon on a fact-finding mission to the Mississippi Gulf Coast in the wake of the strongest storm to hit the U.S. mainland since records have been kept in such matters.

After his report was delivered to the President, he said that Nixon was greatly disturbed that the federal government "was not better able to forecast the intensity and precise destination of the hurricane."

The vice president said the government had found that the Navy storm-hunting planes had excellent meteorological equipment but were not strong enough to stand up against a hurricane with the 200-mile-an-hour winds of Camille.

Agnew added that the Air Force had more durable planes but lacked advanced scientific weather-finding instruments.

It is not at all difficult to find the genesis of his conclusions.

Last Friday, Dr. Robert Simpson, head of the National Hurricane Center, was quoted in a press interview as saying he gave Agnew "both barrels about what we didn't have and what we need" to improve the center's work. He made a plea—with which we concur—that research funds must be greatly increased from the present $750,000 annually.

Simpson was also quoted as telling Agnew: "some old Navy Constellations that should have been junked years ago trailed Camille all day Saturday and didn't dare go into the storm because they knew their aircraft couldn't stand up under the pounding." He added that "the pilot was right."

Simpson said he "finally got an Air Force plane in there about 5 p.m. Saturday and it recorded the lowest barometric pressure ever found by any aircraft inside a hurricane of record."

He said he further told Agnew that "the Navy has a wonderful instrument package and lousy airplanes. The Air Force has wonderful planes and lousy instruments. It's past time for somebody in Washington to get everybody together."

We are certain also that Simpson intended no criticism of the performance of the Hurricane Hunters but there are unfortunate implications that could be drawn by anyone who did not fully understand the context and intent of his remarks.

The Navy and the Air Force work together on hurricanes, each with different missions.

Navy Hurricane Hunters go in at low-level, beneath the clouds, where they can actually observe the sea. Depending on the visibility, this is sometimes only 400 feet above the whitecaps.

At this level they not only track the storm, both visually and with radar, but also measure surface winds and sea temperatures.

It is obvious that the safety factor at the lower levels is steadily reduced. Hurricanes have more than horizontal winds. There are vertical drafts, torrential rains and water spouts. Turbulence and the wind factor is generally higher at these low altitudes. There is no margin for error.

For this task they use the Constellation which has the advantage of a flexible wing—the wing actually flaps and there is less chance of it shearing off. At these altitudes they must use maximum engine power to maintain level flight.

The Air Force goes in above 10,000 feet and this is also a hazardous task. In fact one Air Force plane had to limp desperately back to an emergency landing at Houston after penetrating the eye of the hurricane at 30,000 feet.

As far as we can determine, the Navy and Air Force Hurricane Hunters work together well at their different missions, respect each other's work and there is no quarrel between them.

Over the years, the Navy's Weather Reconnaissance Squadron 4 has developed guidelines, culled from years of experience as to the maximum tolerance of the aircraft under the conditions which pervail on their lowlevel missions. The wind guidelines is 120 knots (about 142 miles per hour) and the diameter of the eye must be at least 15 miles for penetration in order to afford room for aircraft maneuverability.

The Navy in this case made every fix assigned to it by the National Hurricane Center on Hurricane Camille before being taken off to assist in Operation Storm Fury—the seeding of Hurricane Debbie in the Atlantic.

Each plane sent out from Jacksonville into Camille spent some 12 hours in the air, most of this time inside and around the parameters of the hurricane.

There is great question—and perhaps the push for better equipment will develop a definitive answer to it—whether any plane now in use (even by the Air Force) could have penetrated the eye of Camille in low level flight and returned.

Camille was tagged as a dangerous storm long before it went ashore on the Gulf Coast and the 5 p.m. Saturday barometric reading

by the Air Force plane would have given at least 24 hours warning.

As to the precise point of entry, it is difficult to see where the planes themselves could provide any more information than they did about the exact point at which the hurricane would make landfall. They tracked its position and direction as ordered. The general Gulf Coast area in which it was predicted progressively moved westward as these tracking reports came in.

Although forecasters have developed hurricane predictions to a great degree of accuracy, the state of the art may never be such as to be able to predict them exactly. To some extent they are predictable but they contain some great unpredictable factors.

There have been hurricanes which looped, which turned south—against all odds—and which have done other things that hurricanes are not supposed to do.

At this point it would be well to emphasize the positive side of the picture. Advance warnings caused some 200,000 persons to flee their homes and held casualties from the worst recorded storm—and one of the most destructive in history—well below the toll of some hurricanes of much lesser strength in the past.

The mainland had not experienced 200 mile an hour winds before and even had doubters in the storm's path been forcibly removed (a step which would have been necessary since some refused to leave despite explicit warnings) the physical destruction would have been enormous.

While recognizing the need for more research funds and for better planes and equipment, the administration would also do well to recognize the fact that many men—Navy and Air Force—risked their lives to provide the warning that was available.

They deserve a ringing vote of thanks.

SICK OR SAFE TOYS?

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. PUCINSKI. Mr. Speaker, in a recent newsletter, Mr. Marvin Glass, the Nation's outstanding toy designer, has quite properly pointed out that in our concern over physical safety in toys we have overlooked the need for psychological safety in toys.

Mr. Glass believes that we should direct more attention to the psychological impact of toys on children, such as reducing toys of violence or those that stress materialistic rather than spiritual values. Mr. Glass himself is opposed to toy weapons of war and violence and is conducting a quiet campaign against them by refusing to design any.

I commend the following article to my colleagues:

SICK OR SAFE TOYS?

Legislative concern today over physical safety in toys is like the old legend of the emperor's non-existent clothes. Onlookers are seeing things that are not there and not seeing the startling aspect of what is.

Congress is stressing physical toy hazards that are for the most part non-existent, or unlikely, and is not looking at possible psychological dangers that are.

With this consideration, a new definitive look should be taken at the proposed Toy Safety Act, the joint Moss-Joelson bill which calls for broad regulatory powers over the manufacture of toys.

This is the warning of Marvin Glass, the nation's outstanding toy designer, who has played a major role in innovating new styles in the toy industry for the past 30 years and whose creations alone this year are expected to account for $125 million in toy sales.

"Modern toys are generally designed, engineered and manufactured with great precision and precaution," Glass points out. "They are built primarily for use with foreseeable abuse. Most manufacturers are aware of safety in production. This means they watch for possible sharp edges, poisonous substances and dangerous electrical, thermal or mechanical parts in toys. Taking everything into consideration, physical injury to a child from a toy is remote, unless the child uses one to throw at another child.

"On the other hand, many toys are psychologically unsafe. There are numerous toys on the market, such as miniature weapons of war, that condition, if not encourage, future generations to violence and love of power. There are also too many toys that over-emphasize materialistic rather than spiritual values. For example take dolls that stress magnificence in clothes and coiffures, or expensive model cars for boys. Little girls grow up to be real life versions of these dolls, demanding fabulous wardrobes. Boys reach manhood thinking flashy cars are necessary to the right way of life. Such toys advocate conspicuous consumption and are greatly responsible for the present day huge teenage market in clothes, cosmetics and cars."

Glass points out that a toy is a psychological tool that orients a child to reality. It should emphasize the magic of the world around him or the world of the future, the designer says.

"We try for an atmosphere of fun and laughter. If future citizens of the world can be taught to laugh at themselves, then maybe ultimately a world devoid of self-righteous people and war might result.

"Through multi-play toys, we try to teach children cooperation in group effort. These toys stress equal time for play, how to take turns, and the principle that only fair play wins. We hope, also, to orient children to our competitive, capitalistic society with good competitive games of chance, offering reasonable but not speculative risks.

"If a toy isn't psychologically sound, it is psychologically unsafe, possibly even sick with a contagious illness. There is a greater need for regulation in this area than in that of possible physical hazards."

TOWSON, MD., AMERICAN LEGION POST 22 BASEBALL TEAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. LONG of Maryland. Mr. Speaker, American Legion Post 22 of Towson, Md., has sponsored a fine baseball team this year. The young men have just returned from the American Legion World Series where they captured second place. I wish to take this opportunity to honor them.

The team is managed by Louis Grasmick and coached by Thomas Finnegan. Athletic Director Dixon Gaines also contributed to their success. Team members include: Russell Niler, Michael Wyatt, Russell Bryant, Grant Grasmick, Rieck Foelberg, Mark Russo, Hugh Curd, Danny Coyne, Lindsay Graham, Jack Dunn, Joe Lavezza, Michael Kelley, Thomas Heinzerling, Randy Respess, Carl Glaeser, Bruce James, Bob Gulwee, and Lenny Owens.

DANGER SIGNALS: NATION'S WATER SUPPLY

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. VANIK. Mr. Speaker, Mr. Charles C. Johnson, Jr., administrator for the Consumer Protection and Environmental Health Service of the Department of Health, Education, and Welfare, reported recently that as many as eight million people may be drinking water which exceeds Public Health Service criteria for bacteria. Furthermore, Mr. Johnson indicates that as much as 40 percent of the Nation may be drinking water which does not meet other Public Health Service standards for safety and desirability.

The evidence of the steadily worsening condition of our water supply continues to grow. This shocking neglect of our water resources must be reversed now.

A UPI news story and list of water supplies provisionally approved by the Public Health Service follows:

NATION'S WATER SUPPLY

(By Craig A. Palmer)

WASHINGTON.—More than 100 water systems around the country supplying interstate travellers do not fully measure up to Federal standards although they are not considered unsafe, according to a new Government report.

The Public Health Service, which has jurisdiction over municipal and private supplies involving interstate commerce, lists them as "provisionally approved"—inadequate as to bacteria and other content, but usable for drinking and cooking.

UPI obtained the report on request after administrator Charles C. Johnson Jr. of the Government's consumer protection and environmental health service said in a speech: "There is reason for serious concern about community water supplies in the United States."

More recently, Johnson has said the drinking water problem "is growing in seriousness with every year that passes."

The "provisionally approved" classification is applied if major deficiencies are found during monthly tests of water supplies, or if operators of a system have failed to act on recommendations from a previous inspection.

The classification is in effect a warning to state and local officials that the supply in question must be improved if it is to retain government certification.

The water supplies covered by the report are those used by interstate carriers—buses, planes, trains and water craft—either in transit or for passengers in terminals, for either drinking or cooking.

Officials said these sources of water served some two million travelers daily, and some 82 million residents in the local communities where the water systems are located.

No systems are on the forbidden list just now. But 38 per cent on the "provisionally approved" list have failed to meet requirements on bacterial count for a month or longer. And even should a supply be rejected, the Government could effectively bar its use only on interstate public transportation on which water is furnished.

Also, Johnson had this to say:

"The present PHS standards do not reflect the best and latest knowledge of real or potential threats to human health and fall far short of the drinking water quality goals promulgated by the AWWA (American Water Works Association) last year."

On another occasion, Johnson said a 1967 report concluded "that 33 per cent of all public water supplies serving some 50 million persons do not meet the requirements of the Public Health Service's drinking water standards."

Major water systems listed as "provisionally approved" as of July 28, included:

Nome, Alaska; Pueblo, Colo.; Miami Beach; Augusta, Ga.; Worcester, Mass.; Missoula, Mont.; Jersey City and Newark, N.J.; Buffalo, N.Y.; Asheville, N.C.; Altoona, Pa.; San Juan, P.R.; East Providence, R.I.; Charleston, S.C.; Chattanooga, Memphis and Nashville, Tenn.; Charlottesville, and Norfolk, Va.; Salt Lake City; Charleston, W. Va.; La Crosse, Wis., and Sheridan, Wyo.

Although the Public Health Service estimates there are some 22,000 water supplies throughout the country, it has certifying authority over only about one-third of them.

However, the more than 700 supplies it does certify serve about two million travelers daily, and 82 million persons living in the respective communities.

As of April 16, PHS had classified 66 per cent of these as approved and the other one-third as either "provisionally approved" or "no current report," said the PHS Bureau of Water Hygiene.

Testing of these water supplies is done by local, State and Federal agencies—in various cases by one, two or all three. The test is not conducted just at the point of use by an interstate carrier, but at random places in town.

MUNICIPAL OR PRIVATE WATER SUPPLIES USED BY INTERSTATE CARRIERS AND CLASSIFIED AS PROVISIONALLY APPROVED AS OF JULY 28, 1969

This table lists communities with water supplies provisionally approved for drinking and cooking on interstate carriers as of July 28, 1969. This classification means the supplies do not meet all Public Health Service standards. It is made by agreement between State officials and officials of the Bureau of Water Hygiene, Environmental Control Administration, Consumer Protection and Environmental Health Service, Department of Health, Education and Welfare.

To be classified "provisionally approved" does not mean the community's water supply is unsafe. Airplanes, ships, trains and buses are permitted to use provisionally approved water. Provisional classification, however, is a warning to State and local officials that deficiencies in a water supply system's construction, maintenance, operation or quality control must be corrected if certification as an interstate carrier water supplier is to be retained. The schedule for making improvements is individually determined for each water supply by the State Health Departments and the Bureau of Water Hygiene.

Alabama: Birmingham and Tuscaloosa.

Alaska: Kodiak; and Nome; and Umnak Island (Reeves Aleutian Airways).

Colorado: Grand Junction; Pueblo; and Salida.

Florida: Fort Myers; Freeport (Murphy Oil Company); and Miami Beach.

Georgia: Augusta; Augusta (Bush Field); Brunswick; Columbus; Macon; Savannah (National Gypsum Company); and Waycross.

Idaho: Lewiston Orchards Irrigation District.

Illinois: Beardstown; Bedford Park (Chicago Supply); Franklin Park (Chicago Supply); Hartford; Lemont (Pure Oil Company); and Rosemont.

Indiana: Mount Vernon.

Kentucky: Central City; and Fulton (Illinois Central Railroad).

Maine: Bucksport Water Company and Searsport.

Maryland: Brunswick.

Massachusetts: Fall River; Falmouth; New Bedford; Weymouth, and Worcester.

Mississippi: Moss Point.

Montana: Missoula.

Nebraska: McCook and North Platte.

Nevada: Carlin (Southern Pacific Railroad) and Las Vegas (Union Pacific Railroad).

New Hampshire: Portsmouth.

New Jersey: Bayonne (North Jersey District Water Supply Commission); Gloucester (Mobil Oil Company); Hoboken (Jersey City Water Supply); Jersey City; Kearny (North Jersey District Water Supply Commission); Lower Township Water Company, Newark; North Jersey District Water Supply Commission (Wanaque); Perth Amboy; Wrightstown (Fort Dix).

New York: Buffalo; New York; Onondaga County Water Authority; Oswego; Rome, and White Plains.

North Carolina: Asheville.

Ohio: Akron-Canton Airport; Toledo Airport; Wellsville.

Pennsylvania: Altoona; Clairton; Connelsville; Dravosburg; Fairless Hills (U.S. Steel Corporation); Floreffe.

Puerto Rico: Aquadilla; Mayaguez; San Juan.

Rhode Island: East Providence.

South Carolina: Cainhoy (Detyens Dry Dock); Charleston.

Tennessee: Alcoa; Chattanooga; Clarksville; Johnson City; Kingsport (Washington-Sullivan Counties Consolidated Utilities District); Memphis and Nashville.

Texas: Brownsville (Brownsville Navigation District).

Virgin Islands: St. Croix (Alexander Hamilton Airport).

Virginia: Charlottesville; Crewe; Hot Springs (Virginia Hot Springs Co.), Norfolk, and Portsmouth.

Utah: Ogden, Salt Lake City, South Salt Lake City.

Washington: Bellingham; Edmonds; Everett; Hoquiam; Raymond; Wishram (Spokane, Portland and Seattle Railroad).

West Virginia: Charleston; Grafton; Parkersburg (Wood County Airport); Point Pleasant; and White Sulphur Springs.

Wisconsin: La Crosse; Manitowoc.

Wyoming: Green River; Rock Springs; Sheridan.

ATTENTION ALL AMERICANS

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. WYMAN. Mr. Speaker, deserving of the attention of all Americans who would stay free, are the profound remarks of Edmund Burke on "Freedom." While for many it takes years to comprehend the full sweep of Burke's exposition, its contents should be required reading for every citizen in or out of school:

EDMUND BURKE ON FREEDOM

Men are qualified for civil liberty in exact proportion to their disposition to put chains upon their own appetites; in proportion as their love of justice is above their rapacity; in proportion as their soundness and sobriety of understanding is above their vanity and presumption; in proportion as they are more disposed to listen to the counsels of the wise and good, in preference to the flattery of knaves. Society cannot exist unless a controlling power upon the will and appetite is placed somewhere; and the less of it there is within, the more there must be of it without. It is ordained in the eternal constitution of things, that men of intemperate habits cannot be free. Their passions forge their fetters.

A TRIBUTE TO TODAY'S YOUTH

HON. ROGERS C. B. MORTON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. MORTON. Mr. Speaker, I would like to call the attention of my colleagues to a notable task accomplished by the in-coming seniors at Cambridge High School in Dorchester County. Six students took it upon themselves to initiate a clean-up of the high school that utilized 100 gallons of paint and would have cost the taxpayers $5,000.

At a time when school vandalism and delinquency are on the increase and the newspapers are filled with the problems of youth it is good to see what our young people are doing who are not making headlines. The students of Cambridge deserve congratulations and respect for the fine job they have done and example they have set.

An article appeared in the Baltimore Sun magazine on Sunday, August 31, by Walter E. Huelle. The article tells the story of Cambridge High School and I am pleased to include it in the CONGRESSIONAL RECORD:

CLEAN-UP BY THE CLASS OF 1970

When Otis M. Trice, principal of Cambridge High School, told James Busick, Dorchester county school superintendent, that six representatives of the class of 1970 wanted to see him, he reluctantly agreed.

This was in June, his busiest time of year, and when he was told by three girls and three boys that class members were volunteering to scrub and paint the interior of the high school during the summer he asked, "Why?"

The group representing the incoming seniors said their class wanted to improve the school's image. They proposed to do this by literally scrubbing away the black marks and graffiti left behind by the class of '69 and those before it.

The six also indicated that by setting a good example they hoped to erase other bad memories. They were referring to numerous rumbles after athletic contests and a beer party that was raided by police. The fact that three members of the class of '69 were sent to jail for stealing dynamite and blowing up a county road as the climax to other escapades undoubtedly was a factor too.

A permanent mark was left by last year's class on the masonry columns at the school's entrance. The numerals "69" were painted on five of six pillars and the columns were scarred in the cleaning process.

After listening to all these reasons, spoken or implied, by the six students, the superintendent said bluntly, "I don't believe you'll do it."

One of the girls, Karyn Cook, a top scholar and president of the Lower Eastern Shore Student Council, returned Mr. Busick's challenging look and replied firmly, "We'll do it."

The superintendent glanced at the others, Debbie Jenkins, president of the Student Council; Bob McWilliams and Steve Aarons, varsity athletes; Karan Woodward, John Wharples and was convinced that this was no ordinary request and promise.

After the principal got approval from the board of education to buy paint and brushes, the students started to work the last week in June.

On the first of August, 30 members of the class of 160 were still scrubbing and painting. And although it was an unusually hot and humid Eastern Shore summer, with both temperatures and humidity in the 90's even

at night, the boys and girls painted three nights a week from 7:15 to 10, singing a good part of the time.

Most of the student painters have summer jobs. Some girls work as clerks in stores or are waitresses in restaurants and lunchrooms. Some, after finishing the nearly three-hour painting stint, work in snack bars that stay open late. And a number had parts in the Dorchester County Tercentenary show that ran five nights in July after rehearsing for a month.

Early in the project a freshly painted area was mysteriously marred by vandals. The damage was shown to Mr. Busick, but the boys begged him not to take action. "We'll handle this ourselves," they said.

Before the project started and the word got around that the class was going to paint, the numerals '70 were scratched on several school walls. Apparently the scribblers were mocking the altruism of the incoming senior class. One unnerving omen, however, was the appearance of the numerals '72 on one of the walls.

William Kahl, school custodian, is on hand during the painting sessions; school officials drop in from time to time. These include John Armstrong who is in charge of plant and buildings. He says the students, who have used 100 gallons of paint and performed about $5,000 worth of labor, are doing a top-grade job and saving the taxpayers money.

Acts of vandalism at Cambridge High had been increasing steadily. They reached a peak last year. This parallels a national trend.

School vandalism caused damage in the United States amounting to $200 million in 1967–1968. It costs Baltimore $716,602 and New York City $5 million.

Breaking schoolhouse windows is one of the biggest forms of vandalism. The Cambridge High custodian has replaced one steel framed louvered window four times, at $10 a pane.

Another form of student vandalism is stuffing chewing gum into the keyholes of door locks. The custodian at Cambridge High says students also jam small nails or bobby pins into the keyholes. Throwing soda bottles into toilet bowls hard enough to break is another form of youthful aberration. Prying locker doors open and pilfering them is also common.

A nationwide survey shows New York city's school glass breakage bill in 1968 was a million dollars, Philadelphia's $684,000 and Baltimore's $356,602. Among Maryland's 23 counties, Baltimore county spent $65,000 replacing broken windows, Hartford $11,810 and Washington $407. Dorchester's net cost for glass, above what insurance companies have paid and parents of caught culprits have been assessed, was $40 last year.

Although the net cost of damage to Dorchester's 26 school buildings last year was $275, claims for vandalism paid by insurance companies and reparations by parents amounted to much more.

On the basis of net damage reported in a survey made by Baltimore public schools to which 13 of the 23 Maryland counties responded, Dorchester had the lowest per capita damage—4 cents. Talbot county's bill for damages, with 2,000 fewer pupils, was 8 cents. Baltimore city's was $3.74.

To reduce school vandalism throughout the nation stringent methods are being employed. They include the use of unbreakable, plastic windows, floodlights on school grounds and electric alarm systems. Some schools have hired guards, many of them armed and patrolling with police dogs. Dorchester schools are using night watchmen. The Cambridge High School custodian lives on the premises.

Dorchester school officials, however, are hoping that the example set by the class of 1970 in declaring its sense of responsibility toward public property and student behavior will upset the grave, upward trend of school vandalism and misconduct.

A UNIQUE INSIGHT INTO LATIN AMERICAN PROBLEMS

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. MORSE. Mr. Speaker, a recent issue of the Saturday Review carried a most perceptive and timely article by Sol M. Linowitz entitled "Tinderbox in Latin America." Mr. Linowitz, who until recently was the U.S. Ambassador to the Organization of American States, has a unique insight into the problems of our Latin American neighbors, informed by years of intimate involvement with them. Especially at this time, when United States-Latin American relations are being closely reviewed in the Nixon administration, I think my colleagues will be most interested in Mr. Linowitz' comments.

I especially want to call attention to his statement that—

What it all boils down to is that we cannot help Latin America solve its economic problems with bargain-basement tactics. We cannot do it on the cheap. Rhetoric is fine in its place, and the ringing words of our regard for Latin America make for fine speeches. But without the financial commitment to back up the words we are in trouble in this hemisphere, and we had better make no mistake about it.

I cannot commend these sentiments too strongly and under unanimous consent, Mr. Speaker, I submit Mr. Linowitz' article for inclusion in the CONGRESSIONAL RECORD:

TINDERBOX IN LATIN AMERICA

(By Sol M. Linowitz[1])

For some time now it has become a tired Washington cliché to issue periodic pronouncements to the effect that United States relations with Latin America are in a state of crisis and we must, finally, do something about it. It would be difficult to find anyone, no matter how sparse his knowledge of the hemisphere, who would argue about the crisis half of the cliché. It is the latter part—"do something about it"—that causes all the trouble.

James Reston once observed that the American people will do anything for Latin America except read about it. The apathy is so widespread and endemic, however, that the usually reliable Mr. Reston may have overstated the case with regard to the American people's willingness to do anything for their hemispheric neighbors.

There is a paradox about the situation that contributes to making it one of the most perplexing among the many foreign policy problems that periodically plague Washington administrations, no matter what their political gender. Beginning with Franklin Roosevelt and his Good Neighbor Policy through John Kennedy and the Alliance for Progress, Lyndon Johnson and the summit meeting of American presidents, and now Richard Nixon and the Rockefeller Latin American study mission, no President, Democratic or Republican, in nearly two generations has denied the importance of Latin America, or has claimed it can be neglected or ignored.

Yet despite all the programs and official avowals of concern, who can find any sense of excitement about Latin America among the people of the United States? That does not mean we do not get worked up over a Castro, a Cuban missile crisis, a Dominican Republic crisis, an oil company expropriation, a fishing boat seizure. Or that we are not shocked when the visit of a Governor Rockefeller, who is rightly regarded as a friend of Latin America, touches off nasty demonstrations.

That is the heart of the paradox for the emotions are genuine and the concern is real. Yet when the crisis of the moment is over emotion subsides and concern is shrugged off and once again we turn our attention to another part of the world—until some new Latin explosion such as the El Salvador-Honduran clash reluctantly drags it back again to our own hemisphere.

To suggest that this lack of public interest is directly responsible for the state of affairs in Latin America would be less than accurate. Surely it is not responsible for the nagging economic underdevelopment that grips the continent and its 240 million people—240 million who will be 600 million before the century is out and if circumstances continue as they are, many times poorer.

The other side of the coin, however, is that our public disinterest sharply points up the inescapable fact that there is no real Latin American constituency in the United States—a political nuance that the Congress has not failed to notice.

Last year, for example, we disappointed the people of Latin America with cuts in our appropriation for the Alliance for Progress—cuts that made it the lowest since that vital program was launched in 1961: $336-million against some $500-million in 1966 and $460-million the following year. This year President Nixon has proposed an appropriation of $603-million, and already we are beginning to hear the sound of chopping on Capitol Hill.

Obviously, it is far from the intent of Congress to do anything that would slow the rhythm of development in Latin America, for that could only weaken the constructive forces of peaceful change and give impetus to those who believe in violence as the way to alter the status quo. But cutting our share of the alliance appropriation has this precise effect, whether that is the intent or not, and the United States cannot evade responsibility.

What it all boils down to is that we cannot help Latin America solve its economic problems with bargain-basement tactics. We cannot do it on the cheap. Rhetoric is fine in its place, and the ringing words of our regard for Latin America make for fine speeches. But without the financial commitment to back up the words we are in trouble in this hemisphere, and we had better make no mistake about it.

Too often in our relations with Latin America over the years we in the United States have not done as we said, nor have we always said clearly just what it is we would do. Our promises, moreover, have not always withstood the test of time or pressure. The people of Latin America have good reason to be confused about how seriously we regard them and their problems and, based on past experience, even better reason to have skepticism with regard to the credibility and continuity of the commitments we make to them.

There should be no doubt that this uncertainty in Latin America is a contributory factor in the repeated demonstrations of anti-U.S. sentiments that crop up with disturbing frequency, or that it is a potent weapon in the hands of those who relish the notion of a fragmented Western Hemisphere, with the South being played off against the North. Nor can there be any question that the time is long past for Washington to undertake a credible commitment to the republics of Latin America that will resolve

[1] Sol M. Linowitz, former United States Ambassador to the Organization of American States, is presently practicing law in New York and Washington, D.C.

the doubts that now give rise to such uncertainty and even to fear.

President Johnson, following the summit meeting of American presidents at Punta del Este in 1967, went a long way toward extending such a commitment when he said, "We will persevere. There is no time limit on our commitment." But realistically speaking, the words he spoke did not have the force of law or of a treaty—a fact Congress made all the more evident when it cut the alliance funds last year. And with a change of Administration, accompanied by all the uncertainty that such a change brings with it, the Latins are still wondering how far we will go, and to what extent we will persevere.

It was not, I am sure, President Nixon's intent to add to this uncertainty when, a few months after taking office, he addressed the Organization of American States and strongly criticized the alliance for all that it had left undone. Even the dispatch of Governor Rockefeller on his fact-finding mission, rather than help assuage fears that Washington was contemplating a major change in its Latin American policy, only intensified the uncomfortable feeling that, once again, things were up in the air.

Inevitably, there will be much of value in what Governor Rockefeller will be reporting to the President, but the point cannot be overstressed that we need, above all, patience, perspective, and the determination to see the job through. Latin America should not be an issue for domestic party politics. Quite the contrary, it offers what is perhaps the most inviting area for constructive and imaginative bipartisan foreign policy cooperation.

It is the kind of cooperation that must look beyond the immediate horizon and focus on another far off, one still shrouded in clouds of uncertainty. For no matter what we do, no matter how firm our commitments, no matter what funds we appropriate to help the people of Latin America to build and to develop their continent, no matter what our trade policies, we cannot guarantee the future; we cannot say that if we do this Latin America will be an unwavering ally and firm friend of the United States, that it will offer us a vast commercial market for our goods. No one—politician, economist, or seer—can offer any such guarantee. And even if he could, it would be a poor motivation for the kind of effort that must be undertaken for the remainder of this century.

Latin America is not for sale to the highest bidder, and if we gear our programs with the idea that it is, we are in for a sad awakening—an awakening that, as recent events demonstrate, has already begun. What we must understand is that change in Latin America is inevitable. The only question remaining is whether it is to be a violent change or a relatively peaceful one, and obviously, therefore, our own best interests would dictate that we aid those forces seeking to build and to strengthen economic and political democracy in Latin America.

If they should fail, the change that is bound to follow can only be one of violence. All the explosive ingredients are present. For in Latin America, even as in the United States, we cannot expect people denied hope and dignity to sit patiently while life and the world pass them by.

The point has been made that if Latin American governments do not pass badly needed economic and social reforms they deserve to fall. And it has been argued too that perhaps some violence may be necessary to convince the oligarchies and military governments that desperate conditions beget desperate actions. To some extent it is difficult to answer those arguments. It is all too true that in too many cases Latin governments are not doing all they should and all they could to cope with the underlying causes of economic and social underdevelopment, nor are they doing enough of what must be done to promote the growth of representative government responsive to the will of the people. These facts are all too glaring to be swept under the rug, and we should recognize them for what they are—part of the reality of Latin America today.

What all this points up is the truism evident wherever people are struggling to be free—economically, socially, and politically: Time is not on the side of those who would shelter the status quo. Those who would see democracy and freedom fulfill their destiny have the responsibility of seeing to it that the vicious circle of poverty, sickness, and illiteracy is broken once and for all. People within its orbit live outside the mainstream of society and really play no part in shaping their nation's policies; because they are not part of the democratic process, they have little stake in it.

Clearly we must do all we can to encourage the growth of orderly, democratic procedures sensitive to the needs of the people they are designed to serve. But we can not and must not elbow our way into another country's system, telling it how it should manage its affairs, as if we had all the answers. We haven't, as the problems before us of putting our own house in order aptly testify.

What we can do, however—and what we have not done with any real consistency—is to make clear our firm commitment to representative government and to the growth of political democracy in this hemisphere. Such a policy will enable us to develop special friendships with Latin America's men of vision, with the men who know that peaceful social progress is endangered by any entrenchment of the privileged few.

Today the despair that exists in much of Latin America provides the climate in which a Batista or a Castro flourishes best, or in which a despotism of the right can provide the foundation for a dictatorship of the left. Or vice versa. It is a situation that only underscores the urgency of continuing the partnership launched eight years ago this month when President Kennedy, following a Latin-inspired initiative known as "Operation Pan-America," pledged the support of the United States to the Alliance for Progress.

The alliance was a magnificent concept, with goals and aspirations to match its grandeur. If it can be faulted in hindsight, it would be for assuming that the job could be done in ten years. That, and setting an annual growth-rate goal without recognizing that the birth rate was shooting up at a pace that far exceeded Latin America's growth-rate capabilities.

But who can argue that any program of the scope and reach of the alliance—a program designed to bring about the upheaval of the Latin American continent and build a healthy, vibrant, economically secure, and politically sound inter-American community—must not set its sights high, and that it must not keep them there? Surely not the people who live without amenities of civilization, or without hope of a better tomorrow. For they can attain that tomorrow only if there is no compromise in the fight to attain the goals the alliance so eloquently set forth—goals for better housing, education, health, tax and land reforms, a revitalized and modernized industry and agriculture, and an integrated continent-wide economy.

Yet the yearly per capita growth rate still is well behind the Punta del Este goal of 2.5 per cent. The birth rate soars. Fifty per cent of the people are illiterate. The cities are clogged with workless *campesinos*. Tight protective tariffs protect inefficient monopolies. Feudalism persists in the countryside, and the people there go hungry or move away.

If it was a mistake then to hope that this could be changed in ten years, it would be catastrophic now to turn our backs on what has been done. True, economic sufficiency remains a distant goal, but for the first time a way has been charted out of the Latin American jungle of underdevelopment.

The statistics add up to an impressive total, particularly in an area of the world that has never experienced such concentrated doses of progress. But no statistic can possibly convey the meaning of a new road that slices through an Amazon jungle and links up a hitherto isolated village with the heartland of its country. Nor can it convey the significance of a new classroom opened for children in the plateaus of the Andes or in the *barrios* of the cities; of a *campesino* who now works his own farm; of water supplies made potable; of infant mortality rates reduced; of a family able to quit the sordid life of the slums for a new start in a new apartment.

And with all the statistics totaled up, it is clear that the alliance has devoted more of its resources to investments in the social areas, particularly education and health services, than in any other sector.

The actual rate of Latin American development, therefore, is higher than the economic growth charts indicate simply because social investment is not reflected in Latin America's gross product. But the direct effort to speed up the processes of education and social welfare is the surest guarantee that an obsolete social order will be peacefully transformed, as in Japan or Britain, rather than explosively altered via the violent, revolutionary routes of eighteenth-century France or twentieth-century Russia.

What must be understood above all about the alliance—and perhaps the most misunderstood feature, even among a number of our own key government officials—is that it is not a bilateral American aid program, but rather a cooperative self-help program, to be carried out primarily by the people of Latin America. The United States is one partner in this program, of which 90 per cent is financed by the countries of Latin America. The alliance is not ours to manipulate, and the amount we appropriate, therefore, is no handout, but a hand of help extended in friendship. Congress must not forget this when considering how much we can afford to appropriate for our share of the effort.

When all is said and done, and with all that remains undone, there is no escape from the conclusion that eight years ago the alliance launched a truly creative, regenerative development program. But it was, and is, only the first step in a long journey. In our inter-American relations, we need most of all a sense of propriety, a sense of time, a sense of scale, and a sense of destiny.

As for propriety, Americans may find wry amusement in cartoons that depict the stereotyped Latin American—the sleepy, guitar-playing, sombrero-wearing, not too ambitious but pleasant fellow. But the stereotyped North American—the Yankee with the dollar sign for a heart—is hardly the object for smiles in Latin America. The truth, of course, is that neither stereotype is valid today, if it ever was.

The people of Latin America are a combination of some of the wealthiest cultures our civilization has known. Its young people, with their passion for country and their zeal for the future, are restless and prone to impatience. They are skeptical of our aims and so are more willing to blame us for their problems than to understand the difficulties in solving them. Yet these are the people with the mystique and the vision of grandeur who can spark the enthusiasm and loyalties of their countrymen. These are the people who are so anxiously searching for a revolution of social justice—the very people we must convince that we want to work with them because our continued partnership is essential to the future of freedom. In so doing, anti-Communism as such will not get

us very far. It is not a powerful argument for the average citizen who is steeped in a personal struggle to keep his head above water.

A student at the University of Chile once summed it up when he told me: "The United States is constantly talking about the value of political democracy. We agree that it is essential, but we also feel you would accomplish far more if you said less about political democracy and put more of your weight behind the concept of economic democracy."

What he was saying is that city slum dwellers denied hope and illiterate rural Indians denied even a glimpse of the twentieth century neither comprehend the meaning of political democracy nor offer any foundation to sustain or to nurture it. They will either remain mute or give their sullen support to the demagogue or "leader" who elbows his way through the masses offering them protection and food. These are the staple commodities they want and need, and no promise of a better life made possible by democracy can vie with them. As former Senator Paul Douglas once said, "When you offer a starving man a choice between the Four Freedoms and four sandwiches, he always chooses the four sandwiches."

When, however, attention is given to questions of basic order, when roads and streets are made safe, when food, clothing, and shelter are made available, when attention is given to living conditions, when the masses discover they can rear, educate, and marry off their children and leave them an opportunity for a better life, political democracy becomes not only possible, but imperative. For as living standards rise, democracy becomes the only political system through which that better life can be sustained and advanced. And this is to the mutual benefit of all the Americas.

As for time, no nation has fully modernized itself in less than sixty years. The United States took much longer. In eight years Latin America, despite false starts and frustrated hopes, has made more progress than we had any right to expect. Realistically, however, it would be unwise to think in terms of less than thirty years for full-scale modernization of the continent. After eight years the alliance must, therefore, be regarded as in its infancy. Any other view does injustice to Latin America.

And this leads to the need for a sense of scale in our relations with Latin Americans, including a sense of proportion in both the United States and Latin America. We must look at our hemisphere with a new eye of understanding, one that recognizes its importance to the future peace of the world. We cannot take Latin America for granted, believing it will be there when we need it. We need it now no less—and perhaps more—than it needs us, for what happens there in the closing years of this century may well shape the coming years of the next century.

As for Latin Americans, it is time for them to recognize that the United States is not the wielder of the big stick of the 1900s, that we mean what we say about wanting to work with them, that our commitment is to an inter-American community of equal states. In short, they must turn away from memories of the past and turn instead to our mutual hopes for the future.

We talk of destiny, of partnership, of shared hopes and efforts toward hemispheric unity. But what does that destiny look like if our hemisphere ends up half suburb and half slum? Is this the limit we set to the creative, working partnership the American presidents established at Punta del Este to meet the increasing needs of today's "revolution of rising expectations"?

Surely our destiny is more in keeping with the brave new world we have always sought to build. Surely it is more in keeping with our faith that the dream of Simón Bolívar will flourish at last, like the dreams of our own founding fathers—that this hemisphere will grow in prosperity and confidence into a model of how states, with all their diversity of cultures and differences of gifts, can work together to improve and enrich and ennoble their common life.

We shall not do this with cold, lifeless graphs and charts. We shall not do this with Congressional cuts. We shall not do this between today and tomorrow. But with time and with resources, and with the republics of the Americas all working together, it can be done.

SOMETHING TO REMEMBER US BY

HON. DEL CLAWSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. DEL CLAWSON. Mr. Speaker, at a meeting in my congressional district during the recess, at a gathering which I had been invited to address, an introduction was prepared by one of the members of the organization. He presents in rhyme a comprehensive catalog of questions and issues which are on the minds of the folks at home. Under leave to extend by remarks in the Extensions of Remarks of the RECORD, I would like to include this poetic quiz for the information of my colleagues in the House. The poem follows:

SOMETHING TO REMEMBER US BY

(By Bob Compton)

Even though we may only see you once a year.
It's a real pleasure, Del, to have you here.
We look forward to your legislative report;
The bills you oppose and the bills you support.
On national government you keep us up to date,
It is sort of a preview of our fate.
But please excuse us if we don't seem like scholars;
Our minds aren't geared to billions of dollars.
Tell us what's new on the Washington scene;
The ins and outs of the political machine.
What progress was made in sixty-nine?
In nineteen seventy can we hold the line?
Will we have pulled out of Vietnam,
Or will we employ a nuclear bomb?
Is Russia now considered friend or foe?
What can we expect from Chi Minh Ho?
(Poetic license)
What is your opinion of medicare?
Will schools be entitled to hear a prayer?
Now that we've landed on the moon,
Is Mars next or is it much too soon?
Is President Nixon on his way to fame?
By the way, what's the Vice President's name?
Are we concerned that they devalued the franc?
For higher taxes who do we thank?
Is there any money in the Social Security till?
Do you feel that Ted Kennedy is over the hill?
Will the United Nations get the sack,
Or be saved by Shirley Temple Black?
How long will J. Edgar Hoover maintain his thunder?
Will the Supreme Court never cease to blunder?
Will the Dow Jones average continue to fall?
What is the answer to the West German wall?
Will adults under twenty one be allowed to vote?
What is the latest Jim Garrison quote?
What is your opinion of the Warren Report?
How many foreign countries do we support?
What's going to happen to postal rates?
What are you doing about conglomerates?
Will violence and riots rock our land?
Is our welfare program out of hand?
Will the prime rate be going up or down?
Can urban renewal help our town?
How can dope peddling be turned away?
Are hippies really here to stay?
Can you board a plane for Savannah, without fear of ending up in Havana?
How can auto traffic be abated?
Will all our schools be integrated?
Are we beginning to feel a slight recession or is that a nice word for depression?
Will teachers teach or join the insurrection?
Can those who need it get protection?
Does President Nixon also have a dog?
What are you doing to eliminate smog?
Will unions continue to have such power?
Are they going to tear down the Eiffel Tower?
What is the size of our national debt?
Is there any way it can ever be met?
What are you doing about over population?
How are you going to stop inflation?
How many crops will be plowed under?
How many flags will be torn asunder?
Will the Pueblo incident be repeated?
Is Korea again getting overheated?
Can the world expect famine or feast?
How explosive is the Middle East?
Will the cost of living continue to rise?
Can the Cosa Nostra be cut down to size?
Will the astronauts be allowed to pray?
Is oil depletion here to stay?
Is our news media giving us factual data, or are flying saucers from another strata?
Is the Truth in Lending a committee's notion, or a product of some witch's potion?
These points we hope can be clarified; which are but rumors, which are verified?
So give us the facts, Del, not just fiction, you're not the type to use restriction.
But setting aside these problems if we may,
We have a special wish for you today.
To us this is a meaningful date, and we would like to help you celebrate—
Your birthday and we don't care which one.
We just want to wish you health and fun.
Come back next year, older but wiser too, with this schedule of things we've given you.
Of course if you've solved the problems by that time,
We'll find another way to end the rhyme.
But if you haven't, then please believe us, Del,
Like true constituents, we'll give you hell!

ERNEST PETINAUD HONORED

HON. ROBERT O. TIERNAN

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. TIERNAN. Mr. Speaker, it has recently been brought to my attention that our distinguished friend—Mr. Ernest S. Petinaud—was the recipient of a great honor. He has been recommended by the imperial potentate of the Ancient Egyptian Arabic Order, Nobles Mystic Shrine of North and South America and its Jurisdictions, Inc., for the degree of honorary past imperial potentate. Ernie will receive this honor at the Imperial

Council Convention and sessions to be held in Boston next August.

Ernie's presence in the halls of the Capitol has become part of this building's tradition. His abilities, recognized by all of us here in the House, are far exceeded by his warmth as a man.

I was pleased to learn of this award to Ernie and I am sure all of my colleagues join me in congratulating a great American—Ernest S. Petinaud.

NIXON BACKS UP ON TAX EQUITY

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. VANIK. Mr. Speaker, I would like to call the attention of the House to an article which appeared in the Washington Post, Sunday, September 7, 1969, by Hobart Rowen entitled, "Nixon Backs Up on Tax Equity." The article is an excellent analysis of the way the administration has broken its promise to the American public.

As Mr. Rowen points out the Nixon "tax reform" proposals are a clear indication that "lobbyists for Wall Street, the Nation's corporate hierarchy, have all earned a good raise." "And lobbyists for average-income persons apparently are nonexistent."

The Nixon proposals remove $2.5 billion of tax relief from the middle income Americans—the forgotten Americans—and gives $1.6 billion to business.

The articles continues:

In reality, the rate reduction (for business) will amount to much more than the $1.6 billion cited by the Treasury, which does not take into account the probable growth of the economy.

Said one expert:

There's no discernible philosophy in the Treasury bill. They didn't move in the first place until the Ways and Means Committee built a fire under them. Now, they still seem to be reacting instead of providing the kind of leadership you expect from a Department of the Treasury.

Mr. Rowens analysis is as follows:

NIXON BACKS UP ON TAX EQUITY

(By Hobart Rowen)

Lobbyists for Wall Street, the nation's corporate hierarchy, the big foundations and the educational establishments have all earned a good raise.

Those working for the oil industry have earned their pay, but no salary boosts.

Lobbyists representing real estate interests have probably lost their jobs.

And lobbyists for average-income persons apparently are nonexistent.

These are the conclusions being drawn by sophisticated tax experts in the nation's capital, examining the Nixon Administration's reform recommendations. Their general conclusion is that the administration has taken a distinct step backward, over all, from a halting effort toward tax equity in the House Ways and Means Committee bill.

"The Nixon administration has been willing to bend where it has been pushed," said one tax lawyer yesterday.

As analyzed here, the Treasury's most serious rejection of the principle of tax equality is in its recommended changes in the capital gains area.

The House bill had contained a modest proposal, increasing the holding period for long-term capital gains to one year from six months, and eliminating the existing 25 per cent tax ceiling. It did nothing to tackle the problem of gains that escape taxation at death.

In fact, out of an estimated $8.5 billion annually lost by the Treasury through the capital gains preference rules, the House was going to pick up only $635 million.

But instead of approving the House provision as a good initial step to be followed by further plugging of the capital gains loophole, the Treasury went the other way. It recommended keeping the six-month definition of long-term gains, and except for some special circumstances, proposed keeping the 25 per cent maximum tax limit on capital gains. Loss, compared with the House bill: $210 million. Score a big one for the Wall Street lobby, which sold Treasury on the idea that "capital investments would tend to be frozen" by the House provisions.

On top of this, Mr. Nixon introduced something brand new: a tax reduction of two points in the corporate rate that would cost $1.6 billion a year. This gives back to business about half of the money taken away through repeal of the investment tax credit. (In reality, the rate reduction will amount to much more than the $1.6 billion cited by the Treasury, which does not take into account the probable growth of the economy. None of the estimates for any of the bill's gains or losses takes economic growth into consideration. Over-all revenue losses will tend to be much larger than those cited officially). Score the corporate rate cut for Big Business lobbyists.

In terms of individuals, the Treasury proposed changes that it claims would concentrate tax reform benefits in the lowest income brackets. But there is some dispute among the experts on just how the Treasury plan would actually compare with the House proposal in the lower brackets. It is clear, however, that the Treasury proposal would shift tax relief within the middle-income brackets. It would tend to diminish the advantages given home owners in the House bill, by reducing the standard deduction ceiling to $1,400 instead of $2,000 as in the House bill. The Treasury would also repeal the personal deduction now allowed for state gasoline taxes (a $10 or $15 item for most taxpayers). Over all, the Treasury would trim back individual tax relief by $2.5 billion, compared with the House bill. Score card: consumer tax lobby needed.

On the delicate issue of taxation of interest on bonds issued by state and local governments (now free), the Nixon Administration retreated completely. The House would have included this tax-free interest in the calculation of a 50 per cent minimum tax. But the Treasury would allow individuals to continue to accumulate huge amounts of wealth, tax-free, by this loophole. Worst of all, the Treasury hid behind the notion of the "constitutionality" of taxing municipal bond interest, a question that the legal fraternity agrees was put to rest more than 25 years ago. Chalk the victory for this one up to the Mayors' lobby and Vice President Agnew.

Perhaps the most complicated area of tax reform proposals relates to the oil industry, and here the administration went further than expected in some areas—but responded to oil industry pressures in others.

It went along with the House recommendation for reducing the depletion allowance from 27.5 per cent to 20 per cent. Moreover, it proposed including excess depletion in the minimum tax calculation, as well as in the Allocation of Deductions Rules.

But the Treasury supported a version of a special provision (intangible drilling costs) that permits oil operators to deduct exploration costs in the year paid out, rather than spreading such costs (really capital outlays) over a period of years as is required in other industries.

The Treasury would make it tougher for those not primarily engaged in the oil business to profit from the very specialized set of provisions. But tax lawyers say that anyone in the oil business will still be able to write-off much, possibly all of his income against allowable intangible drilling costs. Score a halfway victory for the oil lobby.

The real estate lobby, which has been riding high, wide and handsome for years, profiting from accelerated amortization provisions, was hit hard by the House bill, which removes special double depreciation provisions (except for new housing). The Treasury goes even farther by adding to both the LTP (minimum tax) and the allocation of deduction rule (ADR) provisions the excess of interest, taxes, and rent from unimproved property during the period of construction. It also would reach out and grab under LTP and ADR accelerated depreciation on leased personal property (this latter would affect such things as bank lease-backs of aircraft to airlines. Scoreboard: new lobbyists needed by the real estate crowd.

The foundations and the universities did well. Instead of facing a 7½ percent tax, the foundations would be clipped by the Treasury only for a 2 percent "supervisory" tax.

This tax would be kept out of general revenues, and be related, at least in theory, to Internal Revenue's administrative costs. If the idea is accepted, it would rule out in a practical sense any big future boosts in the tax rate on foundation income. The universities and other institutions got theirs by persuading the Treasury to back a softened provision on taxation on the increased value of gifts to such institutions. Score a plus for the egghead type lobbyist.

The Treasury was alternately tough and weak in many other areas too numerous to detail. For example, it improved on the House's farm "lobby" loss provision, but for no accountable reason, it caved in on closing a co-operative tax loophole.

It held firm on the House proposal to make "restricted stock plans" for executives less attractive, but waffled on the question of deferred compensation. The House suggested a minimum tax on deferred compensation payments exceeding $10,000. The Treasury argues for deletion of this provision pending a study of the tax treatment of all deferred compensation, including amounts paid under profit-sharing and pension plans.

"There's no discernible philosophy in the Treasury bill," said one expert. "They didn't move in the first place until the Ways and Means Committee built a fire under them. Now, they still seem to be reacting instead of providing the kind of leadership you expect from a Department of the Treasury."

PRESIDENT NIXON REITERATES SUPPORT OF POSTAL REFORM

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. CUNNINGHAM. Mr. Speaker, President Nixon on September 2 reiterated his support of postal reform, stressing the importance of its early passage.

President Nixon stated that the setting up of a Government corporation to re-

place the present system is one of the top priority measures of his administration.

I am indeed proud to have introduced the administration's postal reform bill. I believe, as does the President, that it will provide what this country deserves—fast, efficient, postal service.

Mr. Speaker, I commend to my colleagues the President's remarks of September 2 and those of Postmaster General Winton M. Blount, the Honorable Lawrence F. O'Brien, and the Honorable Thruston Morton in a press conference which followed:

REMARKS OF THE PRESIDENT ON POSTAL REFORM

Ladies and Gentlemen: I am flanked today by a bipartisan group which is gathered together for what I consider to be one of the top priority measures of this Administration.

Several months ago you will recall my meeting with the press in Washington, along with Postmaster General Blount, and indicating the complete support of this Administration for postal reform, the setting up of a Government corporation in place of the present system.

Within the next two weeks a major decision will be made in the House of Representatives by the Post Office and Civil Service Committee with regard to the bill which will be reported to the House. This will be the first round in a very big battle as to whether we are to continue a system which has proved that it is inefficient, inadequate to meet the tremendous responsibilities that we have today, or whether we are to have a new system that will give this country what it deserves—fast, efficient postal service.

This is a bipartisan measure, bipartisan in the sense that it was first recommended by President Johnson, and as indicated today, it is supported not only by the Administration and the Postmaster General, but by two former Chairmen of the National Committees, the former Democratic National Chairman, Mr. O'Brien, and the former Republican National Chairman, Senator Morton.

Mr. O'Brien, I should say, has had the position Mr. Blount has as Postmaster General, and is enthusiastically for this legislation.

I simply want to say in conclusion, before they submit to your questions, that I believe that postal reform is high on the list of those items which I indicated in my speech last night needs a new approach, an approach that will be adequate to the Seventies.

Our present postal system is obsolete; it has broken down; it is not what it ought to be for a nation of 200 million people, and a nation that will be 300 million within 30 years, and now is the time to act. We are very happy to have the bipartisan support that we have, as indicated by this meeting this morning.

The Postmaster General will take over, and all three will answer questions—either on the post office or politically.

PRESS CONFERENCE OF POSTMASTER GENERAL WINTON M. BLOUNT, THE HONORABLE LAWRENCE F. O'BRIEN, AND THE HONORABLE THRUSTON MORTON

Postmaster General BLOUNT. Ladies and Gentlemen: If you have any questions, we will be delighted to answer them.

Q. General Blount, where do you expect the opposition to come on the postal reorganization plan?

Postmaster General BLOUNT. There have been intensive hearings in the House during this summer. They have concluded those hearings. There was some opposition from the postal unions and some opposition on some of the other small parts of this legislation. But the legislation itself stood the test of the challenge in the committee hearings and we are very optimistic that we are going to get this bill out of committee and passed this year.

Q. General Blount, on the political side of the proposal, now that the hearings have concluded in the House, can you gauge for us the amount of opposition you received because of the potential loss of political patronage.

Postmaster General BLOUNT. I don't really think that has been very significant. I think that when we introduced this legislation that it was generally said that we did not have three votes on the committee. We feel that it is also widely acknowledged at the present time that we have about an even split on the committee.

I think that represents a great deal of progress. I think, again, it represents the fact that this legislation has stood up under the challenge that the committee hearings have given it.

Q. Do you think it will come out pretty much intact the way the Administration recommends it?

Postmaster General BLOUNT. There may be some changes, but I hope not substantive changes.

Q. What do you regard as the most important reform that will take place?

Postmaster General BLOUNT. Well, I think the most important thing about this legislation is that it centralizes management in one place. Now we have a fragmented management. The Congress sets the basic policy decisions, the prices for postal service, and they set the cost in that 80 percent of our costs are wages.

So they, in fact, control some of the major policy decisions of this operation. They set the investment policy by how much we are able to invest in capital facilities and mechanization.

So this legislation centralizes these management decisions in the management of the Post Office Department and then for the first time you will be able to hold a Postmaster General responsible for managing this department.

Q. Is there much opposition in Congress to losing this power?

Postmaster General BLOUNT. I think, again, as I have stated on a number of occasions, that this is pretty comprehensive legislation. It is really the first time that you are talking about taking a Cabinet Department and removing it from Cabinet status.

We have 300 million customers. People should examine this legislation. The Congress should examine it. We have 750,000 employees who need to examine it. This is what has been going on since our legislation was introduced.

I think as I have said earlier, we have made great progress in talking to the Members of Congress about this legislation.

Q. What was the reason for the meeting today with the President?

Postmaster General BLOUNT. The principal reason for the meeting was to receive from Mr. O'Brien and Senator Morton a report on their activities of the Bipartisan Citizens Committee that is supporting this legislation. The President and I were both delighted to hear of the things that they have been doing and we have been working with them in trying to support this legislation.

Q. What did you tell the President, Mr. O'Brien?

Mr. O'BRIEN. In general terms, the Senator and I reported to the President that we felt some significant progress was being made toward this legislation. Now we all realize it takes sometimes, an inordinate period of time to legislate in important areas.

But from the time that I first made the suggestion and the Kappel Commission reported, I think that the education program that we are engaged in has been beneficial. I can't recall a similar situation—I tried to think back over a number of years—where you have President's from the opposite parties and party officials from both parties united in a common cause.

You will recall that President Johnson supports this legislation and President Nixon, of course, has proposed it in his message. Postmaster General Blount has been carrying the ball on the Hill for it and we have been trying, as citizens of this nation, for the continuing interest in this area, to do what we can to be helpful.

Q. Mr. Blount, is the opposition from the postal union because of fear of job loss or loss of seniority, is that the basis?

Postmaster General BLOUNT. I think the basis for most of the opposition, really, is that this is change. Everybody in dealing with change has some reluctance to come to grips with it. I think that the postal unions have been very diligent in their efforts to understand this legislation. I have personally had a number of meetings with them to talk about it. I hope that they will ultimately come to the position of supporting this legislation.

Q. What is the deficit—predicted deficit—for the current fiscal year, and if this legislation is not enacted, what would be the perspective deficit for fiscal 1971?

Postmaster General BLOUNT. The perspective deficit is $1.3 billion.

Q. That is this current year?

Postmaster General BLOUNT. That is right. Now, we don't think that this legislation is going to turn this department around overnight. It is going to take time. This is a department that has not had the opportunity to be managed for decades. So we provide in our legislation a transition period of five years for this corporation to break even.

Q. When will the next postal rate increase go into effect, in your opinion?

Postmaster General BLOUNT. Well, we proposed it four months ago and the Congress has not acted on it yet. That is one of the things about this legislation. We need to be more responsive to the conditions affecting the Post Office Department. I could not forecast when this would be enacted by the Congress.

Q. Are you still asking for a one cent increase in first class mail?

Postmaster General BLOUNT. That is right.

Q. Senator Morton, when General Blount first went forward with his idea of reorganization there were both public and anonymous statements of opposition in the Senate, rather strong statements, as General Blount probably recalls.

What can you tell us today about the chances of this bill in the Senate itself?

Senator MORTON. I would be more optimistic about the Senate than I would be about the House, frankly. I am optimistic about the House. The Senate has not had a word of hearing, nothing has been done. I have not attempted to nose count in the Senate. I have not discussed this with many Senators in detail.

The time I have spent on it I have been trying to work with the House, especially the House committee, giving my support, obviously, and my reasons for being for this.

Many years ago, longer than I care to remember, I served on that committee. There is only one person still on the Committee who was there at that time. But these are people on both sides of the aisle that I respect greatly.

Q. Will this bipartisan effort continue?

Mr. O'BRIEN. This bipartisan effort might continue forever.

Senator MORTON. This question of the Congress, I can speak to this question about the patronage that has been brought up here several times, as one who spent a good many years in the Congress. You are always going to give lip service to the postal organizations. They are right effective politically,

frankly. But most members of the Congress, down in their hearts, would like to get rid of this headache. Because, when you make a man postmaster in "Chittlin Switch" you lose ten family votes, and "Chittlin Switch" might not have but ten families.

The workers of the Post Office Department, I think 65 percent, retire in the jobs in which they started. After 30 or 40 years of service, if he started as a letter carrier, he went up in grade, yes, his compensation was increased, and longevity, but I don't know of any big corporations today that have that sort of record.

I think the men and women in the postal service will have a far greater opportunity to develop their own talents, to advance to positions of responsibility under an organization set up such as is envisaged in this proposal.

Mr. O'BRIEN. I just want to add a note to the Senator's comment. I think this has been overlooked to some considerable extent in the proposal. The opportunity for the employees to, in a true career sense, to move ahead in the service would be built into a government corporation is nonexistent almost totally at the moment. That depresses me more than any other aspect in my experience.

Q. How about the big users, are they pretty much behind this, the big mail users and businessmen?

Mr. O'BRIEN. Some of those who would formerly be opposed, perhaps, to some aspects of this have come forward, recognizing that this can significantly alter their rate, and that is what I guess you are talking about, Hugh. But I think they have been men of good will and many of them have come forward and surprisingly helped us in that effort. Perhaps Red could add to that, but that is my observation.

Postmaster General BLOUNT. They take the position that the mail service is vital to them and they recognize the fact that if something is not done in a few years we may well be in chaos in this postal system.

So in its own self-interest, in recognizing in the short run it may be to their disadvantage, in the long run it is to everybody's interest that postal reform be brought in. I think it is just that simple.

FREEDOM BECOMES ILLEGAL—ONE RESULT

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. RARICK. Mr. Speaker, the destruction of the Amite High School in my district Friday night was a tragic and regrettable incident.

I join with the community and the school alumni who have worked so hard to build and maintain the school as an educational center in this their loss.

Yet, this incident and in fact the tension and chaos which continues to exist in my district was not only foreseeable but apparently was a desired effect by some of the unelected bureaucrats and judicrats in the North who talk and teach that violence is necessary to bring about progress.

It can only be a sick mind to see progress in a burnedout schoolhouse. But the school was made of brick, wood, and mortar. It can be rebuilt. The far more serious loss is destruction of the public education system and with it the future of the human family—a loss that is irreplaceable.

What flimsy excuse can social mechanics, HEW, and Federal judges offer parents and taxpayers—those who built and paid for the schools only to have them confiscated and some now physically destroyed?

The conflagration which consumed the Amite High School was ignited in 1954 by Earl Warren and his liberal leftwing northern friends just as surely as if they had set the blaze.

Let us put the blame and cause where it belongs and not with the people.

Every hypocritical northern liberal, every apathetic northern moderate should recognize their guilt and their role in this loss to my people.

Punishing my people with smears and name-calling, more force laws, compliance threats, and court orders will not reach the cause nor mitigate the undesired effect.

Responsible government authority must restore to the people their rightful freedoms under God otherwise we can anticipate that people who have known freedom will react to continued tyranny as free men have done throughout history.

I include a news clipping on the school fire and correspondence from a constituent following these remarks:

[From the Baton Rouge (La.) State Times, Sept. 6, 1969]

AMITE SCHOOL HIT BY BLAZE

AMITE.—Amite High School was completely gutted by a fire which burned through much of the night last night and was finally brought under control early this morning.

Tangipahoa Parish school officials and school board members were holding a special emergency meeting this morning in an attempt to work out a way to get the some 700 students who attended the school started in classes next week.

Officials refused to speculate on the cause of the blaze, or whether arson might be involved. They said state fire marshals and other law enforcement officials were investigating the cause of the fire this morning.

School Supt. Dewitt Sauls said this morning that the school was "completely burned out." The second floor of the building was destroyed, he said, and the lower floor was gutted. "Mostly, the walls are all that is left," Sauls said.

Amite Fire Department officials said the blaze was reported at about 10:40 p.m. yesterday by a group of students returning from a football game at Franklinton on a school bus.

The fire had a "good start" when firemen arrived, the fire department spokesman said.

The fire was brought under control and the last flames extinguished at about 7:30 a.m. today, he said. Firemen were still pouring water on the smoldering ruins at about 9 a.m.

The three units of the Amite Fire Department were assisted by units from Hammond, Roseland and Independence in fighting the blaze. The fire department spokesman said that had it not been for the assistance of these units, the fire could not have been controlled.

FOUR FIREMEN INJURED

Four firemen, three from Hammond and one from Amite, were carried to Lallie Kemp Memorial Hospital at Independence suffering from smoke inhalation and exhaustion during the night, the spokesman said. He said the four men were reported in good condition this morning.

Students returning from the football game carried books, trophies, desks and school records from the burning building until deputies forced them to stop because of the danger of the ceiling falling in on them.

The fire department spokesman said the blaze seemed to have started in the school auditorium, in the general area of the stage. The auditorium is near the center of the two-story brick building, constructed around 1927.

Supt. Sauls estimated this morning that it would take about a half million dollars to replace the school. He said that it was damaged beyond repair.

In the meantime, school officials must find some means to educate the some 700 students in grades 9–12 who attended the school. Sauls said the platooning of students from the school with those at another school was being considered, along with the possibility of obtaining sufficient portable classrooms to operate on a limited basis.

BOGALUSA, LA.,
August 6, 1969.

Re children's education.

HOUSE OF REPRESENTATIVES,
Washington, D.C.

To the Representatives of the United States of America:

I, as a citizen and a parent, would like to bring to your attention the problems that you have created as to the Education of Children in these United States. I not only mean the Children of the Southern Part of the United States, but the East, West, and Northern Areas. It is a disgrace that there have been so much confusion and interference when it comes to a child's education. It is not only the right of each parent according to the Laws of each State to send their children to school regardless of where they send them but also their privilege. If you are financially able to send them off to a private school, that may be to their benefit as well as yours. If you are not financially able, we have a public school system that is supported by the taxes collected from Property Taxes and Federal Grants. Please correct me here, if this is not correct that the Federal Grants are primarily the taxes paid by the citizens of this country. The property taxes paid are kept within the State and the Town School Board has jurisdiction as they are an elected body and will usually try to be fair to all in their community, so as to be retained on these Boards.

If you are wondering what I am implying, I would like to say this, that my childs education is my chief concern. I have two children, a daughter 13 years of age and a son 7 years of age. I have taught my children to respect young and old alike and I believe that they do this the very best for their ages. I have also taught them to be careful who they associate with as they wear their own Price Tax and that their Name is their Honor. I am not fanatical in any way, and I treat everyone as I would want to be treated. I have as many colored friends as I know and as many white friends as I know. I call all these people my friends, but I do not mix with all these people socially. The reason is that as long as I have life in my body I will be my own judge as to the kind of education that I want for my children and the people that I would like them to associate with. I believe and I know that I am not mistaken that this is just what everyone of you as representatives and as family men believe in too. This is what the constitution is and what it was written for: Our personal freedom. The Civil Rights law in itself gave the Colored People of these United States their Freedom of Choices. The more that is added to this the more that is taken from someone else.

I took my child out of a Private School because according to my way of thinking, she was not getting the kind of education

that I thought would carry her through her future. It may have been just Basic, but the Basics is what we have to start our future Adult Citizens with. I enrolled her in the Bogalusa Public School System as I felt she had qualified School Teachers and a Qualified Curriculum. That was my privilege and I did what I believed in and what I believed would benefit my child. I still feel like this and it is shameful to see Federal intervention in our Schools as to the placement and without "freedom of choice".

It is not the Constitution of these United States that have given these appointed judges this type of Authority but Federal Appointments. These are not elected men. They do not have to account to the people but only to personal friends. I believe that the Three (3) Branches of our Federal Government are to keep the Balance of Democracy. But if it comes to the Public to call for the election of the Judicial Branch of Government, I now see that the people of the United States will vote for not against these Elections.

I know that I have gone into more than I had started to say, but this is something that has been building for the past fifteen (15) years and if you will just stop using the people and their children as political footballs and start thinking about the majority and the benefits for them, I know that you will understand that; you have not done your duty as representatives for your country and constituents.

Cordially yours,

MARY ALICE SMITH.

UNITED NATIONS PEACEKEEPING FORCE—THE FIRST BRIGADE

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. ROSENTHAL. Mr. Speaker, this country is withdrawing from a wasteful and tragic conflict in Vietnam with the resolve that alternative methods to American intervention must be found to keep the peace. In this search, I feel that our attention may profitably be focused on the United Nations. Some 11 years ago, Congress passed a concurrent resolution which urged that there should be developed procedures to "enable the United Nations promptly to employ suitable United Nations forces for such purposes as observation and patrol in situations that may threaten international peace and security"—House Concurrent Resolution 373, 85th Congress.

Now is the time, finally, to implement the provisions of this resolution. Consequently, I have today reintroduced a resolution providing for the establishment of a 1,000-man American unit to be on constant call for service with the United Nations. This force would serve as a symbol of American commitment to the peacekeeping efforts of the United Nations and to the ultimate creation of a permanent, individually recruited force for impartial peacekeeping duties.

International intervention serves several valuable ends which unilateral activity cannot. Among other benefits, the multilateral approach can help diffuse the immediate crisis and buy time; it can, through third party fact-finding and peace observatory, reduce factual uncertainty about the origin and initiation of the conflict. Perhaps most importantly, however, it reduces the risk of direct U.S. and U.S.S.R. confrontation, with its ominous dangers of escalation. Undoubtedly there will be instances, such as those covered by the individual and collective self-defense provisions of the U.N. Charter—article 51—where unilateral response will be required. But, even here, after the initial reaction has been made, a lengthy conflict might be avoided through the use of international agencies.

THE MIDEAST EXAMPLE

Such multilateral international action has, indeed, earned a respected place in the arsenal of weapons for world peacekeeping. In the Middle East, a 6,000-man U.N. emergency force maintained the armistice for almost 11 years before being withdrawn, significantly, on the eve of the 6-day war. United Nations intervention in the Congo, while hampered by the internal complications of the dispute, prevented the implantation of the cold war in Africa. The present peace on Cyprus stems largely from the activities of units from seven different countries stationed there. And most recently, the presence of San Salvadoran troops in Honduras was ended by the threat of OAS retribution.

But multilateral intervention has not been without difficulty. As the process emerged after the Suez crisis in 1956, it entailed the voluntary provision of troop units by U.N. member governments, dependence for logistic support on the larger powers, executive administration by the Secretary General, and unsatisfactory patterns of financing which, in recent years, have relied in large measure on voluntary contributions by U.N. members. The constant dependence on voluntary contributions of funds and military personnel has left the United Nations without the capacity to make the rapid responses which crisis situations demand. It has also meant that vast energies have had to be expended merely to garner support and that the costs of each operation have been borne disproportionately among the members.

A STANDBY BRIGADE

The provision, by each member state, of a standby brigade would eliminate these difficulties. Subject to General Assembly or Security Council action, these forces would mean the availability of ready troops and support completely financed by the donor country. Already such units exist in the armed forces of 10 of our allies, including Canada, Denmark, Italy, and the United Kingdom.

The time is particularly ripe for an initiative by the United States in this direction. Since 1964, the Soviet Union has voiced a willingness to consider the whole issue of a United Nations force under article 43 of the Charter. By scheduling a conference to discuss this matter and taking the first concrete step towards developing such force, the United States will appear in a highly favorable light. We will possibly regain some of our prestige as a promoter of world peace, a reputation somewhat eclipsed by our involvement in Vietnam.

What follows is part of a recent report of the United Nations Association of the United States of America. Included are the recommendations of that body's Policy Panel on Multilateral Alternatives to Unilateral Intervention, chaired by Kingman Brewster, Jr., president of Yale University, and having among its members Gen. Matthew B. Ridgway, former Army Chief of Staff, and Charles W. Yost, Ambassador to the United Nations:

RECOMMENDATION OF THE PANEL

The Panel believes the national security interests of the United States require a reassessment of the instruments on which we place principal reliance for international conflict control. To deter and avoid nuclear war it is essential that a strategic balance with the Soviet Union be maintained. It is also essential that we maintain our principal defense alliances. But to cope with the many conflict situations around the world, it is imperative, the Panel believes, that means be found, promptly, for a larger number of countries to share more fully the responsibility for international peacekeeping. It would be a mistake for the United States to continue carrying, or attempting to carry, so much of the responsibility alone.

There is likely in the future to be even greater political resistance, both domestic and international, to essentially unilateral efforts to keep the peace or to control "foreign" conflicts. This in itself is reason for the United States to give urgent priority to the development of other means of conflict control.

There is clearly at present no reliable multilateral approach to the control of international conflicts. The United Nations operations in the Middle East, in the Congo and in Cyprus have not been quick, clean and assured of success. But the Panel believes that the growing convergence of U.S. and Soviet national interests in avoiding a nuclear war, and in preventing the escalation of small conflicts into superpower confrontation, now justifies new efforts to strengthen substantially the principal multilateral instruments for conflict control, including those of the United Nations. Such efforts would, the Panel is convinced, coincide sufficiently with the national interests of other key Members of the United Nations to permit progress to be made.

There are indications that the USSR may be interested in a revival of negotiations on the provision of national military units to the UN Security Council (under Article 43 of the Charter) for international peacekeeping service. The Panel believes the time has come, through initial explorations and, if these are productive, through more formal negotiations, to attempt to develop a more capable United Nations Standby Force. Such a Force would be composed of units from UN Members other than the Permanent Members of the Council; would be supported by adequate earmarked and trained reserves; and would be backstopped by more reliable measures for financing.

The Panel proposes the establishment of a new Peace Fund to finance future UN peacekeeping operations, and urges the prompt liquidation of past peacekeeping debts in a package settlement. It also proposes a series of support measures which it believes could strengthen, importantly, the logistic, communication and command aspects of UN operations.

The Panel believes that peacekeeping through the United Nations and through regional organizations can and should be mutually reinforcing. It suggests that in the future there should be closer relationships between the work of regional organizations and that of the UN. We could then envisage arrangements in which certain national military units were earmarked for service either with the UN or with regional organizations. Such a system might strengthen the peacekeeping capabilities of these institutions.

The measures we have suggested represent, the Panel believes, only a first step—although a major one—in the development of the necessary international peacekeeping capabilities needed in the 1970s. The time and the setting are right for the necessary beginning.

U.N. SECURITY COUNCIL SHOULD DEMAND RELEASE OF TWO TWA HOSTAGES

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. PUCINSKI. Mr. Speaker, I have today sent the following letter to Secretary of State William P. Rogers urging him to seek assistance from the United Nations Security Council for the immediate release of two Israeli passengers taken from the hijacked TWA airliner and still being held by Syria as hostages.

It is now 10 days since these people were taken hostage and the conscience of the world cannot permit this outrage against two innocent passengers on an American carrier to continue.

I am puzzled by the silence of our liberal friends in our own country. Where is their voice of outrage against this illegal denial of human rights to two people whose only crime is that they were passengers on an American international carrier?

The letter to Secretary Rogers follows:

SEPETEMBER 8, 1969.

HON. WILLIAM P. ROGERS,
Secretary of State, Department of State, Washington, D.C.

DEAR MR. SECRETARY: Ten days have now elapsed since the Trans World airliner was hijacked by Arab terrorists and taken to Damascus. You will recall that all but two of the passengers on this international carrier flying an American flag have been released. I am deeply concerned about the remaining two passengers over whom, I believe, the United States has considerable responsibility, if for no other reason than because they were legal passengers on an American-owned commercial aircraft.

I hereby request that you take appropriate steps as soon as possible to summon a meeting of the Security Council at the United Nations and demand an immediate release of these two passengers.

The only crime that these two Israelis still being detained by the Government of Syria have committed is that they were innocent passengers on an American international air carrier. So far as I can ascertain, this is the first time in modern history that a nation has deliberately detained passengers from an aircraft as hostages for terrorists who hijacked the aircraft.

I am astounded that our country has not taken more forceful action already. I have read with interest your own very strong statement denouncing this international piracy at the time the hijacking occurred. I commend you for this statement, but the statement alone is not enough.

Nor am I at all persuaded by arguments of those who urge no action at this time because of the "delicate" negotiations for the release of these two Israeli citizens.

I believe the most effective means of securing the immediate release of these two passengers on an American aircraft is for the Security Council to serve notice on the Government of Syria that any harm to these two people will bring the strongest retaliation by the combined membership of the United Nations.

It is unconscionable that the free world has remained silent on this issue for so long. Secretary General U Thant has tried to persuade the International Federation of Pilots Association against the worldwide strike of airline pilots in protest against this hijacking, and even more against the illegal detention of these two Israeli passengers. Mr. U Thant would better serve the cause of justice if he addressed his energy toward a meeting of the Security Council for immediate action.

It is my honest judgment that a continuing failure by the United States and the other major powers to deal effectively with Syria's cruel detention of these two innocent passengers will only beget more actions of terrorism against the United States. We have seen already one example in Brazil and we are now witnessing a tragic story unfold in North Korea.

I urge you to instruct your aides for an immediate petition to the Security Council for an emergency meeting to demand the release of these two passengers. For the United States to delay in providing maximum protection for these two passengers will seriously shake confidence in the integrity of the entire American international carrier fleet and in my judgment will have not only serious moral consequences, but even some economic setbacks.

Your cooperation in this matter will be greatly appreciated.

Sincerely yours,

ROMAN C. PUCINSKI,
Member of Congress.

MORMON LEADER 96 TODAY

HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. BURTON of Utah. Mr. Speaker, today marks the 96th birthday of President David O. McKay, leader of the Church of Jesus Christ of Latter-day Saints. President McKay is the head of a church which has grown from a faithful few in New York to what is now estimated to be almost 3 million members the world over.

As president of the church, he has met with statesmen, kings, noblemen, and five U.S. Presidents. Under his leadership, the church has grown, not only in membership, but also in its physical properties, for three new temples are being constructed—one here in Washington, D.C., and the other two in Utah.

President McKay's accomplishments are many, and I would like my colleagues to read, as I did, one report which appeared in the church section of the Salt Lake Deseret News:

PRESIDENT DAVID O. MCKAY, BUSY AT 96 YEARS

President David O. McKay will celebrate his 96th birthday on Monday, September 8, 1969, with family visits and a quiet day to enjoy the many greetings sent by mail. Honoring President McKay will be a groundbreaking of the Ogden Temple. The President has had a desire to be in Ogden for this event and plans to attend if health will permit. President McKay works from his apartment-office in the Hotel Utah. He meets with his counselors and others often as he directs the activities of the Church. President and Mrs. McKay attended the opening of the McKay Hospital in Ogden last July and rode in the Days of '47 Parade on July 24 in Salt Lake City. Physical frailties necessitate the use of a wheel chair and prohibit the President from many of the activities in which he would like to take part. Since he has become President more than 18 years ago—April, 1951—the Church has grown in size from 1,137,000 to 2,884,973. The number of wards has increased from 1,666 to 4,507 and the number of stakes from 191 to 492. President McKay has taken great pride in the growth of the Church and the devotion of the people. Five temples have been constructed under his presidency. Three more have been approved and work will begin soon on these temples in Washington, D.C., Ogden and Provo, Utah. Contracts have also been awarded for the 25-story Church Administration Building scheduled for completion in 1972.

Under Church correlation, growth and progress has been experienced in every area of the Church. All who meet and know President McKay have been impressed with his abilities and capacity to serve. Men and women from all walks of life who have visited him have been received in a courteous, uplifting way. President McKay has a great capacity to love and serve. He enjoys being with people. He values his association with the brethren with whom he works. His family means so very much to him, and a visit from any one of them brings light to his face. President McKay shows a special gratitude to his staff and those who help him in his overwhelming responsibilities. The President not only responds with love to people he meets, but they also respond to him. The Tabernacle Choir and other choirs who sing at Conference are touched by the spirit of President McKay. Oftentimes they sing with tears in their eyes. President (Hugh B.) Brown announced while conducting a recent Conference that Brother Richard P. Condie suggested that the choir be permitted to sing President McKay's choice of all hymns, "I Need Thee Every Hour." They would do this to honor our President.

DANIEL J. RONAN

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. ARENDS. Mr. Speaker, during the recent vacation recess of the Congress one of our distinguished colleagues, Congressman Dan Ronan, of Illinois, was called to his great reward. This was a great shock to all of us when we learned of his passing.

It is difficult for one to understand why a person so young, so able, and so eager to serve the people should be suddenly taken from us.

Congressman Ronan was only 55 years of age. For 2 years he served in the Illinois State Assembly and until his election to Congress was alderman in the city of Chicago. For 13 years he represented the 30th ward in the city council.

Dan and I were of opposite political faiths. Very few major issues came before the Congress on which he and I were in agreement. His philosophy of government was not the same as mine. Nonetheless, I respected him for his views and I am sure he respected me for mine. While we differed on various legislative matters, we were as one in seeking to do what we considered best for the State of Illinois and for our country.

Dan will be long remembered by all who had the privilege to know him. He was a dedicated public servant. He will be greatly missed in the Congress.

I extend my personal sympathy to his mother and his two sisters.

LEAD POISONING

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. RYAN. Mr. Speaker, the plague of lead poisoning among our city children continues to exist and is being perpetuated.

Until recently the nature and effects of this disease have been largely ignored. But there now is a greater public awareness which should lead to remedial action. It affects children who eat bits and pieces of old lead-based paint which peels off of the walls of substandard housing and falls within easy reach of young children.

This disease is usually not reported until after it has reached its most critical stages. At this point lead poisoning results in epilepsy, cerebal palsy, permanent mental retardation, and death.

It has been estimated that between 25,000 to 30,000 children a year suffer from lead poisoning in New York City.

I have introduced three bills, H.R. 9191, H.R. 9192, and H.R. 11699 which are aimed at alleviating and, hopefully, terminating this silent epidemic. These bills were reintroduced in July with 18 cosponsors as H.R. 13256, H.R. 13254, and H.R. 13255.

I am inserting in the RECORD an article which appeared in the September 1 edition of the New York Times. It concerns a summer survey done in the Brownsville section of Brooklyn by Brooklyn College, Brookdale Hospital, and the Neighborhood Youth Corps. The survey findings showed that there is a high incidence of lead poisoning in the children living in the Brownsville area. Forty-five percent of the families visited in a door-to-door survey were affected and half of the cases required hospitalization.

I urge my colleagues to support legislation which will combat and eradicate lead poisoning.

The article follows:

BROWNSVILLE PLAGUED BY PAINT POISONINGS

A survey conducted by Brooklyn College, the Brookdale Hospital and the Neighborhood Youth Corps has found a high incidence of lead poisoning among children living in Brownsville tenements.

Brooklyn College said yesterday that more than 45 per cent of the families visited in the door-to-door survey were found to have some evidence of lead poisoning and that half of these cases required hospitalization.

The college said that 400 interviews were conducted in the summer survey and that 182 cases of suspected lead poisoning were referred to Brookdale Hospital.

"All of the referred cases were found to have lead poisoning," the college said, "and 94 were severe enough to require hospitalization."

PAINT IS THE CAUSE

Children living in slum neighborhoods develop lead poisoning by eating chips of paint bearing heavy amounts of lead. The paint industry halted production of lead-based paints for interior use 20 years ago, but in many slum houses old accumulations of lead-based paint remain.

Last March health officials estimated that between 112,000 and 225,000 children—most of them under 5 years of age—fell victim to lead poisoning last year. About 25,000 to 30,000 children a year suffer from lead poisoning in New York City.

In May a 2-year-old Newark girl died of lead poisoning, and seven other youngsters were hospitalized after they ate paint and plaster from a tenement wall.

Lead poisoning, which has been called "the silent epidemic," causes nausea, crankiness, vomiting and lassitude in its more minor forms. When the level of poisoning increases to more than 80 milligrams in the blood stream, the lead destroys nerve cells and can cause irreparable brain damage and death.

TREATMENT WITH DRUGS

Lead poisoning can be treated with drugs that draw the metal out of the human system.

Irene Impellizzeri, associate dean of teacher education at Brooklyn College, noted that lead poisoning often impairs its victim's ability to function in school. Commenting on the Brownsville survey, she said:

"If these statistics are applicable to the entire Brownsville community, it may turn out that what has long been considered problems of remedial education may better be treated by doctors rather than teachers."

Dean Impellizzeri said that existing methods of preparing teachers to identify medical problems among their pupils were "totally inadequate."

"There is no telling," she said, "how many young students were written off as slow learners or even as retarded when they were simply manifesting symptoms of lead poisoning."

The Brownsville survey was conducted by eight interviewing teams, each consisting of a Brooklyn College teacher trainee and a youth from the Neighborhood Youth Corps. The teacher trainees received medical orientation from the staff of Brookdale Hospital's Comprehensive Child Care Program.

THE LATE HONORABLE DONALD C. BRUCE

HON. JOHN M. ASHBROOK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. ASHBROOK. Mr. Speaker, on Sunday, August 31, in the early evening, a good friend and former colleague, Donald C. Bruce, passed away unexpectedly in Round Hill, Va. I was especially shocked and saddened, for I had spoken to Don just several weeks before, and his concern for the welfare of our Nation remained as intense as ever.

Circumstances and a similarity in political philosophies combined to make our friendship an unusually close one during our 4 years together in the House. Don and I had arrived in 1961 as freshmen Members; we had served on the same committees; we had compared notes together for hours on end in our adjoining offices during the 87th and 88th Congresses. I had a unique opportunity to learn why the people of Indianapolis and the 11th Indiana District chose Don to speak for them in Washington.

The oath of office was no mere formality to Don Bruce. To him it was a solemn contract which he made with the people of his district and the Nation. A driving faith in his religious beliefs and in the U.S. Constitution compelled him to spend himself in a widely ranging concern for issues both domestic and foreign. With justification did the Washington Star in its obituary state that Don was "concerned about the country's moral and spiritual erosion and the threat posed by communism."

Don never lost his faith in the ability of the American people to do what was right when properly informed. To this end he turned his gift as an eloquent public speaker, traveling countless miles to all sections of this Nation, persuading and encouraging people in stations high and low to oversee the affairs of government of which they are the final custodians. To how many he imparted a newly awakened sense of personal responsibility for the welfare of our country, we in this life can never record.

As a citizen Don Bruce was in love with the history and traditions of his country; as a legislator he came to appreciate more fully the genius of our forefathers in designing this Government. While realizing that ours is a government of laws and not of men, he prayed for leaders in the image of our Founding Fathers, closing many an address in these words of Josiah Gilbert Holland:

God, give us men! A time like this demands
strong minds, great hearts, true faith and ready hands;

Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;

Men who possess opinions and a will;
Men who have honor; men who will not lie;
Men who can stand before a demagogue
And damn his treacherous flatteries without winking!

Tall men, sun-crowned, who live above the fog,
In public duty and in private thinking;
For while the rabble, with their thumb-worn creeds,
Their large professions and their little deeds,
Mingle in selfish strife, lo! Freedom weeps,
Wrong rules the land and waiting Justice sleeps.

To his wife, Hope, and to his children, Patti and Bruce, I extend my deepest sympathy. With them, we can take consolation in that Divine Providence will not be outdone in bestowing His rewards on each of His faithful servants.

FREEDOM BECOMES ILLEGAL—THE STRUGGLE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. RARICK. Mr. Speaker, the American people are becoming more aware and incensed as freedom of choice is denied

to them in selecting schools for their children.

The American who has known freedom reacts in many ways upon learning he has lost it.

One such fight for the freedom and religious preference of his child is the story of a lawsuit which has been filed by a minister in Florida.

If forced segregation was immoral and now illegal, how can forced integration be found moral and legal?

I insert a news clipping from the Jacksonville, Fla., Times Union for Friday, September 5, following my remarks:

MINISTER SUES TO HAVE SEGREGATION RETURNED

(By Otis Perkins)

A segregationist church minister here is asking in a federal court suit that his daughter be allowed to attend all-white classes or that the government pay her way in a private school.

The suit by Rev. William V. Fowler makes a shotgun attack on "forced" integration, saying it violates the constitutional rights of his minor child, Dana Snow Fowler, of freedom of religion and to attend a school of her choice.

Fowler, who is becoming a familiar figure in U.S. District Court here, says racial segregation is an inherent doctrine of his church, the II Covenant Church of Jesus Christ.

He alleges school integration by judicial mandate forces his child to violate her own religious beliefs—therefore is in violation of the constitutional ban on religious legislation—and takes away other rights guaranteed by the U.S. Constitution.

Fowler said he learned Aug. 27 his daughter would have a Negro teacher and requested her transfer to a school with an all-white class. He said the request was repeated when classes began Sept. 2, but that the school principal said the matter was out of her hands, that she was bound by a federal court integration order.

Fowler filed 15 exhibits, including Biblical references by which he claims segregation is a command of God.

The suit adds:

"After having it clearly stated to us that our beliefs and rights would not be rejected we were compelled to withdraw our child from public school. This is against our wishes and the wishes of Dana," demanding she be allowed to return to a school of her choice.

He then cites a school prayer decision:

"In the Madalyn Murray case the courts held that if a child who had no religious beliefs attended a public school and was forced to hear even the simplest prayer their constitutional rights were violated.

"We further state that churches other than ours as a cardinal principle preach integration of the races (National Council of Churches, Federal Council of Churches) as a religious view, and in effect the federal government is endorsing these religious views by establishing and enforcing same in public schools.

"Therefore Dana is compelled to accept the doctrines of other religious ideologies and churches which are enforced by the state, thus establishing a state religion, all in violation of her constitutional rights."

He alleges forced integration to obtain "racial balance" violates the 9th, 10th and 14th amendments of the Constitution as well as public law. It adds:

"Forced integration in schools impairs the educational opportunities of children of all races; that the causes of gross difference justifying segregation are genetic, not environmental, and will not be changed by integration . . ."

The suit asks an injunction against the United States and its officials, the Department of Health, Education, and Welfare, and the State of Florida and its officials, the State Board of Health. It asks payment of damages to cover the cost of private school and $100,000 in attorney fees, "if one is needed."

Fowler was tried in January on a charge of assaulting an FBI agent. The jury couldn't agree and the charge was dismissed. On Aug. 22 he sought unsuccessfully a federal court injunction against Jacksonville police he said were harassing his church.

TECHNOCRACY: DESPOTISM OF BENEFICENT EXPERTISE

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. GALLAGHER. Mr. Speaker, the problems caused by advanced technologies are coming under increasingly informed scrutiny. While we all admit that unparalleled abundance is technology's prime product, numerous nagging doubts have surfaced. My own activities in evaluating psychological testing, computer technology, and credit bureau operations have been to isolate the toxic in the tonic of technology.

An extremely valuable review of current books on the subject was published in the September 1, 1969, issue of The Nation. Mr. Theodore Roszak surveys these books with both a keen mind and, perhaps even more important, a deeply committeed humanist viewpoint. Witness his response to a proposal to scientifically measure value systems held by Americans:

How does one drive it home to such academic cold fish that their project, serviceable as it is for purposes of technocratic consolidation, is misconceived *ab initio*? As Socrates knew 2,500 years ago, to enter the agora *simply* to survey the so-called values of a befuddled public is the betrayal of philosophy. The values of men are not to be measured or predicted but to be honestly debated, affirmed and deeply lived, so that we may educate one another by mutual example. It is *this* that we owe one another as fellow citizens.

One of the things that Congressmen owe their fellow citizens is to attempt to insure that Government fosters human values and does not allow them to be drowned by what Mr. Roszak calls expertise, being committed to that self-congratulatory form of alienation called objectivity.

Mr. Speaker, we are not going to unbefuddle Americans by turning them over to an allegedly benelovent technocracy, nor can we lead our Nation out of its current agonies by imposing the value structures of an elite. I would point out that the title of Mr. Roszak's forthcoming book is "The Making of a Counter Culture: Reflections on the Technocratic Society and Its Youthful Opposition." The more I learn of the various schemes to uplift our society by denying our traditions and entrusting ourselves to totally "think-tank" solutions, called so aptly by Anthony Oettinger, "the seductive power of absurdity in full formalized attire," the more I believe that former New York Governor and Democratic candidate for President in 1928, Al Smith, had it exactly right:

The only cure for the ills of democracy is more democracy.

And I would only add that I feel that means full democracy for every American who is willing to admit that another's rights must be protected and cherished as vigorously as he protects and cherishs his own.

Mr. Speaker, Mr. Roszak has written a valuable article and I am pleased to introduce it into the RECORD at this point:

TECHNOCRACY: DESPOTISM OF BENEFICENT EXPERTISE

(By Theodore Roszak)

Our society advances towards technocracy along many paths. The authors assembled here for review help us count the ways. Some—bravura technicians like Buckminster Fuller—crusade flamboyantly toward the regime of scientific expertise, flying banners in behalf of an *outré* social engineering whose goal is nothing short of "world planning." Others, like the members of the Pittsburgh Values Project, smooth the way more subtly by laboring to convert our capacities for evaluation and taste into a new behavioral technics accessible only to the academic specialist. Some, like the industrialist Simon Ramo, seek to clear the obstacles of traditional politics from our line of advance by entrusting our social problems to the objective competence of the systems analysts. Others, like Michael Reagan investigating the nearly total dependence of science on federal patronage, speed us along our way by celebrating the virtues of the alliance, while assuring us that any vices accruing can be easily adjusted by vigilant administration within the corridors of power. Even those like Victor Ferkiss who view the journey with a critical eye, contribute to our progress toward technocracy by conceding far more to the technician's world-view than their humanistic instincts should permit. The result is frail resistance in the face of a massive historical movement whose seriousness we underestimate at the peril of our human dignity.

No doubt there is room to disagree about the extent to which a technocratic totalitarianism has been developing in our society. I believe we have gone too far in this direction and that the technocracy, despite the stubborn survival in our midst of sundry flat-earthers and dilettante occultists (as well as a growing population of hip young swamis), looks more like the wave of the future for all industrialized nations, regardless of official ideology, than anything else now in sight. In any event, a lively concern for that prospect is the best touchstone for evaluating the burgeoning literature on technology and society. Is the writer aware of the technocratic possibility? Does he welcome or resist it? Is he aware of the force technocratic tendencies exert upon our politics and our total culture, of the costs and losses to which they can lead? Such are the questions I find myself persistently asking whenever I come upon still another diagnosis of our high industrial agonies.

Technocracy, Jean Meynaud says in his important anatomy of the beast, stems from "the pressure of technology on the political system." It is the demand "that politics be reduced to technics." The seed from which technocratic politics sprouts first blossoms in the field of industrial invention and organization, the obvious province of technical intelligence. But the high yield which man's engineering talents achieve there, bolstered by the technician's claim to scientific ra-

tionality, eventually encourages the same habits of mind to embrace social life as a whole. As Meynaud puts it:

Founded on the advances of scientific thought . . . modern technique becomes, in its broadcast sense, all those methods which allow man to make best use of existing resources to satisfy his material needs and common ideals. . . . Technique is not confined to a limited sector of society: it is society looked at from a certain perspective.

The perspective, that is, of technician and scientific intellectual.

Regarded in this light, as a product of both the scientific and industrial revolutions, technocracy assumes a formidable cultural momentum. Its legitimacy reaches deep into all that modern Western man has come to consider good, true and beautiful: affluence, empirical knowledge, and prodigious material power over his environment. As a social form, it is the irresistibly logical consequences of what science tells us reality is and of what technicians tell us can rationally be done to manipulate that reality.

The essays in Lynn White's *Machina Ex Deo* provide a keen examination of the larger cultural context out of which our science and technology evolve. His book—which includes the superb essay. "The Historical Roots of Our Ecological Crisis"—is a model of concerned and elegantly literate scholarship for the general reader. One could not ask for a more sensitive approach to the now submerged religious origins of industrialism: "the sources of our faith in science today and . . . the well-springs of motivation that lead man to pursue science."

White is far more sanguine about the prospects of a "new humanism" arising among the engineers than I can be. As a medievalist, he tends to see scientists and technicians as still the free spirits and rugged individuals they were before they tasted power and the corruptions attending. The transition from "little science" to "big science" (to use Derek de Solla Price's terms) has taken a greater toll of the pristine ideals of scientist and engineer than White may realize. How much of the Christianity of the catacombs survived into the age of Innocent III? Perhaps as much of Galileo and Edison survive in the age of Edward Teller and C. P. Snow. Still, White is correct in identifying technology as "a prime spiritual achievement," an expression of mankind's tireless search for "a new order of plenty, of mobility, of personal freedom." It is only by drawing upon such vital desires that the technocrats could achieve the great moral and psychic power they hold over our allegiance. Technocracy, far from being only an opportunistic and cynical plot (and the worst social evils never are), is a proud, noetic citadel solidly based on all that scientific inquiry has accomplished after the dark millennia during which man was supposedly sunk in superstition, mythological guesswork and helpless bewilderment. The policies that emanate from the citadel are born of pure reason and generous intention; its custodians are those who qualify as disinterested experts in all aspects of life—or, at one highly important remove, those who control the services of such experts.

One senses how domineering the regime of experts has become when one recognizes the lengths to which contemporary radicalism must go in seeking to outflank its values and metaphysical assumptions. An eloquent example of such an effort is Gary Snyder's *Earth House Hold* which seeks to recall the ecological intelligence to be found in poetic and primitive life styles. For Snyder, who learned his social theory from Zen masters and redwood trees, our salvation depends upon recapturing the spirit of "the ancient shamanistic-yogic-socioeconomic view" in which there abide 'the most archaic values on earth: . . . the fertility of the soil, the magic of animals, the power-vision in solitude, the terrifying initiation and rebirth, the love and ecstasy of the dance, the common work of the tribe."

The audience for Snyder's rhapsodic appeal is small, largely the young and the dropped out who cling on and make do, chanting mantras at the social margins; "the tribe" as Snyder calls them, referring to those like the sod brethren of the Berkeley People's Park whose delicate experiment in Arcadian communitarianism the Governor and University of California have determined to trounce out of existence. Unhappily, visionaries like Snyder are regarded as the heretics-in-residence of our pluralistic technocracy, and their words make light weight in the scales of power. Not that society is closed to visionary declarations. Visionary *technology*—of the World's Fair, science-fiction variety—easily wins spellbound regard; for the millions, it monopolizes the whole meaning of imaginative daring. They will starve their poor to finance Project Apollo; they will sacrifice their peace of mind to have supersonic airliners split the skies above their cities with the sound of progress; they wait with bated breath to have their gene pools programmed for the guaranteed production of talented and beautiful progeny. Those who speak the language of numbers and technologisms never lack for reverent if bewildered public attention, and the bolder the scientific impresarios become, the greater the awe and acquiescence. One hundred million Americans may attend church every Sunday, bringing with them supersitions and prejudices as old as the Stone Age. But when they exclaim rhetorically, of Harvard's Program on Technology and Society. Indeed, the program would seem to have its future course well surveyed if it were to extend Oettinger's critique to the relations between technology and society generally.

Clearly the job needs doing. It is wholly disheartening to review the evidence Oettinger presents of our society's scientistic gullibility and gadget mania—in this case from the U.S. Office of Education down to the smallest local school board—and of the cynical flummoxing perpetrated by industry and eager-beaver systems analysts. In education as in all other areas of our life, we are indeed patsies for what Oettinger calls "the seductive power of absurdity in full formalized attire." And, sad to say, as sharp a critic as Oettinger himself can have his blind spots in this respect. Even he grants that systems analysis, for all its limitations in the field of education, *is* properly at home in the Defense Department. Quoting Charles Hitch (now President of the University of California, via RAND), Oettinger agrees that it "is easier to program and to analyze [military strategy] quantitatively than many areas of civilian government. For example, it is certainly easier than the foreign affairs area."

That is a fatal, but revealing admission. For after what fashion has Defense Department policy become more adaptable to systems analysis? By subordinating to its oppressively quantitative and value-neuter demands every aspect of life that gets in the way (including "the foreign affairs area"). In brief, systems analysis has "worked" for our society's infinitely expansive conception of military necessity precisely as it purports to "work" for our educational problems: by flattening every non-quantitative consideration beneath a steam roller of dehumanized logicality.

It is the great claim of the systems approach that it embraces *all* facets of every problem. It purports to blanket the whole with coordinated competence, leaving nothing to intuition or amateurish improvisation: meaning, it leaves nothing to the layman. This claim to comprehensiveness, however, is fundamentally false. Systems methodology by its very essence stops short of taking into critical consideration the whole of society, economy, environment, or the human condition. Such wholes are what Ramo calls "too big a system." He warns us:

"Surround the problem too broadly, try too hard to be absolutely complete, and you will not only get nowhere in the solution of the problem, but you will be doing a terribly poor job of systems engineering."

In what sense are such systems "too big"? Why, too big to be handled in the specialist's value-neuter framework. To think on such a scale is to aspire beyond amoral measurements and partial adjustments toward philosophical comprehension and social criticism, and doubtless toward many embarrassing questions about the likes of Simon Ramo, his fortune and influence in contemporary America.

It is revealing of the technocratic temperament that Ramo should finish his treatise by projecting the "golden age" that will ensue "once most people are wedded to creative logic and objectivity to get solutions to society's problems." Logic and objectivity: translated (with a deal of legerdemain) from mathematics and physics into the professional study of society, are science's gift to the apologetics of technocracy. One does not moralize about microbes and quasars; *ergo* logic dictates that the objective mind does not moralize about Thompson-Ramo-Wooldridge, thermonuclear deterrence, or the uses of the multiversity. Where the "human factor" is concerned, the systems team may, as Ramo puts it, have to "tap preferences, judge needs, present possibilities, and evaluate alternatives." But it is the experts who will do the tapping, judging, presenting and evaluating: the "chaos" is theirs to cure. And the experts work neither for free nor in a vacuum. As Jean Meynaud makes clear:

"For technocracy to cease being essentially conservative, technicians themselves would have to become inspired with the will to change. . . . But it is not rare for the technician to consider that the social system (one which manifests itself with continuity) is necessary to the realization of his designs. After all, the supporters of Saint-Simon were not lacking in human generosity, but they finally gave the best of themselves to the big industrial undertakings and commercial banks."

For his own France, Meynaud is able to trace the roots of this conservatism to the family and educational background of the highly cliquish Gaullist polytechnicians. Though they are more diffuse in social origin, the regents of the American New Atlantis display the same combination of "technical boldness and social conservatism." What passes for objectivity among those who staff our military-industrial think tanks is an understandable reticence respecting the worldview and social system that justifies and rewards expertise. Nothing could be more quantifiable than the gold in Ramo's "golden age": it measures out in dollars and cents, status and prestige.

This same practiced evasion of all philosophically challenging questions characterizes Michael Reagan's examination of science under the patronage of the government, a study that never once confronts the overarching issue: the political form that must inevitably follow from the progressive assimilation of expertise by forces commanding the bulk of society's cash and privilege. Indeed, Reagan would press the process of assimilation further still. He calls for the funding of a National Foundation for the Social Sciences (on the order of the National Science Foundation) as the best way for social scientists to make "their developmental needs known to government through a regularized internal, differentiated organizational position" and for them "to be in on the choice of problems and of strategies for dealing with them."

What news it would be to Plato and Marx, to Veblen and C. Wright Mills to learn that students of man and society must make their "needs known to government" and must choose their problems and strategies. But

clearly this is a rather different breed of student, one who approaches the Prince with the same power-political promise that has served as sweet bait on the atomic scientist's hook.

Reagan's conception of political science is contained entirely within the corridors of power, where everything that is, is—with minor adjustments—right. Inevitably, then, we reach the cheerful conclusion that the scientists, the multiversities and the government enjoy a "fruitful relationship" bearing "all the earmarks of permanence"; and if there are any problems, they can be rectified by some reshuffling of agencies and funding priorities. Reagan's first priority would go to "social objectives which are defined as most urgent politically." He does recognize, though without alarm, that this process of "definition" is often carried out by "vested interests in government agencies and outside groups." The remedy for this vice, however, is another echelon of supervisory expertise . . . a Technology Assessment Board perhaps . . . or an amalgamation of the Office of Science and Technology with the President's Science Advisory Committee . . . or why not an expansion of JCST . . . or of COSPUP . . . or of OSRD . . . etc., etc.? Reagan's study is a fine reference guide to the C. P. Snow world of the science bureaucracy. But with respect to all the great questions of justice and democracy and intellectual conscience—the issues that drove Norbert Wiener out of the "science factories," that sent Einstein heartsick to his grave, and that have stirred student rebellions across the land—Reagan is totally "objective." His suggestions for reform are eminently practical. He goes no further than to play committeemanship with the expert-administrators.

It would be wrong, however, to suggest that the technocratic mentality at its best lacks concern for values. On the contrary, the professional study of values is, along with technological prognostication (*"futuribles,"* as the French call it), a hot and highly sophisticated specialty. A volume like *Values and the Future* serves as a twin introduction, authoritative if ponderous, to both the new science of ethics and the "futures industry."

The anthology grows out of a high-powered conference held at the University of Pittsburgh during 1965–66 under grants from IBM and the Carnegie Corporation. The result is academically suave, but hardly encouraging. With the exception of a few of the less pretentious essays such as those by John Kenneth Galbraith and Kenneth Boulding, the anthology deals in the learned superficialities which are the hallmark of technocratic culture: the systematic circumvention of emotional engagement and personal commitment. The essays are filled with baroque methodologies, much statistical virtuosity and esoteric computer games; and these last, as described, achieve levels of absurdity rivaling Ionesco. (Thus, in one of the games, the conferees, in the pursuit of computable statistics, take it upon themselves to "simulate" teen-agers, housewives, cultural elite and "persons in lowest income decile" as of the year 2000. "And *that* is science, my friend," said Dr. Spalanzani.)

Professionally, it is all quite elegant. But what is it, at last, that technical expertise does with values when it gets hold of them? It treats them like alien organisms under a microscope. It surveys them by way of foolish questionnaires no serious person would agree to complete. (Imagine Tolstoy or St. Paul being asked to give their "relative preferences" and "numerical evaluations" regarding "personality control drugs" and "household robots.") It quantifies them, by way of "weightings" and "scalings" that are the mathematical analogue of a Rube Goldberg contraption. And finally, it predicts their future course, by way of facile computerized techniques—in this case, their course under the impact of technological forces that are taken to be as inexolerable as the will of God.

Not very remarkably, the "findings" that come of such porcedures are always upbeat. "The most striking feature of the questionnaire responses is their clear optimism," Nicholas Rescher reports on one of his surveys. But who were the respondents? Fifty-eight experts from IBM, RAND, NSF, and the IBM-financed Harvard Program on Technology and Society. (Are there no laws against such intellectual incest?) Again, to quote Meynaud, "the future is influenced by the picture which men themselves draw of it. . . . One of the trends of 'futurism' is a tendency to exalt the virtues of a technical civilization and the merits of technicians. . . ."

In the introduction to *Values and the Future,* Alvin Toffler declares that "we need systematic surveys of the value systems held by important American subcultures, by different professions, age groups and socioeconomic groupings." It is surely a call for a million years of "extensive—and expensive—empirical research." But, Toffler feels, only this will give the specialists what they need as they set about "drawing up their reports in forms that can be taken into account in cost-benefit appraisals." Ideally, he anticipates a new profession of "Value-Impact Forecasters" who will be "armed with scientific tools" and "located at the hot center of decision-making" as "part of every corporation, research laboratory, government agency and foundation whose output includes technological innovation."

Surely it is the perfection of technocracy when values become statistical grist for the research mill. Once such a great project is launched, shall we not then be assured that all the goods and evils of policy and decision have been taken competently into account—with logic and objectivity—by the court wizards? And what will there be left for the layman to worry his amateurish head about?

How does one drive it home to such academic cold fish that their project, serviceable as it is for purposes of technocratic consolidation, is misconceived *ab initio?* As socrates knew 2,500 years ago, to enter the agora simply to *survey* the so-called values of a befuddled public is the betrayal of philosophy. The values of men are not to be measured or predicted but to be honestly debated, affirmed and deeply lived, so that we may educate one another by mutual example. It is *this* that we owe one another as fellow citizens. But I doubt that this distinction between the academic and the irreducibly existential would prove persuasive. Expertise, being committed to that self-congratulatory form of alienation called "objectivity," makes no allowance for the person. It discounts the experiential deeps and attends to the behavioral surface. What chance would there have been to convince Dr. Kinsey that he had it all wrong? That love is not to be measured but to be fallen into, made, enjoyed and suffered? "But," the scientific mind insists, "there is *also* matter here (and where is there not?) in need of professional research. For only by professional research do we come to *know* anything."

And that is the box in which the technocrats have us trapped: their conviction and ours that only the scientific mind—objective, logical, quantitative—has access to reliable knowledge. What other remedy can there be, then, for the ills of mankind in a scientific culture but still more science, still more technology? Was it not scientist and technican who constructed our industrial cornucopie in the first place? Who else can understand its mysteries and maintain its flowing abundance? And maintaining industrial abundance is what everybody's politics is about in our time—Left, Right and Center. It is precisely this epistomological monopoly that legitimizes the shameless self-selection and internal circulation of technical elites within our military-paramilitary-financial-industrial-multiversity-think-tank-foundation-Presidential-advisory complex.

Here is the point that I believe Victor Ferkiss overlooks when he writes off the possibilities of technocratic totalitarianism. Granted, he is correct in concluding that the American version of the technological society really overlays and serves old-fashioned, bourgeois profiteering. (Technocracy has no difficulty absorbing any social system, provided the system is committed to an expanding economy.) Granted too, he is correct in concluding that the effort to create a totally efficient technocracy—a Huxleian Brave New World—is more apt to produce a "clumsy monster" constantly on the brink of chaos. But he is wrong in deciding that these facts make "the notion of a scientific elite a myth," rather than a growing reality. For what does the citizen in a scientized culture have by way of knowledge or value to hold against those who are the experts or those who own the experts? Values, as we now learn, are becoming the province of ethical technicians equipped with inscrutable methodologies and expensive computers. Knowledge—the product of logic and objective research—is similarly the property of the experts. True, we may still resist the experts and their employers. But by appeal to *what* does our resistance lay claim to the sanction of reason, sanity or progress? What is there the citizen can claim to know that an expert somewhere cannot prove he knows better?

I believe that Ferkiss underestimates this mystique of expertise because he himself has fallen beneath its spell. Even he, an admiraby humanistic critic, believes that the thrust of science and technique "by giving man almost infinite power to change his world and to change himself" has carried us to the threshold of nothing less than an "evolutionary breakthrough," to which all culture must adapt if we are to produce the mature "technological man." Once concede that this is the proper relationship of science-technology to culture (the former disposes, the latter scurries to adjust) and our political life is delivered into the hands of the technical experts and their patrons. All complies to their world-view and there are no alternative realities. No doubt the technicians *will* proceed to build us a "clumsy monster" of a social system, a push-button bedlam with music by Muzak; but they will also convince the citizenry—by logic and objectivity—that it is the only rational system. Jean Meynaud's analysis is sharper than that of Ferkiss, and much gloomier.

We might wonder whether the determination to obtain maximal efficiency, combined with greater prosperity in larger sectors of society, is not likely to throw into gear a movement which will lead to progressive monopoly of power by "competence." Supposing that such an evolution occurs, the final end of the scientific society might perhaps be democratic, but its functioning would no longer be so. In the extreme case, a scientific technocracy . . . would replace traditional political machinery, conserving the essential nature of the established order.

One must face the fact that such a despotism of beneficent expertise, guaranteeing both the bread of cybernated affluence and the circuses of moon shots, would, at this point, be far from unwelcome to most of the Americans it was willing to integrate. Perhaps only a handful of wild and woolly dropouts and stubborn black nationalists would be inclined to resist its invitation to the fat and dependent life. Certainly Meynaud's proposed safeguard- -an unspecified strengthening of elected authorities and their institutions wholly within the going industrial system—looks like a very weak reed. This is because it ignores the psychic and metaphysical depths to which the technocracy

reaches in achieving acquiescence and in this way undercutting democratic institutions.

Erich Fromm does greater justice to this dimension of the problem in his *Revolution of Hope*, an inspirational tract that provides a sensitive, if primer-simple assessment of our technological dehumanization. With a shrewd eye for the pathological, he tells us that the main problem . . . is not whether . . . a computer-man can be constructed; it is rather why the idea is becoming so popular in a historical period when nothing seems to be more important than to transform the existing man into a more rational, harmonious, and peace-loving being. One cannot help being suspicious that often the attraction of the computer-man idea is the expression of a flight from life and from humane experience into the mechanical and purely cerebral.

The major weakness of Fromm's treatise lies in the author's eagerness to dish up a rather thin potpourri of specific reforms (though there are several good ideas here) and to launch a new political movement. I doubt that the changes Fromm desires should, or will have the conventional organizational characteristics he suggests: a national committee of notables ("The Voice of American Conscience") reared on a base of local subcommittees. The "psychospiritual renewal" he calls for must perforce be more subtle and spontaneous, and surely less concerned than Fromm is with avoiding "the breakdown of the industrial machine." It will have to get at the millions as insidiously as it has apparently gotten at Fromm himself, whose latest writings begin to reveal a pronounced compromise with his former secularized, Socialist humanism, and a growing disposition to take seriously religious forms of community and personal transcendence.

Fromm does not, to be sure, move far enough in this direction to match the sensuous, primitivist mysticisms of Gary Snyder: "the timeless path of love and wisdom, in affectionate company with the sky, wind, clouds, trees, water, animals and grasses." And his hesitancy is understandable, since to cut so deep seeking the roots of the technocracy means hazarding one's intellectual respectability. But I think it has come to that desperate a pass. Caliban, having acquired the higher mathematics and devised him a clever machinery, hastens to counterfeit his master's magic. We may then need more than a touch of Blake's brave perversity:

> To cast off Bacon, Locke & Newton
> from Alibon's covering,
> To takeoff his filthy garments & clothe
> him with Imagination.

Buckminster Fuller surely ranks as dean of the Promethean technicians. Certainly few exert greater personal magnetism among the "think big" younger generation of architects and engineers. Among Fuller's great schemes: his project to house the human race in prefabricated, helicopter-transported geodesic domes (Fuller's most famous and most overpraised invention) and the birth-certificate-universal-credit-card designed to operate anywhere on earth by means of a frequency tuned to the holder's genetic code. Now, in Fuller's latest book, the earth is stripped of its metaphorical motherhood and becomes instead a spaceship in need of nothing so much as properly trained "world planners" in its cockpit. The technocratic world-view could not ask for a more serviceable central image—though it will certainly require a less idiosyncratic "operating manual" than Fuller has to offer.

Some of Fuller's notions—like his "synergetic mathematics"—may have vaguely mystical implications. But he is careful always to protect the respectability of his bizarre brainstorming by disguising it as a form of omni-competent, global engineering. Like Marshall McLuhan, he is a great bamboozler: a combination of Buck Rogers and Horatio Alger. His intellectual repertory rarely includes a reference to artist, philosopher, poet or prophet. This, along with his anti-academic autodidacticism, makes him decidely the technocrat Old Style. Yet he manages to lay ham-handedly on the line most of the tacit assumption of the technocratic mentality: that it was only when man became a machine maker that he "began for the first time to really employ his intellect in the most important way"; that invention and efficient organization embracing as they do the whole meaning of Reason and Progress, necessarily improve with increase; and that for every human problem there is a technical solution—sometimes a dazzingly simple one. Thus: "You may . . . ask me how we are going to resolve the ever-acceleratingly dangerous impasse of world-opposed politicians and ideological dogmas. I answer, it will be resolved by the computer . . . all politicians can and will yield enthusiastically to the computer's safe flight-controlling capabilities in bringing all of humanity in for a happy landing."

To be sure, "General Systems Theory," the form of technical expertise Fuller recommends for the better piloting of "spaceship Earth," is intended to be ambitiously broad-gauged: the very antithesis of the myopic specialization which is Fuller's bête noire. The prospectus sounds intriguing, but the social realities behind GST are bound to be unappealing to those who have sentimental attachments to participative and communitarian politics. This form of elitist brains-trusting—an outgrowth of wartime operations research—is apt to be the essential component of the technocracy's *machine à gouverner*.

Those who desire a brief, ebullient account of the systems technique may consult Simon Ramo's *Cure for Chaos*. Ramo, vice chairman of Thompson-Ramo-Wooldridge, father of the ICBM, and, as the book jacket tells us, "frequently consulted by government leaders," is, like Fuller, a self-made technician-entrepreneur. The beneficiary and booster of military-industrial boondoggling, his vision of life is colored accordingly. The archetypal social problem for Ramo is patterned upon the gadgeteering perplexities of the ballistic missile system, where everything including the megadeaths, yields to simple numbers. Ramo readily admits that, in matters involving "the human component," the "systems team" must include "techno-political-econo-socio-experts." Yet systems engineering discriminates not at all between problems of air traffic control and education, the arms race and urban renewal. The problem-solving procedures are identical. One assembles the certified experts and trusts them to convert the project at hand into "specific well-described and often measurable performance requirements." The skill of experts, Ramo tells us, lies in "putting quantitative measures on everything—very often cost and time measures."

Thus, in quantification the systems engineer has found what the alchemists of old sought in vain; the universal solvent. It is little wonder that the fiercely mathematical passion of such expertise finds no trouble in sliding from discussions of thermonuclear weaponry to hospital design in successive paragraphs, or in conceiving of education as something whose value is calibrated in lifetime income differentials and whose substance can be captured at "electronicized desks," where vigilant computers pace their attentive students through true-or-false and fill-in-the-blank testing.

After Ramo's and Fuller's intoxicated high touting of the systems approach and computerized instruction, Anthony Oettinger's *Run, Computer, Run* is sobering reading. Oettinger wisely works from the assumption that the Himalayan dilemmas of American education are through and through political and philosophical. This means that "systems analysts trained to think unthinkable, apocalyptic thoughts in the style of Herman Kahn, or to calculate the performance/weight tradeoffs for missiles, are ill-prepared to deal with more than the form of the educational system."

The present tools of former systems analysis work best on well-defined, simple, concrete models involving quantifiable concepts, measurable data, and, above all, thoroughly understood theoretical structures which adequately reflect reality.

Since almost nothing about education, beyond perhaps the plumbing of school buildings, yields such convenient simples, Oettinger spends little time on the latest instructional gimmickry and systems techniques. Rather, he devotes himself to debunking the many "highly visible quickie" solutions currently on the scene that offer only "the illusion of progress." One by one, Oettinger undermines the widespread assumptions that teaching machines save money, save time, save manpower, and "individualize" instruction. It is a commendable display of candor from one, who, as director of Project Tact ("Technologiacl Aids to Creative Thought": Harvard based, Defense Department financed), would seem to have every interest in extolling the myths here marked out for destruction. Oettinger's enormously intelligent book is a commendable product "Will wonders never cease!" it is the works of the engineers and not the works of God they have in mind.

SUBSIDIZED LUXURY

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. BROYHILL of Virginia. Mr. Speaker, as many of our colleagues know, I was among those who joined with many residents of the District of Columbia in protesting the purchase earlier this year of a luxury highrise apartment known as Regency House in Northwest Washington by the National Capital Housing Authority for use as housing for the elderly poor.

Despite the protests of a large segment of the Washington community, the National Capital Housing Authority, with the approval of the mayor of the District of Columbia, and the Department of Housing and Urban Development, purchased the property.

Mrs. Shirley Scheibla, associate editor of Barron's, a business weekly, has written two excellent articles appearing in Barron's on August 11 and 18, which provide many details concerning the Regency purchase never known to the public. As I believe purchases of this type, which the Department of Housing and Urban Development appears to be promoting throughout the Nation, are clearly illegal, I welcome this opportunity to include Mrs. Scheibla's discoveries in the RECORD with the hope that others will join me in protesting the continuation of the Department of Housing and Urban Development policies which permitted this costly and wasteful purchase.

The articles follow:

[From Barron's, Aug. 11, 1969]

SUBSIDIZED LUXURY—PUBLIC HOUSING HAS STRAYED INTO QUESTIONABLE AND COSTLY AREAS

(By Shirley Scheibla)

WASHINGTON.—Shortly after last year's riots here, the Washington (Catholic) Lay Association launched a massive drive to collect money to house the poor. According to the Association's president, it netted pledges of $127,000, of which $40,000 promptly went to the National Capital Housing Authority (NCHA), to enable it to purchase Regency House for public housing. Regency is a luxury high-rise apartment building on exclusive Connecticut Avenue, complete with air conditioning, swimming pool, penthouse, recreation room and sheltered parking.

Thanks to other donations, which made up the total difference of $75,000 between the highest appraisal and the purchase price, NCHA now has acquired Regency for $2,425,000. The deal not only has aroused the ire of many local residents, but also has brought to a head a storm of controversy with nationwide implications which is reverberating within the halls of Congress.

UNUSUAL VENTURE

For apart from the donations, NCHA bought Regency with federal funds supplied by the Department of Housing and Urban Development (HUD). The chief justification given for the unusual venture is that it enabled NCHA to carry out a 1965 HUD regulation requiring location of public housing outside areas of minority racial concentration (although whites are a minority in this city). The regulation, however, is of doubtful legality. Moreover, attempts to implement it increasingly look like a disservice to the poor and a windfall for select property-owners.

In some areas, the regulation has brought public housing programs to a virtual standstill. Moreover, it largely ignores the large families which have the greatest need for public housing. In Washington, at least, rents in "non-ghetto" apartments run higher than in regular public housing, thus barring the poorest of the poor.

HUD's policy also is impeding compliance with the Widnall Amendment to the Housing Act of 1968, which requires urban renewal residential projects to include at least 20% housing for low and moderate income families. In addition, it is likely to add to the financial troubles of a large number of local public housing authorities. Finally, it is lowering tax revenues of cities already strapped for funds.

An executive order and the Civil Rights Act of 1964 form the legal basis for HUD's policy. In 1962 President Kennedy issued Executive Order 11063, in which he directed federal agencies to take all action necessary to prevent discrimination in housing owned or operated by the U.S. government. With respect to the 1964 Act, HUD is relying entirely upon language in Title VI, which says, "No person in the United States shall, on the ground of color, or national origin, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance."

In August 1965, HUD issued its Low Rent Housing Manual, which directs public housing authorities to select sites giving members of minority groups an opportunity to locate outside of areas of concentration of their own kind. It asserted: "Any proposal to locate housing only in areas of racial concentration will be prima facie unacceptable and will be returned to the Local Authority for further consideration and submission. . . "

Three years later HUD sent the authorities a memorandum reminding them of the site selection rule, and a 1967 amendment which stated: "Local authorities will be expected to utilize available means for resolving any zoning or other city impediments to compliance with Title VI site selection requirements."

NO PLANS TO CHANGE

The Nixon Administration apparently has no plans to change HUD's policy. Secretary George Romney and Assistant Secretary Lawrence Cox have defended it, while Assistant Secretary Samuel C. Jackson has indicated he might like to go further. In a recent speech before the NAACP Legal Defense and Educational Fund in New York City, he said the Kerner Commission was right in accusing America of racism. Zoning ordinances requiring large minimum-sized lots and single-family home construction, he added, have prevented the construction of low-income apartments, thereby limiting the ability of blacks to move to the suburbs. "The insistence on locating public housing in the central city has also been a considerable force in containing low-income black residents in the ghetto. Only recently has federal policy begun to stimulate balanced public housing locations."

While the policy may be "stimulating," its results so far are deplorable. Edward Aronov, Executive Director of NCHA, told Barron's that because of the racial regulation, HUD refused to approve several acquisitions proposed by NCHA in southeast Washington. One offered 68 two-bedroom apartments and included air conditioning, swimming pool, play area, children's nursery, dishwashers, garbage disposals and parking for 57 autos. With no rehabilitation required, the price was $10,000 per unit. The 161 smaller apartments at Regency cost $15,062 each.

WAITING LIST

Meantime, at the end of June, NCHA had 3,978 applications on its waiting list for housing. It expects that number to increase by 300 as a result of a regulation, effective July 1, eliminating the one-year residency requirement for applicants.

Norfolk, Va., provides another outstanding case in point. Last September HUD authorized 1,200 units of public housing for the city. But Norfolk has been able to go ahead with none, according to Charles L. Kaufman, head of the local housing authority. He explained to Barron's that HUD so far has approved no sites because the city has failed to come up with any which the agency does not reject as "racially impacted."

Again, after lengthy negotiations, Pittsburgh succeeded in persuading HUD to approve sites for less than half of 2,000 proposed public housing units, with the understanding that it will find "white sites" to match those approved. In Hackensack, N.J., in Rep. Widnall's own district, HUD is holding up construction of a 100-unit public housing project for the elderly. HUD told Hackensack, in effect, to build another project in a white area to balance the proposed one, or to build the latter in a "white area."

SWING WEIGHT

Rep. Widnall's words swing weight in Congress, since he is the ranking minority member of the House Banking and Currency Committee and its housing subcommittee. Here is what the lawmaker has to say on the matter: "As a long-time advocate of civil rights, I am concerned that this interpretation has entrapped us. . . . Here we have an administrative ruling, based upon an interpretation of the law as yet judicially undecided, that is prohibiting housing activity in slum areas, in urban renewal, and in non-slum areas because there the HUD cost guidelines would be breached. . . ."

Regarding the interpretation of the Civil Rights Act and the effect on his amendment to the Housing Act, the Congressman declares, "I am most disturbed that administrative regulations can defy the law. I do not think that the Executive Department can dictate to the legislative."

Since, as Rep. Widnall notes, the land available in white areas costs too much, HUD now is financing "acquisitions" of existing apartment buildings for public housing, i.e., purchases without major rehabilitation. This has been practical only since the urban riots of the past two years and the flight to the suburbs of many big-city residents. HUD Associate General Counsel Joseph Burstein says the result has been that many city apartment properties "came on the market at good prices." He concedes, however, that during a time of shortage the acquistions are not adding to the housing supply.

LAND SET ASIDE

How "good" the prices are is a matter of interpretation (to be explored in an article to follow). A great deal of land has been set aside in Model Cities for public housing, and, according to Rep. Joel T. Broyhill (R. Va.), HUD is contravening the intent of Congress by holding up construction on these sites and offering instead to purchase a few plush properties.

In addition, many properties which, like Regency, boast such luxuries as air conditioning and swimming pools, are bound to call for increased operating costs. At Regency operating costs are so high that the poorest of the poor won't be able to live there. NCHA is charging a flat monthly rental of $50 for an efficiency there, compared with a low of $27 for comparable space elsewhere.

HUD finances construction or acquisition of public housing properties, and in theory the rents collected by local housing authorities must pay operating costs. However, according to Secretary Romney, 15 local housing authorities now are in financial difficulty. They are located in Washington, Kansas City, San Francisco, St. Louis, Columbus, New York, New Haven, Omaha, Boston, Newark, Chicago, Los Angeles, Philadelphia, Louisville and Detroit.

HUD Assistant Secretary Cox predicts other cities will be in trouble next year. Rep. George E. Shipley (D., Ill.), a member of the House Appropriations Committee, agrees, and adds that he is sure Congress will have to provide the money to bail them out. When HUD officials asked the Committee for a supplemental appropriation of $6.5 million for that purpose recently, Rep. Shipley declared, "It is going to be twice that or three times that the next year, and it is going to build up. . . ."

NO IN-DEPTH STUDY

HUD has made no in-depth study of the financial straits of the 15 aforementioned authorities, and it lacks breakdowns on operating costs for acquisitions compared with other properties. Nevertheless, it plans to step up acquisitions. While 601 units were acquired without major rehabilitation in 1968, it expects to acquire 2,000 in 1969 and 3,000 in 1970.

HUD also is preparing to launch another experiment that will deplete its resources without adding to the housing supply. It plans to spend $45 million by the end of fiscal 1970 for services to public housing tenants. By authority of the Housing Act of 1968, these will include "counseling on household management, housekeeping, budgeting, money management, child care, and similar matters; advice as to resources for job training and placement, education, welfare, health and other community services; services which are directly related to meeting tenant needs and providing a wholesome living environment; and referral to appropriate agencies when necessary for the provision of such services."

[From Barron's, Aug. 18, 1969]

HIGHHANDED HUD—ITS PURCHASE OF REGENCY HOUSE IS A COSTLY CASE IN POINT

(By Shirley Scheibla)

WASHINGTON.—"I regret to have to report to you, Mr. Mayor, that the objective of conducting an open forum wherein all of the

facts were presented to the public for discussion was not achieved."

Thus stated Hearing Officer Samuel J. Fusco to Washington's Mayor Walter E. Washington, in a report following a hearing last January concerning the acquisition for public housing of Regency House, a luxury highrise apartment building here on Connecticut Avenue. The mayor's approval was needed for the purchase of Regency by the National Capital Housing Authority (NCHA) with federal funds from the Department of Housing and Urban Development (HUD).

The failure to have a full discussion sprang from no lack of interest. On the contrary, about 300 people jammed the hearing room and the outside corridor. Examiner Fusco reported, "The emotions of the audience were very intense, and it was difficult to maintain order."

CONTROVERSIAL PURCHASE

Although NCHA consummated the highly controversial purchase of Regency last May 15 for $2,425,000, full details still have not been made public. Regency thus serves as an outstanding example of a new trend among housing authorities which enables them to effect transactions with federal funds without full disclosure.

For many years, the federal government has subsidized the construction of public housing projects by local housing authorities. Under this system, the latter openly solicit bids from builders and accept the best one. More recently, however, HUD has been financing "acquisitions," whereby housing authorities buy modern and often luxurious apartment buildings for public housing. (As explained in last week's article, this is being done chiefly as a means of complying with a HUD regulation requiring location of public housing outside areas of minority racial concentration, since in most white areas vacant land for construction isn't available.) It's a bonanza for the sellers, who take accelerated depreciation during the first few years of a property's life, when the tax advantage is greatest, and then dispose of it at a long-term capital gain.

Since such transactions are not governed by the Administrative Practices and Procedures Act, there is no requirement for hearings, nor for a 30-day notice of the impending action. Moreover, HUD does not ask the authorities publicly to solicit offers for possible acquisition, or, before closing a deal, to publish the name of the seller or the purchase price. Thus close scrutiny of what has happened in at least one outstanding case, Regency, seems in order.

BAN OUTLINES

Rep. John L. McMillan (D., S.C.), Chairman of the House District of Columbia Committee, had to turn to U.S. Comptroller General Elmer H. Staats to obtain even the bare outlines of the Regency affairs. Mr. Staats told him in a letter that Murray Levine, a D.C. realtor, approached NCHA on August 2, 1968, with the idea of selling Regency for public housing and, in a letter dated August 20, formally offered it for $2,700,000.

On September 4, representatives of HUD's regional office in Philadelphia came to town and inspected Regency. According to a letter from Mr. Staats to Rep. McMillan: "They commented on the suitability of the site and estimated that an acceptable acquisition cost would be $2,433,200."

The Department's regulations specify, however, that it must not subsidize a purchase price in excess of the highest independent appraisal. Accordingly, NCHA obtained two independent appraisals, one for $2,300,000 and another for $2,350,000. On October 10, the Authority submitted these to HUD along with a request for approval of the purchase of Regency at $2,475,000, because "This voluntary offering represents the only likelihood of achieving in the near future a housing project west of Rock Creek, an objective literally unobtainable heretofore . . . (and) . . . the price indicated is reasonable in view of the site location and related social goals of the public housing program."

FIRST INKLING

On January 14, Mr. Levine stated in writing that he would sell Regency to NCHA for $2,475,000. Next day the public got its first inkling of what was afoot when the D.C. government placed an official notice, measuring one and a half by three inches, in the classified section of Washington's Evening Star. It said the mayor had ordered a hearing January 30 ". . . for the acquisition of Regency House . . . for elderly families and individuals to be displaced by urban renewal, highway construction, code enforcement and other public works programs."

While it described the location in detail, the notice failed to disclose either the prospective seller or the proposed price. Three days later The Washington Post carried a story on Regency which said, in part, "NCHA director Edward Aronov would not disclose the asking price or NCHA's offer for the property. Regency House is jointly owned by Washington realty dealer Murray Levine and a group called Annan, Inc. Levine said he would not answer questions about the building."

On January 26, Clinton B. D. Brown, an attorney who lives near Regency, wrote the D.C. government, in part, as follows:

"(1) The published notice is deficient in that it does not identify the statutory authority for the proposed acquisition.

"(2) The notice is inadequate in that the hearing relates to a proposed action which, in its practical effect, would be tantamount to an amendment of the zoning regulations, for which at least 30 days' notice of public hearing is required by statute, D.C. Code, Sections 5–414 and 5–415.

"It is requested that . . . the hearing be postponed and rescheduled for a later date upon at least 30 days' full and adequate public notice including the specific statutory authority for, and terms of, the proposed acquisition."

Mr. Brown says he received no reply.

PRIVATE BUSINESS

At the hearing, NCHA Director Aronov testified: "Although it is not proper to subject the private business of the owner to public scrutiny at this time, if Regency House is approved for acquisition by NCHA, the sales price and other aspects of the transaction will become a matter of public record."

This prompted F. Joseph Donohue, former head of NCHA and also an ex-D.C. Commissioner, to ask: "On what food does he (Aronov) feed that he thinks he can spend my money and tell me it is none of my damn business how he spends it?"

The League of Women Voters said at the hearing: "The unfortunate lack of details on the financial aspects of the proposal disturbed both supporters and opponents. The League does feel that citizens are entitled to a full presentation of the facts about governmental action."

Joseph O'Neill, president of the Chevy Chase Citizens' Association, referring to the aforementioned Washington Post story and its mention of Annan, Inc., told the hearing, "This corporation is not listed as a District corporation, and consequently it was not possible to find out from any normal local record who the owners of this corporation are. . . ."

Richard O. Haase of the Washington Board of Realtors testified, in part, as follows: "The Washington Board of Realtors finds it incredible that the NCHA has entered into contract negotiations with a private owner without making public its intentions or asking for tenders from other segments of the community. We know of no other government agency that acts in this manner. To give you a very clear example, it was not until we walked into this very hearing room that we found out what the purchase price was. . . . We can state unequivocally that there is a large supply of apartment units that can be purchased by the NCHA at a fraction of the cost per unit of the Regency House in well-established neighborhoods."

A COVER-UP?

According to the official transcript of the proceedings, Leo Diegelmann, representing the Oldest Inhabitants of the District of Columbia, said, "The owners, Murray Levine and Annan, Inc., will answer no questions and furnish no information. Is some shady dealing being covered up?"

The next significant event took place on February 14, when the aforementioned Mr. Brown wrote Mayor Washington that public records in the Office of the Recorder of Deeds showed that when the land was assembled for the construction of Regency House, it was deeded to Jacob Lehrman, David B. Sykes and Emanuel Cohen as joint tenants with an undivided one-half interest. Apparently they kept this interest until February 9, 1968, when the three men executed a deed transferring their interest to Annan, Inc.

Thus, if Mr. Brown and Comptroller General Staats are correct, Regency was offered to NCHA about four months after Annan acquired a half interest in it. Mr. Staats wrote Rep. McMillan that half of Regency was owned by Murray Levine and his wife, and half by "Annan, Inc.—a Delaware corporation that is related to Giant Food Profit Sharing Plan."

REGISTRATION STATEMENT

A report filed with the Labor Department's Office of Labor Management and Welfare-Pension Reports indicates that Annan is a wholly owned subsidiary of the Plan, and that Annan leases part of its properties to Giant Food.

All three of the men who Mr. Brown said transferred their stake in Regency to Annan are officers of Giant Food. According to the company's latest annual report, Jacob Lehrman is executive vice president and secretary as well as a director; David B. Sykes is vice president, controller and assistant secretary; Emanuel Cohen is treasurer.

A registration statement filed with the Securities and Exchange Commission on April 3, 1968, indicates that the Giant Food Profit Sharing Plan was set up on January 31, 1953, as a retirement fund "for the benefit of those of its salaried officers and employees who meet certain and minimum employment requirements." On April 26, 1968, its net assets were $4,752,776. At that time, the total amount accrued under the plan for Mr. Lehrman was $184,264; for Emanuel Cohen, it was $184,793.

In his letter to Mayor Washington, Mr. Brown asked that it be made a part of the hearing record. When Barron's looked at the record, however, it was not to be found. We obtained the letter from Mr. Brown.

Hearing officer Fusco noted that several attorneys, including Mr. Brown, questioned the legality of "certain aspects" of the proposal. "Since I am not an attorney," Mr. Fusco told Mayor Washington, "you may want an opinion from your Legal Officer on the legal aspects of the proposal."

Three days later Mayor Washington issued a brief announcement of his approval of the Regency proposal. He said the price of $2,475,000 was "less expensive than five of the Authority's 10 most recently built or acquired developments containing units for the low-income elderly." He appears to have been wrong on this. He definitely was wrong on another point. He said HUD had reviewed and accepted the proposed purchase price. HUD was unable to approve the price because it was $125,000 above the highest ap-

praisal; only its regional office had approved the deal.

PRIOR PROMISE

On the day the mayor issued his statement, Mr. Aronov said that in accordance with his prior promises, he was making full disclosure of the Regency deal. He said the acquisition cost was $2,475,000, to be paid to Murray Levine and Annan Corp.

Noting that questions had been raised about whether NCHA was favoring one person or corporation over others in the purchase of existing buildings, Mr. Aronov said: "Without additional comment the National Capital Housing Authority presents a list of owners or developers of the . . . 10 most recent developments with units for the low-income elderly. In no case has our negotiations or settlement been for more than one property with the same owner or developer."

The list showed that Henry S. Reich was one of the persons from whom NCHA purchased Harvard Towers for $2,320,000. (Like Regency, it is a high-rise with air conditioning and swimming pool.) Mr. Reich is vice president of Giant Food Properties, Inc. According to the aforementioned statement filed with the SEC, Giant Food "owns approximately 12% of the outstanding shares of Giant Food Properties, Inc. Certain officers and directors of the Company are also officers and directors of Properties, and such officers and directors and their families own approximately 15% of its common stock."

ONE OF ORIGINAL OWNERS

Mr. Reich has a son-in-law named Lee G. Rubinstein, whom Mr. Brown identified as one of the original owners of Regency besides the three aforementioned (but not as an owner at the time of the sale to NCHA). Mr. Rubinstein also was named by Mr. Aronov as one of those from whom NCHA bought Horizon House, another luxury high-rise for $2,165,000.

Mayor Washington has decided that future housing programs for D.C. should be part of an overall economic development plan. Accordingly, in August of 1968 he established MEDCO—the Mayor's Economic Committee. As chairman, the mayor named Joseph B. Danzanky, president of Giant Food.

Serving as MEDCO's chief economist is Leon Keyserling. While the D.C. government boasts that he once served as chairman of the President's Council of Economic Advisers, it fails to mention that he currently is a member of the board of directors of Giant Food.

Last June MEDCO issued its first report, prepared under the supervision of Dr. Keyserling with a grant from the Economic Development Administration. As part of its goals for the next decade, it called for construction of "about 102,000 new housing units, about half private and half publicly assisted." The study also advocated leased shopping centers (which happen to be a specialty of Giant Food Properties).

DIRECTOR OF PRIDE

MEDCO's staff director is Carroll Harvey, who also is a director of Pride, Inc. Marion Barry, director of program operations for Pride, is listed as a member of MEDCO in its June report, although The Washington Post reported the previous month that he led a protest rally in the city council's chambers and declared, "We have just declared war on the Police Department and this city."

Giant Food, however, gets along with Pride. The firm's latest annual report says proudly: "Giant was the first member of the business community to offer Pride cooperation and support. This cooperation began with assistance in the development of a landscaping training program, and has now been expanded into a commercial landscaping project. Pride is now responsible for landscaping four of Giant's 'beautified' stores and our general offices. Other areas of cooperation are now being explored."

Under the leadership of Mr. Danzansky, Giant Food also helped feed the people burned out of their homes by last year's riots. Later Mr. Danzansky helped feed the residents of Resurrection City here last summer.

ARRANGED FOR DONATIONS

Unquestionably Giant Food's management has done a lot for the D.C. government, and vice versa. Mayor Washington arranged for the donations which made up the $75,000 difference between the purchase price and the highest appraisal for Regency House. Besides the $40,000 raised by the Washington (Catholic) Lay Association, other contributions, according to NCHA, included: Eugene and Agnes E. Meyer Foundation, $10,000; New World Foundation, $5,000; Public Welfare Foundation, $5,000; Stern Family Fund, $5,000; Hattie Strong Foundation, $5,000; and Taconic Foundation, $5,000.

The contributions, plus a reduction of $50,000 in the selling price of Regency, made possible the acquisition. Even before the reduction, figuring a price of $2,475,000, NCHA came up with an average unit cost of $14,390. It found this was cheaper than unit costs for five other projects for the elderly, and "eminently reasonable."

The Comptroller General, however, found average unit costs of $16,478 even after the reduction. That's because he counted only the 161 dwelling units, while NCHA included 10 doctors' offices in the basement which will not be used for public housing. Furthermore, NCHA failed to include $84,500 for rehabilitation costs, $24,700 for moving expenses for tenants forced out and $177,179 for NCHA costs. The latter comprises such items as $8,000 for salaries for nontechnical employes, $11,501 for technical salaries and $5,780 for architectural and engineering fees.

Whichever way the unit price is figured, it seems high, since HUD is subject to limitations on room costs contained in section 15 (5) of the Housing Act. Normally it is $2,400 a room. But in projects designed specifically for the elderly, it is $3,500 a room. Still, that would seem to bar Regency, which has 77% one-room efficiency apartments. But costs of land and non-dwelling units may be excluded, and HUD counts the bathroom and kitchen of efficiencies, thus coming up with three rooms.

Mr. Staats explained, "Under HUD procedures, a project is considered to be specifically designed for the elderly if it is designated by HUD as a project for the elderly, and at least 60% of all dwelling units are efficiencies and not more than 4% of the units have two bedrooms."

ELDERLY DESIGNATION

The government put grab bars in the bathrooms at Regency and gave it the elderly designation. (The aforementioned Horizon House and Harvard Towers also are designated for the elderly.) While NCHA counted 174 units in figuring costs of acquiring public housing, Horizon actually has only 106 apartments. The rest of the units have been converted to serve as the headquarters for NCHA.

Though the Authority seems adept at acquiring luxury high-rises, its expertise does not seem to extend to taking adequate care of some of the more traditional projects it owns. Local papers reported recently that tenants at the Frederick Douglass Public Housing Project here are complaining of rats, termites, ceilings falling in, doors and windows without screens or locks and apartments that have not been painted for six years.

EASING RACIAL TENSION THROUGH RACIAL BALANCE

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. RARICK. Mr. Speaker, if busing of schoolchildren across town or about a county is a desirable means of attaining social justice, surely it is just as desirable to bus children from State to State—or for that matter, to transport families from area to area. The only difference between across town or State to State is the distance involved which certainly cannot be a moral consideration in attaining social justice and relieving racial tensions by achieving racial balance—if the promoters are truly in good faith.

For this reason, I have introduced House Resolution 497 to establish a committee "to conduct a full and complete study of the demography of the United States with a view toward providing relief from racial tensions by more equal distribution of underprivileged racial groups throughout the several States and in the political subdivisions of each State."

To any student of contemporary America, especially those dedicated to a fully integrated society, it is generally known that Negroes comprise 11 percent of our national population. Yet, in some sections of our country, the Negro population exceeds 50 percent and even extends to 80 percent. Attaining social justice in these heavily impacted areas is a much more difficult task than in other locations which are under the 11 percent national average.

Castigating or villifying the people and community in the heavily impacted areas only incites additional racial tensions and is not a solution but aggravates the problem. My bill would propose a study to determine the equal distribution of the underprivileged minorities about our country. House Resolution 497 would, first, help ease the ever-increasing racial tensions and, second, give more of our fellow countrymen an equal opportunity to work together to help solve the seriously worsening underprivileged minorities problem in our country.

I invite all my fellow colleagues, especially those who have already approved of using busing and denial of freedom to achieve racial balance, to join with me in cosponsoring similar legislation.

Mr. Speaker, House Resolution 497 follows:

H. RES. 497

Resolved, That there is hereby created a select committee to be composed of nine Members of the House of Representatives to be appointed by the Speaker, one of whom he shall designate as chairman. Not more than five members of the committee shall be members of the same political party. Any vacancy occurring in the membership of the committee shall be filled in the same manner in which the original appointment was made.

The committee is authorized and directed to conduct a full and complete study of the demography of the United States with the

view toward providing relief from racial tensions by more equal distribution of underprivileged racial groups throughout the several States and in the political subdivisions of each State.

For the purpose of carrying out this resolution the committee, or any subcommittee thereof authorized by the committee to hold hearings, is authorized to sit and act during the present Congress at such times and places within the United States, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents, as it deems necessary; except that neither the committee nor any subcommittee thereof may sit while the House is meeting unless special leave to sit shall have been obtained from the House. Subpenas may be issued under the signature of the chairman of the committee or any member of the committee designated by such chairman or member.

The committee shall report to the House as soon as practicable during the present Congress the results of its investigation, together with such recommendations as it deems advisable. Any such report which is made when the House is not in session shall be filed with the Clerk of the House.

A CALL TO ACTION

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. FEIGHAN. Mr. Speaker, as I mentioned last week, our merchant marine fleet is in dire need of rejuvenation. We can no longer ignore this call to action.

I would like to bring the following brochure, published by the Labor-Management Maritime Committee, to the attention of my colleagues. This brochure outlines what must be done to improve the stance of the merchant marine fleet.

The brochure follows:

MARITIME PROGRAM IMPERATIVES—A TIME FOR "DEEDS—NOT WORDS"

Throughout the current decade, the maritime industry has been "studied to death." The approach to each major problem has been: Appoint another committee—conduct another study—initiate another survey. These are the convenient tools of those whose end purpose is to do nothing or who seek to delay what must be done. It may already be later than we think to get on with the job of building an overall balanced merchant marine. This publication not only calls for an end to wasteful delay but sets forth a formula for meeting urgent maritime program needs. President Nixon has called for a strong U.S.-flag merchant marine. We strongly support him in his efforts to achieve this worthy objective.

A TENACIOUS TALKATHON

"Let us build us a city and a tower, whose top may reach unto Heaven; and let us make us a name, lest we be scattered abroad upon the face of the whole earth." Genesis 11:4.

An Executive Order dated June 17, 1964, established the President's Maritime Advisory Committee (MAC). It included the best maritime minds in the nation.

With commendable unanimity, this high level committee sought to build "a tower" of maritime strength and again "make us a name" among the sea powers of the world.

Much of our merchant fleet had already been "scattered abroad upon the face of the whole earth" by a loose foreign transfer policy.

On November 27, 1965, following months of strenuous effort, the Committee concluded its task and submitted its report to the President. Regrettably, it was ignored and relegated to the "archives."

Thus this meritorious effort became engulfed in the same tenacious talkathon that has plagued our merchant fleet for two decades.

Nor does it stand alone in this respect. Other pronouncements of undoubted good intention met the same fate.

In 1944 President Eisenhower said, "America's industrial prosperity and military security both demand that we maintain a privately operated merchant marine adequate in size and of modern design to insure that our lines of supply for either peace or war will be safe."[1] This worthy aim and purpose has been appreciably forgotten.

President Kennedy declared on October 3, 1960, that "our defense must be second to none, our merchant marine at full strnegth, our commitment to the world's people clear and unmistakable."[2] Nothing remotely resembling "full strength." was ever accomplished.

President Johnson stated on January 16, 1964, "A strong merchant marine is a guarantee of national security and economic stability"[3] Nothing was done to help the merchant marine guarantee it.

Again, on January 4, 1965, he declared, "I will recommend heavier reliance on competition in transportation and a new policy for our merchant marine."[4] Nothing worthy of the name was ever recommended.

On March 19, 1969, the Honorable L. Mendel Rivers, Chairman of the Armed Services Committee of the House of Representatives, sought an end to words without deeds when he said:

"We have had promises from the Administration and past administrations that we would get a new Navy and a new Merchant Marine. The time has come for more than words. As President Nixon said, 'I believe that it is far more effective to use deeds rather than words . . . in order to accomplish objectives'. Words have been used up till now. Mr. President, we are waiting for some deeds."[5]

Congressman Rivers' call for an end to this tenacious talkathon should be heeded without delay. The gap between pronouncement and performance must be bridged.

THE DIMENSION OF MARITIME DIVISIVENESS

"Let us go down, and there confound their language, that they may not understand one another's speech." Genesis 11:7.

October 4, 1965, is remorsefully known as our maritime "day of infamy".

On that day came the abrupt revelation that the Administration—while purporting to confer openly with the "maritime industry"—had simultaneously and with concealed ambidexterity, produced the now infamous Interagency Maritime Task Force Report. The whole maritime industry was stunned.

With unfathomable shock and chagrin, the President's Maritime Advisory Committee struggled on through the few ensuing days of its life and concluded its report.

Quickly shelving the MAC recommendations, the Interagency Maritime Task Force extolled the virtues of its own report in every major seaport of the nation.

However, this atrocious maritime deformity, spawned in the shadows of administrative secrecy, could not long endure the light of day.

Over a 20-year period—1966 to 1985 (inclusive)—it proposed to:

Reduce our present small commercial fleets by 185 ships.

Accomplish such fleet reduction during periods of enormous foreign trade expansion.

Reduce annual government support by over $25 million.

Confine U.S. shipyard construction to a static 21 commercial ships annually.

Open the floodgates to extensive foreign construction of U.S.-flag ships.

Reduce shipboard employment by 20,465 jobs.

Change national policy to support only a "lean trade leverage" fleet.

Place the nation's commerce at the mercy of foreign shipping.

The principal result of such a monstrosity was to beget massive maritime divisiveness.

Thus were sown the thorns of division that choked out the seeds of unity.

This is not to say that divisiveness had not existed—labor vs. labor; management vs. management, or both against each other.

However, in the MAC deliberations, all joined together to achieve maximum maritime capability. The Interagency Task Force neutralized these meritorious efforts, creating a Tower of Babel fiasco from which the martime community even yet has not emerged.

To those who desired unlimited foreign ship construction, the turnstile was opened wide.

To American capital with expansive foreign-flag operations, the Task Force Report gave sanctity and support.

To those with obsolete World War II fleets, vague experimental subsidy proposals evoked dubious hope.

To maritime labor, already divided, it engendered even greater proliferation in desperation for realistic long-term employment security.

The bureaucratic gods of the Intergency Maritime Task Force truly came down "to confuse their language".

Subsequently, a multi-lingualism of massive proportions has beset the maritime community, engulfing government, labor, and management.

The Nation awaits a new dawn of maritime consciousness. It is fervently hoped that this dawning will not be too late.

Government cannot evade vital maritime issues by a pronouncement that nothing will be done until industry is united. Government helped divide it.

Carriers of waterborne commerce cannot expect maximum effort from government while their leaders pursue further separative purpose.

Maritime labor cannot expect favorable action to reverse the decline in merchant shipping while their ranks continue a divisive course.

Perhaps the whole maritime community cannot reunite. God forbid! for it will most certainly bring grief to the nation

A reappraisal of our maritime needs with an acceptable program for meeting national maritime objectives is imperative.

The Labor-Management Maritime Committee believes the following condensed formula is conducive to a responsible maritime program. It invites consideration by all who hope for a rebuilding of U.S.-flag merchant shipping.

BASIC CONCEPTS FOR STRENGTHENING THE U.S. MERCHANT MARINE

General policy imperatives

Support and sustain the Merchant Marine Act of 1936 as the national instrument of maritime policy, amending it cautiously

---

[1] President Eisenhower in London, 1944.

[2] Speech at convention of National Maritime Union, New York City, October 3, 1960.

[3] Remarks in connection with keel laying of SS "Louise Lykes" on January 16, 1964.

[4] State of Union Message, January 4, 1965.

[5] Address before Propeller Club of the U.S., Port of Washington, D.C., March 19, 1969.

where the lessons of time and experience clearly mandate.

Reaffirm the valid and time-tested concept that a strong U.S.-Flag Merchant Marine is essential to both the commercial well-being and national security of the Nation.

Develop constructive means for transporting a "substantial portion" of our export-import commerce in U.S.-flag ships and aggressively pursue the declared objective of "at least 50%" as a national goal.

Provide more realistic consideration of U.S. merchant seapower in future military and defense planning.

Adopt an overall Merchant Marine program sufficiently capable of meeting foreign competition from any source including the ever-growing challenge of the communist bloc.

Achieve to the highest attainable degree an American Merchant Marine owned and operated under the United States Flag by citizens of the United States, composed of the best equipped, safest, and most suitable types of vessels constructed in the United States, manned with a trained and efficient citizen personnel.

Essential trade routes

Support the principle of essential trade routes over which regular and dependable shipping services are mandated.

Provide (1) flexible adjustment in maximum and minimum sailings, (2) facility in modifying ports of call, and (3) broader trade route determinations based upon ultimate intermodal destinations and responsive to changing conditions.

Promote adaptability of shipping service to excessive traffic or peak load conditions on the respective sea lanes by approval of cross-chartering between operators.

Simplify procedures under Section 605(c) of the Merchant Marine Act of 1936 to facilitate determinations for expanded U.S.-flag service.

The steamship conference system

Encourage the operation of ocean freight conferences under the shipping act of 1916 to promote rate stability and avoid costly rate wars by further strengthening the operational aspects of rate agreements.

Provide dependable services to exporters and importers through maximum self regulation by the maritime industry.

Sustain the concept that complete regulatory surveillance by government in the public interest should continue to be lodged with the Federal Maritime Commission as the proper guardian of the Shipping Act of 1916.

Support the dual rate contract system as a common and proper business practice which can provide constructive assistance in meeting the objectives of the 1916 act with properly administered safeguards against possible abuses.

Cargo preference

Equate foreign and domestic costs through (1) maximum competitive ship capability and (2) operating support for the remaining cost differential gap.

Retain and strengthen cargo preference (after equating costs) to achieve "routing preference" only—thus offsetting similar preferential routing practices by competing foreign maritime nations.

Mandate the positive and effective application of cargo preference laws by responsible government agencies, concentrating overall supervision in one centralized authority—The Maritime Administration.

Operating subsidy contracts

Unburden the authority to contract from the unorthodox administrative controls superimposed by Reorganization Plan No. 7.

Promote greater flexibility in the exercise of the contracting authority under the Merchant Marine Act of 1936 without impediment from other governmental sources.

Call upon the executive and legislative branches of government to implement and make effective the legally authorized contracts of the constituted quasi-judicial maritime authority.

The parity principle

Maintain the cost equalization of parity concept of the Merchant Marine Act of 1936 in both the operating and construction areas of world competition.

Acknowledge existing incentives for diminishing the differential cost gap in each area of competition and strive for additional incentives with effective application.

Correctly identify and apply full parity between foreign and American costs. Eliminate current government practices designed to dilute the payment of fully equalized operating cost differentials to contracting lines.

Simplify the current cumbersome and laborious methods of computing cost differentials, thus eliminating traditional backlogs in accounts due to the operators, making certain that the applications of new systems do not violate the parity concept itself nor impair its basic realization in practice.

Recognize that reductions in differential gaps between U.S. and foreign costs may be possible through achieving higher relative competitive capability but that elimination of such differentials assumes the improbable: (1) lack of corresponding foreign maritime competitive progress and (2) equalization of world-wide standards of living and wages.

Merchant shipbuilding

Adopt a merchant ship construction program ranging from 30 to 40 ships a year designed to provide appropriate allotment between liner, dry bulk and liquid bulk carriers based upon demand.

Support the maximization of merchant shipbuilding in U.S. yards with shipyard subsidy adequate to meet this purpose.

Sustain the principle that the United States must have an adequate shipbuilding capacity and an adequate nucleus of skilled shipbuilders to meet peacetime emergency needs.

Oppose any proposal that this Nation take advantage of sweatshop standards in backward countries to build ships for the commerce of the United States.

Support the construction or purchase of ships abroad with full U.S. flag operating privileges *only when* American shipyard facilities are unavailable or when ship replacements will be denied or seriously impeded due to lack of government financing.

Keep pace with other nations by adopting an adequate and continuous planning and research program designed to attain the highest competitive ability through modernization of plant facilities and the promotion of technological advancement.

Separate support for U.S. shipyards

View shipbuilding in the United States as a distinct industry separate and apart from the operating Merchant Marine.

Provide necessary government subsidy directly to the shipyards.

Provide direct federal support for research and development programs dealing with construction practices and management systems specifically designed to promote efficiency, productivity, and the ability to meet world-wide competition.

The national defense reserve fleet

Accept the fact that the National Defense Reserve Fleet as we have known it, is the remnant of an age that has passed and do not overburden the future with it.

Pursue an active scrapping program for all ships deemed unusable for military purposes.

Oppose the upgrading of AP–2, AP–3, and similar World War II vessels in the reserve fleet; subjecting them only to the normal preservation processes and applying cost savings to the construction of new privately-owned merchant ships.

Upgrade the reserve fleet by accelerating the retirement of C–2 and C–3 or even superior vessels from the current operating fleet.

Concentrate on new ship construction to produce ready and available operating ships for defense purposes.

American owned foreign-flag ships

Recognize the weakness of the "effective control" policy as a means of insuring availability of American owned foreign-flag ships in a national emergency.

Re-evaluate the Department of Defense position that "effective control" ships constitute a dependable national asset.

Stop the exodus of U.S. merchant ships to foreign-flag and encourage their return to U.S. registry by re-designing government policy to achieve a climate conducive to capital investment and competitive operational stability.

Financing a merchant marine program

Provide continuity of available Government funds to implement our national maritime policy through the instrumentality of a maritime revolving fund.

Institute a maritime revolving fund for both ship operation and construction purposes in a manner similar to the former construction fund provided under Section 206 of the Merchant Marine Act of 1936.

In addition to the fund sources provided under this provision of law, consider the continuous replenishing of such revolving fund by annual transfers from customs receipts.

Predetermine an appropriate amount to meet the government's share of essential operating and construction costs necessary to effectively implement our national maritime policy, increasing customs duties if necessary to accomplish this purpose.

Make transfers from customs receipts as well as expenditures from the maritime revolving fund, conditioned upon annual program consideration by the Congress and appropriative action by the respective appropriation committees.

By such method, eliminate budget inadequacies contributing to our current unenviable position in world shipping.

Berth line carriers

Process the long delayed and unprocessed applications of berth lines for cost parity contracts under the 1936 Merchant Marine Act.

Provide operating subsidy to such lines without unfair advantage over existing subsidized carriers and with reasonable dispatch, wherever the provisions of 1936 are adequately met.

Provide for fleet replacement, within a reasonable period, under the same limitations and obligations now assumed by existing Berth Line carriers under subsidy contract.

Require as a condition to receiving cost parity operating support that all companies involved subject themselves to the normal regulations applicable to existing subsidy contract lines and divest themselves of foreign-flag operations.

Dry bulk carriers

Provide cost parity with foreign operators by extending operating differential subsidy to dry bulk carriers similar to that enjoyed by the Berth Lines, wherever practical. Require such carriers to eliminate equivalent foreign-flag tonnage to the extent possessed and guarantee no subsequent increase in such tonnage thus leading to its ultimate retirement. Amend the Merchant Marine Act of 1936 to facilitate this purpose.

Provide long-term operating contracts for qualified dry bulk carriers with provision for vessel replacement and with worldwide trading privileges.

Phase out rate differentials in transporting government supported bulk cargoes as new vessels are constructed and placed into service with appropriate timing to protect existing operators in the trade with Title XI or other financial obligations to meet.

Terminate the purely administrative practice of denying to bulk carriers the shipyard construction support authorized under the 1936 Merchant Marine Act.

Standardize to the fullest practical extent the design of bulk cargo vessels to achieve the lowest possible construction cost without sacrificing productivity and efficiency in world market competition.

Establish an interim goal for carrying 30% of our dry bulk export-import cargo in U.S. flag ships and strive for an ultimate goal in excess of 50%.

Modify the Merchant Marine Act of 1936 to provide capital reserve and/or special reserve privileges similar to those enjoyed by the current subsidy contract Berth Lines. Extend this latter provision to Great Lakes shipping as well.

Liquid bulk carriers

Re-design shipping policy to encourage American owned liquid bulk carriers engaged in U.S. foreign commerce to operate under U.S. flag.

Pursue the goal of transporting at least 30% of our liquid bulk cargo in U.S. flag tankers.

Seek voluntary action by liquid bulk proprietary companies to return their foreign-flag ships to U.S. registry and program future replacement ships for U.S.-flag operation.

Upon failure of voluntary means to achieve results, mandate the imposition of a minimum import quota in order to reach desired goals.

Inland water carriers

Repeal the no-mixing rule for inland barge lines so that large volume tows may continue to be operated and low rates for shippers preserved.

Advance the replacement of obsolete equipment through provision for equipment trust arrangements. Support legislation for recording trust agreements and evidences of equipment indebtedness with the Interstate Commerce Commission for all types of water carriers.

Oppose waterway or user charges on inland waterways.

Domestic commerce

Provide a realistic depreciation policy to stimulate investment capital for domestic commerce.

Grant to domestic carriers the right to deposit a portion of earnings before taxes in a special reserve fund for purposes of ship construction, reconstruction or alteration as in the case of subsidized operators. Amend Section 511 of the Merchant Marine Act of 1936 to accomplish this purpose.

Appropriate lodging of government maritime functions

Accept the principle that a positive merchant marine program is the preeminent and overriding consideration—not the lodging of maritime functions within government.

Lodge the Maritime Administration where deemed most appropriate but assign to it broad authority for carrying out our national maritime laws and policies.

Pursue the goal of transporting at least 30% of our liquid bulk cargo in U.S. flag tankers.

United States Senate—clothed with appropriate authority and responsibility for administering maritime programs unfettered by pyramiding echelons of multiple supervision and control and with independent action on all matters requiring hearings and/or public notice.

Establish a civil maritime board with independent authority (either within or outside a department), appointed by the President with confirmation by the United States Senate—to perform promotional and quasi-judicial functions. If within a department, provide an appeal either to the secretary or directly to the courts as in the case of an independent agency.

Passenger ships

Promote continued passenger ship operation under U.S.-flag.

Eliminate restrictions on sale or other means of disposal of unprofitable passenger ships upon proven economic non-feasibility for continued operation.

Construct new passenger ships of the size, type, and design required for modern passenger traffic especially keyed to the cruise trade.

Apply the sole recourse provision of the Merchant Marine Act of 1936 to all new passenger ships.

Support merger of passenger ship operations on a broad consolidated company basis if required to keep U.S.-flag passenger ships on the high seas.

Labor-management relations

Strive to achieve continuity of service to shippers and the general public without interruption by labor-management disputes.

Support government action to stem the ever-spiraling cost of living and corresponding wage depletion so damaging to maritime work stability.

Establish a system for handling labor-management disputes intrinsically conducive to timely settlement—failure of which penalizes only the disputants.

Provide for continuing review of incentives conducive to equitable and effective avoidance of work stoppages.

Seek proper wages for corresponding job assignment without inter-union "me-too-ism" which has plagued the maritime industry.

Promote a realistic recognition on the part of all segments of the maritime industry that unnecessary work stoppages have already wrought great damage and can ultimately destroy it.

Appoint a high level committee of union and management representatives to develop realistic means of achieving these ends.

The Labor-Management Maritime Committee has set forth in this brochure the key imperatives for achieving a strong U.S.-flag merchant fleet. We feel that most segments of the American Merchant Marine will preponderantly agree with the proposals set forth. Where there is disagreement, there will undoubtedly be areas of compromise. Where patently unsound proposals are advanced, or where unwarranted attacks are made upon the Merchant Marine Act and those operating under it we shall oppose them. We call upon all segments of the industry, both labor and management, to assist the President and the Congress in the job of restoring a major share of our commerce to U.S.-flag shipping and in building a merchant marine capable of transporting it.

AMERICAN VETERANS COMMITTEE SPEAKS OUT ON NATIONAL AFFAIRS

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. FRASER. Mr. Speaker, it gives me a great deal of pleasure to place in the RECORD the national affairs platform and resolutions of the American Veterans Committee.

This outstanding, liberal veterans' organization consistently supports progressive policies for our Nation. Their slogan, "citizens first, veterans second," reflects their desire to work on behalf of the Nation as a whole and all of its people rather than just for special privileges for veterans.

I commend this excellent statement to my colleagues, as follows:

NATIONAL AFFAIRS PLATFORM OF THE AMERICAN VETERANS COMMITTEE

AVC stands for the Bill of Rights as a living force animating the political life of our Nation and as a firm limitation on the arbitrariness of government.

AVC stands for the Bill of Rights as a guarantee of our freedom to speak, to assemble, to believe, and to dissent without fear from the conformities of the day.

AVC stands for equality for all, regardless of race, color, ancestry, national origin, religion, sex or age, and for the constitutional guarantees of such equality.

AVC stands for just legislative representation of the people of the United States, the States and their subdivisions, without poll taxes or other property qualifications for voting, with equal weight for each vote, and on a geographically fair basis, within the framework of the Constitution of the United States.

AVC stands for a policy of gainful, full employment and security for all, as outlined in the Employment Act of 1946.

AVC stands for responsible, efficient, and honest government and for the merit system in government employment.

AVC stands for a government possessing and willing to exercise all powers necessary to bring about a solution of our national problems.

AVC supports the active intervention of government, primarily of the Federal Government, in the economy and the general welfare of our country to stimulate and provide employment to improve the physical condition of our cities and towns, of our housing and our schools, to bring all the greatest benefits from the development and conservation of our natural and industrial resources and to provide for the general welfare and health of our country to stimulate and provide employment to improve the physical condition of our cities and towns, of our housing and our schools, to bring all the greatest benefits from the development and conservation of our natural and industrial resources and to provide for the general welfare and health of our people.

AVC supports a tax policy based on ability to pay and opposes regressive sales and excise taxes.

AVC stands for the recognition of equal rights for labor and management and for improved social benefits of employees.

AVC supports an educational system and a public health system which will give the American people, and America's youth in particular, the knowledge, skills, and training, and the physical and mental health and stamina, to continue their forward march toward America's democratic fulfillment.

GOVERNMENT AND LIBERTY

I. The Nation's freedom—The Bill of Rights

1. We affirm the basic right of all Americans to due process of law, the right to counsel and to freedom from unlawful search and seizure. We oppose all efforts to suppress freedoms to believe, speak, write, assemble, criticize, and dissent.

2. A. We urge strong and consistent enforcement of existing laws and regulations which will insure to the citizens of the United States and of the several States the full measure of their privileges and immunities of due process of law and the equal protection of the laws guaranteed to them by the Constitution, regardless of race, color, ancestry, national origin, religion or sex, or wage, and urge the national, state and local governments to enact such further laws, ordinances and regulations as may be needed further to insure these ends.

B. We believe in the principles of the separation of church and state.

C. We favor freedom from censorship of newspapers, magazines, radio, television, motion pictures and other media by the Post Office, Customs Bureau, police departments, and other units of government as well as by private pressure groups.

D. We oppose the use of wiretapping and electronic and other forms of eavesdropping devices whether by private individuals or Government officials, elected or appointed.

E. We urge protection by Federal law of all members of the Armed Forces from physical violence because of race, color, ancestry, national origin or religion.

F. We urge making lynching a Federal crime, as well as making provisions for compensation to the families of lynching victims.

G. We favor Federal legislation making it a crime to bomb or to conspire to bomb school, church and other public and quasi-public property.

3. A. The right against self-incrimination. No inference should be drawn in regard to guilt in any legal proceeding of any person solely because he exercises this right.

B. The right to travel. The right of an American citizen to travel abroad should not be arbitrarily abridged by the Federal Government.

II. The Nation's Government

1. Freedom of information: The right of the people to full knowledge of government affairs must not be abridged, except where disclosure would imperil the national security of where disclosure would, without substantial public benefit, encroach on the right of the individual to personal liberty or freedom.

2. Congress: We urge proper changes in the rules of the Congress of the United States which will make it possible for the majority of the members to vote cloture or close debate on legislation after a reasonable period, and which will make merit, not tenure alone, the standard to be used in the selection of committee chairmen.

3. Federal-State Relations: We favor strict Federal standard-setting and enforcement in all federal grants in aid.

4. State and local government: We urge reapportionment within the States consistent with the principle "one man-one vote."

5. The Federal civil service:

A. Apart from discharges based on reorganization of Government activities or reduction in force, Government employees should be discharged only for cause and through due process of law. The employees should be presented with a written statement of charges, have the right to a hearing before an impartial board. He should have the right to present evidence, be confronted with adverse witnesses, cross-examine witnesses, and receive a transcript of the hearing free of charge. Action toward his separation from the Government service should be taken only on the basis thus made.

B. The rights granted to veterans in the Veterans Preference Act in regard to discharge procedures and appeals should be extended to all Government employees except those in probationary status.

6. District of Columbia: We urge that the District of Columbia receive, by legislation or by constitutional amendment where the matter cannot be handled by legislation:

A. The right to local self-government and;

B. The right to elect Senators and Representatives in Congress;

C. An equitable annual Federal contribution in lieu of taxes.

ECONOMIC SECURITY

III. Basic economic policy

1. We continue to support the Employment Act of 1946 which states it is the policy of the Government to create and maintain "conditions under which there will be afforded useful employment opportunities including self-employment for those able, willing and seeking to work and to promote maximum employment, production, and purchasing power."

2. To insure the interest of the consumer we urge Congress to establish a Department of the Consumer, to be headed by a Secretary of Cabinet rank.

IV. Monetary policy and tax policy

1. Monetary policy:

We urge the establishment of a Federal capital budget for reimbursable public works appropriations and to improve the accounting and budgetary operations of the Government.

2. Tax policy:

A. We urge elimination of special provisions in the internal revenue laws which are discriminatory in nature. As blatant examples, we point to the favored tax treatment of the extractive industries, the restricted stock options for corporate executives, the retirement income credit, the preferred tax treatment of profits on stock market transactions, and the dividend exclusion and credit provision.

B. We also call for an end to the abuse of the deductibility of business expenses to finance luxurious travel, vacations, and entertainment for business management, professional men and sales executives.

V. The urban crisis

AVC from its inception has been vitally concerned about the urban crisis, and we recognize the urgency of effective action to overcome the conditions which have caused it. These are many-faceted, including a shortage of jobs, of homes, of services, of educational incentives, of recreational opportunities. They also include environmental pollution and the citizen's increasing inability to influence or even participate in city government by democratic means. Many of these evils are most concentrated in the slums.

The concept embodied in the Model Cities program of strengthening local government and the people it serves to solve these problems, offers a sensible approach to solution of the urban crisis itself. AVC urges expansion of this demonstration program to all communities which may benefit from it, with adequate financing for both the development of local plans and the federal programs which are expected to contribute to their implementation. We intend to be vigilant that the focus remains, under the new program guidelines, on the disadvantaged in the cities.

Citizen participation in the planning and administration, as provided for in Model cities, Community Action and other programs, is the democratic means of assuring that resources intended to help the disadvantaged are not bargained away without the consent, or at least the understanding, of the poor themselves. We urge the Congress to retain its requirements for citizen participation and extend them to additional programs which the federal government supports. We urge also that provision be made and funds be allocated for independent planning staff and facilities for citizens' groups and commissions.

An important aspect of the urban crisis is housing. Physical reclamation of the slums requires the provision of housing for those who now inhabit the slums, at rents or prices which are fair and which they can afford to pay. To bring this about, we favor flexible use and adequate funding of the variety of programs now in use, including rent supplements, eased purchase credit, reduced interest costs. We also recognize that it will be some time before the private housing industry will be able to play a significant role in such low-return activities, and we therefore call for the widest variety of public investments in housing, such as traditional public housing, turnkey housing direct interest-free loans and leased housing. And we need serious thought about new approaches.

Beyond the creation of the necessary housing, our government must assure that access to housing is assured regardless of the race, color, creed, national origin, age or size of family of the prospective user. We call for vigorous enforcement of the Fair Housing provisions of the Civil Rights Act of 1968, which was a start toward elimination of the ghettos.

We also recognize that the urban crisis is affected by the rural crisis which has long been apparent but ignored. We therefore demand that the scantly-funded rural counterpart programs be rovitalized and used toward stabilizing the life of our rural citizens in the countryside where they prefer to live instead of forcing them to migrate to the cities, often to be engulfed by the slums.

VI. Conservation and development of natural resources

We accept as a cardinal principle of conservation policy that the natural resources of this land are given to us in trust for the people of this and subsequent generations. The benefits of these resources must be distributed widely and equitably and a share thereof must be preserved for future citizens.

Through comprehensive and coordinated national and regional planning and development, wise use, and enlightened conservation, this can be done. The very nature of the problem requires that Government play a major and controlling role in assuring that conservation.

1. Department of Natural Resources. We propose the organization of the Department of Natural Resources. Such a new department should provide for regionally decentralized opportunities for program formulation and execution, while clearly placing federal responsibility for resources development within the framework of a single agency. The regional multi-purpose concept may require that specific localities or projects be reserved or developed for one or more preferred use.

2. Water and Air Conservation:

A. We reaffirm our strong support of comprehensive multi-purpose river basin development and urge the accelerated application of this principle to our river basins.

B. We similarly favor regional planning by the States and metropolitan areas as well as area redevelopment.

C. We urge the Federal Government to undertake the planning and construction of multi-purpose water and power projects similar to the one provided in the Tennessee Valley. Their very scope requires government development and precludes the short-term, piecemeal operations of private interests.

D. The conservation and development of adequate fresh water supplies to meet expanding needs for domestic agricultural, industrial, wildlife and recreational uses, and the protection and improvement of water quality, especially in relation to accumulated pesticides and other contaminating matters, are of increasingly urgent concern.

3. Energy resources conservation. We call for:

A. The maximum feasible development of our only renewable energy resource hydroelectric power including Federal construction of multi-purpose power dams and other waterpower, irrigation, flood control and navigation works using standards of feasibility and repayment schedules for such projects based upon their reasonably expected service life.

B. A continuation and acceleration of the Federal programs to develop and stimulate development of effective processes for the utilization of our immense reserves of oil, natural gas, shale and coal.

C. We urge a major increase in the scope and speed of air pollution prevention measures.

D. The development of atomic energy (both fission and fusion type) for power and other peaceful purposes.

4. Recreation and Wildlife:

The expansion in the demands for outdoor recreation opportunities requires that we add to our national park system and increase the recreational developments of our national forests, public lands, reservoirs and seashores.

We endorse legislation to control billboard erection in scenic areas. Urban planning and redevelopment should include provision for open spaces and outdoor recreation areas.

5. National Land Reserve.

We support the concept that our remaining public lands constitute a "National Land Reserve" to be administered for the benefit of the public with appropriate safeguards for future generations.

6. Pesticide Control

We urge careful consideration and close supervision of pest control programs in recreational, farming, and urban areas.

VII. Agriculture

American agriculture is increasingly the victim of the owners of the new machines, themselves investors rather than farmers. Hired workers are displaced from jobs, and farm lands are being concentrated in fewer hands as farmers themselves are displaced.

AVC calls for a four-part approach to the resulting problems:

1. A reduction of subsidies to industrialized agriculture, those now being paid in proportion to production or for practices which, like some in other industries, are a normal part of the business;

2. New approaches to two problems of the sub-marginal farmer and the farm laborer, recognizing that their plight is closely related to that of the underemployed urban worker and is only in part agricultural.

3. Strengthening the economic family farm through greater attention to credit, service and marketing needs;

4. Providing for rural people the whole range of educational cultural, recreational, health and other opportunities already accessible to dwellers in metropolitan areas.

VIII. Labor

We urge:

1. Periodic updating of the provisions of the Fair Labor Standards Act to insure the coverage of maximum numbers of categories of workers and a realistic and decent Federal minimum wage.

2. Enactment of laws for the full disclosure of the administration of pension and health and welfare plans, whether administered by unions or management or jointly by both. Federal law should follow existing Federal securities legislation and State laws such as that of the State of New York for the exemptions contained in the latter.

IX. Social welfare

As veterans concerned with the social welfare of all citizens we urge:

1. Federal standards to increase unemployment insurance benefits, more realistic eligibility standards and lengthening of the period for which benefits are paid.

2. Development of a strong and unified child welfare program with the Department of Health, Education and Welfare.

3. Development of Federal services and grants-in-aid for the prevention and control of narcotics addiction, based on the promise that drug addiction is a disease to be treated.

X. Education

1. We recognize that "in the quality of education lies the fate of freedom itself." We urge the provision of educational opportunity for every American to the limits of his capacity, and the identification of the talented among us in order to challenge them to their highest achievement.

2. To improve and extend existing scholarship and loan programs for college and university students.

3. To extend scholarship and exchange programs for study by Americans abroad and by nationals of other countries in the United States.

4. To appropriate adequate Federal aid to communities impacted by Federal programs.

5. We oppose the use of public funds whether as grants or loans to non-public elementary and secondary schools.

XI. Public health

We urge:

1. Increased Federal expenditures for research in the prevention and care of illness.

2. Expansion of medical insurance and group medical care plans, including a plan for national health insurance.

3. Expansion of public health facilities and services hospitals and nursing homes, without regard to race, color, ancestry, national origin, religion or sex.

XII. Indian rights

We oppose revocation of commitments entered into by treaty between the U.S. Government or the Government of any state and the various Indian tribes.

We support all efforts (1) to safeguard Indian lands and resources from exploitation and expropriation in violation of treaty rights and (2) to make the Indian tribes capable of supporting themselves from the proper development of their resources.

We support adequate health and educational services for the Indian tribes capable of supporting themselves from the proper development of their resources. We support adequate health and educational services for the Indian reservation as well as training in modern industrial and management skills to enhance the opportunities for better living and the ability of the Indian tribes to manage their own affairs.

We also support social services to those Indians who desire to live outside their tribal reservations so as to assist them in adapting themselves especially to urban living and to protect them against discrimination and hostility in their new environment.

RESOLUTION ON VOTING RIGHTS LEGISLATION

AVC wholeheartedly endorses the extension of the voting rights legislation now in effect and slated to expire in 1970. In AVC's view, this legislation should be made permanent. But if this is not feasible, it should be extended for at least ten years rather than the five years now proposed. The extended legislation should uphold clearly existing bans on literacy and other special tests for voter qualification. In particular, it should not lessen existing provisions for their prohibition in the guise of making them applicable nationwide. The extent of state—or even county—or city-wide voter registration or actual voting is not a guaranty against vexatious state laws directed against participation in voting by segments of the voting population.

RESOLUTION ON TAX REFORM

I

AVC in its platform has called for tax reform; that is, the abolition of favored treatment of numerous types of business transactions and of the exemptions of broad classes of income from the burden of income taxation. The tax reform is NOT, however, the imposition of a token tax on a small group of very wealthy taxpayers whom the law presently enables to avoid all taxes or the repeal of the income tax which now hits some very small net income earners. If, as the Nixon Administration proposes, only these two steps were taken, it would be in effect a refusal to bring fundamental justice to our tax system. Even within this framework the Administration proposals reduce the proposed tax bite from the income of the very rich from $420,000,000 in earlier proposals to only $80,000,000 in their own current project and narrow relief for low income taxpayers to the very lowest group which pays minimal income tax in any event, and pays taxes primarily through sales taxes which some Administration leaders seem to favor on a nationwide scale under the guise of a "value added" tax. This reshuffling of income taxes would help the very low income earners very little and would certainly not relieve seriously their poverty. To this end, welfare policies must be revamped as we propose in a separate resolution. It is our hope that Congress, sensing the mood of taxpayers, will take the bit in its mouth and enact a program which will reshape our income tax to make it a fair instrument to raise the funds needed to finance national programs.

II

The areas of favored income and transactions are today well known in their broad outlines to lay taxpayer and tax specialist alike. In general, in these areas, tax reform means the removal of the tax favored treatment. If some situations require special formulae, these would not be in the nature of exemption, but of defining the application of the general principles imposing the income tax to particular sets of business facts.

The major classes of income which should be made fully taxable are:

1. Interest from tax-exempt state and local bonds, including industrial development bonds.

2. Capital gains, including unrealized capital gains on assets passing on their owner's death to his heirs or as the principal of a trust upon the death of life tenant to the remaindermen.

3. Income from oil and gas properties and rights and other mineral and natural resources through application of depletion allowances.

Arrangements which should not give rise to tax-favored treatment include:

1. Stock options for corporate executives.

2. The splitting of a single business into multiple corporations to escape in part the surtax on corporate income.

3. Unlimited charitable contributions.

4. Charitable contributions of appreciated property.

5. Real estate transactions involving accelerated depreciation and other "tax-shelter" devices.

6. Interest paid on funds borrowed for certain types of bond purchases.

7. Farms operated primarily for loss deduction purposes by individuals and corporations engaged in non-farm callings or professions.

It has been estimated that the annual tax loss to the U.S. Treasury Department from the tax-favored treatment of these and other classes of income and transactions exceeds $20 billion at present tax rates. Obviously, many social programs for the relief of poverty and discrimination, for the improvement of housing and of our environment, and for the advancement of science and education could be financed and, in addition, relief be given to the lower and middle-bracket taxpayer.

III

The business activities and investments of charitable and educational and religious institutions, including private foundations, have grown to such an extent that the burden on other taxpayers of the exemptions from income tax which their income from these sources largely enjoys, is seriously called into question. We endorse proposals to subject their income to taxation at a special lower rate, which recognizes implicitly the public benefit judged to flow from their activities.

We warn, however, against the misuse of the need for reform in this area, as well as in the area of self-dealing and personal benefit between foundations and their founders, to impose upon foundations restrictions on the choice of their activities which reflect political prejudices of congressional majorities and bar them from innovative social projects which could not be undertaken without foundation support for the benefit of the American people.

IV

We urge immediate repeal of the investment credit provision in order to help stem present inflationary pressures.

RESOLUTION ON EQUAL EMPLOYMENT OPPORTUNITY PROGRAMS

AVC expresses its grave concern over the recent actions of the Department of Defense in the handling of its Equal Employment Opportunity Program for Defense Contractors. The return to a practice of direct informal dealings between high Department of Defense officials and top officials of defense contractors, which in the past has proved barren of results in promoting effectively equal employment opportunities has seriously impaired the usefulness of this program. Such direct dealing not only in effect grants immunity for past violations and from regular enforcement procedures but also demoralizes the administrative staffs within the Department of Defense and of Labor charged with the administration of the program. For they find themselves by-passed and their authority undermined. Only a return to strict accounting for progress to be achieved under well-defined action programs and their enforcement through regular established procedures, where compliance lags, can restore the damage done by the Defense Department's handling of its program in its dealings with the big Textile firms of Burlington Mills, Cannon Mills and J. P. Stevens. Moreover, it is time that the Department of Defense publicly account for its stewardship of the equal employment opportunity program for defense contractors. Information on its activities and results in the form of detailed satistical data on initial hiring, upgrading and promotion of minority group employees have been unavailable to the public. General reassuring answers are no longer sufficient. We call on the new Secretaries of Defense and of the military departments to publish full data on the operation of the program so that the success or failure thereof can be assessed and steps taken to render it more effective. We call on the cognizant Congressional committees to obtain and publish relevant information and to exercise their influence to render the program truly useful.

We further urge that the Civil Service Commission of the United States take new steps not only to continue to combat or prevent discrimination against employees but also to foster the employment of minority group civil service employees, their promotion to higher positions in the career civil service, than has hitherto been attained, and the correction of earlier acts of discrimination which have prevented in numerous individual cases promotions and advancement of civil service employees belonging to minority groups in the same manner and to the same extent as their white majority fellow employees.

We protest the harassment by men such as Senator Dirksen of public servants who devote their best efforts to the promotion of equal employment opportunity in business, industry and Government for employees belonging to minority groups. Instead of senatorial censure they deserve the support and commendation of the National Administration, of Congress and of all citizens intent upon ending discrimination in employment and all other aspects of public and private life.

RESOLUTION ON MEDICAL BENEFITS

We ask for expansion and higher standards of medical care. In order to avoid a frittering away of limited available funds to pay for Medicare and Medicaid, we ask for strict controls over the performance of, and the fees paid doctors, pharmacists and paramedical personnel to avoid fraud or overreaching or slipshod handling of patients from taking root in the system wherever they may occur. We condemn those professionals and institutions which refuse to participate in public medical care and non-profit insurance programs and urge them to reconsider their stand. The welfare of the American people requires that all those engaged in rendering any kind of health service work together closely so as to enable every American, rich or poor, to obtain the medical care which he needs.

We object to the high prices charged by drug manufacturers for their labeled drugs. As a minimum step, we urge that all public agencies procuring medicines or drugs be instructed to order them only by generic name and not by the brand name of particular manufacturers, and that doctors, hospitals and other institutions providing service under Medicaid and Medicare do likewise.

Finally, we demand the strengthening of FDA so that it can effectively and fully perform its function of keeping ineffective and dangerous drugs from reaching the public.

RESOLUTION ON FEDERAL EMPLOYEE SECURITY LEGISLATION

We are convinced that present laws, regulations and procedures fully protect the United States against disloyalty among and against actual or threatened breaches of security by its employees. We, therefore, view with undisguised dismay legislative proposals, now being considered in the Senate of the United States, to expand or tighten existing procedures and to institute a centralized security system for all federal employees with the Chairman of the SACB acting as Grand Inquisitor. In our view, nothing in the present situation calls for new federal employee security legislation or for centralization of administrative action within the federal government. We, therefore, urge the Senate and House and their respective committees to defeat new legislative proposals in this area decisively either in committee or on the floor whenever the occasion arises.

RESOLUTION ON WELFARE POLICY AND SERVICES

That our national welfare system requires a complete overhaul to enable it to perform its function of providing a minimum livelihood and services to the poor has become a truism which only the most hard-hearted can deny. Action, however, has been slow to follow insight.

What is now required, especially in the light of recent court decisions abolishing waiting periods for welfare applicants who have moved from one state to another, and what we, therefore, again demand is:

(1) a uniform, nationwide system of welfare standards and rules which ensure an adequate minimum standard of living to those unable to work for health or family reasons or for lack of jobs paying an adequate wage.

(2) a system by which welfare recipients are encouraged to improve their economic situation by retaining earnings from such work as they can find or perform and by which they are enabled to become independent of welfare support.

(3) the establishment of day care centers to enable welfare mothers to provide for the children necessary care and supervision while they are at work or seek training, if they so desire.

We condemn the new budgetary and social policies, put into effect in recent months by the Federal, state and local governments across the country, which reduce public benefits and services for the working poor and those unable to provide for themselves and endanger even the continuance of the level of services heretofore provided for them by public agencies.

Specifically we protest:

I

The abolition of the Job Corps centers which deprives thousands of young men and women of the opportunity to complete training for more highly skilled and paid jobs, to gain education and to escape at least temporarily from the evils of a poverty-stricken ghetto life.

II

The transfer, in the cause of alleged economy and efficiency, of Headstart to HEW for administration by generally unsympathetic State educational bureaucracies can only result in depriving numerous young children of the poor of the opportunity to learn early and to initiate the personal development which will help them benefit from education later on.

III

The cutting of medical and welfare benefits in order to balance local budgets or to avoid a heavier tax burden on business activities. All such actions contribute only to cutting off the escape of the poor from their poverty.

IV

We urge the institution of an extensive information program by HEW and local welfare authorities to effectively inform all persons entitled to welfare benefits of their rights.

RESOLUTION ON PROTEST AND ACADEMIC FREEDOM

Campus unrest has placed in jeopardy the freedom and every existence of institutions of higher education in the United States. Some of this unrest is a concomitant of necessary adjustment in the American educational system as it adapts to the needs of a rapidly changing technological society, to the legitimate demands of all Americans, for new educational programs and to liberalize its structure of governance.

But some campus demonstrations and activities have clearly threatened civil liberties and academic freedom by destroying the ordered environment for teaching and learning that permits the educational process to produce trained men and women who can contribute to the solution of the problems of poverty, race and peace.

As veterans who have directly benefited from the opportunities of education made available to us in recognition of our service and as citizens who have consistently favored expansion of educational opportunity for all, we in AVC know the importance and strategic place in American life of the campus. That is all the more reason for our speaking out against those who seek to "revolutionize" the American University by destroying its essential function as an institution of free inquiry open to all by virtue of ability and not through birth, wealth or status and seek to transform it into an instrument of partisan political and social struggle.

RESOLUTION FOR A SINGLE AMERICAN SOCIETY

As the second anniversary of the appointment of the Kerner Commission which laid out the road to an integrated and more democratic American society is drawing close, we cannot be proud of the progress made. For in many respects little has been accomplished toward the goals set out in its Report which we ringingly endorsed, when it was published. On the contrary, the recent voting trend in overwhelmingly white urban com-

munities shows that far too many white Americans refuse to accord equal consideration to the interests of the Negro minority as to their own or to treat without prejudice Negro candidates competing for public office in areas where Negroes do not predominate. We call upon the President to repudiate these racist attitudes, to rebuke sternly American racists, and to reject the support of racist politicians and voters regardless of party or electoral advantage. We urge the leaders of Congress and of the political parties, and the Governors of the States to do likewise and to show unrelenting vigilance and fortitude in combating racist tendencies.

In the face of all difficulties we must not falter nor despair. As members of AVC, an organization devoted to the welfare of the American people and to the perfection of their right to participate actively in forging their own fate, we reaffirm our faith in the attainment of a truly integrated America in which all people, regardless of their ethnic or religious background, their sex, their age or the color of their skin, can share and enjoy a fruitful life as citizens, as productive members of society, as ordinary men, women and children.

Such a better America needs the help and concern of all its people. It gratefully recognizes the contribution which all Americans have made by their labor and their minds to the welfare of their country. It is proud of the heritage of all its sons and daughters. In this spirt we emphatically recognize and support the healthy desire of the Negro and Spanish-speaking and American Indian minorities to express their pride in their own past, to explore their historical and cultural background, to receive recognition for their cultural achievements and their contributions to America, and to achieve the kind of self-determination which our country vouchsaves to all other groups. We support their insistence that their culture and life become the subject of proper academic study—a demand which is, indeed, on the way to widespread realization. But these goals can be achieved only by participation and not by withdrawal or by a pseudo-revolutionary stance.

Therefore, we reject the siren calls of those who assert:

that men and women of different ethnic backgrounds or skin color never in history could or cannot now live together in equality and join in cooperative behavior;

that the road of liberation for minority groups lies in withdrawal from the larger society and the conquest of a special place controlled by "nationalist" or "separatist" power seekers;

that the university and college student of negro or other minority background must limit himself exclusively to the study of his own group's condition and affairs and undergo nationalist indoctrination;

that the black and other minorities must assert its right through violence and, in particular, should attack religious or ethnic groups within the white majority, which are themselves vulnerable because they have only recently emerged, or are only now emerging, from the blight of discrimination and prejudice.

These are roads with no exits and, notwithstanding the momentary successes of spectacular or violent action, can only lead to defeat, to continued second class status and to the perpetuation of ghetto poverty and ignorance.

We are fully aware of the fact that on the road ahead we shall meet hardened resistance from many elements of the white majority. Many among its prosperous and influential business and professional segments do not desire to contribute through taxes the funds necessary to overcome the lack of jobs, bad housing and schools and all the other effects of past and present discrimination. Others feel that the rise of hitherto economically less-favored minority groups threatens their social and economic position and the job monopolies which they have secured. Obviously, there will be great resistence to make a place for rising minority group members in power, jobs, and other aspects of life. Only the ceaseless struggle of these minority groups and of all those allied with them in the battle for their rights and for freedom in the United States can win victory.

We pledge ourselves as AVCers, citizens first and veterans second, to continue the fights for social justice, freedom from discrimination, welfare and democratic rights for all Americans to whom these are denied, so that together we may attain the goal of a free, democratic and prosperous America.

RESOLUTION ON MAN'S ENVIRONMENT

Whereas, a state of national and international emergency exists as a result of the accelerating destruction of man's environment, by reason of the massive and continuing pollution of air, water and other natural resources; and

Whereas the magnitude of the factors responsible and the enormous efforts required to reverse these conditions call for action at the highest levels of every major sector of our society,

Now therefore, be it resolved that AVC, in accordance with its traditional role as a civic organization, should call upon the national administration to assemble and sponsor a White House conference of responsible leaders from the federal, state and municipal governments, from science and industry, and from the other organizations in the country, which are or should be working toward the amelioration of these horrifying and destructive conditions, to come together and start doing so.

THE HILLMANS OF PITTSBURGH

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to place in the RECORD the following article entitled "The Hillmans of Pittsburgh," from the September 15, 1969, issue of Forbes magazine.

Henry L. Hillman is one of Pittsburgh's most outstanding civic and business leaders. A man of quiet dignity and warm humor, he has earned the respect and admiration of all who know him.

I am sure the Members of Congress and the American people will find much of interest in this fine article of Henry L. Hillman and the Hillman family.

The article follows:

THE HILLMANS OF PITTSBURGH

(NOTE.—A gut businessman, Hart Hillman built a fortune in the coal, iron and steel business. A cool intellectual, his son Henry has expanded that fortune many fold. To the father, business was one big brawl. To the son, it is a kind of chess game.)

Henry Lea Hillman is only the second-richest man in Pittsburgh, and a poor second at that, but since Richard King Mellon ranks first, Hillman is nonetheless one of the richest men in America. He is, in fact, worth something like $300 million, most of which is in solid value, rather than in inflated stock-market paper.

Yet so little is known about him that when two of his companies were involved in a recent effort to save Piper Aircraft from the unwelcome attentions of Chris Craft Corp., none of the newspaper reports even mentioned Hillman's name. Chances are that their editors and reporters had never heard of him. "Henry Hillman?" asked a fellow Pittsburgh industrialist recently. "Well, of course, he's in coke and chemicals." The fact is that Hillman is no longer in either.

"We just really have never liked publicity," Hillman declares, "and have tried to avoid it. It serves no purpose, being in the limelight. It's easier to operate without getting your name in the papers or Forbes magazine or anyplace else." Actually, the Hillman name does get into the newspapers but not in connection with business. Elsie Hillman—Henry's wife—is chairman of the Allegheny County Republican Party. Henry himself is president of the Allegheny Conference on Community Development, the Pittsburgh establishment's vehicle for fighting urban decay. And the Hillmans, of course, were primarily responsible for the recently completed $12-million Hillman Library at the University of Pittsburgh.

What is little known, however, is that through Hillman Land, the family investment holding company (recently renamed the Hillman Co.), Henry Hillman owns, controls or otherwise influences enough other companies to make most conglomerators green with envy. He is a director of no less than ten major companies, including National Steel, Cummins Engine and Chemical Bank. Through Pittsburgh Coke & Chemical, he either owns or controls half a dozen fair-sized companies, involved in such diverse areas as concrete pipe, sporting goods, power shovels, aircraft parts and air transport. He is the largest stockholder in the Pittsburgh National Corp., the town's second-largest bank (after the Mellon National, naturally); Texas Gas Transmission; Global Marine; Wheeling Pittsburgh Steel; and Copeland Refrigeration. In addition, he has large and strictly private holdings in real estate (including Pittsburgh's 37-story Grant Building), barges, coal brokerage, Texas and Louisiana oil and gas, and assorted small manufacturing operations. Not counting the companies that Hillman merely *influences* as a director, the Hillman empire had combined revenues last year of roughly $1 billion, assets of around $3 billion.

Founded by Henry Hillman's father, John Hartwell Hillman Jr., the Hillman fortune is a rare example of real financial continuity. After more than a half century, the Hillman fortune is still growing—not through the ministrations of sharp young hired hands as in the case of the Rockefeller and the Kennedy fortunes, but under the daily guidance of Henry Hillman himself. Inheritor though he may be, he is also one of the most able businessmen in the U.S. today.

The Hillmans of Pittsburgh are an old family, having arrived in the U.S. as early as 1670. Like the Harrimans and the Mellons who came afterward, they were farmers who only later found their way into business. When that happened, they became blacksmiths first, then forge operators and finally iron workers.

By the time the Civil War broke out, Daniel Hillman, the first Hillman to make any large scale business in business, had established a rolling mill in Kentucky that turned out some of the best boiler plate and bar iron made in the U.S. The war ruined him, as it did most other Southern industrialists, but he managed to reestablish himself afterwards, and some time before his death he acquired the coal and iron ore properties near Birmingham, Ala., that his younger son, Thomas Tennessee Hillman, was to use as the foundation of the mighty Tennessee Coal, Iron & Railroad Co., now U.S. Steel's southern unit. In Daniel and T. T. Hillman were the first signs that the Hillmans might possess extraordinary business talents.

Daniel's older son, John Hartwell Hillman,

who was Henry Lea Hillman's grandfather, started out in the family business but in 1886, after his father's death, he moved to Pittsburgh and set himself up in the coal and coke brokerage business. In those days, Pittsburgh was making millionaires by the dozen—Mellons, Fricks, Carnegies—but J. H. Hillman wasn't among them. He loved horses more than he did business, and he lacked both the interest and the drive to propel himself and his family into the ranks of the very rich. But his son, J. H. Hillman Jr., the man who was to become Henry Hillman's father, had drive enough for ten men.

Hart Hillman—as he was called to distinguish him from his father—began selling coke and pig iron when he was 18, and after his father's death, joined with a younger brother, Ernest, and Arthur B. Sheets in forming J. H. Hillman & Sons. It was a company that was to become very nearly as influential in Pittsburgh business affairs as T. Mellon & Sons had been a half century before.

"I just took the crumbs from the Mellon table," Hart Hillman used to say, but even the crumbs were sizable. In less than a half century, he created a second great industrial empire in Pittsburgh. It encompassed coal, iron and steel, chemicals, natural gas, transportation, manufacturing, banks, investments and real estate. The Hillman empire was neither so large nor so diverse as the Mellons', and it created no Gulf Oil or Alcoa. Instead, it emerged from the bits and pieces of other men's failures, opportunities missed and companies ruined and bankrupted. What is most remarkable is that it could have been done at all so late in the history of U.S. capitalism. The Hillmans almost missed the bus but, having caught it, rode it to the very end of the line.

The fact is that J. H. Hillman Jr. was the last of Pittsburgh's great industrial tycoons. In 1898, when he first began selling coal and coke, Pittsburgh businessmen still lived by the law of the jungle, and Hart Hillman learned to operate by those laws. Ironically, this was the very time when the robber barons on whom Hart Hillman modeled himself were beginning to yearn for respectability. In the Twenties, when the Hillman fortune was mounting rapidly, the Carnegie philanthropies were already well established, the Rockefellers had begun their great work in conservation, while the Mellons had already begun planning the National Gallery of Art.

Hart Hillman was not well beloved in his home town. He built his fortunes in a world where the robber baron had gone out of fashion. "At the time he was growing up as a businessman," his son Henry says gingerly, "people operated differently from what they do today. Their methods were a lot rougher, and in later years he tended to be rougher and tougher than a lot of his contemporaries."

Even in memory, Hart Hillman seems to come out of an earlier time, redolent of cigar smoke, frosted glass and oak-wainscotted offices. He always worked in his vest and shirt sleeves, his coat off, but his hat on—and a derby hat at that. He got into the office early, left it late and rarely got out for lunch. "He was one hundred percent business," as one friend puts it, "one hundred percent work. He didn't have any social life to speak of. He didn't play golf or support the symphony. He didn't hang out at the Duquesne Club, and he wouldn't have been caught dead in Rolling Rock, where the Mellon crowd circulated. Hell, they wouldn't have let him in."

He was a big man, six-feet-two or three, with a personal style to match. He was profane and earthy, brusque, inclined to rant and rave, to play the bully. "He was always in a hurry," his son recalls. "I think that created a lot of his impatience and frustration with people. He always wanted to force things." And he hated publicity. As one old employee recalls, "The first thing Hart Hillman said when I went to work for him was, 'You know, I hire public relations people to keep me out of the press. That's different than others,' and he emphasized that whatever he did or whatever I was going to be doing with him was never to be made public."

"He was just a damned aggressive businessman, and I guess he kicked a few people around," says William Renchard, chairman of New York's Chemical Bank, in which the Hillmans have had an important interest for two generations. "He was a big man, and he was very strong. Very strong-*looking*. And tall. A very forceful man. In that environment, anybody who put together a bundle as big as J. H. Hillman did was bound to rub some people the wrong way."

"He was a very tough operator," says George M. Humphrey, Eisenhower's Secretary of the Treasury and former chairman of Hanna Mining, who was associated with Hillman in several deals. "He was smarter than most people and worked harder and out-traded a lot of them, and that's what they objected to. But we never had any trouble of any kind."

The formation of J. H. Hillman & Sons in 1913 marked the beginning of the Hillman fortune. Eager to protect himself both on the demand and supply side, Hillman branched out beyond the brokerage business into the ownership of coal mines, barges, coke ovens and blast furnaces. "This was the era when people could really make money in the coal fields," says Michael Budzanoski, president of the United Mine Workers' Pittsburgh Office. "It was a vicious business, and you had to be on your toes or you ended up in the gutter."

Hillman stayed on his toes. Within 20 years he had established himself as one of the Big Four in the coal industry—along with Pittsburgh Coal, Union Collieries and Westmoreland Coal. By 1935 the various Hillman companies operated 15 mines, produced 1.1 million tons of coal a year, and boasted reserves of more than 225 million tons.

Hillman's great ambition in those days was to win first place in the coal industry, and during the Depression he tried repeatedly to take over the industry's largest producer, Mellon-controlled Pittsburgh Coal. Pittsburgh Coal was losing money, and the Mellons no longer had much interest in it. "Hart worked very hard to make a deal with the Mellons for Pittsburgh Coal," George Humphrey recalls. "Then he'd really be in the coal business." But the Mellons refused to sell. That was their privilege and his misfortune. It was not George Humphrey's misfortune, however. A few years later, Humphrey's M. A. Hanna Co. acquired Pittsburgh Coal which, as Consolidation Coal, became the largest and most profitable coal producer in the world.

As his Pittsburgh Coal gambit suggests, for Hillman depressions were always as much opportunities as they were hazards. It was no accident that most of the important Hillman coal ventures—Hecla Coal & Coke, a 1917 consolidation of four companies; Hillman Coal & Coke, a 1924 consolidation of six others; Emerald Coal and Coke, 1931; and W. J. Rainey, 1939—came under Hillman's domination in the wake of major recessions. Hillman always kept cash on hand for picking up bargains. Even in the late Forties, when the coal industry was in chaos and Hillman himself had begun to withdraw from coal production, he was trying to pick up for back taxes a 2,600-acre tract in Greene County, Pa. that had once been part of the Thompson coal empire. "He knew the value of cash," says British-born D.G. (for Douglas George) Sisterson, 75, his accountant for four decades and now chairman of the Hillman Co., "and he didn't go any deeper into debt than he had to. In other words, he didn't believe too much in leverage."

In a depression, of course, the real trick is to distinguish value from price, to tell a potential bargain from a potential bankrupt. But Hillman had the knack. In 1931, for instance, when he decided to buy up the Emerald mine and its adjoining coal lands, some of his partners thought he was crazy. The property, after all, was failing. But Hillman saw the Emerald's inherent worth—its enormous reserves of high quality metallurgical coal, its strategic location on the Monongahela River—and bought it anyway. "He could see the long-range success of that property," Sisterton says, "as against others." Now under lease to Gateway Coal, the Emerald mine returns the Hillman Co. around $1.8 million in annual royalties.

Hillman's rougher side also showed up during the Depression in his talent for buying out minority stockholders at extremely favorable prices. "The company required money to modernize it," says one such minority stockholder. "Mr. Hillman advanced the money, but instead of its going into modernization it was dissipated in operating losses. As minority stockholders we were finally compelled to object. It was a question of ineptitude, I suppose. But we weren't ready to put up the additional capital ourselves. So Mr. Hillman bought us out, paid us maybe a few cents on the dollar."

At the same time that Hillman was expanding in coal, he had also begun acquiring dominant interests in a half dozen or so of Pittsburgh's smaller banks, and for the next 30 years he maneuvered and plotted to put them all together. His motives were elementary. Not only could you realize significant economies in bank mergers, you could also do more with a big bank than you could with a small one.

It took nearly a half century and three major mergers (the last in 1959, only two weeks before his death) but he finally succeeded in merging them all into the Pittsburgh National Bank. "He wanted to see it done," PNB's President Merle Gilliland says, "not because of any personal satisfaction—he was ill by that time, and it didn't mean that much to him anymore—but he saw the *economic* advantage. He was very emotional about it. And when the merger was finally approved he was a very happy man."

Without the banks and the financial support they could give him in expanding his operations, it is doubtful that Hillman would have been able to come so far so fast. In the late Twenties he established an important alliance with New York's Chemical Bank. Chemical had been trying to expand nationally and when the Mellon Bank refused to give it the time of day, Chemical turned to Hillman and his extensive connections for business. It got plenty. For years Hillman was Chemical's largest single customer.

"He was the one important businessman in Pittsburgh," says Chemical's William Renchard, "who didn't kowtow to the Mellons. In those days, in the Thirties, the Mellons didn't like him much. They hated his guts. Somehow or other he must have kicked them in the shins or gotten something they thought belonged to them. If you're in Pittsburgh and you buck the Mellons, you've got to be pretty tough."

Hillman was tough, no question of that. The man who refused to kowtow to the Mellons did not tremble even before the house of Morgan. In the early days of the Depression, when the Missouri-Kansas Pipeline Co. needed money to complete the construction of its Panhandle Eastern and Kentucky Natural Gas subsidiaries, they turned to Hillman. Panhandle had ambitions of building into Columbia Gas' territory, and Columbia, which had a half interest in Panhandle, feared that when its system was complete, Panhandle would have the financial strength to do so. "There was terrific pressure on Hillman to keep him from doing it," one Panhandle official recalls, "but he

thumbed his nose at the House of Morgan, which of course controlled Columbia Gas, and loaned them the money. It took a lot of courage."

And so, in 1931, Hillman loaned $6 million to Missouri-Kansas and its Panhandle Corp. subsidiary, which with Columbia Gas owned Panhandle Eastern Pipeline. Within a year, both MoKan and Kentucky Natural were bankrupt, and in the end Hillman wound up with all of Kentucky Natural's stock and most of the stock of Panhandle Corp. It was these Panhandle holdings that a few years later brought down upon Hillman a landmark antitrust suit in which he was charged with having conspired with Columbia to keep Panhandle from moving into Columbia's markets.

"So Hillman spent 13 years working out his investment," Sisterson says. "He had the foresight to see what could be done, and the other creditors didn't, so he bought them out. But it was a rough time, between the money going out in legal expenses and operations and things like that." With Kentucky Natural in his control, Hillman next acquired Memphis Natural, and finally realized the only way to make the two pay off was to build the Texas Gas pipeline from Texas all the way to Ohio and tie them together.

The risks were enormous, Sisterson recalls. "They had to finance the total pipeline, and they had to get it certified by the Federal Power Commission. I remember—the day I think was March 31, 1948—J. H. Hillman Jr. was literally pacing the floor, because they were committed for $60 million in debt, they had been drawing against it—making purchase contracts for gas, sales contracts for deliveries at the other end, buying pipe and so on, and this was the last day for the FPC to certificate the line. The certification came through. But if it hadn't, I don't know what might have happened."

Coal, however, remained Hillman's first love. He was now both a broker and a producer. But whenever business slackened off, it was independents like Hillman who felt the crunch first. "If a coal mine is operating," Sisterson says, "it does right well. But if it isn't, its costs still remain pretty high." And so, in the Twenties Hillman began acquiring interests in a number of potential customers—in coke and iron companies, in steel producers and fabricators—in any sort of company that might conceivably use Hillman coal—A. M. Byers, the wrought iron producer; National Supply, the oil well pipe makers; Sharon and Pittsburgh Steel. Thereafter, when Hillman customers cut back their coal requirements, some other supplier would be the first to go. But with Hillman, one thing always led to another, and in 1927 he dumped his industrial holdings into an investment company, Pennsylvania Industries, sold stock to the public, and used the proceeds to expand even further.

As Hillman's interests multiplied, outside stockholders complained periodically that he ran the various companies he controlled for his own benefit—and apparently not without some justification. On one occasion, they charged that Hillman-controlled Pittsburgh Steel had bought some securities from another Hillman company at much too high a price. On another, they charged that Pittsburgh Steel had made much too favorable a contract with Hillman Coal & Coke to manage certain of its coal and coking operations. Certainly, to an extent at least, the Hillman companies were run for each other's benefit if not directly for J. H. Hillman's.

What made Hillman especially vulnerable is that he rarely acquired anything like majority control in the companies in which he had an interest. He rarely needed to. In Hart Hillman's hands, a 15% stock interest was often as good as 50% in anyone else's. Better. By sheer force of personality he could often domineer his way into control of a company. "J. H. *was* a pretty dominant personality," Sisterson says with a grin.

Nowhere is Hillman's ability to get the greatest possible mileage out of his limited resources more evident than in his foray into the steel industry during the Thirties. Hillman's Pennsylvania Industries had had an almost 10% interest in Sharon Steel ever since the Twenties. Then, in 1930 it acquired a 120,000-share block of National Supply, the oil well pipe maker that is now part of Armco Steel. Hillman went on the National Supply board and for a time even acted as chairman.

During the worst of the Depression, Hillman was content to sit tight. Then, in 1936, Sharon Steel picked up a 15% interest in Pittsburgh Steel, enough to put Hillman on the Pittsburgh board and Sharon's president in as head of Pittsburgh. A merger of the two companies seemed inevitable—indeed, for seven, the two companies shared common officers—but Hillman was thinking bigger than that. In 1938, he sold Pittsburgh his National Supply holdings for a 28% interest in Pittsburgh Steel. Thus, in one stroke, he tightened his hold on Pittsburgh, without perceptibly loosening his grip on National Supply.

But for all his wheeling and dealing, Hillman was never able to work out his mergers. Pittsburgh and Sharon came to a parting of the ways in 1943, and a year later National Supply's management sought to throw off Hillman's domination, charging that, in controlling National Supply, Hillman was in violation of the antitrust laws. In response, Hillman launched a proxy fight and lost, just as two years later he was to lose a similar fight for control of Alan Wood Steel.

What went wrong? For one thing, Hillman never really acquired enough stock to control either Sharon or National Supply. More basic than that were the brass-knuckled tactics that alienated the managements of both companies. "They didn't like Hart Hillman," a close associate of the time says. "It's as simple as that." Hillman's objectives were sound, however. He saw quite correctly that Pittsburgh Steel needed a merger if it was ever going to be any more than a marginal producer. But he clearly lacked the talent to bring it about.

Hillman's whole business experience *had* trained him perfectly to capitalize on the opportunities presented by the Thirties, however. It was no accident that none of the Hillman banks went bankrupt, though there were admittedly some close calls, and it was no accident either that he eventually succeeded in working his way out of virtually every bankrupt industrial company he got caught in.

But it required great patience and often considerable operating talent. Take Pittsburgh Coke, now one of the main pillars of the Hillman fortune. The company went into business in 1928 as Davison Coke & Iron, and in order to get part of its coal contracts, Hillman in 1929 agreed to help finance its expansion. Davison went into default, however, in 1932, and though Hillman and another creditor, W. J. Rainey, Inc., worked out a temporary reorganization, it wasn't enough, and in 1935 the company went bankrupt.

Hillman spent the next several years attempting to rescue his investment, liquidating what was not worth preserving and merging into it other companies that would strengthen it. By the end of World War II, Pittsburgh Coke & Chemical, as Davison had been renamed, was a small but remarkably well integrated little company. It turned its own coal into coke and then converted the by-product tars and gases into chemicals. It used the coke to make pig iron and the slag that was left in the manufacture of cement. A small company admittedly, but for a time at least something of a jewel.

In Pittsburgh Coke, Hillman found himself in partnership with George Humphrey and the M. A. Hanna Co., which, like Hillman, had been a Davison creditor. "J. H. was a great admirer of George Humphrey," Sisterson says. "He liked the look of the Hanna Co.—the way they had it set up, and the way the thing worked for the Hanna family." A coal and iron ore mining company, Hanna had made major investments in some of its principal customers, thereby cementing the supplier-customer relationship. The resulting combination of dividend and operating income produced considerable stability of earnings. "To some extent, Mr. Hillman patterned his own operations after the Hanna Co.," Sisterson says, "and he did quite well." Which explains the hybrid structure of both Pittsburgh Coke and the Hillman Co.: half operating company, half investment company.

By this time, Hillman, like T. Mellon before him, had earned a fairly widespread reputation as a forecloser. Davison wasn't the only example. There were, among others, the Bellefield Co., proprietor of Pittsburgh's once fashionable Schenley Hotel; the Pittsburgh Terminal Railways; even W. J. Rainey, Hillman's old partner in Davison Coke & Iron.

In the early Thirties, Hillman had sold Rainey some coal properties, and Rainey had paid for them in mortgage bonds. During the 1938 recession, however, Rainey defaulted on the bonds. But Hillman didn't foreclose. Instead, he lent Rainey the money to pay the interest and would have lent more. But unexpectedly Rainey went into voluntary bankruptcy—"They must have thought they could get a better deal," Sisterson comments—but that didn't help Hillman's reputation any. "Some of the things that were said about him were just not so," Sisterson says. "I knew the facts, but Mr. Hillman shunned publicity, so nobody ever knew."

"I know they called him a pirate," says a former colleague, "but I never saw any of it. He was very generous. Brusque, sure, but really considerate. He knew I was pressed for money, and he told his people, when my bills came in, to pay them promptly. They were paid almost before they got there."

"He was a hard taskmaster, the old boy," Sisterson says, "but I survived, and I enjoyed it. I liked him. I admired him. But it was never easy."

"When you know someone as one does a father," says Henry Hillman, "you see him in a completely different light. Deep down, he was a soft, warm person. He really loved people. He was, I felt, wonderful to his family. I had just the finest relationship in the world. It was really unusual."

"His insides were just made of melted butter," says Elsie Hillman, his daughter-in-law, Henry's wife. "He had more people that he sort of took care of over the years, people he'd been kind and good to for no apparent reason other than that they'd got a little piece of his heart somewhere along the line."

J. H. Hillman's wife died in 1940, and in 1948, at the age of 68, he was married a second time—this time to a 43-year-old divorcee, Dora Keen Butcher Russell, a sister of Philadelphia stockbroker Howard Butcher III and mother of two young children whom Hart Hillman adopted as his own. "Some time after he married," says Chemical's William Renchard, "I went into his office, and he had his hat off and his coat on. And I said, 'I see there's been a change—from a hat and no coat to a coat and no hat.' She was a very fine lady, and she changed his office, but she couldn't change him in other ways."

During the last decade of his life, J. H. Hillman began to consolidate the gains he had made during the Thirties and during the war. He sold off his interests in Alan Wood Steel, A. M. Byers, Sharon Steel and National Supply. He liquidated Pennsylvania Industries, and he even began to withdraw from the coal business. He found he could do better leasing or buying and selling coal lands than he could operating them. What remained were the four companies that stand as monuments to his business talents: Pitts-

burgh National, Texas Gas, Pittsburgh Coke and Pittsburgh Steel (now Wheeling Pittsburgh). Singly or together, they are no inconsiderable achievement.

"He certainly wasn't interested merely in amassing money," Henry Hillman says. "He felt—and I certainly feel—that business can be a lot of fun. You're dealing with interesting people, interesting problems. It's a very active and challenging game, with the signals always changing, the circumstances changing. I think he just loved it."

"Hart Hillman liked business," one longtime associate observes. "He liked it the way A. W. Mellon liked business. It was part of the spirit of the age . . . the Harrimans . . . the Vanderbilts. . . . It was an amazing financial triumph, wasn't it?"

At 50, Henry Lea Hillman projects almost perfectly the image of inherited wealth. A tall man like his father, blond, trim, athletic, he must once have looked like one of those golden people in Scott Fitzgerald's novels. But he is somewhat older than that now. His hair has begun to thin, the lines in his face have deepened. Yet there remains some of that special grace about him. His manner is easy and self-assured, courteous, the speech measured, almost painfully judicious, broken with quick nervous smiles that wink on and off like a warning signal.

Despite his considerable reserve, he has in recent years assumed fully the public responsibilities of great wealth. He was a member of Pittsburgh's Urban Redevelopment Authority for over a dozen years, a director of Children's Hospital, a trustee of the University of Pittsburgh.

But it is as president of Pittsburgh's Allegheny Conference on Community Development that he has come into his own. At his instigation, the Allegheny Conference has shifted its emphasis entirely—from rebuilding the physical city of Pittsburgh to rehabilitating the human one—to finding jobs for its ghetto residents, retraining them, finding the backing to enable them to start their own businesses. A hardly revolutionary program, it is true, but a significant one in a city where the business response to the urban crisis has been to install bullet-proof glass in the Duquesne Club's windows.

"In respect to the public good," says Pennsylvania Congressman William Moorhead, "Henry's moving in almost exactly the same direction that Richard K. Mellon was twenty years ago."

His civic and philanthropic activities notwithstanding, Henry Hillman is not simply an inheritor of great wealth. He is an accumulator in his own right, and he gives every sign of intending to remain so. Over the past decade, he has taken the fortune he inherited from his father and transformed it, restructured it, and multiplied it many fold. By just how much, Henry Hillman refuses to say. But if Pittsburgh Coke & Chemical, the one public company whose fortunes he has been directly responsible for is any index, the Hillman fortune has probably tripled. Since 1958 Pittsburgh Coke's net asset value has risen from $36 to $118 a share, its common stock from 21 to over 100.

"There are as many opportunities now," Henry Hillman says, "as there were when my father was alive and as I think there will be in the future. Our method of operating is very different from what it was then, but basically I think the objective is the same—to put two or more things together to make a better package."

Considering the varied temptations that beset rich men's sons, it is fairly rare for so dominant a personality as J. H. Hillman to produce a son both able and willing to succeed him. His older son, John Hartwell Hillman III, successfully resisted any attempt to propel him into the family business, preferring instead to run a series of small businesses on his own. But his son Henry became not only a businessman but an immensely capable one.

Henry Hillman went to Shady Side Academy in Pittsburgh, then to the Taft School and to Princeton, where he majored in geology. After three years as a Navy flyer during World War II, he went to work for Pittsburgh Coke, getting to know that company thoroughly, and then, after attending Harvard's advanced management course, began acquainting himself with the rest of the Hillman empire by serving as a director of the various Hillman companies. And finally, at 37, in 1955, he became president of Pittsburgh Coke.

"I think every father likes to see a business continue if he's gotten it going," Henry Hillman says, "but I believe I always intended to go into business. I was pretty well raised on it. My father talked with me a great deal, exposed me to business through plant visits, discussions and conversations. I started to work summers when I was about 16. But I never really—all the time he was alive—worked directly for him, which I think maybe was a good thing—not to have one's father looking over one's shoulder. Later when he became ill, I was able to help out on projects he's been working on."

But once he took over at both Pittsburgh Coke and the Hillman Co., Henry Hillman made it abundantly clear that he was his own man, with his own distinctive style and his own distinctive talents. He does share his father's reserve—that reticence, that distaste for publicity—and his considerable business talent. But in his personal style he is almost everything his father was not.

"Some people have to rant and rave to get things done," says Merle Gilliland, president of the Pittsburgh National Bank. "Henry doesn't. I've never heard him raise his voice. But he tells you how he feels. You know he's either with you or not." Yet, for all their differences, father and son often seem basically much alike.

Over the past decade, Henry Hillman has liquidated a large proportion of his father's empire with a dispassionateness that would have done Hart Hillman proud. J. H. Hillman & Sons, the company his father founded, is no more, having been merged into the Hillman Co. two years ago, and even the traditional Hillman companies are gradually being set adrift. The Hillman interest in Pittsburgh National and Texas Gas is well below 10%. And currently, Hillman, in effect, is getting out of Wheeling Pittsburgh, having cut his interest from 6% to under 1%. As it is, he does not even have a stock interest in Texas Gas anymore, save through the Hillman Foundation. Only Pittsburgh Coke—the company Henry Hillman has rebuilt in his own image over the past decade—is likely to remain a major Hillman property, and, with the Hillman Co. in possession of 90% of its stock, Pittsburgh Coke in effect has just gone private. "We have no long-term commitment to any investment," Henry Hillman explains. "We feel we have to be completely flexible."

Different times and different circumstances obviously dictate different courses. J. H. Hillman was concerned with building an empire, much of it during the Depression; Henry Hillman has been concerned with cultivating a fortune, primarily during the Boom. The result is that J. H. Hillman was always looking for something that was worth more than it cost, just as Henry Hillman keeps looking for things that cost less than they are worth. Fundamentally, one was a buyer, the other a seller; one concerned with value, the other with price. "When times change," Henry Hillman says, "*you* have to change."

Certainly in 1960, the year after J. H. Hillman died, Pittsburgh Coke did not look like a particularly dynamic company. Its coke and pig iron business was at a cyclical low, its by-product chemical business was suffering from overcapacity. Only its cement and activated carbon businesses were flourishing, and both of these were small. In the circumstances, any prudent businessman might have decided to diversify into something else. And Pittsburgh Coke did, moving into such new businesses as concrete pipe (U.S. Concrete Pipe), mining and excavating equipment (Marion Power Shovel), airlines (American Flyers), and aircraft parts (Standard Aircraft Equipment). But in order to do so, it quietly disposed of virtually all its original assets. The iron and coke division went to Shenango, Inc., the chemical divisions to U.S. Steel, the activated carbon division to Calgon and the cement business to Marquette Cement. Today Pittsburgh Coke does not have a single one of the major assets it had when Henry Hillman took over.

"In every case," Hillman says, "we saw another investment opportunity more attractive than the one we had before. Every move was evolutionary. It was a question of taking one step at a time, looking at each individual area and making a decision on it. It was not that what we had was bad or undesirable. It was just that we looked and found more attractive opportunities as we went along."

Obviously, this is no operating man's point of view. It is the viewpoint of the asset manager, and in the circumstances it is hardly surprising that within a relatively few years it transformed Pittsburgh Coke from an operating company into an investment holding company.

"In general, we look for a substantial appreciation in asset value," Henry Hillman says. "Basically you look at the arithmetic—the cost of what you're buying relative to a number of factors—its competitive position in an industry, for instance, and the outlook for the industry itself—and you make a decision. Like everyone else, we like to get into situations where management is good. We're not interested in moving in and taking over. The more decentralized you are, the freer you are to pay attention to the other opportunities that come along. We try to get into a variety of investments. Obviously some are quite secure, and we look for a much lower rate of appreciation than we do from something that's riskier. We try to set a balance between the two, which I think we've achieved."

There were signs of the change to come even before J. H. Hillman died. In 1955 Pittsburgh Coke exchanged its agricultural chemicals business for a half interest in Chemagro, a partnership with Farbenfabriken Bayer. Two years later, it sold its Great Lakes Steamship subsidiary to Wilson Marine Transit for cash and common stock. Significantly, both of these transactions involved at least the partial conversion of operating properties into investments, and for both Henry Hillman was primarily responsible.

But it was not until after his father's death that he was able to do what he wanted to with the company. "He'd been sick for a few years," Henry Hillman says. "Even though I was doing some of the things that the head of the company would do, I was not the head of the company as such, and it just was not feasible to move at the same speed."

Once in control, he moved very fast indeed. In 1963 Pittsburgh Coke notified U.S. Steel that its cash requirements were such that it was considering selling its Pittsburgh Chemical subsidiary, which happened to be one of U.S. Steel's major naphthalene customers. To prevent that and to preserve its "opportunity to compete for this business," U.S. Steel guaranteed $5 million in Pittsburgh Chemical bank loans, which were used to retire part of Pittsburgh Coke's advances, and bought a 25% interest in Pittsburgh Chemical for $2.6 million.

At the time, U.S. Steel was considering

entering the chemical business, and finally in 1964 it took the plunge, acquiring Pittsburgh Chemical's industrial chemicals and protective coatings divisions as the nucleus of what has since become USS Chemicals. Pittsburgh Coke had a book loss of $6.6 million on the deal, but it had eliminated $800,000 in annual operating losses, and it still retained PC's activated carbon business.

Pittsburgh Coke had also obtained the right to buy back at cost U.S. Steel's 25% stock interest in Pittsburgh Chemical (now renamed Pittsburgh Activated Carbon. That proved remarkably farsighted, because a few months later the Calgon Corp. approached Pittsburgh Coke about the possibility of acquiring Activated Carbon. The two were a natural fit. Calgon was a water-purification company. Activated Carbon produced filtering materials. And so, with U.S. Steel's 25% interest in hand, Pittsburgh Coke worked out a deal in December 1965 to sell Activated Carbon for $43 million in Calgon stock.

Meanwhile, Merck & Co., the big New Jersey pharmaceutical house, had decided to diversify, and it had settled on water purification as one logical extension of its existing skills and Calgon as a likely prospect for acquisition in that area. Calgon's executives were reportedly less than overjoyed at having the company sold out from under them, but, with a third of the stock, Pittsburgh Coke was in the driver's seat. And so, in January 1968 Pittsburgh Coke exchanged its 1.2 million shares of Calgon for 1 million shares of Merck, worth at that time something like $80 million.

Pittsburgh Coke now had 55% of its assets concentrated in a single security, Merck, and Henry Hillman did not intend to spend his life collecting Merck dividends. Last summer Pittsburgh Coke offered to exchange 557,913 of its 1 million Merck shares for the publicly owned common and preferred of Pittsburgh Coke itself. Worth $10 million when U.S. Steel had an interest in it, Pittsburgh Coke's Activated Carbon business had been transformed into stock with a market value of $93 million, an appreciation of 830% in just under three years.

Though Pittsburgh Coke common was then selling for less than 80, last February Hillman offered to exchange it for 1.1 shares of Merck worth roughly $95 a share *vs.* a net asset value at year's end of $105.20. "The exchange," Hillman says, "seems favorable to both those going out and those staying in. If they stay in, it certainly doesn't hurt them. If they want to get out, they get a good value."

Undoubtedly they do. Long range, however, the Hillman Co.—which held onto its Pittsburgh Coke shares—probably got the best deal of all. With the exchange complete, Pittsburgh Coke's net asset value has soared from $105 to $118 a share. In effect, the exchange was a way of buying underpriced assets with higher-priced paper.

"When he's got something that's fully priced," Howard Butcher III says of the Merck deal, "why, Henry's not adverse to selling it. That's the difference between a businessman and a really smart businessman. A lot of businessmen just buy things and forget to sell things. But Henry sells them just when they get to be ripe. He's very sensible and turns them into cash and puts them to work in the best place possible. The Merck is fully priced, you see, so he's selling it in effect—giving it to others."

In seeking new deals, Henry Hillman quite frankly shies away from large companies. "Smaller companies very frequently have greater appreciation possibilities", he explains. "Larger companies have reached a state of maturity, and it's more difficult to get a doubling of value within a reasonable period of time. But in small companies you can come in and talk to people, get to know and understand them, and generate the kind of spirit that can get them moving." What is most notable, of course, is Hillman's talent for transforming a small situation into a large one, an Activated Carbon into a Merck, or—almost—a SouthPly, and a U.S. Concrete into a Piper Aircraft.

In an effort to escape Chris Craft, Piper's management last spring was prepared to pay and pay generously, and Henry Hillman was ready to oblige. He was prepared to sell SouthPly, which had a negligible net worth, for $10 million in Piper stock, and U.S. Concrete Pipe of Florida, carried on the books at $8.4 million, for an additional $23 million in stock. Hillman would have wound up with close to a fourth of Piper's stock *vs.* 35% for the Piper family itself. But that deal never came off.

Hillman's basic method is, as he says, to put two or more things together to make a better package. Thus, Goerz Optical, which the Hillman Co. acquired in 1964, merged last year with an instrumentation company. Kollmorgen Corp., for 95,000 shares (10%). Nichols Aluminum (aluminum wire and sheet), acquired in 1965, was merged only last June with Homeshield Industries (aluminum building materials). And having acquired Melchior, Armstrong, Dessau in 1965, Hillman strengthened its existing businesses by acquiring Foregger (hospital supplies) and Bahnson (air-conditioning systems).

Like his father before him, however, Henry Hillman has generally shied away from the kind of venture capital investment that can afford really huge returns, the backing of brand-new companies. With one notable exception, of course: Global Marine, Los Angeles' contract offshore drilling outfit, and Global Marine turned out to be one of Henry Hillman's biggest and most successful coups.

Significantly, however, Henry Hillman didn't find Global Marine. Global Marine found him, sought him out to provide the capital the company needed to expand when General Tire unexpectedly backed out. "We went to him," GM's president, A. J. Field, recalls, "and he made a rather fast decision, for which we admired him. He's a good financial man, but basically, he's interested *subjectively* in things, looking for people, basically, to bet on. Henry's not a man to throw his weight around. He's a man who thinks in terms of broad concepts, things, rather than the balance sheet."

Henry Hillman also has his father's love of the deal—the ingenious maneuver, the dazzling coup—which is why, for all his aversion to publicity, you find him periodically on the fringes of what could become highly public situations. He risked public exposure last spring in getting involved in Piper Aircraft (and, as this story makes clear, finally got caught), just as he had done earlier in backing management at Copeland Refrigeration when industrialist Bernard McDonough made threatening takeover gestures a couple of years ago.

With McDonough on the scene, Copeland's chairman Frank Gleason worked out a deal to acquire a refrigerator distributorship from Hillman's Melchior, Armstrong Dessau subsidiary. "A number of companies in the business have bought up distributorships," Henry Hillman explains innocently, "feeling that if they understand some of the problems of being a distributor they'll be able to serve their other customers better."

Maybe so. But the purchase also put a large block of Copeland stock in friendly hands. Even more curious, Copeland bought the Hillman distributorship on approval—for 105,000 shares (7% of the total outstanding)—with the understanding that within a year it could, if it chose, sell the distributorship back to Hillman at cost—in cash, however, not stock. Outmaneuvered McDonough backed off and eventually sold out—to Henry L. Hillman. In the end, Copeland decided it didn't want the distributorship after all and sold it back to Hillman—for cash. By that time, however, Hillman's 105,000 Copeland shares were worth $4 million, *vs.* $2.2 million when he bought them, and with McDonough's shares in hand, Hillman had clearly established himself as Copeland's largest shareholder.

Unlike McDonough, Hillman—as he repeats constantly—has no interest in taking control of the companies he takes positions in. He usually becomes a director and he makes his views known, but that's about all. Pittsburgh Coke, he admits, has gotten involved recently in the reorganization of its American Flyers airline, a Pennsylvania-based supplementary airline. But that's because American Flyers' staff is small and hasn't the resources to do the job alone. "Being spread as widely as we are," Henry Hillman says, "we don't feel we can, or should, or care to try to operate things."

This is sound management practice these days, of course, but it is also the normal course of second-generation wealth. As the UMW's Pittsburgh chief, Mike Budzanoski, puts it, "When the founder of a fortune passes away, the family is often not interested in continuing in the same mode. When you're an industrialist, you're actually producing something, and there's a certain amount of hard work and heartbreak in that. But if you're a financier or an investment manager, you take your chances and manipulate your money in such a way as to bring back the quickest return. Like the Rockefeller and Kennedy families—most of them prefer to enhance their fortunes without actually getting their hands dirty."

Henry Hillman occupies a kind of middle position. He doesn't like getting his hands dirty as his father enjoyed doing. But he hasn't turned his back on active business as most scions of great wealth have either. Not by a long shot.

THE WASTED DEFENSE DOLLAR

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. KEITH. Mr. Speaker, over the years I have brought to the attention of my colleagues a large number of articles written by Everett Allen, the assistant to the editor of the New Bedford, Mass., Standard-Times. During the past year he has written two 12-part series on the ABM, both of which have appeared in this journal. These efforts have established him as one of the leading journalistic authorities on anti-ballistic-missile defense.

Most recently, Mr. Allen has authored a five-part series on "The Wasted Defense Dollar" which was published in the Standard-Times during the month of August. Concentrating on two case studies, Mr. Allen examines the inadequate contracting and supervisory practices which may have contributed to the sinking of the submarine *Guitarro* at its dock in San Francisco and to the high level of defects in oceanographic equipment purchased by the Navy. In his concluding essay, the author finds a solution to sloppy procurement practices in H.R. 474, a bill now being considered by the Government Operations Committee. This measure would establish a Hoover Commission to study Government contracting procedures. With the adoption of this legislation, Mr. Allen believes, ef-

fective congressional oversight of defense spending can be reasserted.

Mr. Speaker, in order to bring this thoughtful series of articles on wasteful defense spending to the attention of my colleagues, I include them in the RECORD at this point:

THE WASTED DEFENSE DOLLAR—I: TIGHTER CONTROLS OVER ARMS INDUSTRY DEMANDED

(By Everett S. Allen)

WASHINGTON.—American industry does not and cannot properly—have the responsibility for insuring a successful U.S. defense product.

Industry is basically motivated by profit and it must be, if it is to continue to exist. Therefore, industry cannot be counted upon to provide successful defense products without close government technical control. Ample experience indicates that industry does not want tight specifications and tight inspection.

This opinion, one of the most candid offered to date in the continuing colloquy on U.S. military-industry relationships, is that of Rear Admiral Hyman G. Rickover, director of the Navy's Division of Naval Reactors, and the "father" of the atomic submarine.

$44 BILLION ANNUALLY

The scope of what he is talking about may be judged by the fact that of a total of $50 billion annually spent in government procurement, $44 billion is spent by the Defense Department. There are 40,000 civilian Defense procurement officials, plus an additional 1,500 military personnel assigned to procurement matters.

This series of articles is principally concerned with detailed consideration of two Navy-civilian procurement relationships, one involving Navy Yard services, the other, the purchase of oceanographic equipment.

These examples were selected to show some of the weaknesses of the over-all military-industrial relationship because their simplicity of circumstance makes them easier to comprehend than many of the long-running contractual arrangements.

Admiral Rickover expressed his view, and related comment, during a closed-door session in the Capitol of the congressional Joint Committee on Atomic Energy.

He greatly impressed his listeners. In a lengthy interview with The Standard-Times—concerned primarily with this aspect of the admiral's testimony—Rep. Chet Holifield, D-Calif., chairman of the prestigious joint committee and a member of the House of Representatives for a quarter-century, commented, "In my opinion, Admiral Rickover is one of the most efficient buyers in the whole structure of government procurement.

DILIGENT IN DEMANDING

"He is diligent in demanding from industry the fulfillment of every contract on the basis of absolute compliance with quality specifications."

The admiral is disturbed by the Navy's present inability to achieve top quality in both goods and services provided by the civilian sector and, primarily, he blames both the Navy and the Defense Department.

He deplores the fact that no government emphasis is being placed "on assembling and training technical groups necessary to provide direct control of this complex work—technical groups that have the resources and ability to be, in fact, directly responsible for carrying out this difficult work—and purchasing groups that have the ability and training to obtain from industry contractual terms that are in the government's best interests."

In taking this position, Mr. Rickover, the Navy erudite, stormy petrel, once more needled some of his high-ranking colleagues and the Pentagon as well.

NO ONE RUNS STORE

However, among his allies is Robert A. Frosch, assistant secretary of the Navy for research and development, who commented, "As we are now behaving, we are using up our best people in filling out documentation for their superiors to read, and most of the time, no one is running the store."

To considerable degree, the principles and problems that bother the admiral may be broadly applied to the total government-industry relationship in defense procurement. This multi-billion dollar marriage is in need of major reform, principally because its guidelines and ground rules have lagged behind the revolutionary growth in size and sophistication of defense demands.

Some of the shortcomings, manifested in the massive loss of dollars, if not, in fact in lives, of which the admiral complains, are these:

1. The lack of a strong submarine design capability in the United States is one of the most important problems facing the Navy today, yet "it doesn't even appear to be recognized. The investigation following the loss of the Thresher should have made this abundantly clear to everyone, but it didn't. All that was done was to spend several hundred million dollars in the SUBSAFE program to patch up the mistakes of the submarine designers in going to deeper, and faster submarines than they were used to.

NOTHING DONE

"Nothing was done to establish a technically stronger submarine design organization to meet increasing new requirements. If anything, submarine design is less controlled technically today than it was when the Thresher was designed."

2. The whole tendency of the Navy is to do away with technical expertise and to have the "remaining people become 'managers.' This came forcefully to my attention several years ago when I started looking in detail into the non-propulsion area of the NR–1 design. I found that the Naval Ship Systems Command did not have even one person assigned full time to the non-propulsion aspects of the NR–1, regardless of the fact that the NR–1 will be the deepest diving nuclear submarine ever built. The people who know about submarine design had been assigned to administrative organizations.

"I wrote a rather forceful letter, and I got two people assigned responsibility for the non-propulsion aspects of the submarine. I also discovered that had I allowed the NR–1 non-propulsion plant design to continue the way it was proceeding, failures would quite probably have occurred. This further illustrated that considerable improvement was needed both in industry and in the Navy in submarine design capability."

The admiral added, "However, the way things are going, the technical proficiency of the Navy is being reduced every day. The Russians have taken advantage of this trend and now are clearly going to get ahead. That is my opinion and I will stick to it."

3. It is essential to the future welfare of the Navy that top Navy and Department of Defense management attention be placed on increasing the stature and authority of the technical groups charged with the responsibility of executing the Navy's technical work.

"If the current assumption that this work can be successfully turned over to industry is allowed to endure, the Navy will soon find itself exhausting its energy and finances to patch up the unsuccessful technical products it will receive from a loosely-controlled industry."

4. Another matter which bears directly on the problems of poor quality and high cost of our new and complex weapon systems is the lack of permanence of personnel.

For example, a survey of naval shipyards engaged in nuclear propulsion work showed that over a period of 18 years, one of the top three people—the shipyard commander who runs the shipyard, the planning officer who is in charge of all design work and cost estimating, and the production officer who is in charge of all construction—was replaced on an average of every six months in every one of those shipyards.

RAPID CHANGEOVER

Further, not one of those people in any yard held his job for more than four years, and even four years was a rare case. Said Rickover, "I don't think you can run a sophisticated technical business that way."

5. With specific regard to naval shipyards, the admiral recommends:

An immediate reduction at several of the yards of about 10 per cent of the workers—"the non-producers"—which, he believes could lead to increased efficiency. "I have visited the shipyards," said Rickover, "and I have observed the vast amounts of unproductive labor, and I have so reported this to the shipyard commanders and to the commander, Naval Ship Systems Command."

Relieving shipyard commanders of their military duties, such as area co-ordination, base commander, and public relations, which "take up most of their time to the detriment of their primary task. They then would devote their efforts only to the technical and production aspects of the yard."

Rickover concluded, "I see no point in Congress appropriating more than half our taxes for military purposes and not devoting time to seeing whether the money is properly spent. It is like giving a vaccination and not bothering to find out whether the vaccination has taken."

ACTIVE PROTAGONIST

Admiral Rickover is convinced that Congress "will have to become an active protagonist in overhauling the defense procurement process," which now has "many deficiencies and loopholes," because the Department of Defense has been greatly influenced by the industry viewpoint . . ."

Among other reforms in this process the admiral would like to see:

Uniform standards of accounting so that actual costs and profits can be readily determined, thus providing a sound basis for contracting;

Application of the rules of non-competitive procurement to all contracts that are not formally advertised procurements.

(During the period 1951–67, the Defense Department negotiated 86.1 per cent of the net value of its procurements, despite the clear congressional intent that procurements be made through formal, written competitive bid procedures.)

CENTRAL FILE

Establishment of a central government file on contractor experience, showing for each contractor such items as his actual delivery performance, exorbitant or unfounded claims he has submitted, the difference between original and final price of each contract performed, and the amount of excessive profit he has realized on government work.

Admiral Rickover concluded, "What I have said is essentially no different than what I have been saying for years in the Navy and to Congress. However, I am convinced that it will take a major catastrophe before anything is done . . ."

On May 15, there was a major catastrophe.

THE WASTED DEFENSE DOLLAR—II: COMEDY OF ERRORS SINKS ATOMIC SUB

(By Everett S. Allen)

WASHINGTON.—At 8:55 p.m., May 15, the nuclear-powered attack submarine Guitarro sank while tied up to the dock at the Mare

Island site of the San Francisco Bay Naval Shipyard.

The submarine had been under construction since August 1965 and was due to be commissioned in January 1970. It was refloated on May 18 and, after inspection, damages were estimated at between $15.2 million and $21.85 million.

A congressional subcommittee, headed by Rep. Samuel S. Stratton, D-N.Y., went to Mare Island, took 605 pages of testimony, under oath, from witnesses deemed most knowledgeable as to facts bearing on the sinking, and concluded that immediate cause of the catastrophe was "the culpable negligence of certain shipyard employes."

SLOPPY ORGANIZATION

Interviewed by The Standard-Times, Stratton commented, "The Mare Island organization under the admiral was sloppy, and he probably was not even aware of it. It was shoddy management."

Asked if the same thing could happen again, the congressman replied, "Congress can go only so far. Then it becomes an executive branch matter."

What the testimony taken at Mare Island reveals would be as unbelievably amusing as a French farce, except that, for want of the timely exercise of very little common sense and the taking of a few simple precautions, it concerns the wasting of millions of taxpayer dollars.

Moreover, the element of incredible human error recalls Admiral Rickover's complaint that, "It must be realized that, under existing rules, it is most difficult for shipyard commanders to get rid of anyone for cause, no matter how bad the person is.

IMMEDIATE STEPS NEEDED

"If the Department of Defense is actually in earnest about improving the efficiency of our Navy yards, it should take immediate steps to alter and simplify the rules so that Navy Yard management will have the same freedom as private yards to improve worker efficiency."

This is what happened to Guitarro:

4 p.m.: A civilian construction group (nuclear) began an instrument calibration assignment which required the filling of certain tanks, located aft of the ship's pivot point, with approximately five tons of water.

4:30 p.m.: A civilian construction group (non-nuclear) began an assignment to bring the ship within a half degree of trim. This entailed the adding of water to tanks forward of the ship's pivot point, to overcome a reported two degree up-bow attitude.

From approximately 4:30 p.m. to 7:45 p.m., the nuclear group continued to add water aft, and the non-nuclear group continued to add water forward. Neither group knew what the other was doing, nor were they apparently aware of each other's presence.

WAVES INTO MANHOLE

At 7 p.m., and again at 7:30 p.m., a security watch advised the non-nuclear group that the Guitarro was riding so low forward that a 1½-foot wave action, stirred up by boats operating in the river, was causing water to enter an uncovered manhole in the most forward and lowest portion of the ship's deck. These warnings went unheeded.

The open manhole is noteworthy. Guitarro's sonar operation is dependent on a number of large electronic components known as transducers. Sometime after the sonar equipment was installed, it was discovered that some of these components were faulty and would have to be replaced. To facilitate this work, a 3½-foot high cofferdam and a bolted manhole cover that had protected the opening were removed.

This occurred in early March and neither the cofferdam nor the cover ever was replaced. At the same the Guitarro went down, the manhole cover was on the dock and the cofferdam was in the storage warehouse.

Both the non-nuclear ship superintendent and the general foreman on the sub had a responsibility for protecting it from the threat posed by the open sonar dome manhole. The ship superintendent testified that the bolted manhole cover should not have remained off without a cofferdam around the hole.

NEVER NOTICED

However, he further testified that, although he made daily inspection of the Guitarro, he never noticed the uncovered sonar dome manhole and that no one ever brought the matter to his attention. In view of the fact this dangerous condition existed for two months before the sinking, this is an incredible bit of testimony.

A cofferdam could have been installed easily and quickly but the general foreman testified that, although he recognized the open manhole as a potential threat to the safety of the ship, he felt a sufficiently close watch of it was being maintained and, therefore, there was no need for a cofferdam. Unfortunately, no one was watching the night the Guitarro sank.

The swing-shift foreman, who was assigned the work of trimming the sub to correct a reported bow-down attitude, testified that he had never before attempted to trim a ship and did not feel qualified to do so. Moreover, although he was told that Guitarro was bow down, he had it checked by one of his workers, who reported the bow up two degrees, rather than down at all.

Obviously, someone was seriously in error and accumulated evidence suggests it is not beyond possibility that both the day shift and swing shift measurements were in error and that, as a matter of fact, the submarine actually was in trim and needed no adjustment of attitude at all.

As time went on, the non-nuclear group in the forward part of the ship was not having much success in reducing the up-bow attitude believed to exist. Presumably, this was due, at least in part, to the fact that the nuclear group was pouring several tons of water into the tanks aft.

So the non-nuclear group—since moving water to the forward trim tanks had not produced the desired result—decided to put water in the forward ballast tanks. What this operation means can best be understood from this comment by a submariner with extensive experience in submarine construction and operation: "To put water into a main ballast tank, to a person in submarines, is—you don't do this unless you want to submerge, or unless it is a very deliberate, controlled evolution."

7:45 p.m.: The non-nuclear group stopped adding water to the ballast tanks in preparation for their lunch break.

7:50 p.m.: The nuclear group completed their calibrating assignment and began to empty the tanks aft.

8 p.m.: The non-nuclear group left for lunch.

SUDDEN DOWN ANGLE

8:30 p.m.: The nuclear group completed emptying the water from the after tanks and a member of the group noticed "a sudden down angle being taken by the boat. At approximately the same time, the non-nuclear group and others, returning to the ship for lunch, observed it down sharply at the bow, with massive flooding taking place through several large open hatches.

8:30 to 8:45 p.m.: Efforts made to close watertight doors and hatches were unsuccessful due to lines and cables running through them.

8:55 p.m.: The Guitarro sank.

The evidence suggests that the relatively rapid emptying of the tanks aft was the final straw which tipped the bow the last fraction of an inch needed for rapid flooding of the sonar dome.

It also appears that, by flooding the forward ballast tanks, the submarine was put in a dive posture and that what it eventually did, therefore, was precisely what it had been designed to do—submerge.

NO CENTRAL CONTROL

What seems to have been principally lacking at Mare Island was centralized control and responsibility for all construction. A memorandum dated March 27 describes a meeting held on March 15 at which Guitarro's prospective commanding officer urged creation of a Mare Island agency that would fulfill this function. According to the memorandum, the suggestion was opposed by the shipyard representatives.

One enlightening paragraph of that memorandum reads: "CO 665 (the prospective commanding officer) pointed out the need for a central controlling agency in the non-nuclear construction areas of the ship. Shipyard representatives (Lampson and Sheldon) pointed out the fact that the shipyard had been in business for a long time without the need for such a procedure and no one had been killed or equipment damaged yet. CO 665 replied that they had been lucky."

On May 15, the shipyard's luck ran out.

Mr. Stratton's subcommittee recommended that the Secretary of the Navy take "immediate action" to establish and enforce clearcut lines of responsibility at all construction yards, and to instruct the Naval Ship Systems Command to "undertake an immediate and thorough survey of the construction practices and procedures in effect at all Navy shipyards . . ."

HARD TO CHANGE

Yet there is evidence that even the catastrophe of which Admiral Rickover warned, and which Guitarro represented, may not be sufficient to inject into the military-industrial relationship those relatively simple elements of communication, authority and responsibility necessary to prevent another "Guitarro." Change comes hard.

"What disturbs me most now," said Mr. Stratton, who holds the rank of captain in the Naval Reserve, "is that we had the commander of the Ship Systems Command before the committee the other day (Rear Admiral Edward J. Fahy), and he didn't give me a very satisfactory answer as to what they were doing, if anything, about our recommendations. I am not aware that they have, in fact, done anything about them.

"What happened at Mare Island was that no one person was in charge of the ship and responsible for it. Congress can ride herd on the executive, can point out that a situation like this needs to be corrected, but I can't see what legislative action needs to be taken, and we can't perform an executive function."

THE WASTED DEFENSE DOLLAR—III: CRAFTSMANSHIP LOST ART?

(By Everett S. Allen)

WASHINGTON.—On July 14, Dr. Jacques Piccard began a 1,500-mile submerged drift, Florida to Massachusetts, in the midget sub Ben Franklin, to study characteristics of the northward-flowing Gulf Stream.

Within the first three days, almost half of the scientific equipment aboard, provided by the U.S. Navy, was out of operation.

(The Ben Franklin is expected to surface today at a point about 300 miles southeast of Cape Cod, after drifting for nearly four weeks.)

Captain T. K. Treadwell, commander, U.S. Naval Oceanographic Office, commenting on failure of the oceanographic instrumention that reduced scientific effectiveness of this $10–$15 million project by 50 percent, sug-

gested as much as two-thirds of the gear might not work properly by the time the trip was ended.

TEMPERS CRITICISM

Nevertheless, Captain Treadwell's criticism of the industry that supplies Navy oceanographic equipment is tempered by several factors.

In an exclusive interview with The Standard-Times, he philosophized about the $10–$15 million a year spent by his office annually that makes the Navy the nation's largest purchaser of oceanographic instrumentation. It buys half of all the instruments in this field sold in the country.

He said, "There is nothing unique about either oceanographic instrumentation or nuclear subs. We face the same problem with cars, television sets and refrigerators. There is a general lessening of care and morality in production, an absence of the kind of craftsmanship we used to have. It is observable throughout most of our manufacturing industry.

"If we could just bring back some of the pride in craftsmanship, the element of responsibility that we used to have, most of the necessary improvements in quality could be achieved at no cost. It takes no more time to run a good solder joint than it does a cold solder joint that won't hold. A properly threaded nut takes the same length of time to tighten as a cross-threaded nut."

NEED MORAL REVOLUTION

But in the absence of such a moral revolution in manufacturing, Captain Treadwell turns to more immediately practical approaches.

In his view, "What really hurts is that we deal in small quantities. Ten items is a large run. We cannot have the routine checks that are practical in assembly-line runs of such mass-produced articles as television sets and automobiles. Our items must be hand-done, one-of-a-kind things that are individually checked, and this costs money."

Money may be the answer that is most practical, he suggests.

"Admiral Rickover suggests tighter specifications and closer supervision," Treadwell commented, and although we have gone somewhat in that direction, it poses a question.

"If you're going to put a man on the moon, you can't afford error, so you reduce the meantime between failures of components to an infinitesimal minimum, but you pay dearly for it. What we have to ask ourselves in oceanography—and presumably in other government procurement areas where such of life, are involved—is how much is reliability worth?

BALANCE COST AND NEEDS

"In our field, we have to weigh such values as the $5,000-a-day cost of operating a ship and intangibles such as having to wait for data. We have to strike a balance between higher quality control and higher costs, as compared with more assured performance and operations. Lunar modules and nuclear subs are examples of items in which quality is worth any price that it costs.

"It is not the same with oceanographic instrumentation, although I think we can spend a lot more on quality control. It looks as if we could reasonably spend 25–50 percent more for hardware without pricing ourselves out of the market; we would still be ahead, because of greater assurance of performance, even at that level."

The money to purchase better products is, of course, not necessarily available; at present, Navy oceanographers teeter in their procurement between buying a few better instruments, and many of lesser quality, attempting to keep going as broad a program as possible.

Treadwell thinks the situation is improving, in considerable measure, because of the National Oceanographic Instrumentation Center's (a relatively new federal unit for testing U.S.-purchased equipment) "strong campaign." He said, "They are convincing manufacturers that they must turn out quality products and price them at what quality costs and that if they do not, we'll return the products. It's working."

Consequently, he believes that NOIC should be more broadly applied in government procurement. Recent nationalization of the testing agency is a step in this direction and its facilities now are available to other government facets—for example, the Bureau of Commercial Fisheries.

NOT OUR OWN MASTERS

He also commented that:

1. "We are not our own masters in choosing contractors. We are required to give a certain percentage of work to small business, to depressed areas. I recall a particularly unfortunate example—a major ship contract awarded to a bicycleshop operation that went bankrupt, leaving three or four rusting, half-completed vessels and a lot of litigation.

2. "The necessity of accepting the low bid often overrides our better judgment. Astronaut John Glenn, at the lift-off of his historic triple orbit of the earth in 1962, is supposed to have reflected: 'Every component was purchased at the lowest competitive price.'"

3. "In the cases of perhaps one out of four companies to which we have to allocate business, we have serious misgivings as to whether they can perform at all, or at the estimated price. In the latter case, we know well that many companies underbid purposely, figuring on making it up on cost-plus programs."

4. "There ought to be some flexibility in the low-bid principle, and on the economic factors that pressure us to place contracts in certain areas. The principles are helpful, but we balk at not being able to override a decision if it appears to us likely to lead to catastrophic result."

SMALL COMPANIES RELIABLE

5. "Some of our best equipment comes from small companies. There's less to check, and the boss's eye is everywhere."

6. "We're moving away from the cost-plus contract. It's an open invitation to underbidding and cost overrunning. We're trying now for fixed-fee contracts or cost plus an incentive fee, with the 'plus' depending on how well the contractor does the work."

Captain Treadwell believes that oceanography is at a turning point because "we are beginning to stress its practical applications" and that this factor necessarily will force an upgrading in the reliability of oceanographic equipment.

He said, "From now on, we are not concerned with a trained technician, who can make inferior equipment work. We are increasingly concerned with merchant marine officers, fishing skippers, and untrained workers in military service operations who require reliability of instrumentation.

RELIABILITY NEEDED

"For example, in introducing science into the fishing fleet, which now is happening, we must make the scientific tools as reliable, and as accident-prone as the sextant.

"There is an economic incentive for the manufacturer in striving for this kind of quality for only in producing items for the lay user is he going to find a mass market. There probably are a hundred fishing skippers for every scientist, and what the fisherman demands for a scientific supporting tool is a rugged, simple piece of hardware.

"That is the direction in which we must go."

THE WASTED DEFENSE DOLLAR—IV: HALF OF OCEANOGRAPHIC GEAR FAULTY

(By Everett S. Allen)

WASHINGTON.—Oceanographic equipment purchased by the U.S. Navy has a failure rate of from 35 to 50 per cent, according to the National Oceanographic Instrumentation Center at the Navy Yard here.

These figures include only "catastrophic" failure; that is, something so expensive that the Navy cannot afford to repair it. In such cases, NOIC returns the equipment to the manufacturer with recommendations on how to fix it, at his own expense.

If the "catastrophic" yardstick were not used, if instead, every failure of equipment tested, for whatever cause, were included, the failure rate would "approach 100 per cent."

I asked an NOIC spokesman "Are you saying that every piece of oceanographic equipment you test here has something wrong with it that prevents it from doing what its manufacturer said it would?"

"Yes," he replied, "either a repair or an adjustment is necessary; for the most part, something that should be done, or should have been done by the manufacturer."

He added, "Personally, I think any failure, for major or minor cause, is 'catastrophic' if it prevents you from using the instrument."

NOIC, initially a Navy operation and only recently nationalized, is unique in the military-industrial relationship but the indications are that its function—testing equipment to spot poor quality—ought to be broadly emulated in government.

$250,000 PER MONTH

This agency examines $250,000 worth of oceanographic equipment per month, and an official commented, "I would hate to think how much defective gear the Navy accepted before we began this operation four years ago. Frankly, all of it may have been defective."

Moreover, NOIC publishes a widely distributed fact sheet identifying the equipment tested, and noting its failures, whether or not the manufacturer decides to make its recommended repairs or improvements. This is creating a new atmosphere of healthy skepticism summed up by one NOIC staff member who remarked, "We're just saying, 'Don't necessarily believe the performance claims in the manufacturer's brochure.'"

Involved in this testing are products created by fewer than 100 companies, supplying government oceanographic needs in a relatively non-competitive situation.

The equipment failure rate is increasing, officials agree, but they differ as to the reason.

One official suggested it is because the instrumentation required is more complicated. He said that "practically all the companies" supplying this type of gear to the Navy would "be dropped" if it were policy to exclude firms that had had one or more failures in their product.

UNIQUE REQUIREMENTS

But in defending industry, he added that the government has "unique requirements, special demands," and the manufacturer has limited research and development capabilities.

Referring to companies that repeatedly produce a poor product, he said, "Part of this is due to lack of official continuity. The people who evaluate a company's ability to produce are not responsible for its capability or output if it gets a contract. The people who must use the equipment are not the ones who decide whether the company is capable of making it."

An interesting development is the fact that the NOIC program is generally acceptable to industry, which finds its tests and recommendations helpful in the improvement of product, and which, in the words of one engineer, "usually is willing to take a piece

of gear back 100 times when we tell them what's wrong with it, and what they ought to do about it."

NOIC, with an annual budget of $1.3 million and a staff of 60, undoubtedly is saving thousands of dollars, breakdowns and loss of man-hours. Could this Navy-oriented program be generally applied to the military-industrial relationship, with resultant benefit to taxpayers and the military?

WOULDN'T ACCEPT

Replied the NOIC spokesman with a wry smile: "It would be murder all the way for the other services," presumably meaning that neither the military (the Defense Department) nor major industry would accept it.

It is only fair to note that the military's more sophisticated demands are not wholly responsible for the oceanographic equipment failure rate.

One Navy Oceanographic Office staf member offered these comments and examples:

1. Much workmanship is "pathetic" because of lack of industry quality control and it has been "sliding downhill" in recent years. Item: Long screws instead of short screws were furnished with a salinity and depth measuring device. When tightened, they "cut right through the plastic coating on the capacitors, and blew up the whole power supply."

2. Fifteen per cent of companies supplying Navy oceanographic equipment have a "consistently low performance rate, but we have to take the low bidder even if we know he can't perform."

3. Instruction manuals, "never updated," frequently are behind the model of the equipment produced.

LATE DELIVERY

4. A measuring system, part of a $440,000 contract was nine months late in delivery. When it arrived, it was damaged, because it had been improperly packed, and the units had to be returned. Three months later, the factory returned one of the units, with parts missing. Later, the parts were supplied upon request, but manuals for assembly and usage still have not arrived, and "this gear is supposed to go on a ship in two weeks." Considering that it costs the Navy $4,000–$5,000 per day to operate a ship, this fiasco represents a lot of working ship-days lost.

Incidentally, a unit of this system—characterized by poor workmanship—was run for one week, at the end of which time it was "completely inoperative."

5. Said the staff member, "I went to one plant that we buy from. I looked at the gear and said 'You ought to reject these items.' A plant supervisor said to me, 'I could reject them this morning, and they'd be turned back to me by my supervisors for shipment by tonight.' "

On another occasion, the Navy staffer said, "At one company, I looked at 18 current meters that were ready to roll down the line on their way to the Navy. I rejected all of them, for bad solder connections, after they had been OKd by the company representative. I think good quality control could knock down our rejection rate to maybe 10 per cent."

EXCERPTS FROM LETTERS

The following are excerpts from letters written by NOIC to manufacturers supplying oceanographic equipment to the Navy:

"Before an acceptance test of the unit could be performed, these actions had to be accomplished:

"1. The gearing in the depth channel of the recorder was very noisy and had to be adjusted;

"2. The guide rod that supports the chart paper was loose in the case and had to be reinstalled and secured in place;

"3. The gears in the salinity channel were not meshing; these had to be readjusted;

"4. The cabling for the sensor input connections in the rear of the recorder were reversed and improperly marked as listed in the instruction manual."

And in a second letter:

"The regulated power supply was lying loose inside of the cabinet. This was due to the holding brackets breaking loose;

"The continuous balance unit has one holding bracket broken loose.

"The bracket holding the toroid is bent.

"The machine screws for fastening the power supply and the continuous balance chassis were found loose in the bottom of the cabinet.

"The holding bracket for the power supply was broken loose.

"The holding flange on the continuous balance chassis is bent.

"The socket for the converter on the continuous balance unit is broken loose and damaged."

And in a third letter, "The (equipment) was received damaged because the crate was not marked 'Handle in horizontal position' although it was clearly intended to be handled that way."

And the fourth letter was from a manufacturer to the Navy: "Please forgive our oversight in failing to complete calibration tables provided with the equipment you ordered." This was in response to an NOIC complaint.

"This sort of thing is frequent," commented the staff member. "It goes on all the time, and as small, new companies come into the field, attracted by the increased amount of oceanographic funds available, the rate of equipment failure is bound to go up."

THE WASTED DEFENSE DOLLAR—V: HOUSE UNIT HAS REMEDY

(By Everett S. Allen)

WASHINGTON.—The House Committee on Government Operations on Aug. 6, approved a bill that could transform practices and policies of the federal government's $50-billion-a-year procurement program.

Essentially, the measure, H.R. 474, proposes establishment of a federal commission on procurement, patterned after the so-called "Hoover Commissions." These latter, consisting of members of the House and Senate, plus outside experts, were established for the purpose of studying operations of the Executive Branch and making recommendations for improvement to the Congress.

Due to the congressional recess, there will be no opportunity for House floor action until after Labor Day, assuming the Rules Committee clears the bill.

The architect of H.R. 474 is California Democrat Chet Holifield, who, as a 17-year member of the House Military Operations Subcommittee, has long been concerned with armed services procurement procedures, which amount to at least 65–70 per cent of total procurement funds spent.

HEARINGS CONDUCTED

Mr. Holifield, now chairman of the subcommittee, for two years has been conducting hearings on his bill and the parade of civilian and military witnesses—a virtual Who's Who of the Capitol and Pentagon—has contributed expert testimony filling five published volumes.

In an interview with The Standard-Times, Mr. Holifield who was a House member of the second Hoover Commission, predicted that the Operations Committee would report favorably on his measure, that it will be passed by the House before the end of this session of Congress, and added, "It is possible it also will pass the Senate in this session; if not, it will be on the agenda for 1970 action by that chamber. I am confident it will become law before the end of the 91st Congress."

The commission proposed by H.R. 474 differs from the Hoover Commissions in two respects. First, its role would be confined to a study of procurement only—in Mr. Holifield's words, "the many methods by which government dollars are transferred to private industry."

Second, in addition to members from the House, Senate and civilian sector, it would include as a working member the comptroller general of the United States.

This is because the comptroller is the administrative head of the General Accounting Office, which has the function of making post-audit investigations of government expenditures, with a view toward standardizing and improving the federal systems of accounting and bookkeeping.

FIFTY REORGANIZATIONS

Mr. Holifield, who as chairman of a government operations sub-committee has "handled more than 50 presidential reorganization plans, most of which became law," noted that GAO and its 6,000–7,000 skilled investigators, accountants and lawyers are "looked upon as an arm of Congress, and are answerable to us, rather than the Executive."

He feels that without GAO's help, the Congress would be largely helpless in this area, because "it fills the deficiency gap which Congress is responsible for in not developing a large, competent staff for each committee."

The Californian believes, as does Admiral Rickover, that "it is basically the responsibility of Congress that efficiency obtain in the Executive Branch." He referred to the 1946 Reorganization Act, which directs each committee of Congress to oversee the application of laws it passes, and to oversee the agencies within the committee's jurisdiction, for the purpose of observing the efficiency and economy of the Executive operation.

Commented Mr. Holifield, "This is a basic operational responsibility of Congress. Principally, the committees of Congress have failed to perform this job of oversight which Congress' own laws require it to do.

EFFORT MADE

"An effort is being made, but the effort is not enough, nor have the committees equipped themselves with adequate staff to do the continuous job of oversight."

It has been suggested that the post-audit function of GAO should be enlarged to include running audits or current scrutiny of programs of procurement in the Executive Branch. Mr. Holifield commented, "In my opinion this step will be taken before very long."

(On Aug. 7, the Senate voted to make major Pentagon contracts for weapons subject to the independent scrutiny of the General Accounting Office. The action was taken by a one-vote margin over the strenuous opposition of the chairman of the Senate Armed Services Committee, John C. Stennis, Democrat, of Mississippi.

(To amount to more than a symbolic assertion of the congressional control over the Pentagon this action, sponsored by Sen. Richard S. Schweiker, Republican, of Pennsylvania will have to be approved by the House, but there the Armed Services Committee, which will oppose it, is more generally influential with the membership.)

"The committees of Congress are calling on the GAO much more often for the purpose of investigating multi-year procurement programs while they are in operation, rather than waiting, as heretofore, to post-audit the programs after they are completed," Mr. Holifield added.

Specifically with regard to military procurement, the veteran West Coast lawmaker made these points:

1. Military procurement problems are further complicated by the fact that men in uniform can overrule decisions which the Civil Service personnel in their departments—who have more continuity of service and more experience—have made;

LESS ROTATION

2. The Military Operations subcommittee repeatedly has recommended that there be a cadre of "in-house" military people who are not subject to rotation, but who are retained in a department of procurement, being given for that service the same periodic promotions as those who are rotated.

"Until this is done," said Holifield, "we will never have the efficiency we should have in Department of Defense procurement.

"As we get into more complex and technical fields of defense hardware, it becomes more necessary than ever that we develop top-caliber expertise in buying. To develop this requires training in the scientific disciplines involved even to the point of having scientific degrees. It requires expert engineering capability and specialized business and fiscal training.

"What I am essentially advocating is that government procurement personnel have the same time of specialized training which obtains in comparable positions in the business world," the West Coast legislator concluded.

MARYLAND MARINE KILLED IN VIETNAM

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. LONG of Maryland. Mr. Speaker, Cpl. George F. Bonnett, a fine young man from Maryland was recently killed in Vietnam. I wish to commend the courage of this young man and to honor his memory by including the following article in the RECORD:

[From the Baltimore Sun, Aug. 27, 1969]

MASS SCHEDULED TOMORROW FOR BONNETT, VIET CASUALTY

A requiem mass for Lance Cpl. George F. Bonnett, a Baltimore marine who died of wounds received while leading a patrol in Vietnam, will be offered at 9 A.M. tomorrow in St. Dominic's Church, Hartford road and Gibbons avenue.

Corporal Bonnett, who was 19, was seriously wounded August 12 while leading a reconnaissance patrol, Corporal Bonnett's parents received a telegram last Sunday informing them that their son died August 16.

Corporal Bonnett was born in Baltimore and attended Archbishop Curley High School. He enlisted in the Marines a month after he graduated in June, 1968.

He received basic training at Parris Island, S.C., and parachute and reconnaissance training at Camp Lejeune, N.C., and Fort Benning, Ga. He was sent to Vietnam in January.

Corporal Bonnett was fluent in French, and received special training last May in the Vietnamese language. He was in the Marine Corp's Combined Action Program, in which he helped instruct Vietnamese soldiers.

In a letter written in February to his sister, Mrs. Irene Mogavero, Corporal Bonnett expressed the hope that the war would end before his nephews were of age.

Corporal Bonnett wrote: "It's not a pleasant experience seeing a man torn apart by a bullet or a fragment of a mine; it's not fun to take what's left of your friend and let him lay there until the chopper comes.

"I hope they never have to see or feel or experience what I have. It opens your eyes to reality. You're lucky to be alive and in the U.S.

"But, on the other hand, there will always be a Vietnam somewhere, someplace, and always a universal soldier."

Besides his sister, Corporal Bonnett's survivors include his parents, Mr. and Mrs. Jacob W. Bonnett, of Baltimore, and five brothers, Staff Sgt. James H. Bonnett, USAF (Ret.), John H. Bonnett, Jacob W. Bonnett and Dennis Bonnett, all of Baltimore, and SK 1 William R. Bonnett, USN, of Washington.

MY DOMAIN

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. DERWINSKI. Mr. Speaker, a very impressive and imaginative description of our great land written by the Fox College Creative Writing Class has just come to my attention and I insert it into the RECORD at this point as an example of the pride and healthy appreciation that Americans should have for our country. The description speaks for itself, as follows:

MY DOMAIN

In my domain, I have the greatest art collection in the history of mankind. I can say that someone knows and practices the art of basket-weaving, of tuning a piano, or even hitting a home run. In my domain there are many arts—as many as there are kinds of deliberate, specialized activities in which one may engage.

In my libraries, I have more books than were printed in the entire history of the world, up until the nineteenth century.

I have forest preserves and parks greater than most of the kingdoms of ancient, medieval, yes—and modern times.

Noah was a piker! Noah had two members of every specie of every animal known to man. I have a dozen of every specie. Why I have hundreds of every specie in my domain.

In my preserves I have hundreds of thousands of ducks—Mallards, Pintails, the green- and the blue-winged Teal. Canadian Honkers arrive every fall in gigantic formations—by the thousands. In my southern preserves are the most beautiful of all birds—an extravaganza in color.

I have trees now growing in my forests that were growing when Christ walked the Earth. Why I have glaciers sliding down to the seas that have been sliding for millions of years.

I have thousands of miles of rivers, seashores, lakes—beautiful lakes of unknown numbers—waterfalls, and mountains of forests.

My holdings overlook the giants in industry, education, and commerce—millions of fertile square miles, wheatlands, coal mines, and steel plants. It fairly makes me burst with pride.

My domain stretches from the rock-bound coast of Maine, past the sunny strands of California, to the golden beaches of Waikiki, from the frozen tundras of Alaska, to the Florida Everglades.

My schools are the greatest, my churches are the grandest! That's my domain.

Always—my Community Newspapers accentuate the positive.

The vast majority of my people are industrious, upright, honest, and hard working. They have the qualities and characteristics that have made my domain the greatest in the world.

You should see my western wonderland—the home of the geyser, the glacier and the Grand Canyon. You should feel the abysmal loneliness of Padre Island and visit Aransas Pass—the home of the Whooping Crane. Stand with me in the Alamo, ride through the Cumberland Gap, travel the Skyway to Valley Forge and Independence Hall. Weep with me at the foot of Lincoln's Monument. Proudly watch the guard in measured step honoring The Tomb of the Unknown Soldier—eternally.

I want you all to come visit my domain. Make yourself at home. You hear? Treat it as though it were your very own, because it is—you know! God Bless America!

THE LITERATURE OF CAMPUS CONFLICT

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. COHELAN. Mr. Speaker, indicative of the current concern about conflict on our campuses and about unrest and alienation in our young people is a marked increase in the literature on the subject.

Recently, in the San Francisco Chronicle, one of my constituents, Mr. Claude Ury, reviewed four books on this important subject. I think that these reviews will be of interest to the Congress and I include them in the RECORD at this point:

STUDENT CONFLICT, STRATEGY, A SHOW OF POWER

(Reviewed by Claude M. Ury)

(Book reviews: "Conflict of Generations," by Lewis Feuer. Basic Books; $12.50; "Confrontation on Campus," the Columbia Pattern for the New Protest. By Joanne Grant. New American Library (paperback, 95 cents); "Students Without Teachers," the Crisis in the University. By Harold Taylor. McGraw-Hill; $7.95; "Student Power," Problems, Diagnosis and Action. Edited by Alexander Cockburn and Robin Blackburn. Penguin Books (paperback, $1.25).)

Confrontation in the colleges across the nation are becoming more frequent and increasingly militant. They are no longer merely demonstrations for demands; they are also a show of power. Common characteristics of these rebellions since Columbus include occupation of buildings, the involvement of community people, fighting police, reluctance to negotiate. This last has had the anticipated effect of genuine confrontation—that is, the power of the students versus the power of the trustees and of putting professors up against the wall.

Feuer's book is the most definitive study on student movements. He surveys student movements in more than 20 nations, with particular attention to Russia, Bosnia and Germany in the 19th Century and Japan and the United States in the 20th.

"The pattern is the same in practically every country," said Feuer, who is Professor of Sociology at the University of Toronto.

"The movement, is rooted in altruism, a concern for establishing community and overcoming alienation. It begins by celebrating liberal democratic values and usually ends by discrediting those values for the whole society."

The movements, Feuer said, are typically led by young men who have had particular problems with their fathers.

"You can see this," he went on, "in one movement after another"; Karl Follen, the key figure in the Prussian movement; Gavrilo Princip, who assassinated the archduke, down to Mao Tse-Tung and leaders of American movements.

"These leaders read out to students in whom the problem is more attenuated. Then at some crisis—let's say the arrival of police on campus—the leaders appeal to generational solidarity and the struggle is finally revealed in its aspect."

The Grant volume assesses in great detail the events leading to the Columbia protest

and compares it to other student revolts nationwide.

Before Columbia the pattern of taking buildings had been established in several other schools beginning with the Berkeley Free Speech Movement at the University of California in 1964. At that time most observers tended to view the demonstrations as a Berkeley problem and to analyze the causes as related to that institution. Since then each campus outburst has been seen as peculiar to the campus on which it occurred.

At Columbia the students attempted to force the faculty as a whole to take a stand, but succeeded only in the lesser goal of exposing the faculty as unable or unwilling to separate itself from the institution and the faculty's stake in it.

THE REVOLUTION

Taylor's book is about the student revolution—how it started, what it means, and where it is going. With a sense of reasoned urgency, Taylor argues that students in the United States and abroad are major agents of social change, and that the universities must be reformed in ways which can give to student talents and energies a chance for expression in political, social, and cultural action. At present, the students are without teachers to whom they can give their loyalty, respect, and trust. They have accordingly turned to one another for the intellectual and moral leadership they fail to find in the university and the social system it represents.

After describing the character and history of the student movement, the author analyzes the relations between the mass culture and the educational elites, the nature of the present university crisis, the causes of student unrest, and the philosophy of education now dominant in American Institutions of learning. He urges a return to progressiveism in educational thought and action. The longest section of the book, the Reform of Mass Education, presents a series of concrete recommendations for reforming the system of teaching and learning to restore a sense of purpose and relevance to the work and students and teachers in the schools and colleges.

Taylor cities the instrument of educational change developed by San Francisco State College students in their experimental college with the result that the curriculum of the entire institution has been enriched

The Cockburn and Blackburn study, published in cooperation with the New Left Review, examines the real nature and international implications of student activism in Britain. Students have piecemeal grievances over discipline, examinations and grants. What is wrong with established student organizations? How does the student differ in the established universities, in art colleges and in teacher training colleges? And most important since students are often accused of fomenting anarchy, what is the strategy for the future?

CONGRESS CAN HELP SAVE THE BAY AND DELTA

HON. JEROME R. WALDIE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. WALDIE. Mr. Speaker, the popular effort to protect and preserve San Francisco Bay, its estuary, and the Sacramento-San Joaquin River Delta from probable ecological disaster by the planned diversion of some 80 percent of this system's normal fresh water inflows is gaining widespread support and publicity.

Instrumental in this effort is the effective contribution of the area press. An example of that support is an excellent editorial that appeared in the August 26, 1969, edition of the Antioch Ledger of California.

Mr. Speaker, it is my privilege to enter this editorial, "Congress Can Help Save the Delta," in the RECORD for the edification of the Members of Congress:

CONGRESS CAN HELP SAVE THE DELTA

Contra Costa County's fight to preserve the quality of Delta waters is a long, complicated battle, but it appears that momentum may be picking up.

The recently concluded Congressional Committee hearings are just a small chapter in the long saga, but they could well prove to be a significant turning point.

When the Committee on Conservation and Natural Resources studies all the testimony before it and comes up with a recommendation, we expect them to reasonably decide that there must be more safeguards to the Delta before the Peripheral Canal is built.

We expect that the testimony of oceanographers, marine biologists, and other water experts will override the obviously conflicting testimony of William Gianelli, director of the Department of Water Resources.

The committee, and Congress as a whole, is in a better position to assess the situation in the Delta than Gianelli, or, frankly, Contra Costa County officials.

Let's face it, Gianelli, if given a choice between fulfilling contracted water deliveries south and preserving the Delta, he would be expected to choose the former.

That's his job.

In the same light, Contra Costa County officials, if given the same choice, would elect to save the Delta and let the State Water Project fail.

It's our water.

We expect Congress can look at the problem from an over-all viewpoint, and demand a reasonable solution through its control over the federal purse-strings.

The over-riding principle in this water debate is that you may take excess waters from one area to help another.

No one will argue that we don't have excess waters. The flooding of Sherman Island is positive proof that there are years when Northern California has too much water.

But the application of this principle demands that you do not degrade the water of an area by shipping out anything but the excess water.

This is what the debate is about.

Contra Costa County has maintained that the Peripheral Canal can benefit the Delta waters if operated properly.

But the phrase "if operated properly" is the key.

The Peripheral Canal will not be "operated properly" if outflows of 1,800 cubic feet per second are used to maintain the quality of the Delta and San Francisco Bay waters.

The expert, impartial testimony bears that out, Gianelli's opinions to the contrary.

Yet it is exactly by those standards that the Peripheral Canal is proposed to be operated, as outlined in the 1965 Memorandum of Understanding.

Those standards may be raised after state hearings on water rights currently conducted in Sacramento are finished, but the balance of power, and the votes, in California rest in the southern part of the state.

We hope adequate water quality safeguards are established for our waters, so that the federal government will not have to do what the state should do for itself.

We do not think the State Water Project, with $2.8 billion tied up already, should be stopped.

But if adequate safeguards are not adopted for the Delta, enforceable in court, then there appears to be no alternative but to halt the project by whatever means necessary.

And one of those means is the Congress refusing to participate in the destruction of the Bay-Delta water system by paying for half of the Peripheral Canal, as presently proposed.

SENATE—*Tuesday, September 9, 1969*

The Senate met at 11 o'clock a.m. and was called to order by the Vice President.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal Father, as on this day we offer our tribute of esteem and affection for our fallen colleague, Everett McKinley Dirksen, may Thy grace be sufficient for all our needs.

Surround all who are near and dear to him with ministries of comfort and healing. And to us give Thy peace.

Through Jesus Christ, our Lord. Amen.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, communicated to the Senate the resolutions of the House adopted as a tribute to the memory of Hon. Everett McKinley Dirksen, late a Senator from the State of Illinois.

The message announced that the House has passed a bill (H.R. 11039) to amend further the Peace Corps Act (75 Stat. 612), as amended, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the bill (H.R. 7206) to adjust the salaries of the Vice President of the United States and certain officers of Congress, and it was signed by the Vice President.

HOUSE BILL REFERRED

The bill (H.R. 11039) to amend further the Peace Corps Act (75 Stat. 612), as amended, was read twice by its title and referred to the Committee on Foreign Relations.

DEATH OF SENATOR EVERETT McKINLEY DIRKSEN

The VICE PRESIDENT. The Chair lays before the Senate two resolutions of the House of Representatives, which will be read.

The assistant legislative clerk read as follows:

H. Res. 531

Resolved, That the House of Representatives accepts the invitation of the Senate to

attend memorial services for the Honorable Everett McKinley Dirksen in the rotunda of the Capitol on Tuesday, September 9, 1969, at 12 o'clock noon.

Resolved, That the Clerk communicate these resolutions to the Senate.

H. Res. 532

Resolved, That the House has heard with profound sorrow of the death of the Honorable Everett McKinley Dirksen, a Senator of the United States from the State of Illinois.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased Senator.

Resolved, That a committee of thirty-two Members be appointed on the part of the House to join the committee appointed on the part of the Senate to attend the funeral.

Resolved, That as a further mark of respect to the memory of the deceased, the House do now adjourn.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, September 8, 1969, be dispensed with.

The VICE PRESIDENT. Without objection, it is so ordered.

TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that there be a period for the transaction of routine morning business not to exceed 20 minutes, with a limitation of 3 minutes to statements made by Members during that period.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR SYMINGTON

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, after the Senate returns from its recess subject to the call of the Chair, the distinguished Senator from Missouri (Mr. SYMINGTON) be recognized for not to exceed 40 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT TO 10 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in adjournment until 10 o'clock tomorrow morning.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT FROM TOMORROW, SEPTEMBER 10, TO 10 A.M., FRIDAY, SEPTEMBER 12, 1969.

Mr. MANSFIELD, Mr. President, I ask unanimous consent that, at the conclusion of the business of the Senate tomorrow, the Senate stand in adjournment until Friday morning at 10 o'clock.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. In other words, the Senate will not meet on Thursday, so that those of us who wish to do so—and I am among them—will be able to attend the funeral services for our late and beloved colleague, Senator Dirksen, at Pekin, Ill.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, it is my understanding that at the conclusion of the remarks by the distinguished senior Senator from Missouri (Mr. SYMINGTON), the 3-hour limitation will go into effect, the time to be equally divided, as previously agreed to last week.

The VICE PRESIDENT. The Senator is correct.

NO WAR IS A GOOD WAR

Mr. SYMINGTON. Mr. President, at times it would appear that some of us do not realize what would be the effect of a full nuclear exchange between two or more countries.

With that premise, I ask unanimous consent that a recent most thought-provoking editorial from the St. Louis Post-Dispatch, entitled "No War Is a Good War," be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO WAR IS A GOOD WAR

Many Americans, including some in high places, are complacently toying with a dangerous idea—that our national interest would be well served by a war between the Soviet Union and Communist China.

That the friction between these two countries could actually come to war has long seemed incredible, but their menacing gestures and the continuing outbreaks of border fighting make the possibility less incredible every month. In the spirit of "let's you and him fight," unthinking Americans show an increasing tendency to welcome such a conflict. If the Russians and Chinese destroy each other, it is supposed, the United States can only gain.

History ought to tell us otherwise. Prior to World War II, many Americans and West Europeans tended to welcome the possibility of war between the Russians and Nazi Germany. Behind the psychology of Munich lurked the obscure hope that if Nazi aggression could be diverted to the East, Britain and France would be spared. It didn't work out that way. And even after the West had been attacked, no less a person than Harry Truman greeted the news of Hitler's assault on the Soviets with satisfaction. Let 'em kill each other off, it was said: good riddance!

The flaw in this reasoning was that every war produces a postwar situation, and when we came to think about the kind of world we would have to live in after a Russo-German war it became apparent that it was not in our interest to see all Europe dominated by any single power, whether it be Russia or Germany. We therefore found ourselves in the war on the side of Russia, which we had treated as an implacable enemy not so many years before.

The postwar situation that resulted was far from ideal, but nobody now doubts that it was infinitely preferable to one in which the Nazis would have emerged as undisputed masters of Europe and of Russia. Nor can it be doubted that the best of all outcomes would have been the avoidance of war altogether, had this been possible.

If today it seems wholly unthinkable that we could ever find ourselves fighting at China's side in a war against Russia, the logic of history tells us: don't be so sure. Should those two nations actually come to blows, it would not be long before Americans increasingly realized that conquest by either one would be to our disadvantage. We would not want to see the largest population mass of Asia controlled by Europe's largest power, nor European Russia controlled by China. Irresistible pressures would be set up to draw us into the conflict on one side or the other; and if nuclear weapons were used, as seems likely, we would suffer from the fallout as much as anybody else.

It is definitely not in our interest, therefore, that Russia and China should go to war. In the nuclear age no war anywhere can be complacently accepted. Our national welfare will best be served by a world of diversity, mutual respect, peace and independence. Ideologically we may oppose both China and Russia, but we are better off with both of them co-existing than with one conquering the other. As their own ideological affinities did not prevent the collapse of what used to be called the Sino-Soviet bloc, so our ideological differences need not prevent our living at peace with both, and encouraging them to do likewise.

What the United States can do to influence Soviet and Chinese policy is limited. But at least we can be clear in our minds that a Russo-Chinese war would make the world an even more dangerous place than it is, and that our interests call for doing what we can to prevent such a calamity.

THE AIR ROAD WILL WIDEN

Mr. SYMINGTON. Mr. President, as the various aspects of airpower continue to be discussed, I would hope that Members of the Senate would be interested in a superb address delivered earlier this year at the Wings Club by one of the truly great pioneers of aviation, Grover Loening.

In that for many years I have been emphasizing the importance of VTOL, STOL—and better still V/STOL—development, the conclusions reached by Mr. Loening were of special interest.

So as to show the extraordinarily wide experience of this outstanding author, who was an assistant to the first man who ever flew, as well as chief engineer of the U.S. Army Aviation Section prior to our entrance into the First World War, I ask unanimous consent that the preface to his address, written by Tore H. Nilert, president of the Wings Club, be printed at this point in the RECORD.

There being no objection, the preface was ordered to be printed in the RECORD, as follows:

PREFACE

In this seventh decade of the twentieth century we make much of the postulate that there has been more technological and scientific advance than in all the preceding history of man.

This is especially the case in aviation, for we have gone from Kitty Hawk to the moon in sixty-six years—in short, within the life span of men who are still with us and, more specifically, within the active working career of Grover Loening.

I do not know where Mr. Loening read the news of Kitty Hawk or what importance he attached to it at the time. But he was then only seven years away from his Master's degree in Aeronautics at Columbia, the first such degree ever awarded in America.

He has been continuously—and significantly—engaged in aviation ever since. He built his own first airplane, the Aeroboat, in 1912. He was assistant to Orville Wright in 1913 and Chief Aeronautical Engineer to the U.S. Army Aviation Section in 1914. He pioneered the first American steel frame airplane, rigid strut monoplane bracing and the first practical amphibian aircraft with a retractable undercarriage. He has blazed trails in helicopter design. The Leoning Flying Yacht set world records and opened the first significant market for private airplanes. The Loening Amphibian was the vehicle for the great Pan-American Good Will Flight by the Army in 1926. Loening research airplanes have helped extend the horizons of aeronautics in many directions.

Grover Loening has been much more than an inspired hardware man. He has articulated his knowledge and experience in countless lectures and books, his most recent book "Take off into Greatness" having received most favorable reviews. His 1937 report to Congress as Aircraft Adviser to the Maritime Commission set the guidelines for government at the start of American trans-oceanic air commerce. Five years later, at the War Production Board, he sparked the contemporary development of the all-cargo airplane.

In private enterprise, as consultant he has served the Chase Bank, Curtiss-Wright, Grumman, Fairchild and many others; and he has been a director of Curtiss-Wright, Pan American Airways, Fairchild, The Flight Safety Foundation and New York Airways.

Mr. Loening has for twenty years been a member of the Advisory Board to the National Air Museum. He is an Early Bird and a Quiet Birdman, a Fellow of both the AIAA and the Royal Aeronautical Society. He holds the Eggleston and Guggenheim Medals and the Collier and Wright Memorial Trophies. Were this London and we the members of our sister club there, I am certain that a grateful sovereign would long ago have dubbed him something like Lord Loening of Biscayne.

All of this is by way of confessing that the Wings Club cannot honor Grover Loening half as much as he has honored the Wings Club by accepting our invitation to present the 1969 Sight Lecture.

The purpose of these lectures—and this is the sixth in the series—is to give us some insight into where we have come from, where we are and where we are going; to survey the future in the light of the past; and perhaps to prevent us from repeating our errors or omissions.

Aviation has been particularly fortunate in attracting men of intellect as well as of accomplishment; and we have been privileged in the past to hear and, one hopes, heed—Sikorsky, Hunsaker, Littlewood, Hildred and von Braun.

This year, we are especially privileged to have as Sight Lecturer a man who has seen it all happen and who has had a finger in every phase of it, from constructing Bleriot copies in 1911 to researching the design of the heliport on the Pan Am roof. We are even more fortunate that our lecturer has matched his technical skills with an ability to relate them to the larger context of society and to communicate the result of his thought. Above all, he has cherished and maintained an independence of mind and an impatience with the clichés which have become almost as numerous in aviation as government forms.

The 1969 Sight Lecture may not comfort us or make us particularly complacent. But we can expect, if we listen well, to be the wiser for it.

TORE H. NILERT,
President.

Mr. SYMINGTON. I also ask unanimous consent that the address itself, entitled "The Air Road Will Widen With Systems Approach and Design Courage," be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AIR ROAD WILL WIDEN WITH SYSTEMS APPROACH AND DESIGN COURAGE

It is, indeed, an honor to be invited to follow the previous five Sight lecturers—so great is their prominence and distinction. The aviation world has found in their words highly important guidance, perspective, and inspiration.

Sikorsky gave us much of his dramatic history and lessons to be learned therefrom for the coming VTOL age. Hunsaker helped so much with his penetrating analyses, summaries, and appraisals. Littlewood—whose passing is such a great loss—gave us some pregnant looks into the future and warnings against questionable present trends. Hildred added a knowledgeable and incisive review of air transport's effect on the world. And von Braun showed us how Space development will become the end product of our incessant air march to ever "faster, higher and farther."

In the classic pattern of these lectures, it may well be quite rewarding and convenient to divide our periods of hindsight, insight, and foresight into the following eras: For the past we study the period of 1925 to 1946. For the present we look to our era of 1947 to 1968. And for the future we present a picture based on contemplating and speculating on the coming period between 1969 to 1990. Within these three generations the story of Air-Space will certainly have been written—the first two periods witnessed, although perhaps not yet fully assessed.

My own history, already recorded in my books, articles, and lectures, is hardly distinguished enough to warrant tiresome repetition here. In brief, I started early—I rode a magnificent wave not of my own making. My aspiration here is to present a return of at least something in repayment, for the wonderful life I have had in the air world, with its rewarding recognitions and splendid associations.

I. WHERE WE HAVE BEEN, 1925–46

We start then with the momentous year of 1925. World War One had vanished into the hazy distance. The contentions and scandals involved in building up American aviation by a starved but eager Army and Navy and ambitious but frustrated infant industry, had finally led President Coolidge to appoint his "President's Aircraft Board," the famous Board, headed and actively directed by Dwight Morrow—one of the few government-inspired investigations in our history that resulted in concrete results of lasting value. The Board's intelligent recommendations were quickly acted on by a sensible Congress and by mid-1926 the fundamental set-up for aviation had at last been established.

In the War Department (Army) and in the Navy Department, Ass't. Secretaries for Air had been provided with authority to expend larger appropriations based on the very much needed continuity of a Five Year Plan. The industry could thus really plan with some assurance that the "fits and starts" kind of manufacturing it had been subject to was over. But more important for the future was the establishment in the Department of Commerce of an Aviation Bureau with an Ass't. Secretary to head it, which would and did put air commerce under licensing and regulation for safety and legal responsibility which the infant air industry had been clamoring for.

At about the same time the Air Transport part of Aviation got its first beginning by the passage in early 1925 of the Kelly Bill, authorizing the Post Office Department to divest itself of its inspiringly successful Air Mail operation and to place it in the hands of private contractors.

At this point the keen, litigious struggle of transport under government contract or of certification by government, started. This beginning marked the distinctive difference between the vitality of our American competitive system and the almost universal, government-owned, operated or subsidized system that all other big nations in the world had adopted.

Other great milestones in this 1925–26 era included the start of the Guggenheim munificence which was to prove so effective, first in building up technical training institutions and wind tunnels, and then in encouraging the establishment of a well organized and successful passenger air transport line—Western Air Express from Los Angeles to San Francisco.

Ford, too, made his historic entry into airlines and manufacturing at this stage and there is no denying that this stimulus helped enormously to put transport aviation on a faster track, spreading greatly added confidence in Aviation's future.

It would be well at this point to define further our objectives in this study, if for no other reason than to limit the various facets of this now enormous aviation field to those that we will have time to consider. Our principal objective is to search the past for errors that we may still unknowingly be following—to contemplate the present to see if we are giving emphasis to the most important and profitable aspects and to peer into the future for that prescience that is mandatory, to get the most out of the precious dollars hopefully and wisely spent, rather than ridiculously squandered on new fads or fancies.

Not being a militarily trained participant in Air Progress, and since many of the existing military features and certainly most of the new developments are on the secret list, I deem this no occasion for me to delve into that area. We must, however, realize that contracting for the Services has long been the bulk of our manufacturing business. And even though commercial aviation in transport, in business use, and in space has become so great (particularly in peacetime), military air activity commands our attention. *The contracting and industry upbuilding influences and practices of military procurement are still quite paramount.* We grew on them from 1925 to 1946, and are profiting in our civilian industry from the huge facilities, the engine and aircraft developments, the training of thousands of workers from mechanics to air scientists that were a legacy of such trenchant consequence.

Let us limit ourselves, therefore, to consideration of the following outstanding features of the generations we are studying.

How the design of aircraft changed and under what influence

In 1925 it was a brave designer indeed who would venture to advocate any airplane type but a biplane. In fact, the Loening amphibian itself had to be a biplane in order to achieve any kind of a selling appeal, even though the designer knew it would be 200 pounds heavier and 10 miles an hour slower than a monoplane type that he favored for years, but to little avail. Why? This is a very typical example of how stubbornly users will oppose change. And yet by 1946 there was hardly a single biplane in the air, either in civilian or military use—excepting, of course, some treasured hangups from the earlier era.

Will the day come in 1990 when all aircraft will land vertically, and horizontal-landing-aircraft will have joined the biplanes in museums

What brought about the change from the biplane in marketable American plane types

was largely the influence of Fokker and Junkers from Germany. When Tony Fokker hit our shores with his cantilever internally-braced wooden monoplane-wing transports with steel tube welded fuselages, he demonstrated much superior performance in speed, load capacity, and cheaper maintenance. Thus what little American competition there was in the Curtiss "Condor" biplane, and a few other biplane transports like the Sikorsky trimotor S–35 and the Boeing "82" biplane rapidly disappeared from the scene. At the same period the final death knell of the biplane was given by the sensationally successful advent of the Ford-Stout stressed-skin cantilever aluminum all-metal wing monoplanes, at first in the single Liberty motor version and then with the famous and still lasting Ford "Trimotor," the famous "Tin Goose."

The importance of the Ford milestone was registered by the high regard in which Henry Ford's name was held. From then on the keynote of how to build an airplane was sounded, with such finality that it lasts to this day, some forty years later. Change came only with the appearance of the low wing designs of Boeing in the "247" and Douglas in the fabulous "DC–3", as well as several others, such as the Lockheed "Electra" and the Vultee. They marked the low wing design predominance in the late thirties over the high wing design of Fokker and of Ford.

It must be noted that in 1926 the retracting of landing gears was just beginning in both civilian and military designs and that the low wing lent itself ideally to this feature.

Also of great importance in this era was the gradual increase in power from single engine to four engine installations. It is generally accepted that the reason for multi-engine usage was to "increase safety." This is not so at all. In fact the early designers were very nervous about increasing the complication and pilot skill requirement for commercial use. But what they did need for the transport market (to make money on) was very much larger aircraft. The biggest engines of the day were not yet big enough to carry the larger loads that were needed both for military use and for commercial profit.

Multi-engine installation added to the fire risk. It did no good when the weather closed in, or if the pilot passed out. If the plane ran out of gas, to what avail the number of motors? The public, however, were no doubt entertained and reassured when the bright aviation promoters hitched on to the gimmick of "multi-motor safety" as an added selling point for air travel.

Flying boats—particularly the large transport ones—also rapidly became multi-engine cantilever monoplanes.

Other major design trends in aircraft construction in the 1925 to 1946 period included "lighter-than-air" dirigible balloons and in particular the Zeppelin type. This is all so far away now that few of us remember the excitement and the arguments involved in this part of the air industry's activities. The highly promoted German effort to present this unique area as one that would dominate the skies of the world and take over its air commerce evoked a sense of international rivalry in the U.S., not unlike the effect of Russia's awe inspiring "Sputnik" some thirty-five years later. There is no denying that, to the Navy, as a long distance scout before our aircraft ranges were so greatly extended, there was distinct value to the Zeppelin. It cost us something like one hundred million dollars, however, to find out that this was a dead-end street. Stark tragedy after tragedy dogged their activity even when the safer helium gas was used. Imposing—they were; but too flimsy to withstand severe weather. Militarily very vulnerable; and commercially not yet fast enough to translate their roominess and load-carrying capacity into profitable ton-miles per year.

The Zeppelin's legacy to our industry was the development of the alloy, "Duralumin" and how to fabricate and make the most of it. This was worth a lot.

Military design continued apace in this period. For example, what was to become one of the truly great aircraft of World War Two was begun as a purely speculative venture by Boeing in 1935.

This aircraft was a four-engine monoplane that was to become famous under either its technical name of the B–17, or its popular name of the "Flying Fortress." This was the great war-horse of aviation in World War Two, the greatest single United States aircraft in helping win that war. It had everything. Fine, sweet, and—for a plane that big—high maneuverability. Like all other truly great planes—like the Douglas DC–3, for example—this pioneer four-engine cantilever, folding-landing-gear, 50,000 pound aircraft was to have a major influence on the design of airplanes for decades to come.

Engines also underwent design changes of great import in this early period. Growth in power was from 200 h.p. in 1925 to 3500 h.p. by 1951. The principal design change was the advent of the radial air-cooled engine—stimulated from two main sources, the Navy and Air Transport builders.

In Europe the water-cooled engines that had developed during the Second World War were chiefly the Hispano, the Rolls-Royce and the Mercedes, and they advanced for over ten years in use and in growth. In America there was quite a different story. While there had been some sporadic building of air-cooled engines like the Bristol and Gnome in Europe, the water-cooled type still continued to dominate the scene.

With the huge volume of Liberty water-cooled engines that clamored for consumption from war surplus in America, this water cooled engine was naturally the one most used by us. But in 1925 the revolution in our acceptable engine designs went far ahead of Europe. This was due principally to the pioneering in radial air-cooled construction by Charles L. Lawrance, and subsequently by the Wright Aeronautical company with which Lawrance merged. They brought out the famous and faithful "Whirlwind," that pulled Lindbergh across the Atlantic in his great 1927 epic flight to Paris, 36 hours without missing a beat. All manner of records were made by radials in ensuing years.

Near the start of the 1925 period the Army and the Post Office, the greatest users of aircraft, had, however, stuck to the water-cooled Liberty 12 cylinder 400 h.p. motor that was making plenty of earlier records to make them happy. But they were in error here, and the Navy saw its opportunity, and jumped in boldly, to concentrate on the use of the Lawrance and its Wright growth versions as well as giving encouragement and orders to the newly formed Pratt & Whitney outfit, starting with its famous "Wasp" series.

The rivalry of the Army and Navy must not be overlooked. It was a sharp stimulus to progress. In its deliberate championship of radial air-cooled engines the Navy thus won one round easily, and to the great benefit of American aviation for many years to come.

The pioneer air transport builders quickly sensed the desirability of the air-cooled radial with its lighter weight and cheaper maintenance. As the twenties grew into the thirties the multi-motored Fokkers, Fords, Douglas and Boeing land planes all were designed and perfected with no water-cooled engines whatever. The pioneer ocean-spanning flying boats, the Sikorsky "S–42," the Martin "Mars 130" and the Boeing "314" were all air-cooled-engined monoplanes.

The Army used Liberties for a long time and also the fine Curtiss "D–12" water-cooled engines which won so many races. Belatedly, however, in 1941, the Army adopted under General Arnold's direction an "about-face" rigid rule that all fighter pursuit planes were to have only air-cooled radial engines. To show how mistaken the authorities can occasionally be, this was a totally wrong decision for that particular moment. It had been completely overlooked that the wonderful "B–17" would need a fast enough escort-fighter for its protection. This could not be done by the radial powered planes, which lacked speed enough and range. Yet sitting in the test hangar at Dayton, ignored and not even programmed, was the Rolls or Allison water-cooled North American P–51 "Mustang," which was shortly to become the greatest American fighter. This occurred, however, only after Major "Tommy" Hitchcock, leading Ace in both wars, and the War Production Board had practically forced the "P–51" upon a reluctant Army.

These were some of the trends that developed in design before 1946.

The wide and varied usage of aircraft began in earnest in 1925

Ambition had motivated the proponents of the many ways in which aircraft could be exploited. We were all fired with unquenchable enthusiasm. The Kelly bill . . . the Morrow Board legislation . . . the new willingness of banks to loan money . . . the Guggenheim Fund spark . . . and the flight of Lindbergh, that set the airplane stage for its great steps forward . . . all took place within a short year or so.

The C.A.M. routes for mail-carrying companies started up one after another. We cannot but find some of the better known ones, which survived the air-mail cancellation attack by a willful President Roosevelt in much the same form they started with. The industry was gradually producing, or making available, aircraft that would do a rewarding job, first in carrying mail and then carrying overnight passengers.

Spectacular competition took place in the domestic market, and Europe looked on aghast at a growth that was so freed of the stilted and bureaucratic bog they were sinking in. National Air Transport, Pan American, Ford-Stout, Western Airlines, T.W.A., American, United Air Lines, Eastern, etc. followed each other in bewildering array.

Then other fields opened up, such as aerial photography, crop dusting (where Delta got its start). Private ownership spread its new wings with a background of farm and rural usage of a size and scope that was an eye-opener to our friends in Europe. Nothing like this existed over there.

Water-based aircraft also were very vital in the 1925 to 1942 period just before we entered the Second War. Particularly in the late thirties, Pan American and American Export (later developed into American Overseas Airlines) were busy crossing the Atlantic (at first via Newfoundland). Pan American had already pioneered its great ocean flying to South America and the area of the Pacific Ocean. There were three outstanding "Clipper" flying-boats used in these operations—the Martin "130"—the Sikorsky "S–42"—and the huge 72 passenger Boeing "314." This latter 1939 non-stop transatlantic giant was indeed the largest practical aircraft that had ever been put in real service. There had been two abortive larger planes—a 12 engined monstrosity, the "DOX" by Dornier—and the equally ridiculous Russian plane, the "Maxim Gorky."

It is very revealing to note that this "super giant" Boeing "314" of 1939 grossed 82,000 pounds, whereas thirty years later we were to have in flight planes of a gross weight nearly ten times larger.

The Navy made a further wide use of water based planes. But viewed from this distance, the whole concept of their trying to develop aircraft that could truly be called (as the Navy did) "seaplanes" was a forlorn hope, as was eventually evident. At the speeds of land-

ing then customary, and with the weight limitation inherent to plane design, we realize now that protection from spray and destructive wave action in even moderate seas was hopeless; resulting in very awkward designs, heavy, slow, and cumbersome. They would be unlikely to progress substantially due to performances markedly inferior to those of lighter land-planes. Later, when we had abandoned efforts to buck high waves; it became evident that this policy, so dear to the Navy, was on the wrong beam; setting back use of the great water spaces for aircraft at least twenty years. This is why I avoid the use of the term "seaplanes" and refer only to "waterplanes."

In smaller sizes for use in calm waters, harbors, rivers or canals, water based planes have continued in use from earliest days by enthusiasts who rightly love the pleasure of flying off the lakes and water spots all over the country. The peak of water-flying was in the thirties, in this early period. The dock that Mayor LaGuardia had provided at the foot of Wall Street in New York would often see as many as twenty privately-owned float-planes or flying boat amphibians landing their owners for the business day. However, the war soon put an end to this. After the war period in 1946 only a few such craft continued to come into the city. One reason for this was lack of facilities. It was in the period 1925 to 1939 that the Loening amphibian development and that of many others became widely used. The Loening company had its own aerodrome in the heart of New York City, locating its factory at the foot of East 31st Street. Scores of its amphibian deliveries, military and commercial, had for years been made out of Kip's Bay, a wide section of the river at this point. Here, indeed, the way to land in New York City itself was demonstrated.

It must not be overlooked that the reason for amphibian development in the 1925–35 era was also the prevailing lack of landing-fields, and of waterplane bases for docking or mooring. With the amphibian it became very easy also to provide a ramp or a beach up which the plane could be taxied out of water for convenient servicing.

Many were the uses that amphibians could be counted on to provide, particularly in all manner of explorations by the Navy and the Army. No need to recount the wide use of the "ducks" all over the country, in Alaska, in Greenland, around South America, etc. And of course the Army, Coast Guard and Navy, as well as commuting city-to-city lines, Cleveland-Detroit, Chicago-Milwaukee, etc.

Water plane usage in extensive private flying went on also in Chicago, in Philadelphia, and several other points where fine water terminals were available.

Wide amphibian usage did not continue at the end of this period because of their limited war serviceability and, more importantly, because by the end of the war the helicopter had arrived and offered much the same wide scope of landing ability and equal versatility.

All through this pre-World War II period designers were still coming out with better water-flying machines, but the market was too slim and expensive for material growth.

The helicopter's advent in 1946 right after the war, prominently marks the next period that we will study.

Despite all the activity that was engendered in air commerce prior to World War II, one of the most important aviation fields—the field of Air Cargo—was largely overlooked. Cargo operations were going on in several parts of the world; Scadta in South America and Taca in Central America. In Germany, too, and in Russia much flying of cargo to inaccessible places was proceeding. But some strange blindness was obscuring the potentialities of this phase of air-transport in America. For one thing, the Services had not yet woken up to the possibilities of military logistics by air.

In fact, incredible as it may seem, in late 1942, the War Department had requested the War Production Board to allocate no more strategic war materials whatever to Lockheed for the "Constellation" or to Douglas for the "DC–4" because *"these airplanes obviously have no military value."*

Then along came serious review of the conquest of Crete by Germany's JU–52's entirely by air, and there was a very brusque awakening by the U.S. Government. The W.P.B. immediately built a wooden frame factory (steel was in short supply) at Park Ridge, Illinois, now O'Hare Field. Here, in 1943, was put into production the famous "C–54", the military version of the "DC–4". The most famous of the many routes regularly flown by the C–54 was the route through the Himalaya Mountains bringing supplies from India to China, which was called the "Over the Hump" project.

The lag in cargo promotion was one of the poor marks against aviation during the 1925 to 1946 era. The then airline industry would have missed much of it had it not been for vigorous development by the services, and the War Production Board.

How environment was affected by airports and flying

At the start of this period in 1925 there had been few paved concrete runway airports in the U.S. Most of the runways were grass, or at most gravel with tar or regular macadam road construction. Many of the military fields were shamefully muddy, such as Selfridge near Detroit and Bolling in Washington, particularly during the snow melting season. This may be one reason why water-based planes had an allure. The runway lengths were in the 2–3,000 foot class, but as the years wore on, the use of concrete began, and by the end of the war there were quite a few fine new airports in the country, chiefly for the military services, but with a commercial future.

But the "one-track" fixation that has characterized our airport thinking had its genesis at this time and hasn't really left us yet.

As to congestion—there was very little. Actually in 1930 it was estimated, that, for example, there were in the U.S. air-spaces only 8,000 active planes and not all at one time. Of these 2,700 were military, 5,300 general or "service" as they were then called, and a total of 685 Air Transports of all types. The latter carried 386,000 passengers that year, and some airlines were actually starting to make money. Of the 29 contract air-mail carriers their total 1930 airmail earnings were $14,000,000.

As to noise . . . the complaints had already started, but the designers paid little attention. Even at this early date it would have benefitted us, then and now, if designers had been oriented to consider noise as an important parameter.

This early period passed into history and the score at the end of 1946 was: The Army had 30,000 planes in inventory including the Air Transport Command. The Navy had 8,000 planes in occasional service. Although the commercial lines had kept going, largely as an auxiliary for the war operations, real commercial operations quickly picked up and by early 1947 there were 64,000 registered planes in the U.S., of which 30,000 were "Cub" trainer types. There were 3500 two engine planes listed (not all in use) and 385 four engine planes in transport service. Twenty nine air carriers were operating. Returned service pilots were grabbing jobs at salaries of anything from $3,000 a year up: mechanics who had earned $30 a week in 1940 were now in 1946 earning $48. The cost of airplanes for commerce averaged $7 to $15 a pound. Although the costlier ones were of metal construction, the smaller, cheaper ones were still built of steel tube frame with wooden spars and ribs and fabric covering.

One of the finest record flights in history was made in October, 1946 when the Navy flew a Lockheed "Neptune" non-stop from Perth, Australia to Columbus, Ohio, a distance of 11,235 miles in 55 hours.

This was followed by a Lockheed "Constellation" flight across the continent in 7 hours, 27 minutes.

All during this period great advances were made in various fuel improvements, higher octane, obtained by addition of tetra-ethyl lead and special blending agents permitting much higher supercharged pressures and higher power without detonation and overheating.

Metal variable pitch propellers were constantly improved. So, also, were instruments.

Transport speeds had increased from 90 miles an hour in 1925 to 300 m.p.h. in 1946. Nuclear engines were being secretly talked about. Slick magazines had a helicopter in every garage with the housewife going shopping therein.

II. WHERE WE ARE, 1947 TO 1969

We have explored hindsight within the time available to us. Now let's look at our present. The start of this next period marks the end of the World War II era and the settling down into serious business of meeting all our challenges with a wealth of knowledge about mass production (96,000 planes built in 1945!) and with an enormous reservoir of trained mechanics as well as highly qualified aviators from the services. Yet coequally there were relatively few engineers steeped in the requirements of this new up-coming commercial aviation era. Their thinking was not yet adjusted to it.

Fundamental design changes were quite limited during the war, except for the advent of jets, and helicopters

Probably the worst legacy of the huge air operations of the war with which to enter the new path of vigorous profit paying enterprise was the descent from affluence; the nursing of every nickel; the reduction of large staffs to a skeleton force that had to prove itself. Many high-flying plans for the rosy future some of us expected, were discouraged. Hard-headed business acumen was not a war virtue but fixed prejudices were. Although we had gained much thereby one had to realize that talent could not be ordered by the commanding officer any more, nor did money grow any more on those trees that had been fed previously with the fertilizer of endless government funds.

So suddenly things got really tough for the air industry. Added to that were many tangles over questionable profits, much anguish over renegotiations of money already paid out and a general letdown feeling. Nevertheless, we kept going along conservative lines in both the military and the newer commercial angles. Fortunately, the "War Surplus" problem was no longer the great deterrent it had been in World War I.

There are two happy sides to our 1947 picture; the helicopters and the jets.

The development of the jet was by all odds the most important technical development of the war in the field of aircraft. As you know, we owe the beginning of it to the British. In the very early years of the war and shrouded in the greatest possible secrecy, the first sample jet engine was brought to the United States from the Whittle turbine engine factory in England and was handed over to the General Electric Company for duplication and for production. Some American alterations were made and in October, 1942, the Bell XP–59, powered with two of the GE engines, took to the air—the first American jet to fly.

Other jet engine developments quickly followed, so that by the end of the war era in

1946 there were, in addition to General Electric, the new rivals, Westinghouse, Pratt & Whitney, Continental Motors, Menasco, Lycoming, and General Motors-Allison companies, all busily evolving their role in the jet-engine field.

History's next great step was in October, 1947 when the first American rocket-driven plane, the "Bell XF–1" was flown through the sound barrier by "Chuck" Yeager . . . and we then entered the new supersonic age.

Although actual vital changes in aircraft frame types are not as distinctive in the post-war period as they had been during the generation before, many further evolvements of the customary low-wing stressed-metal-skin cantilever types rapidly came into being.

The "C–54", so successful in its war logistics, soon grew into the "DC–4"; and by 1947 appeared as the first real air-line money-maker, soon to be followed by the Douglas "DC–6". This plane came into wide use at once, carrying 52 passengers at 300 miles an hour. Its immediate close rival was the Lockheed "Constellation" slightly faster, and seating up to 64 passengers. From then on these planes, and others like the later Martins and Consolidated-Vultees, staged a typical American competitive-growth battle for orders, not only from this country but also in the European markets (hitherto closed).

Right here we find the reason why the American private enterprise system is so far superior. The way our violent and keen competition beats out the European "closed to rivalry" government-dominated and less imaginative regimen is clear.

We get better planes, that's all.

Before the advent of the turbo-jet applications the enormous production of piston engines had given the commercial operations a varied choice of 2,000 to 3,500 h.p. multi-cylinder air-cooled radial engines from Wright or Pratt & Whitney. They had behind them a convincing war record to insure quite safe operation and with seasoned crews, in plenty, to maintain them.

So we went on through ensuing years quite heedless of the fact that there could ever be anything like a congestion in the wide open air spaces. Presently the piston engines gave way to the smoother, easier to maintain and install turbine engines, even though we knew how much noisier they were. As in the previous era, no engine designer was sufficiently far-sighted to start in right then and there to make noise reduction a fundamental parameter of engine design. Some of this may be excused by the fact that the services did not ask for quietness nor worry one dollar's worth of research about it!

It seemed in the later forties that for any sizable load-carrying plane the obvious power application of these new turbines would be in the turbo-propeller combination. The first formidable entry in the U.S. in this field was the Lockheed "Electra". A few hardy souls felt this was a waste of effort since the inherent contribution of the turbine was also to reduce the expense and maintenance by getting rid of those bothersome props. It was predicted by this lecturer, in his 1948 NACA survey that Turbo-props were merely a way-station to jets. But the industry did not follow this idea, and lost time as well as wasted money in those valuable prop-jet years, when their planes could have been in the 600 mile an hour jet-class instead of the prop-jet 400 m.p.h. bracket (that had succeeded the 300 m.p.h. piston "DC-6, Constellation" era).

As the post-war years wear on, helicopter development in varied designs from Sikorsky, Piasecki (later Boeing-Vertol), Bell, Hughes, and Lockheed are all busy on this line, receiving lots of attention from advanced thinkers, as so well documented by pioneer Sikorsky. But little real business or interest resulted from the Services or the commercial people that counted, except for the Viet Nam requirements in the later years, which have become so commanding, and successful.

As for water-based aviation, this has continued to be completely sidetracked as useless, out of date, and not worthy of consideration or study.

Every year now transport planes get bigger, more luxurious—better meals, movies, etc., fine boarding ramps, quicker baggage handling, but there is no real change in type. More crowding means longer landing delays, fewer schedules on time, ever longer trips to town. *Flying in American skies grows from enthusiastic acceptance to outrageous congestion in 1969 because we fail to make a "systems" approach.*

At the start of the post-war era, with so many useful planes developed and thoroughly tested by the vast operations of the services and particularly of the Air Transport Command, America plunged into the great air-line development that has been growing apace ever since. The A.T.C. operations in the late war years were already very large. In the year 1946, the Air Transport Command actually had already carried over 400,000 passengers, though admittedly on war missions.

The piston-engine transport era that had started in 1946 was initially so well-equipped that we gained a head-start over similar operations in Europe that we have never lost.

An outstanding later development than the "DC–6" and the "Constellation" was the great two-deck Boeing "Stratocruiser" which was developed directly from the Boeing "B–50 Super Fortress Bomber." This carried 80 passengers at a cruising speed of 300 to 340 m.p.h., crossing the continent non-stop in about eight hours. This represented about the peak of the piston-engine transportation.

By 1950 there were some 800 transports, their speeds varying from 200 to 360 m.p.h., and already piling up passenger loads of 30,000,000 passengers per year.

Then we came to the jet-engine era. The turbo-jet engine commercial applications were first sparked in 1948 by the magnificent flight non-stop of the Lockheed "P–80" jet pursuit plane, crossing the continent in 4 hours and 15 minutes. Years of gestation then followed. Boeing taking a new leading part with the 6-engine "B–47" bomber (1948), and its great successor the "B–52" bomber, still in use. By 1957 the Boeing Company had taken its standard 4-engine monoplane design and modified the "KC–135" version that had been built for the Air Force as a tanker, into a 4-jet engine passenger plane carrying 120–160 passengers and as we well know named the "707". This plane immediately developed a cruising speed of 560 miles an hour, making the transcontinental trip from California to New York in 5 hours, and continues to fill the transatlantic as well as the transcontinental skies ever since Pan American's first Paris ocean flight in October, 1958. In very short order this 4-jet transport was joined by the Douglas "DC–8", accomplishing practically the same performance. Since then, of course, various development versions of these planes have come out.

The jet usage is so successful in these years that schedules are again constantly being increased because passengers are constantly increasing in number—clamoring for seats, and adjusting to the new "Jet-Age" life of breakfast in New York and lunch in California, or dinner in New York and breakfast in London.

Forty years after Lindbergh's flight we now come to the startling fact that a jet-liner crosses the ocean every 8 or 10 minutes carrying an average load of 100 passengers at 600 miles an hour 30,000 feet above the weather. In the boring six or seven hours solitude of that calm 30,000 feet, we are indeed getting spoiled. We resort to movies, music, liquor, and much too much food, for appeasement. But the fundamental super-comfort feature of air travel is still the announcement from the cheerful hostess, "We have arrived."

Year after year as the number of schedules increases, so does the number of airlines of all nations. Where is the end?

Meanwhile the use of private taxi and business planes increases, too, in unlooked for volume. Most of them aim a making connections at the major airports with the air-lines on their way to more distant ports.

Then to this influx of traffic, we add cargo planes—also piling into these same great airports until one day we suddenly wake up to find that *we have failed to design a system of air-transport.* We have thoughtlessly allowed an unworkable part of a system to grow unwieldly, out of balance, and almost futile.

Why and what have we missed?

The aircraft designers, the airport authorities, the operators, and the government, too—have all failed to plan for *transportation from center to center.* Instead, we have only, at great expense, provided transport from a distant spot in the countryside to equally remote suburban terminals, a condition to grow even worse with SST coming up. Railroads at least carry you into the city you are aiming at, and so do buses.

Why these distant air stations? Because, of course, the room needed for our current planes to land safely on the wheel-and-axle designed landing gear systems their engineers have given them, demand miles of level concrete. This means thousands of acres of room which we have to get out of town to find. The noise we make requires remoteness also. So our system stumbles right there, the service from city to city unfinished. Devil take the hindmost! The dear passenger finds himself a taxi—if he can. Or a bus, possibly too crowded. Or a helicopter, already full. Or a train.

All of these are haphazard and chancy. They would not be, if the airline finished what it undertook when it sold that ticket for a trip from one center to another city or town. Meaning that the airline or the airport authority fails to provide rapid transit from the remote field into the center, or to locate the airport originally where there was rapid transit available, or where the location required none.

The 40-mile-out giant new airport at Miami is an excellent example of good planning showing that it is as important right now for it to have rapid transit, by ground or air, planned and financed, as it is to build runways. This cost is part of the cost of the airport. Let's make it all together a system that has the objective of delivering the passenger to his destination without having to rely part way on some competing or otherwise crowded form of transportation.

What form could this transit service to town take for an airline or the tenants of an airport as a unified group to operate?

Using present roads would add to road congestion. The possibility of totally new roads faces years of delay for condemnation proceedings, etc. even if authorized. The same with the railroads. However, if at the same time the new airport is planned there were to be included, as part thereof and of the appropriations therefor, the transit plan—be it by new road, air road, rail line or hovercraft line—to a planned city center terminal . . . that would make some sense. This really would be a "systems approach," conspicuously lacking in plans that have been proposed to date.

The easiest plan for the airport people to put into being would be the use of the air road. This can be done by helicopter service or STOL service (if landing spots

can be located or purchased in the city center). In most of the big cities, helicopter landing-room is available on roofs of docks or of buildings. Along water fronts suitable STOL ports are less easily worked out.

Besides, we must emphasize that STOL aircraft will be just as much a way station to VTOL, as turbo-props were with jets. The turbulent air in cities is already casting much doubt and difficulty in the STOL's path. It is often overlooked that helicopters have the very desirable quality of ironing out turbulent air conditions in an effective way. Witness how even the rather outdated helicopters of New York Airways can handle very rough westerly winds at Wall Street without the passengers noticing it. The use of the certificated helicopter airlines to date has actually been very limited, with only three lines operating in the country. Whether each air transport line should have its own helicopter contractor for this service or whether the airport as an entity should contract for a service for all its tenants will, now, be worked out. But needed it is, in some form.

Congestion in the skies is caused by congestion at the airports

We now come to our real headache—congestion on airways by limited airport facilities. This is fundamentally due to the design of the aircraft that we have to deal with because the designers have as yet failed to get away from the horizontal-flight landing character of the machines that airlines have to use. Thousands of feet of runway that must be kept clear provide the airplane's "little spot to land on." The bulk of planes around today's airports in the transport or high-class business category cannot slow up in the air much below 120 to 180 miles an hour, (when required to circle to await their turn at landing on the long runways that their 80 to 140 m.p.h. landing-speed demands). To avoid collision, holding patterns are rightly prescribed. But each plane ends up using an air space of 50 to 100 square miles for its circling. This means that the air space over the airport with too few runways gets crowded too easily. Desperately seeking reduced crowding, we now curtail landings, ration takeoffs, prohibit certain usages of airports.

This is not the cure. *Our airplanes are the wrong type!*

Nevertheless, struggling with this unfortunate fact, persistent efforts to improve traffic headaches are in the works, chiefly starting with more parallel runways on each airport and more airports.

Why were so many airports built with only one runway in each direction? Should not every direction have had a "landing" runway and adjacent to it a "take-off" runway—a two track design instead of the limited one-track? One answer to this was that the pilots did not rate their own skill highly enough. With the control available on jet-planes and the knowledge now recognized of how the turbulent wakes can be avoided, there seems to be unwarranted fear of planes getting too near each other. Of course, in thick weather, "see-and-be-seen" flying was originally impossible. But now this is already being resolved by the constantly improving airborne radar, and many other ways of seeing from the plane cockpit or from a tower's installation what the pilot cannot see. Total guidance is rapidly being developed, in the thickest fog.

But there again there is the limitation to the tower system of lack of capacity for growth. It could not ever handle the vast increase in traffic that is coming.

For the less demanding little planes in private, general, air-taxi, and other uses, the requirements for tower operation are much fewer. Concerted efforts are being worked on to relegate them and their STOL versions to a separate area of the airport with shorter runways, lower and steeper altitude approach patterns and no tower control needed. Their slow-landing, short-runway character is a relief that must be accented. A further review of procedures may bring multiplane holding-patterns into safe use. Two or three planes could be flying alongside each other in typical service formation manner and, in the same holding-pattern, seeing each other over the overcast. Then they would peel off on signal to enter the landing pattern. Still further deficiency is evident lately,—the lack of enough unloading gates for this ever increasing traffic. This, like the runway stringency, will find temporary but slow solutions.

More extensive and intensified use of existing runways—immense improvements in airborne collision-avoiding radar, particularly made economically viable for the little planes that must see and be seen by the 600 m.p.h. jet planes—reforms in existing tower procedures and, of course, more airports—will as we all know temporarily improve the present rate of acceptance of commercial flying, under present crowded conditions.

But we have not yet solved the transit conditions from airport to civic center. Nor have we solved the existing limitations of the vehicle that we are as yet committed to—in so many ways, an absurd vehicle. It cannot stop and back up . . . without losing its value as an economical high-speed conveyance. All other vehicles; cars, boats, trains, have a complete pilot-operator in control on board, only because they can be stopped and backed up.

"See and be seen" is the great lack in our system. Not feasible for us with this charging monster that cannot slow down itself without courting disaster. Its uncontrollability is mastered by the expensive delaying subterfuge of our elaborate tower control system. Can we ever get away from this?

The only current solutions much spoken of and little done about, are the Verticle Takeoff and Landing proposals (VTOL), of which there are several most promising in configuration. Bell, Sikorsky, Hughes, and Lockheed are all busy on this line. So, too, no doubt are many yet unheard-of young engineers who must be seeing the future glamour of this new trend. But money, both government and private, is strangely shy of this venture area. We might get some real progress in this development if a foreign country like Russia would come forth with a highly successful one, leading the way as now being done by Russia, France and England with the SST.

We need the VTOL badly in this country, but do we need the supersonic transports? Which should have priority?

At this writing the one that can relieve congestion the most is the one that should have priority. It becomes clear as we study it that the VTOL would help relieve congestion much more. The SST will add to air traffic problems due to its speed, and special limitations, sonic boom, etc. The SST's value will be senseless if it has to land too far out of town. Solving the VTOL problem first might rescue it from ridicule.

What will help *congestion in airways* is the giant aircraft like the "747 Jumbo", about to appear. But the "Jumbo" will worsen *congestion at the airport* when it disgorges at one sitting its 400 passengers and their luggage. It will be somewhat like the arrival of an ocean liner at a New York pier. The same kind of pandemonium, luggage mix-ups and waits. For the airline the "Jumbo", however, promises better earnings, because more passengers are carried per pilot's pay, per gallon of fuel, per hour of maintenance labor, etc. On the other hand, the clerks at the counter have to be increased to meet the load of the bigger crowd, and then become a wasted addition during the long waits between less frequent flights.

Whether the loss of frequency of service, by having one schedule in place of three or four smaller ones, will affect the results is not yet established. But the "Jumbo" will give an amount of relief to the airways crowding in that for a given number of passengers, fewer planes will crowd the airlines and runways. The risks of carrying so many eggs in one basket is frequently cited as a great disadvantage of the "Jumbo" plane if it should have an accident. At first, no doubt, it would unsettle orderly acceptance of such large airplanes. But the history of aviation seems to point to acceptance of even so large a disaster, particularly if several other "Jumbo's" continue to fly regularly and safely. There may be passenger resistance, due to this larger size because of the interior seating, the added confusion, the added waits in the aisles and at the counters, etc. But there does not seem to be an impressiveness-of-size appeal in this present step to the "747". Obviously longer and larger than the "DC–8", the new 250 passenger Douglas "61" hardly made any stir at all.

Remaining to be considered as a vital angle of aviation operations is the possible use of water-landing areas in our quest to find more landing space nearer to city centers. Nearly all big cities in the U.S. have water areas adjacent to their centers, New York, Boston, San Francisco, Chicago, etc. These vast open spaces make it tempting to reopen our minds to an appraisal of what changing from land to water would entail. New materials of construction make corrosion much less a maintenance headache than in earlier years. Pressurized fuselages are strong enough now to serve as hulls, merely with slight change in the bottom to give takeoff step shaping. The spray bother with propellers is gone. The whole picture looks much more feasible than it did; and, at least in the case of the SST, water-based operation should receive much more study to get its operation closer to town. We could be missing a viable operating-field because we have not applied our most modern new techniques and materials to making it work much better. It has, however, become unfashionable even to consider that water airports might be offering an unlooked for solution to much of our airway-airport syndrome.

Airport-to-city transit by helicopters may soon become city-to-city by VTOL's

Air transportation is not finished until goods or passengers are delivered near enough to the city centers to make the air-time saving a reality. Even if the delays of congestion over airports were to be reduced to a practical amount, there would still be the time consumed in the trip from the airport into town.

In the last decade, 1959 to now, since jets have made their wide appearance, airports have been pushed ever increasingly away from city centers. This great fault in our air-transport system has become a number one headache.

Road blockage and road inadequacies, particularly in rush hours, as well as equally frustrating train services, have led us to look to the air-road as the solution, and in particular to the helicopter with its close-in landing possibilities.

Thus, we get into helicopter airlines like New York Airways, Los Angeles Airways, and San Francisco Airways. They promise well and indeed deliver the great time-saving they were expected to. But they are presently facing bravely that hard business reality—their inability to make enough profit. Landing facilities, too, are still too limited. Docks, roofs, parks, water and river fronts, are begging to be used. But municipal imagination is stagnant. The City of Miami just finished a billion dollar "Doxiadis" plan for a great future city. There is no mention, whatever, in this elaborate plan of heliports, waterplane landing-docks, or STOL strips! A

planned huge convention hall has no heliport roof—no front door.

The present helicopter costs of maintenance and operation are just too high to allow for profit under prevailing fare-levels. This may largely be the fault of the builders of helicopters. Ever since Sikorsky started his pioneer work, most of the manufacturers have never been pushed hard enough by the services to design more economical structures. The major designers have not given or had the time to give serious attention to abandoning the shaft-gear driven rotors now used—either single rotor with tail prop or tandem rotor. They could have turned to the surely much-less-expensive to maintain tip-jet driven rotors that have been clamoring for development for many years. One reason for this is that the services made no demand for this kind of progress because economy was not in their language on the same level as it is with a struggling commercial airline.

Now, however, the urgent market for close-in aircraft and the added private and company use of helicopters or their derivative, the VTOL, becomes promising, indeed. With this comes the plea to make it all acceptably quiet, usefully fast, and above all, cheaper to maintain.

Both noise reduction and much less expensive-to-maintain design of helicopters appear to be imminent. The pneumatic tip-jet propulsion system offers a great reduction in destructive vibrations and a simple way to transfer the turbine jet's power from the tip-jet vertical lift mode to direct thrust out of a tailpipe to fly fast on wings. The helicopter's curse of being too slow can be lifted and it can become a fast VTOL. Two recent developments further accent the near future advent of such an aircraft—the Lockheed type rigid-rotor and the retractible folding rotors of several designers. The tip-jet application of power also makes more feasible the installation of multiple rotors (three or four) to still further reduce maintenance by eliminating the cyclic-pitch control with all its bothers of tracking, checking bearings and vibrations. Also on the way out would be the hampering stall of the retreating blade. Control would then be by collective pitch change only, and applied on either side or at the tail as desired. A rotor danger, the "Vortex Ring" condition, would also be eliminated.

The principal objection to the tip-jet is a wastefulness in power application. But jet engines are so light that larger ones can be used and since the close-in ranges that these VTOL craft would be used for are so short in distance (and even shorter in time due to higher cruising speed) the added fuel consumed would not be prohibitive. This high fuel consumption has been a cause of hesitancy on the part of designing engineers. But is this not in the same class as their feeling of fright, several decades ago, over jet-engine applications to airplanes because of so much higher fuel used per hour? They failed, in those early days, to foresee that jets meant so much greater miles per hour speed that the gallons per mile remained almost the same!

New heat resistant materials, titanium, new composites, bonded metals, and fiberglass, help much too, in giving justification for serious thought to tip-jet propulsion. Delay in this is the kind of stupid lag that a fast developing art like ours suffers from—making it so difficult for an executive to really plan ahead. His greatest allies should be the engineers and they are so often just too afraid to put their necks out.

Even more importantly—where is the money for new VTOLS coming from?

The NASA buys flying articles, the space-capsules, from blueprints that have never flown in any basic type. Why can't we look for a similar approach in pushing a 60 passenger city-to-airport VTOL? In short order, it would become a city-to-city transport for 200-300 mile ranges, and then this form of fast 300 m.p.h. transit would really make money.

This is not likely to be seen soon, because the fashion of the day is to do more and more research, rather than to build real articles that will fly! This lag applies equally to the FAA as well as to NASA, going as they do all out for the supersonic transport. The SST's will be relegated to far-out airports. As already pointed out, their value will largely be negated by the long trek into town where the passenger really wants to go. The far-out airports are a vital part of the SST system. So, should not this part of an effective SST system have also included fast VTOL airport-to-city transit from the very start?

It has not yet done so.

Facing stark reality we must recognize that these desirable developments are not yet here so what are we doing to meet these headaches of the day? What is the "insight"?

Only a matter of countable months ago this country established a Department of Transportation, so it very probably is not fair to visit our current sins on it, but look at the problems it faces.

We have built tremendously expensive, long-runway airports far from our cities. We have already embarked, or we are facing the problem, of building great freeways to get to them or of going to the vast expense of constructing rapid transit systems for the same purpose.

Desperately, we call for helicopters, STOLS, air taxis, anything to fly over this mess. What do we find? We find that the only system used with any kind of success in the last few years is the helicopter, but that it is so expensive that it must depend on a subsidy authorized by Congress. And in its all-seeing wisdom, the Congress, doing everything in its power to make a bad situation really suicidal, cut off the subsidies.

What a relief in the midst of all this mess would be the advent of a really effective VTOL. The VTOL needs no vast landing area—in fact, the roofs of present airport concourses could be adapted to provide landing space.

What a relief that would be to the control tower operator, who would only have to tell the city-to-city VTOL pilot—who by now really is a helicopter pilot since he is in the vertical lift-descent phase—what gate to land on top of.

And what a relief to the pilot who can simply stop or back up if his airborne radar shows him too near another VTOL.

Let us keep in mind, too, the highly significant development of the "Decca" and other hyperbolic navigation systems which can show the helicopter pilot his location, at any time and in any sort of weather, within a space of a few feet.

Thus we find this period of 1946 to the present, just as full of wrong steers and of triumphs as earlier ones. And for guidance we must note a few additional high points.

The SST has come on the stage. Before we go too far in government directed designing let us recall some axioms. As we have already said—talent cannot be directed by the commanding officer. Nor can a fine painting be executed by a committee. We must look to individual designing.

Noise is the greatest public antipathy, getting more pronounced every day. As we venture into the VTOL area this is even more serious because the helicopter mode needs all its power to land with and is noisiest when closest in. It is inexcusable now for example to have tandem rotors that overlap and add their slapping noise to the engines.

It is perhaps regrettable that the 1938 Air Commerce Act made no reference to aircraft noise or airways congestion, though few could have foreseen all this back then.

Since there was no real plan then or since for an air transport system, we find that huge orders for aircraft were gaily placed by the industry without the slightest thought on its part—or on the part of the FAA—as to what effect these orders would have on what Herb Fisher calls the "fast moving aluminum overcast" of our overcrowded skies.

Catching up with the noise problem at this moment, too, is the mentioned *problem of air pollution,* which we had all better turn our minds to, for today's higher pressure-ratio engines show so much visibly greater exhaust smoke burning their kerosene fuel at the very moment when the public's hostility to every sort of pollution is increasing by the day.

Looking out of the window of a jet plane today, majestic in flight at 600 miles an hour and 30,000 feet or more above the earth, you can look out at an engine that is nothing more than a simple spool spinning around generating its thrust pushing this huge aircraft on its way. Think back in contemplation only a few years.

How did those 28-cylinder radial engines, with all those cranks and pistons and valves in mortal destructive combat with each other, ever survive?

Or where did we ever get the courage to count on their doing so?

III. WHERE ARE WE GOING? 1969–90

Now we can relax and speculate and let our fancy run a bit freer—but not too free if we want to be constructive.

Of the developments that we can foresee that hopefully most of us in this room will actually witness, perhaps the most exciting will be in power plants. The advent of the nuclear engine within the next decade or so is practically a certainty. There is also talk of reviving the steam engine—in a new and sophisticated form, certainly, but still the steam engine so dear to our grandfathers. And some of our more daring engineers are even talking of ways of trying to harness rocket engines, of developing some sort of throttle that would actually be able to control them precisely. What sort of idea would that be for a tip-jet helicopter?

And the compound helicopter now in the works will, when flying in its wing-borne mode, have a much greater advantage over the helicopter mode—a much higher ceiling. These ever-larger fanjets—when shall we call these giant fans by their correct name? They are really ducted propellers, very efficient and a wonderful addition to the jet age.

The second most important development of the future, I think, will be that of an imposing list of new materials. Coming are all manner of strong, light, thermo-setting plastics, glass fibers, ceramics, metal alloys, titanium boron—for all I know perhaps we shall end up with that miracle material "unobtanium" which we have all dreamed of for so long—lighter, stronger, easier to work, untiring, no crystalline cracks, no corrosion!

IV. WE'RE GOING TO HAWAII IN 1980?

It is spring of 1980 . . . and our foresight has had time to crystallize half way along the road to our goal of 1990 . . . We know from earlier decades that in ten year periods things do not change so much that our expectations can't be realized. In this context may I anticipate a flight to Hawaii on May 21, 1980? Such a flight is predicated on that well known postulate—so vividly proven by Jules Verne and Al Capp—that anything man can imagine he is eventually sure to invent into actuality.

My descriptive forecast would read thus.

A few days before leaving I had called Superior Airline Company on my television teleautograph—computer-phone in New York and visually speaking to the clerk I placed my credit card in the slot, picked from his

chart seat number "9–K", my favorite, and bought it for a flight to Hawaii non-stop where I was to join a friend for the weekend. By pressing the proper buttons I thus had paid for this passage. The clerk punching his machine, and mine receiving his signals, produced the ticket itself, which I pulled out. That was that. I did not have to make a reservation; I held the seat ticket, itself, all ready to use. The boring airport-counter process had long been replaced by the direct seat sale as for a theatre. The at-first-hesitant airlines had worked out their computer and recording machinery so that a last-minute cancellation could be made, by adding a small penalty on the charge account, freeing the seat for others.

Luggage handling had been simplified by an electronic up-dating of the way luggage is handled on ocean liners—by initials. This system had been installed following the appearance of the jumbo jets—a simple paper label that had nothing except the first letter of your last name pasted onto each piece of luggage, and when you went to the luggage counter, you simply had to go to the section with your letter over it.

To start on my trip, I went to what were now called the Airline Docks along the East River, the "VTOL Airpark" that reached from 23rd to 38th Streets where the FDR Drive had been totally covered over. Each airline had its own section of this area, where your taxi could unload exactly at the foot of the escalator that would bring you up to your own VTOL plane.

This aircraft area included some fifteen docks, each with a roof capacity for ten VTOLS. This meant a handling capacity of over 100 of these aircraft at the same time, and there were similar installations at the Hudson River, and down at the Battery.

I marvelled at the changes from the old days. Gone, for example, were the hectic days at Kennedy, with the sounds of the ear-splitting exhausts, as the old-fashioned jets went screaming down the thousands of feet of runway in order to pick up enough speed to get into the air, discharging the pollution of their exhausts in addition.

Here at "VTOL Airpark" there wasn't even any delay. I arrived in my taxi, went up the escalator, completely protected from the weather, went abroad the aircraft, showed my ticket to the usher—formerly called "the stewardess"—and was shown to my seat. Alongside the window was a convenient shelf for things like cigarettes (still used in 1980?), and a little wall fixture for holding your hat.

The takeoff was almost unnoticeable, that wonderful feeling of vertical takeoff where the ground just seems to fall away. Even though I knew there was turbulent air outside, our VTOL was steady as a church, so different from earlier trips I had taken in STOLS, where the light wing loading can be so uncomfortable in bumpy winds.

Settling comfortably in my seat, I noticed how smoothly the tip-jet-driven rotors—one on each side and one at the tail—were lifting us through the overcast to an altitude of several thousand feet. I was not concerned because I knew that the pilot was only gradually increasing his forward speed and that his radar and TV screen, which would show him all planes from a distance of 200 feet out to ten miles, would enable him to avoid any collision.

We finally came out into the clear at our assigned altitude, where we came under computerized traffic control. Our speed increased as the retraction of the rotors began. I could feel the wings taking hold and the acceleration that the direct thrust of the propulsion jets were now giving the machine as it transformed itself into a sleek, streamlined-winged airplane moving toward speeds of 1200 m.p.h. The folding and housing of the rotors, about which there had been so much hesitation twenty years ago, did not seem any more of a stunt than the folding of a retractable landing gear of that age. And the rotors were very little heavier, and far easier to maintain, than the gear that could be used only for a few minutes at takeoff and landing.

Eagerly I looked forward to that thrilling moment when we would slow up over Hawaii . . . open up the rotors . . . let them start turning at zero pitch . . . while the wings were gradually relieved of their burden.

Finally we did arrive, and slowed up to almost stationary hovering. I recalled from previous VTOL flights, that wonderful feeling of then sinking slowly, under perfect control, to a light touchdown on the roof spot reserved just for us. No more waiting for runway clearance, no more taxiing for miles to get to a debarking gate.

So secure did I feel, too, in knowing that even if all our power systems failed, the great safety of fully opened rotor auto-rotation would drift us down to some spot of safety on land or water.

As I was thinking this, the Polynesia Hotel came closely into sight below us and we settled down softly to join the other VTOLS already on its roof.

I had completed an effortless jaunt of 5,000 miles in five hours, direct from the dock roof in New York. Later that evening I was able to say smugly to my fellow dinner guests:

"Forward horizontal velocity in aircraft is no longer meaningful without vertical flight for time saving at each end."

CONCLUSION

There is no conclusion to flying's progress. If we do not by 1980 have the imaginary experience I have just described, it will be because we have been too slow in getting going.

As a sort of pragmatist, I feel that, in the industry at the moment, we are doing too much research and too little building. And most of all, too little system planning.

Bothered most of all by the immediate requirements, we can all see that if air traffic is to grow to maturity on its present lines, the first great needs are more runways and more air aids.

But are those present lines the right ones? *My conclusion after taking these "sights" is that they are not.*

Airport and airways developments take precedence *now* . . . only because VTOL is so slow in being translated into real hardware. The cost of such novel aircraft is high, but how much higher will huge airports be!

Before 1990, or surely before that magic New Year of the Third Millenium, the air road will open up to all manner of traffic in a thrilling and rewarding way. But not until we approach our problems with consideration of all systems involved.

And what's more, we must show *more courage and determination in boldly building new and more tractable aircraft.* The rapidity with which daring innovations followed one upon the other, during the earlier days had often led to the quip: "if it works . . . it's obsolete."

Let's hope that we haven't lost too much of this pioneering impetus.

The air transport industry now has on order over 8 billion dollars worth of equipment in fixed-wing aircraft, incapable of flying or landing at speeds under 120 miles an hour. But not a dollar's worth of orders for vertical takeoff and landing planes!

Are the eggs in the wrong basket?

ORDER OF BUSINESS

The VICE PRESIDENT. Is there further morning business?

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT ON SETTLEMENT OF CLAIM OF THE KLAMATH AND MODOC TRIBES AND YAHOOSKIN BAND OF SNAKE INDIANS

A letter from the Chairman, Indian Claims Commission, transmitting, pursuant to law, a report on the settlement of a claim in Docket No. 100–A, the Klamath and Modoc Tribes and Yahooskin Band of Snake Indians (with an accompanying report and papers); to the Committee on Appropriations.

REPORT OF CIVIL AIR PATROL CORPORATION

A letter from the National Commander, Civil Air Patrol, transmitting, pursuant to law, a report of the Civil Air Patrol Corporation for 1968 (with an accompanying report); to the Committee on the Judiciary.

REPORTS OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on an examination of financial statements of the Federal Home Loan Bank Board, for the year ended December 31, 1968, dated September 5, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the effectiveness and administrative efficiency of the Neighborhood Youth Corps program under title IB of the Economic Opportunity Act of 1964, Gary, Ind., Department of Labor, dated September 5, 1969.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the effectiveness and administrative efficiency of the Neighborhood Youth Corps program under title IB of the Economic Opportunity Act of 1964, Kansas City, Mo., Department of Labor, dated September 5, 1969 (with an accompanying report); to the Committee on Government Operations.

ADJUSTMENT OF IMMIGRATION STATUS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered in behalf of Barbara A. Penaherrera and Maria M. Penaherra relating to adjustment of their immigration status (with accompanying papers); to the Committee on the Judiciary.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A resolution of the Senate of the State of California; to the Committee on Labor and Public Welfare:

"SENATE RESOLUTION 303

"Relative to continuation of funds to federally impacted school areas

"Whereas, The costs of education in the State of California are borne almost exclusively by the property taxpayers, many of whom find it increasingly difficult to retain

their property with the increasing assessments and tax rate; and

"Whereas, In 1950, the federal government enacted P.L. 874 and P.L. 815, thereby recognizing the responsibility of the United States for the financial impact of government installations on local school districts; and

"Whereas, While some California communities have had a third or more of their land removed from the tax rolls by the federal government, they are still responsible for education of all of their resident children; and

"Whereas, Funds, from P.L. 874 and P.L. 815 have compensated affected school districts in the 3–A category for the influx of school age children living on tax-free property, and, in the 3–B category, partially compensated them for educating the children of government workers living off base; and

"Whereas, The school districts have been notified that an effort will be made in the interest of federal economy to eliminate the 3–B category in the current appropriation bill; and

"Whereas, If such a cut in appropriations does take place, some California school districts will no longer be able to operate and many others will be financially crippled; now, therefore, be it

"Resolved by the Senate of the State of California, That the Members do hereby request the federal government to make the full appropriation under P.L. 874 and P.L. 815, thereby making it possible for California school districts to maintain the present level of education for all students; and be it further

"Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and the Vice President of the United States, to the Secretary of Health, Education, and Welfare, to the Director of the Bureau of the Budget, to the Chairmen of the Budget Committees in the Senate and House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

"This is to certify that the above resolution was adopted by the Senate on July 24, 1969.

"C. D. ALEXANDER,
"Secretary of the Senate."

A joint resolution of the Legislature of the State of California; to the Committee on Finance:

"ASSEMBLY JOINT RESOLUTION 64

"Relative to licensing of nursing home administrators

"Whereas, Public Law 90–248 requires that as a condition of Title XIX reimbursement, there must be a state program for the licensing of nursing home administrators by July 1, 1970; and

"Whereas, The Assembly Health and Welfare Committee has evaluated the need for such licensure and as a result of that evaluation has concluded that licensure of nursing home administrators will not materially affect the standards or quality of care provided in nursing homes; and

"Whereas, Public Law 90–248 has the effect of requiring the Legislature of the State of California to surrender its independent judgment in state matters to the federal government; and

"Whereas, The alternative would be to pass a 'paper' licensing act with few requirements so that all existing administrators could be licensed; and

"Whereas, The Assembly does not consider such a subterfuge in the public interest, nor does the Assembly feel that licensure simply for the sake of licensure is a desirable public policy; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to repeal the nursing home administrator licensure requirement of Public Law 90–248 and to reevaluate the entire area of quality of care in nursing homes in order to develop realistic methods for insuring high quality based upon the actual level of care provided rather than mere licensure of the administrator; and be it further

"Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, the Secretary of Health, Education, and Welfare, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Public Works:

"ASSEMBLY JOINT RESOLUTION 59

"Relative to federal-aid primary highway funds

"Whereas, The federal-aid primary highway system in California includes some of the nation's best known routes, such as Route 101 on the California coast, Route 50 from Sacramento to Lake Tahoe, and Route 1, the Pacific Coast Highway, from Ventura to San Clemente; and

"Whereas, The geographical expanse of California lends itself to use of the motor vehicle as the primary means of meeting the transportation needs of the people of this state; and

"Whereas, The Redwood National Park and Point Reyes National Park have recently been established within the state and these parks will generate additional traffic on federal-aid primary system as well as our state highways in areas of the state where such systems are already seriously inadequate to service present traffic demands; and

"Whereas, The improvement of a large portion of the mileage on this system which is needed now cannot be budgeted because of the lack of funds; and

"Whereas, Federal gasoline taxes collected are approximately 20 percent greater than the road funds returned to California from the federal government; and

"Whereas, Substantial deficiencies in federal, state and local highways and roads in California would seem to indicate a greater portion of federal funds should be returned to California to help meet its highway needs; and

"Whereas, The method for distributing federal funds to the states for use on the primary system was first developed in 1916 and is based upon one-third population, one-third area, and one-third post road mileage; and

"Whereas, The California Department of Public Works is now undertaking a federally mandated functional classification study of all streets and highways in the state; and

"Whereas, Such functional classification study may substantially affect the distribution of federal funds throughout the state; and

"Whereas, Additional factors, such as miles of roadway, number of fatal and injury accidents, vehicle miles traveled, and motor vehicle registrations should be considered in distributing funds; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to enact legislation to provide for the distribution of federal-aid primary highway funds on a more currently realistic basis than the outdated formula now used; and be it further

"Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, the Secretary of the Department of Transportation, the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Finance:

"ASSEMBLY JOINT RESOLUTION 40

"Relative to taxation of state and local government bonds

"Whereas, Equity among taxpayers is essential to popular confidence in the federal revenue system; and

"Whereas, The Ways and Means Committee of the United States House of Representatives has conducted extensive hearing on proposals for equitable reform of the federal personal income tax; and

"Whereas, Spokesmen for the National Governor's Conference, the National Legislative Conference, The National Association of Attorneys General and the National Association of State Treasurers, Auditors and Comptrollers have endorsed the objective of tax reform while urging the committee to refrain from changes which would weaken the capacity of the states to meet the needs for state services; and

"Whereas, The Ways and Means Committee is to be commended for its efforts to improve the equity of the federal personal income tax; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States:

"1. That no change be made which would deprive state and local government obligations of their traditional immunity from federal taxation;

"2. That no change be made which would result in constriction of the market for bonds issued by the states or local governments;

"3. That no change be made which would interpose federal judgments relating to the policies of the states or local governments; and

"4. That no change is acceptable which would subject borrowing by the states and local governments to the uncertainties of the appropriation processes of the Congress; and be it further

"Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Labor and Public Welfare:

"ASSEMBLY JOINT RESOLUTION 22

"Relative to bilingual education programs

"Whereas, Congress adopted the Bilingual Education Act in 1967 to facilitate learning by students in their native tongue as well as in English and to preserve the national resource of bilingual speakers; and

"Whereas, The funding of this act for the 1969–1970 fiscal year was $7,500,000 even though the act authorized an expenditure of $30,000,000; and

"Whereas, For the 1969–1970 fiscal year 310 school systems have applied for $40,373,580, which will be apportioned from the $7,500,000 appropriation; and

"Whereas, One hundred two California school systems have applied for $11,662,405 on behalf of 229,309 students in California for the 1969–1970 fiscal year; and

"Whereas, Without adequate federal funds the school districts cannot provide adequate or successful education to their bilingual students; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the members urge the members of the United States Senate and House of Representatives to augment the appropriation made for bilingual education programs for the 1969–1970 fiscal year sufficiently to raise the appropriation to $30,000,000, the maximum amount authorized; and be it further

"*Resolved,* That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Agriculture and Forestry:

"ASSEMBLY JOINT RESOLUTION 47

"Relative to the federal food-stamp and commodity distribution programs in California

"Whereas, The Congress has created food-stamp and commodity distribution programs, which have been implemented by legislative action in California; and

"Whereas, These programs were designed by Congress to provide surplus food to the hungry and needy 'to the maximum extent practicable'; and

"Whereas, On December 30, 1968, a federal court in San Francisco ordered the United States Secretary of Agriculture to immediately implement one or both of these food supplement programs in every California county, but thus far the secretary has taken no action to implement the programs in counties of California which presently do not operate them; and

"Whereas, The federal court also found that there is substantial hunger in each California county without a food supplement program, and that sufficient federal funds are available to implement the programs; now, therefore, be it

"*Resolved by the Assembly and Senate of the State of California, jointly,* That the Legislature of the State of California respectfully requests the President and Congress of the United States to transfer the administration of the federal food-stamp and commodity distribution programs from the United States Department of Agriculture to the United States Department of Health, Education, and Welfare, where their implementation may receive a more favorable response; and be it further

"*Resolved,* That the President and the Congress of the United States are urged to investigate the reluctance of the United States Department of Agriculture to implement these programs in California pursuant to federal court order to determine if congressional intent has not been observed; and be it further

"*Resolved,* That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to the Secretary of Agriculture, to the Secretary of Health, Education, and Welfare, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Commitee on Commerce:

"ASSEMBLY JOINT RESOLUTION 52

"Relative to the California Maritime Academy

"Whereas, The California Maritime Academy has been established to prepare students for a maritime profession; and

"Whereas, The academy is of benefit to the State of California and the federal government and has been funded by both the state and federal governments; and

"Whereas, The State of California currently funds 65.7 percent of the academy's cost which is an increase of 16.5 percent since 1959–60; and

"Whereas, The federal government currently funds 17.9 percent of the academy's budget which is a decrease of 8.3 percent since 1959–60; and

"Whereas, The decreased percent of federal funding is due to a fixed dollar amount formula which does not change for normal price and program cost increases; now, therefore, be it

"*Resolved by the Assembly and Senate of the State of California, jointly,* That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to increase the federal government's share of funding for the California Maritime Academy to its previous level; and be it further

"*Resolved,* That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, and the Board of Governors of the California Maritime Academy."

A joint resolution of the Legislature of the State of California; to the Committee on Interior and Insular Affairs:

"ASSEMBLY JOINT RESOLUTION 16

"Relative to offshore oil development operations

"Whereas, The great scenic beauty of the shoreline along the California coast is one of the state's magnificent heritages; and

"Whereas, An oil spillage of mammoth proportions has occurred at an offshore oil Channel; and

"Whereas, This massive oil leakage has caused immeasurable damage and destruction to the California coast and brought death to countless fish and coastal wildlife; and;

"Whereas, The Santa Barbara Channel is known to be an area of geological fracturing and there is a danger that further oil leakage disasters may occur; and

"Whereas, Such drilling operations are located on federal outercontinental shelflands and operate under lease from the United States Department of the Interior and under federal regulations; and

"Whereas, In view of the oil pollution now wreaking such terrible damage to our coast, it is evident that the public interest would be well served through creation of an insurance fund for the protection and preservation of the California shoreline; now, therefore, be it

"*Resolved by the Assembly and Senate of the State of California, jointly,* That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to review and strengthen federal regulations pertaining to oil drilling operations in areas such as the Santa Barbara Channel under federal control, taking into account the geological fracturing and faulting which exist in such areas; and be it further

"*Resolved,* That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to permit authorized representatives of the State of California to make onsite inspection of oil drilling facilities and practices at oil development operations located on federal outercontinental shelflands off the California coast and to permit state supervision of such operations; and be it further

"*Resolved,* That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to halt all oil drilling operations in the Santa Barbara Channel under federal control until a well-by-well inspection can be made; and be it further

"*Resolved,* That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to establish an insurance fund from revenue produced through offshore oil development and production, to be used for removal of pollution, contamination, or debris resulting from such development and operations which affect the California shoreline and for the compensation of landowners, including public agencies, for private or public property damage; and be it further

"*Resolved,* That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Secretary of the Interior, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Labor and Public Welfare:

"ASSEMBLY JOINT RESOLUTION 24

"Relative to vocational youth organizations

"Whereas, Historically the United States Office of Education has cooperated and assisted in the promotion of vocational youth organizations; and

"Whereas, The Future Farmers of America, the Future Homemakers of America, the Distributive Education Clubs of America and the Vocational Industrial Clubs of America were organized with encouragement and assistance from the staff of the United States Office of Education; and

"Whereas, These youth organizations have become an integral part of vocational education programs in secondary schools through the influence of the United States Office of Education staff members who serve as advisors; and

"Whereas, Through these organizations youth in rural, suburban, and urban areas have had an opportunity to become members of constructive organized groups; and

"Whereas, These organizations have helped youth to identify with the world of work and to develop as civic and community leaders; and

"Whereas, Membership in these organizations is open to all students in vocational education regardless of race, creed or national origin; and

"Whereas, A recent policy statement issued by the United States Office of Education concerning the relationship between the Office of Education and student organizations prohibits its staff from directing the activities of student organizations or participating in the administrative decisionmaking of student organizations as officers; and

"Whereas, This policy will, in effect, greatly reduce assistance to vocational youth organizations; and

"Whereas, In the case of one youth organization, the Future Farmers of America, this policy is in direct conflict with Public Law 740, Chapter 823, Section 18, which specifically authorizes the United States Commissioner of Education, with the approval of the Secretary of Health, Education, and Welfare to make available personnel, services and facilities of the Office of Education; now, therefore, be it

"*Resolved by the Assembly and Senate of the State of California, jointly,* That the legislature of the State of California respectfully memorializes the President, the Congress of the United States, and the United States Department of Health, Education, and Welfare not to implement its policy until there has been sufficient time to permit full congressional review and hearings to determine whether or not this administrative order carries out the intent of the law; and be it further

"*Resolved,* That the Legislature of the State of California encourages the United States Office of Education to take immediate action to strengthen those youth organizations that have become such an integral part of the vocational education program in the United States; and be it further

"*Resolved,* That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, and to the United States Department of Health, Education, and Welfare."

A resolution adopted by the Council of the Borough of Red Bank, Red Bank, N.J., remonstrating against certain action taken by the House Armed Services Committee; to the Committee on Armed Services.

A resolution adopted by the council of the city of Holland, Mich., remonstrating against the enactment of legislation relating to taxing obligations to the separate States and municipalities; to the Committee on Finance.

A resolution adopted by the Third Marine Division Association, Inc., at Miami, Fla., relating to observance of the laws of God and of the land; to the Committee on the Judiciary.

A resolution adopted by the International Conference of Police Associations, Washington, D.C., relating to civil rights, and so forth; to the Committee on the Judiciary.

A petition, signed by Sheila R. Aronow, of Philadelphia, Pa., and sundry other citizens, praying for the enactment of legislation making January 15 a national legal holiday in memory of Dr. Martin Luther King, Jr.; to the Committee on the Judiciary.

A resolution adopted by the city council of Philadelphia, Pa., praying for the enactment of legislation to provide grape harvesters and farmworkers generally with the right to bargain collectively; to the Committee on Labor and Public Welfare.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. BURDICK, from the Committee on Interior and Insular Affairs, with amendments:

S. 227. A bill to provide for loans to Indian tribes and tribal corporations and for other purposes (Rept. No. 91-393).

By Mr. JACKSON, from the Committee on Interior and Insular Affairs, with amendments:

S. 2315. A bill to restore the golden eagle program to the Land and Water Conservation Fund Act (Rept. No. 91-395).

By Mr. McCLELLAN, from the Committee on the Judiciary, without amendment:

H.J. Res. 614. Joint resolution authorizing the President to proclaim the week of September 28, 1969, through October 4, 1969, as "National Adult-Youth Communications Week" (Rept. No. 91-394).

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports of nominations were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary:

John F. Kilkenny, of Oregon, to be U.S. circuit judge for the ninth circuit;

Harold S. Fountain, of Alabama, to be U.S. marshal for the southern district of Alabama;

Wayman G. Sherrer, of Alabama, to be U.S. attorney for the northern district of Alabama;

Eugene A. Wright, of Washington, to be U.S. circuit judge, ninth circuit;

Ozell M. Trask, of Arizona, to be U.S. circuit judge, ninth circuit;

Peter Mills, of Maine, to be U.S. attorney for the district of Maine;

John H. deWinter, of Maine, to be U.S. marshal for the district of Maine;

Marvin G. Washington, of Michigan, to be U.S. marshal for the western district of Michigan; and

Charles S. Guy, of Pennsylvania, to be U.S. marshal for the eastern district of Pennsylvania.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. CASE:

S. 2865. A bill to amend section 13a of the Interstate Commerce Act, and for other purposes; to the Committee on Commerce.

By Mr. HOLLINGS:

S. 2866. A bill to amend the Internal Revenue Code of 1954 to allow a credit against income tax to individuals for certain expenses incurred in providing higher education; to the Committee on Finance.

(The remarks of Mr. HOLLINGS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. SPONG:

S. 2867. A bill to amend section 202(a) of the Federal Property and Administrative Services Act of 1949 to remove a preference accorded to the District of Columbia over State governments in the disposition of excess real property; to the Committee on Government Operations.

(The remarks of Mr. SPONG when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. GORE (for himself and Mr. BAKER):

S. 2868. A bill to authorize the appropriation of funds for Fort Donelson National Battlefield in the State of Tennessee, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. TYDINGS (by request):

S. 2869. A bill to revise the criminal law and procedure of the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. METCALF:

S. 2870. A bill to designate the lake formed by the waters impounded by the Libby Dam, Montana, as "Lake Koocanusa"; to the Committee on Interior and Insular Affairs.

By Mr. GOODELL:

S. 2871. A bill to provide protection to consumers against erroneous and malicious credit information; to the Committee on Banking and Currency.

(The remarks of Mr. GOODELL when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mrs. SMITH:

S. 2872. A bill for the relief of Maj. Louis A. Deering, U.S. Army; to the Committee on the Judiciary.

By Mr. ALLOTT (for himself and Mr. DOMINICK):

S. 2873. A bill to declare the United States holds in trust for the Southern Ute Tribe approximately 213.37 acres of land; to the Committee on Interior and Insular Affairs.

By Mr. GRIFFIN:

S. 2874. A bill for the relief of Soon Nam Pyun; to the Committee on the Judiciary.

By Mr. HRUSKA:

S. 2875. A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide financial assistance to States for the construction of correctional institutions and facilities; to the Committee on the Judiciary.

(The remarks of Mr. HRUSKA when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 2866—INTRODUCTION OF A BILL ALLOWING A CREDIT AGAINST INCOME TAX TO INDIVIDUALS FOR CERTAIN EXPENSES INCURRED IN PROVIDING HIGHER EDUCATION

Mr. HOLLINGS. Mr. President, America's youth provides the leadership of the future. It has always been true, and will continue. By and large, this leadership comes from our colleges and universities. And today, we are facing a genuine crisis in college education. It is not from the student radicals, or from the quality of education. This crisis is financial, and is fed by the increasing inability of the average family to pay the mounting costs of a child's college education. Educational costs are spiraling above the normal increase in costs of living and also higher than the average wage earner's salary.

I deem it a great privilege to introduce a bill which would begin to offer some relief to these parents in the form of tax credits for money spent on higher education.

One has only to look at the recent problem of high interest rates and tight money for the beginning of the current fall semester to see the need of such a measure. College students throughout the Nation were faced with the prospect of not being able to go to school because banks could get better interest rates elsewhere. This created a real crisis in South Carolina this fall when students were unable to get loans from previous sources. Only Presidential action seemed to cause a loosening of the purse strings at our lending institutions.

In every survey taken, Americans have responded enthusiastically to the tuition tax credit plan. This certainly is not difficult to understand. Because of inflation, few families have been able to maintain any adequate, long-term plan for college savings, or any other savings, for that matter.

Another survey showed college officials and trustees also favor this plan to a high degree. The reason, obviously, is that such relief for parents would have a secondary reaction. It would remove some of the burden from existing Federal and private loan, grant, and scholarship programs.

Mr. President, this is a method of income tax reform and relief which is well within our national means to achieve. No one will argue that our future does indeed rest in the minds and abilities of our youth. This conceded, how can we refuse to take this partial step toward helping solve some of the financial problems relating to higher education? Some will say this will cut into the Federal budget as just another expenditure—admittedly needed but unwise at this time. To them I say this is no expenditure, it is an investment, and one we cannot in wisdom ignore.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill S. 2866, a bill to amend the Internal Revenue Code of 1954 to allow a credit against income tax to individuals for certain expenses incurred in providing higher education, introduced by Mr. HOLLINGS, was received, read twice by its title, and referred to the Committee on Finance.

S. 2867—INTRODUCTION OF A BILL AMENDING THE FEDERAL PROPERTY AND ADMINISTRATIVE SERVICES ACT OF 1949

Mr. SPONG. Mr. President, I introduce for appropriate reference, a bill to amend the Federal Property and Administrative Services Act to remove a preference accorded to the District of Co-

lumbia over State governments in the disposition of excess real property. The bill which I have introduced would remove that preferential treatment. I believe the State of Virginia or the State of Maryland or any other State should have access to such lands—after screening of Federal agencies—before the government of the District of Columbia.

Mr. President, under existing provisions of that statute, federally owned property in any State of the Union, declared surplus to the needs of a Federal agency may be claimed by the government of the District of Columbia, prior to the claim of the State in which the property is located. The responsibility of the Federal Government to the Federal City is recognized, but I doubt that the residents of any State would consider such preferential treatment to be justified.

The inequity of this provision became clear when the Army announced recently that it was inactivating a transmitter station in Virginia and was declaring the land, which had been acquired by condemnation in 1951 from private owners, surplus to the needs of the Army. The State and the county in which the land is located, have indicated an interest in acquiring the land for public use and a portion of the land in question, lies in the path of a projected parkway. Even the former owners have indicated an interest in reacquiring the property. Yet, under existing law, the municipal government of the District government, has first refusal. Admittedly, this situation from a practical standpoint is faced more by the States of Maryland and Virginia than any other State. But conceivably the District could file claim for surplus Federal lands in West Virginia, Tennessee, Pennsylvania, Delaware, Kentucky, or for that matter, in any State in the Union, or the Commonwealth of Puerto Rico before the State in which the land is located, even had an opportunity to refuse it.

I think I should point out that this provision was not included in the original statute, but was an amendment added in 1952, which, in effect, converted the municipal government of the District of Columbia to a Federal agency.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 2867) to amend section 202(a) of the Federal Property and Administrative Services Act of 1949 to remove a preference accorded to the District of Columbia over State governments in the disposition of excess real property, introduced by Mr. SPONG, was received, read twice by its title, and referred to the Committee on Government Operations.

S. 2871—INTRODUCTION OF A BILL TO BE KNOWN AS THE FAIR CREDIT REPORTING AND DISCLOSURE ACT OF 1969

Mr. GOODELL. Mr. President, the economics, the technology and the pace of the commercial life of this decade have literally transformed the credit reporting industry in this country. The practices of this industry in the future, operating perhaps in a cashless, checkless society, will be further shaped by today's ever expending computer technology.

While there can be little doubt about the wisdom of applying new technologies to the computerized credit reporting industry of the future, I believe that we must act now to protect our citizens from the dissemination, through those far-flung networks, of erroneous and malicious credit information.

I therefore introduce, for appropriate reference, a bill entitled the Fair Credit Reporting and Disclosure Act of 1969, which would amend the Truth-in-Lending Act to enable consumers to protect themselves against the use and dissemination of such information.

I believe that my bill represents a broad and sound approach to the many problems inherent in regulatory legislation of this kind.

Briefly, my proposal would provide for the following:

First. It would require that a creditor who denies credit to any person, or any one who denies employment or insurance to any person on the basis, in whole or in part, of a credit report to disclose to such person, upon written request made within a reasonable time following such denial, the name and address of any credit reporting agency which furnished such credit report;

Second. It would require the credit bureau to disclose the substance of the credit report to such person, upon written request, and to correct inaccurate or erroneous information, if the dispute was not frivolous;

Third. It would require credit bureaus to furnish upon written request, for a reasonable fee, not more than twice a year, at 6-month intervals, the identities of all recipients of a credit report on the applicant;

Fourth. It would require credit bureaus to update credit bureau files upon receiving requests for investigation;

Fifth. It would require credit bureaus to obtain and note in credit reporting files where reasonably possible the ultimate disposition of all civil and criminal complaints reported in such files;

Sixth. It would insure that lists of names and other credit reporting information, including but not limited to financial status, credit performance, and economic indicators are not disseminated or sold for market research purposes;

Seventh. It would impose a criminal penalty upon any person obtaining a credit report under false pretenses.

The hearings conducted on this subject by Senator PROXMIRE's Financial Institutions Subcommittee last May clearly established the fact that the credit reporting industry exercises considerable power over private citizens. The dissemination of inaccurate or misleading credit information about an individual can be disastrous to his reputation and economic well-being.

Recognizing that consumer credit has become a keystone of our economy, and that the needs of commerce for the free flow of credit information must be protected, some regulation of the industry to protect the consumer is in the public interest.

My bill will provide a simple mechanism for disclosing and correcting credit misinformation without impairing the orderly operation of the credit reporting industry. S. 823, the Fair Credit Reporting Act, would impose an affirmative duty upon the credit grantor and the credit bureau to notify an individual who has been the subject of a credit report and who is ultimately denied credit. I believe that the more reasonable and economical solution is to place the duty upon the consumer to obtain disclosure.

A result of the growth of credit bureaus has invariably been the compilation of large amounts of personal data on many persons. While this is necessary, unlimited access to such files can place in jeopardy the rights of the individual. My bill would limit access to these files to persons with a clearly defined interest. I believe that the measure I introduce today provides significant and vital safeguards for the consumer, while supporting procedures which are fair and equitable to the credit reporting industry.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at the conclusion of my remarks.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2871) to provide protection to consumers against erroneous and malicious credit information, introduced by Mr. GOODELL, was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 2871

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Truth in Lending Act is amended by adding at the end thereof a new chapter as follows:

"CHAPTER 4.—CREDIT REPORTING AGENCIES

"Sec.
"161. Short title.
"162. Findings and purpose.
"163. Definitions and rules of construction.
"164. Regulations.
"165. Access to information.
"166. Unlawful access to information.
"167. Periodic notice.
"168. Other requirements.
"169. Civil liability and criminal penalties.

"SHORT TITLE

"SEC. 161. This chapter may be cited as the 'Fair Credit Reporting Act'.

"FINDINGS AND PURPOSE

"SEC. 162. (a) The Congress makes the following findings:

"(1) An elaborate interstate mechanism has been developed for investigating and evaluating the credit worthiness, credit standing, credit capacity, character and general reputation of persons.

"(2) In an economy which depends increasingly upon information on persons for the extension of credit and the movement of goods and services there is a need that such information be accurate and readily ascertainable.

"(3) Credit reporting agencies have assumed a vital role in assembling and evaluating consumer credit and other information on consumers and other persons.

"(4) There is a need to ensure that credit reporting agencies exercise their grave responsibilities with fairness, impartiality, and a respect for the individual right to privacy.

"(b) It is the purpose of this chapter to enable persons to protect themselves against the dissemination of inaccurate information bearing on their credit worthiness, insurability, or employability by requiring that all credit reporting agencies, utilizing the facilities of interstate commerce, adopt reasonable procedures, in accordance with regulations prescribed by the Federal Trade Commission, for meeting the needs of commerce for credit information on a basis which is fair and equitable to such persons.

"DEFINITIONS AND RULES OF CONSTRUCTION

"Sec. 163. (a) Definition and rules of construction set forth in this section are applicable for the purposes of this chapter.

"(b) The term 'creditor' means any person utilizing the facilities of interstate commerce which regularly extends or arranges for the extension of credit whether in connection with loans, sales of property or services or otherwise, provided that, where credit is extended through the use of a credit card or similar device the issuer of such credit card or device shall be the creditor.

"(c) The term 'person' means an individual, partnership, corporation, association or other entity.

"(d) The term 'credit report' means any report as to the credit worthiness, insurability, or employability of any person, and includes any information which is sought or given for the purpose of serving as the basis for a judgment as to the credit worthiness, insurability, or employability of a person: *Provided, however,* That such term shall not include any such report or representation containing information solely as to transactions between such person and the person making such report or representation. Such term does not include a report or representation where an issuer of a credit card or similar device authorizes or approves a specific extension of credit by the use thereof.

"(e) The term 'credit reporting agency' means any person who regularly engages in whole or in part in the business of furnishing credit reports, and for the purpose of preparing or furnishing them uses any means or facility of interstate commerce.

"(f) The term 'law enforcement agency' means the Attorney General of the United States, a United States attorney, the Secretary of the Treasury of the United States, the Director of the Federal Bureau of Investigation, the Director of the United States Secret Service, the attorney general of any State or the district attorney of any city, county or other locality, or the duly authorized designee of any such individual.

"(g) The term 'licensing agency' means any governmental unit, or any agency or instrumentality thereof, which is required by law to consider the financial status or responsibility of an applicant in determining whether or not to issue a license or grant a benefit.

"(h) The term 'Commission' means the Federal Trade Commission.

"REGULATIONS

"Sec. 164. The Commission shall prescribe regulations to carry out the purposes of this chapter. These regulations may contain such classifications, differentiations, or other provisions, and may provide for such adjustments and exceptions for any class of transactions, as in the judgment of the Commission are necessary or proper to effectuate the purposes of this chapter, to prevent circumvention or evasion thereof, or to facilitate compliance therewith.

"ACCESS TO INFORMATION

"Sec. 165. (a) A creditor who denies credit to any person or any one who denies employment or insurance to any person on the basis, in whole or in part, of a credit report shall, upon written request, made within a reasonable time following such denial, disclose to such person the name and address of any credit reporting agency which has furnished such credit report on such person.

"(b) A licensing agency which denies a license to any person shall, upon written request, made within a reasonable time following such denial, disclose to such person the name and address of any credit reporting agency which has furnished such agency with a credit report on such person.

"(c) Any credit reporting agency so disclosed to a person by a creditor or licensing agency or other person as provided in subsection (a) or (b) shall, upon written request, made within a reasonable time following such disclosure, provide to such person a description of the contents of any credit report furnished to such creditor, licensing agency, or other person and the specific facts or allegations upon which it is based. The credit reporting agency may impose a reasonable charge in conformity with regulations prescribed by the Commission for furnishing such information. If such person shall reasonably establish that any item of such report or of the facts or allegations on which it is based is inaccurate, the credit reporting agency shall forthwith correct such item and deliver, at its expense, a corrected credit report to each person who has previously received a credit report containing such item. If the accuracy of any such item is disputed, such credit reporting agency shall clearly and legibly note in its records of such report and in any subsequent credit report containing such item and relating to such person that the item is disputed; except that a credit reporting agency need not make a notation as to any disputed item if it has reasonable grounds to believe that the objections to the item are frivolous. Any item bearing on a record of payment which is more than five years old or bearing on a record of bankruptcy which is more than fifteen years old shall be deemed to be inaccurate unless the date of such occurrence is clearly stated.

"(d) Notwithstanding any other provisions of law, no person shall have any claim or bring any action or proceeding based on information disclosed pursuant to this section, except that a third party who willfully, knowingly, and maliciously communicates to a credit reporting agency any false and defamatory information, may not assert privilege for information so disclosed.

"(e) A credit reporting agency may adopt reasonable procedures designed to ensure that the person requesting a credit report pursuant to subsection (c) is the subject thereof.

"Sec. 166. Unlawful access to information

"(a) No credit reporting agency shall furnish a credit report to any person or government agency, except pursuant to order of a court, unless such credit reporting agency has reasonable grounds to believe such person or agency (1) is a creditor or prospective creditor, employer or prospective employer, or an insurer or prospective insurer, (2) is a law enforcement agency, (3) is a licensing agency, (4) is a credit reporting agency, or (5) has been duly authorized in writing by the subject of such report.

"(b) No credit reporting agency shall furnish a credit report to any such person or government agency unless it has reasonable grounds to believe that the report will be used solely for a permissible purpose under this chapter.

"(c) No credit reporting agency shall furnish a credit report to a law enforcement or licensing agency, unless it has received a written request which contains the name of each person with respect to whom a credit report is to be furnished, and (1) the agency requesting the credit report is a law enforcement agency and submits a sworn statement that it is requesting the report solely for law enforcement purposes, or (2) the agency requesting the credit report is a licensing agency and submits a sworn statement that it is requesting the report solely for the purposes of considering the financial status or responsibility of the subject of such credit report.

"PERIODIC NOTICE

"Sec. 167. A credit reporting agency shall, upon a written request made not more often than once in any six-month period, furnish the requesting person with the name and address of every person or governmental agency to whom it has furnished a credit report relating to such requesting person during the preceding six-month period. Such credit reporting agency may impose a reasonable charge in conformity with regulations prescribed by the Commission for furnishing such information.

"OTHER REQUIREMENTS

"Sec. 168. Every credit reporting agency shall follow procedures, in conformity with regulations prescribed by the Commission, to achieve the following objectives:

"(1) To insure that information on the basis of which credit reports are furnished is updated prior to the dissemination of any credit report.

"(2) If a credit report on a person contains any reference to any civil action or criminal proceedings, to obtain and note in its files and in any subsequent credit report on such person, where reasonably possible, the ultimate disposition of such civil action or criminal proceedings, and where it is impossible to make a determination of such dispositions, to indicate the same and the reason therefor in such files and such subsequent reports.

"(3) To ensure that lists of names and other credit reporting information, including but not limited to financial status, credit performance, and economic indicators are not disseminated, sold, or given by credit reporting agencies for market research or other purposes to persons other than those authorized to receive credit reports pursuant to section 165.

"CIVIL LIABILITY AND CRIMINAL PENALTIES

"Sec. 169. (a) A person may bring a civil action for damages or to restrain a creditor or other person or a credit reporting agency from violating any provision of this chapter. If in any such action it is found that such creditor, person, or agency has willfully violated this chapter, the violator shall, in addition to any liability for such actual damages as may be shown, be liable for exemplary damages of not less than $100 or more than $1,000 for each such violation, together with costs, reasonable attorneys' fees, and disbursements incurred by the person bringing the action.

"(b) If, in any civil action brought by a person against a creditor or other person or credit reporting agency based on the publication or dissemination of information contained in a credit report, it is found that such creditor, person, or agency willfully violated any provision of this chapter with respect to such credit report or the access thereto, such creditor, person, or agency shall not be entitled to claim any privilege, absolute or qualified, as a defense thereto.

"(c) Any person who requests or obtains a credit report from a credit reporting agency under false pretenses, or furnishes a credit report to any person except in accordance with this chapter, or any employee of a credit reporting agency who willfully falsifies a credit report or any records relating thereto, shall be punishable by a fine of not more than $1,000, or imprisonment for a term of not more than one year, or both.

"(d) Any action under this section may be brought in any United States district court, or in any other court of competent jurisdiction, within two years from the date of the occurrence of the violation."

SEC. 2. (a) The table of chapters at the beginning of the Truth in Lending Act is amended by adding at the end thereof the following:

"4. Credit reporting agencies ..... 161".

(b) The caption at the beginning of the Truth in Lending Act is amended to read as follows:

"TITLE I—TRUTH IN LENDING"

(c) Section 103(a) of the Truth in Lending Act is amended by striking out "The" and inserting in lieu thereof "Except as otherwise specifically provided, the".

(d) The first sentence of section 105 of the Truth in Lending Act is amended by inserting before the period the following: "except for chapter 4".

ADDITIONAL COSPONSORS OF BILLS

S. 60

Mr. SCOTT. Mr. President, on behalf of the Senator from Delaware (Mr. BOGGS) I as unanimous consent that, at the next printing, the name of the Senator from California (Mr. MURPHY) be added as a cosponsor of S. 60, to create a catalog of Federal assistance programs, and for other purposes.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 1362

Mr. SCOTT. Mr. President, on behalf of the Senator from Delaware (Mr. BOGGS) I ask unanimous consent that, at the next printing, the names of the Senator from Massachusetts (Mr. BROOKE), the Senator from Maine (Mr. MUSKIE), and the Senator from Indiana (Mr. BAYH) be added as cosponsors of S. 1362 to provide Federal financial assistance to Opportunities Industrialization Centers.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2636

Mr. SCOTT. Mr. President, I ask unanimous consent that, at the next printing, my name be added as a cosponsor of S. 2636, to make the provisions of the Vocational Education Act of 1963 applicable to individuals preparing to be volunteer firemen.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2609, S. 2610, AND S. 2611

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Indiana (Mr. BAYH) I ask unanimous consent that, at the next printing, the names of the Senator from California (Mr. CRANSTON), the Senator from Alaska (Mr. GRAVEL), the Senator from Oklahoma (Mr. HARRIS), the Senator from Michigan (Mr. HART), the Senator from Hawaii (Mr. INOUYE), the Senator from Massachusetts (Mr. KENNEDY), and the Senator from Maine (Mr. MUSKIE), be added as cosponsors of S. 2609, to increase the participation of small business concerns in the construction industry; and S. 2610, to amend section 3 of the Housing and Urban Development Act of 1968; and of S. 2611, to amend the act of Act of August 24, 1935—commonly referred to as the "Miller Act"—to exempt construction contracts not exceeding $20,000 in amount from the bonding requirements of such act.

The VICE PRESIDENT. Without objection, it is so ordered.

S. 2701

Mr. SCOTT. Mr. President, on behalf of the Senator from South Dakota (Mr. MUNDT) I ask unanimous consent that, at the next printing, the names of the Senator from Wyoming (Mr. HANSEN) and the Senator from Tennessee (Mr. BAKER) be added as cosponsors of S. 2701, to establish a Commission on Population Growth and the American Future.

The VICE PRESIDENT. Without objection, it is so ordered.

SENATE RESOLUTION 255—RESOLUTION RELATIVE TO EXPENSES INCURRED BY THE COMMITTEE APPOINTED TO ARRANGE FOR AND ATTEND THE FUNERAL OF HON. EVERETT McKINLEY DIRKSEN, LATE A SENATOR FROM THE STATE OF ILLINOIS

Mr. PERCY submitted a resolution (S. Res. 255) relative to the expenses incurred by the committee appointed to arrange for and attend the funeral of the Honorable Everett McKinley Dirksen, late a Senator from the State of Illinois, which was considered and agreed to.

(The remarks of Mr. PERCY when he submitted the resolution appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSORS OF RESOLUTION

S. RES. 243

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Indiana (Mr. BAYH) I ask unanimous consent that, at the next printing, the names of the Senator from Utah (Mr. BENNETT), the Senator from Nevada (Mr. BIBLE), the Senator from Kentucky (Mr. COOPER), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Indiana (Mr. HARTKE), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Minnesota (Mr. MONDALE), the Senator from New Mexico (Mr. MONTOYA), the Senator from Oregon (Mr. PACKWOOD), the Senator from Rhode Island (Mr. PELL), the Senator from Vermont (Mr. PROUTY), the Senator from Wisconsin (Mr. PROXMIRE), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Alaska (Mr. STEVENS), the Senator from South Carolina (Mr. THURMOND), and the Senator from North Dakota (Mr. YOUNG), be added as cosponsors of Senate Resolution 243, to make it the sense of the Senate that the President should request the United Nations to take such steps as may be appropriate to bring about compliance by the Government of North Vietnam with its obligations under the Geneva Convention of August 12, 1949, relative to the treatment of prisoners of war.

The VICE PRESIDENT. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH—AMENDMENT

AMENDMENT NO. 146

Mr. MONDALE. Mr. President, on August 12, 1969, I submitted for myself and the Senator from New Jersey (Mr. CASE) amendment No. 136 to S. 2546, relating to the nuclear aircraft carrier designated as "CVAN-69." That amendment would delay authorization of funds for the carrier until the Comptroller General has submitted to the Congress a comprehensive study of the issues connected with the size and composition of our aircraft carrier force.

The Comptroller General has advised us that a number of the questions covered by the amendment go beyond the capacity of the General Accounting Office staff to study independently. However, he has indicated that he could, even in those cases, provide assistance to the Congress in reviewing and summarizing studies made by the executive branch.

It was, of course, our intention in submitting the amendment initially that the Congress would make the final judgment on the questions raised by it. Accordingly, and in light of the Comptroller General's advice, we have modified the amendment to:

First, make clear that the study called for by the amendment is to be made by the Congress;

Second, provide for a report by the Comptroller General to the Congress on those questions which he has said his Office is fully competent to handle; and

Third, provide for the Comptroller General to furnish to the Congress summaries of relevant studies made by the executive branch of the other questions raised by the amendment.

The distinguished chairman of the Armed Services Committee (Mr. STENNIS) has pointed out that the original amendment would bar further expenditures for CVAN-69's long lead-time items already obligated under fiscal year 1969 appropriations. That was not our intention, and I thank the Senator for calling this to our attention. We have also revised the amendment to avoid this effect.

Mr. President, I ask unanimous consent that the text of our revised amendment be printed in the RECORD at this point.

The VICE PRESIDENT. The amendment will be received and printed, and will lie on the table; and, without objection, the amendment will be printed in the RECORD.

The amendment (No. 146) is as follows:

S. 2546

On page 2, line 16, strike out "2,568,200,000;" and insert in lieu thereof "2,191,100,000;"

At the end of the bill add a new section as follows:

"SEC. 402. (a) None of the funds authorized to be appropriated by this Act may be expended in connection with the production or procurement of the nuclear aircraft carrier designated as CVAN-69; and no funds may be appropriated for any such purpose until after the Congress has completed a comprehensive study and investigation of the past and projected costs and effectiveness of attack aircraft carriers and their task forces and a thorough review of the considerations which went into the decision to maintain the present number of attack carriers. Such study and investigation shall, among other things, consider—

"1. What are the primary limited war missions of the attack carrier; what role, if any, does it have in strategic nuclear planning;

"2. To what extent and in what way is the force-level of on-station and back-up carriers related to potential targets and the number of sorties needed to destroy these targets;

"3. What is the justification for maintaining on continual deployment 2 carriers in the Mediterranean and from 3 to 5 in the Western Pacific;

"4. What is the over-all attack carrier force level needed to carry out these primary missions;

"5. Does the present 'one for one' replacement policy for these carriers have the effect of maintaining or increasing this force level, in light of the fact that the newer carriers and their aircraft are more expensive and have far more capability than the older carriers which they are now replacing;

"6. Would a policy of replacing two of the oldest carriers with one modern carrier maintain a constant force level;

"7. How many, if any, attack carriers and carrier task forces are needed to back-up a carrier task force 'on-the-line';

"8. What efficiencies, such as the Polaris 'blue and gold' crew concept, can be utilized to increase the time in which a carrier can stay 'on-the-line';

"9. What type of military threats are faced by the attack carrier; what proportion of the costs of a carrier task force are allocated to carrier defense; what is the estimated effectiveness of carrier defense against various types and levels of threats;

"10. To what extent does the carrier's vulnerability affect its capacity to carry out its missions; what are the plausible contingencies in which carriers may be committed;

"11. What type of resources should be devoted to carrier defense, considering the range of threats, the costs and effectiveness of the defense, and the plausible contingencies in which a carrier can be effectively used;

"12. To what extent can land-based tactical air power substitute for attack carriers; to what extent should the role of the attack carrier be restricted to the initial stages of a conflict;

"13. What are the comparative systems costs for land-based and sea-based tactical air power;

"14. What is the comparative cost effectiveness of land-based and sea-based tactical air power;

"15. How is the attack carrier being used in support of American foreign policy; if there is a need for a 'show of force' in support of foreign policy commitments, can this need be met by smaller carriers or other types of ships?

"(b) In order to assist the Congress in carrying out such study and investigation, the Comptroller General of the United States shall review and make a report to the Congress on items numbered '8' and '13' in subsection '(a)', above. He shall also review any studies which have been made, or may be made, by the Executive Branch which relate to the other items listed in subsection '(a)', above. He shall provide summaries of such studies, together with any appropriate comments or questions, to the Congress. The report and summaries provided for by this subsection shall be furnished to the Congress not later than April 30, 1970."

CONTINUATION OF PROGRAMS AUTHORIZED UNDER THE ECONOMIC OPPORTUNITY ACT OF 1964—AMENDMENTS

AMENDMENTS NOS. 147 THROUGH 151

Mr. MONDALE. Mr. President, I submit five amendments to S. 1809, the bill introduced by the Senator from Wisconsin (Mr. NELSON), providing continuing authorization for the Economic Opportunity Act programs. These amendments are designed to eliminate the Governor's veto over legal services programs, to modify the criminal representation provisions in the present act, to reduce the local share of funding which must be provided through each legal services program, to increase the maximum salary limitations for staff attorneys, and to prevent delegation of the Office of Economic Opportunity's legal services to any other existing Federal agency.

I ask unanimous consent that the text of the amendments be printed in the RECORD at this point in my remarks.

The VICE PRESIDENT. The amendments will be received, printed, and appropriately referred; and, without objection, the amendments will be printed in the RECORD.

The amendments (Nos. 147 through 151), submitted by Mr. MONDALE, are as follows:

AMENDMENT No. 147

SEC. 10. Section 242 of the Economic Opportunity Act of 1964 is amended by deleting the last period of said section, and adding the following additional language to the present section: "or to any program funded under section 222(a) of this title."

AMENDMENT No. 148

SEC. 10. The last sentence of Section 222 (a) (3) of the Economic Opportunity Act of 1964 is amended by striking out "in extraordinary circumstances".

AMENDMENT No. 149

SEC. 10. The first sentence of Section 225 (c) of the Economic Opportunity Act of 1964 is amended by striking ", for the period ending June 30, 1967," and ", and thereafter shall not exceed 80 per centum of such costs." and adding a period at the end of the new sentence.

AMENDMENT No. 150

SEC. 10. Section 244(2) of the Economic Opportunity Act of 1964 is amended by changing the last period of the present section to a semi-colon, and thereafter adding the following: "provided that, the Director of the 'Legal Services' program may, at his discretion, fix the compensation, paid to attorneys in said program and provided by financial assistance given under this title, at levels above $15,000, with a schedule of compensation competitive in the national market for legal personnel."

AMENDMENT No. 151

SEC. 10. The authority of Section 602(d) of the Economic Opportunity Act of 1964 shall not apply to the legal services program authorized under Title IX of such Act. The Director shall not delegate the program authorized under such Title IX to any other existing Federal agency.

Mr. MONDALE. Mr. President, the Governor's veto provision applies to the title II community action programs which include legal services. Although the Director of OEO has the statutory authority to override a Governor's veto, practical political pressures may make an override impossible. My amendment would eliminate Governor vetoes over legal services programs.

Exercise of the Governor's veto, or its threatened exercise, tends to interfere with the traditional attorney-client relationship and with right of access to the courts because political pressure may influence which clients or types of cases are taken by a local legal services program. Political interference becomes conflict of interest when the Governor holds veto power over a legal services program which may sue the State.

A recent New York Times article details the fear of California Rural Legal Services attorneys that California Gov. Ronald Reagan will veto the country's most effective OEO legal services program. A CRLA suit last year blocked Governor Reagan's attemp to drop 160,000 indigent people from Medi-Cal, the California version of medicaid. I ask unanimous consent that an article entitled "Poverty Lawyers Make Coast Gains" from the Sunday, September 5, New York Times, be printed in the RECORD at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POVERTY LAWYERS MAKE COAST GAINS

(By Stevenv Roberts)

LOS ANGELES, Sept. 5—A local legal services program, which government lawyers said last week was subjected to political pressures, has won an important series of lawsuits against the state of California and some strong supporters of Gov. Ronald Reagan.

California Rural Legal Assistance, as the program is called, has handled 35,000 cases for poverty stricken clients in three years and has won 85 per cent of them. Their repeated successes have evoked angry protests from the Governor, Senator George Murphy, several Congressmen and the state's powerful agricultural establishment.

So it was not surprising to local observers that, when 100 Government lawyers expressed concern two weeks ago about political pressures against the nation's legal services program, they specifically mentioned the California agency.

Last year, Governor Reagan threatened to veto a $1.5 million . . . California Rural Legal Assistance, which is financed through the Office of Economic Opportunity in Washington. But he backed down after the Federal Government said it would override his veto.

A POLITICAL ISSUE

This year, however, under the Nixon Administration, lawyers for California Rural Legal Assistance are afraid that they will not receive the same support from Washington for their efforts on behalf of the poor.

Their fears are enhanced by the fact that Governor Reagan is preparing to run for another term in 1970. They say he could try to make the legal services program a political issue.

Terry F. Lenzner, the national director of legal services, was in California this week, assuring anti-poverty lawyers that they would receive support from Washington. But officials of the local group remain wary.

"Any time a program is subject to political considerations, rather than merit, you have

good reason to be apprehensive," said Robert L. Gnaizda, the California program's deputy director.

Paul Beck, Governor Reagan's press secretary, said this week that the Governor objected to California Rural Legal Assistance mainly because Government money was being used to finance suits against the Government itself. This objection had also been raised in Congress by Senator Murphy.

Antipoverty lawyers feel that the essence of their program is their ability to sue the Government on behalf of the poor, who cannot defend themselves.

The record of California Rural Legal Assistance shows how effective a legal services program can be in forcing a redistribution of political and economic power. Among its recent cases were the following:

A suit that succeeded in blocking Governor Reagan's attempt last year to drop 160,000 indigent people from Medi-Cal, the California version of Medicaid.

A suit that prohibited a mushroom grower from employing "wetbacks," or Mexican aliens illegally in the country while native workers were unemployed.

A suit that forced farm owners to pay a minimum wage of $1.65 an hour—the highest wage for agricultural workers in the country.

A case that required all of California's 58 counties to adopt some form of Government food program.

A suit that prohibited growers from dismissing workers for union activity and awarded punitive damages to nine workers who had been let go for such activity.

In addition, the legal services agency, which has 10 offices around the state, is awaiting the outcome of a suit that would guarantee unemployment compensation to all farm workers. Farm workers are now excluded from both state and Federal unemployment insurance.

Another pending case would require the Secretary of Agriculture to provide all poor children with free or reduced-price lunches. Mr. Gnaizda, the local program's deputy director, estimated that only one in 10 poor children in the state currently received such lunches.

Mr. MONDALE. Mr. President, a growing fear among legal services attorneys throughout the country surfaced at a poverty law conference held recently in Vail, Colo. Past experience of the South Florida Migrant Legal Services program and the Navaho Legal Services, DNA, indicated that political and economic interests, antagonistic to the impoverished community represented by legal services, could exercise their influence through the Governor's office to limit the effectiveness of the programs. In the past few months, any indication of opposition to a particular legal services program from a Governor's office was enough to prompt the OEO legal services administrators in Washington to seek compromising changes in the structure of the local program to appease its critics, often the respondents in suits filed by legal services attorneys.

The poverty lawyers gathered at Vail wrote to the director of the legal services, setting out their concerns and seeking the administration's assurance that it will guarantee the "integrity and independence from the pressure of conflicting interests so necessary to preserve this program."

I ask unanimous consent that the text of the letter to Mr. Terry Lenzner be printed in the RECORD at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 21, 1969.

TERRY LENZNER, Esq.
Legal Services Program,
Community Action Program,
Office of Economic Opportunity,
Washington, D.C.

DEAR MR. LENZNER: The conference we have nearly concluded has provided us with an invaluable opportunity to rethink the legal and practical problems of poor people and the professional tools lawyers can bring to their solution. It has also brought out a major threshold issue: whether the present structure for organizing and funding legal services programs is able to assure the independence and integrity essential to aggressive advocacy on behalf of the poor. It should be apparent that neither vigorous representation of a client, nor responsible efforts at law reform can be carried on if antagonistic political or economic interests are permitted to threaten the position of the Legal Services lawyer or his legitimate activity on behalf of his clients.

The OEO legal services program revolutionized legal aid for the poor, not simply because it provided more money, or stationed lawyers where their clients live and work, or provided legal services to people who never had them before, but because for the first time large numbers of able and dedicated lawyers refused to accept a legal status quo that injured their clientele when sound arguments for changing it could be mustered.

The question now facing all of us is whether the administration is able to provide the ironclad assurances of integrity and independence from the pressure of conflicting interests so necessary to preserve this program.

The urgency of this issue has been dramatized for us by the imminent possibility that the South Florida Migrant Legal Services Program and the Navaho Legal Services program (DNA) will be discontinued because of opposition stirred up by their accomplishments. In concept and in execution, these programs exemplify the most striking innovations the Office of Economic Opportunity has brought to legal services for the poor. Along with another rural program, which has also been under determined attack, the Florida and Navaho programs brought legal services of an unusually high quality where they had never been available before and where the record now shows they were desperately needed. Recent evaluations of both programs, and their past accomplishments, sufficiently demonstrate that the opposition to refunding is not based on any deficiency in the quality of legal services they provide. Yet refunding is strongly opposed and there is every indication that there will be strong pressure at the State level to veto renewal. With both programs, the opposition's price seems to be a change that would put the program under the control of interests antagonistic to its clientele, thus incorporating in it an outright and deliberate breach of both the American Bar Association canons of ethics and the Economic Opportunity Act of 1964.

Experience with the legal services program has shown that, as law reform, as vigorous representation of the client, is effective, a program will be controversial. Narrow but sometimes powerful interests see a threat in aggressive advocacy on behalf of the poor. The customary response is an attack on the legal services program itself. These heavyhanded assaults on the freedom of attorneys to represent their clients have multiple sources, but a common theme. Whether local bar associations, political and governmental organizations or community action programs are the source, the real grievance is rarely that a legal services program has done too little, rather that it has done too much. In short, opposition to an aggressive and effective program is really opposition to law and order when it benefits the poor. It is apparent that this is the real reason for resistance to refunding of the South Florida Migrant and DNA programs.

Because of their accomplishments, because of the source of the opposition, and because of the inability of their clientele to provide countervailing political support, the fate of the South Florida and Navaho programs will inevitably be test cases for the legal services program as a whole. Without a firm guarantee of independence and integrity from the Federal level, no innovative aggressive program of legal services can ever survive a similar onslaught. Unless the present administration of the Office of Economic Opportunity is willing to provide that guarantee, even by overriding a gubernatorial veto if necessary, as Mr. Rumsfeld is statutorily empowered to do, the future of all legal services programs will be in doubt. The delay in reaching a decision to refund these programs and the failure to provide some kind of interim emergency funds casts doubt on assurances that the programs will continue, to say nothing of making the personal circumstances of the people employed in them unnecessarily difficult.

The success of legal services programs rests on the ability of the Office of Economic Opportunity to assure the integrity of the lawyer-client relationship. The strong support forthcoming from the American Bar Association has expressly been conditioned on this assurance, and it is vital to the ability of the program to attract and retain able attorneys. Without it widespread demoralization and the loss of active, dedicated and highly qualified staff attorneys will be inevitable.

Senator Mondale, a member of the Senate Committee on Labor and Public Welfare, has indicated an interest in holding hearings on threats to the independence and integrity of legal services programs, with a view to proposing legislative changes that would eliminate them. We would hope that, if OEO is unable by administrative action to assure the independence of legal services programs and to protect the integrity of the lawyer-client relationship, you would join us in searching out and supporting the legislative changes necessary to reach this goal.

We are confident that your concern for the independence and vigor of legal services programs is at least equal to ours, and we therefore assure you our unanimous support in maintaining that independent posture. Nevertheless, to all of us, the legal services program represents a personal dedication, as well as a substantial commitment of time, energy, and critical phases of our professional careers. We are unwilling to see that program, or any worthwhile part of it, crippled through inaction or political impotence. Unfortunate experience, not the least of which is the current plight of the South Florida and Navaho programs, has convinced us that the future of the legal services program demands the following steps:

1. An immediate decision to fund South Florida Migrant Legal Services and DNA at levels consistent with recent evaluations of their programs, if necessary over vetoes at the Governor's level, and also to provide emergency interim funds if necessary.

2. A commitment that the pressure of political and economic interests will not be permitted to block the funding or refunding of programs that provide an adequate level of quality and effectiveness of service.

3. Measures to eliminate forms of local control that subvert program effectiveness.

4. A commitment to the integrity of the attorney-client relationship and the freedom of a program to act in behalf of its clients solely as the professional judgment of its staff dictates, regardless of the unpopularity

of the client or his cause, and without external review of its decisions in particular cases.

5. A prompt review of refunding and evaluation procedures to insure their objectivity, to insure that no program can be terminated or denied refunding without full consideration and an opportunity to be heard, and to insure that no program will be without operating funds in the process.

6. A prompt review and revision of policy-making organs and procedures for the legal services program to provide for the participation of attorneys at the project staff level.

We request your answer to the foregoing in writing by Tuesday noon, and we look forward to discussing your response with you in person next Thursday.

Very truly yours,

CAROL RUTH SILVER.

Mr. MONDALE. Mr. President, a resolution adopted at the annual meeting of the American Bar Association in Dallas, Tex., in late August, voices the same concern over the interference by Government officials with the activities of organizations providing legal services. I ask unanimous consent that the ABA resolution be printed in the RECORD at this point.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas, attacks against Legal Aid and Legal Services lawyers and other lawyers threaten the rights of clients to have independent advocates;

Now, therefore, be it resolved, That the American Bar Asscoiation supports and continues to encourage every lawyer in the exercise of his professional responsibility to represent any client or group of clients in regard to any cause no matter how unpopular; and

Further resolved, That the American Bar Association deplores any action or statement by any government official who attempts to discourage or interfere with the operation or activities of any properly constituted organization which provides legal services to the community because the lawyers associated therewith, or any lawyer acting in good faith and within the confines of ethical conduct, zealously represent clients in matters involving claims against a government entity or individuals employed thereby.

Mr. MONDALE. Mr. President, my second amendment to S. 1809 is intended to ease the restrictions on criminal representation by OEO legal services attorneys. The present Economic Opportunity Act provides for no criminal representation except "in extraordinary circumstances where, after consultation with the court having jurisdiction, the Director has determined that adequate legal assistance will not be available for an indigent defendant unless such services are made available." The amendment I propose would remove the words "in extraordinary circumstances" with the intent that the Director would allow criminal representation in a variety of legitimate circumstances if the local legal services attorneys request it and obtain court approval.

The various circumstances for criminal representation by the civil-oriented legal services programs might include cases arising in rural areas where public defenders are not readily accessible, cases connected with civil suits filed by legal services such as arrests for trespass after a welfare rights sit-in or civil suits for damages from brutal treatment or false arrest against the police, or preliminary hearings on criminal charges when obtaining the services of an attorney rapidly is of crucial importance.

Of course, I do not intend for this amendment in any way to force criminal cases on legal services programs which are already overburdened. However, in many instances legal services programs find their effectiveness and credibility in a community undermined because they cannot provide legal assistance when a member of the community most needs it, when he has been arrested.

The third amendment increases the Federal support for all of the legal services programs from 80 to 90 percent. The remaining percentage or the "local share" must be raised by each director from local sources. The Federal Government supplied 90 percent of the funding for all programs until June 30, 1967; my amendment proposes a return to the original formula for Federal-local sharing.

Many legal services programs obtain their share through "in kind" contributions of time from local attorneys. In some areas of the country it is difficult to find volunteers to assist the programs; in other areas, such as the Deep South, it is nearly impossible.

Other legal services programs are assisted by local United Funds. United Fund support may lead, however, to conflict of interest problems. In Oklahoma City the local share raised through the United Fund was withdrawn promptly when the legal services program filed a suit against the local housing authority in Federal court. In Los Angeles local contributors advised the University of Southern California that they would withdraw their financial support if the university-sponsored legal services pursued litigation it had filed against the local police department.

The fourth proposal allows the Director of the Legal Services programs the discretion to increase the maximum salary limitations for staff attorneys. The present top salary for the community action program, of which legal services has been an administrative part, is $15,000. The CAP Director may approve higher salaries for specialized or professional skills in exceptional cases, particularly in metropolitan areas with higher local salary levels. In practice, it has often been difficult for local legal services programs to obtain salary waivers from the CAP.'s

Salaries for attorneys have been steadily increasing. Beginning salaries for law school graduates in New York and Washington are at the maximum level for legal services programs. If legal services intends to recruit in the national market for "poverty law" specialists or experienced trial and appellate attorneys, the Director needs the clear-cut authority to pay higher salaries.

At this time I do not believe there is a need for an across-the-board salary increase for legal services attorneys. I do believe the authority to increase the maximum salaries will attract experienced, capable attorneys to the program and will keep attorneys who have gained expertise in "poverty law" with the programs.

The fifth amendment prevents delegation of the Office of Economic Opportunity's legal services to any other existing Federal agency. I can foresee a time in the future when legal services may be an autonomous Federal agency. For the time being, however, I believe that legal services should be continued as a part of the Office of Economic Opportunity where conflict of interest problems are at the minimum.

Delegation of legal services to the Department of Health, Education, and Welfare or to the Justice Department, suggestions I have heard, present many possible conflicts of interest. One of the major areas where local legal services have pressed reform is in welfare; if legal services became part of HEW, suits such as those which questioned the constitutionality of the "man-in-the-house" rule would be impossible.

The Justice Department represents the Federal Government in any suit against the United States. Legal services programs throughout the country have represented indigents in suits against the Federal Government. The bar association canons of ethics would prevent Justice Department attorneys from representing both parties in a lawsuit. The effect of delegating legal services to the Justice Department means that legal services programs will not be able to represent indigents in suits against the United States.

The American Bar Association resolution I discussed earlier supports legal services attorneys who "acting in good faith and within the confines of ethical conduct, zealously represent clients in matters involving claims against a government entity or individuals employed thereby." My amendment is intended to prevent the delegation of legal services to another existing Government agency because I fear such a delegation will end legal representation for poor people who have claims against the Federal Government.

CONTINUATION OF PROGRAMS AUTHORIZED UNDER THE ECONOMIC OPPORTUNITY ACT OF 1964—AMENDMENT

AMENDMENT NO. 152

Mr. MONDALE. Mr. President, I submit an amendment to S. 1809, which I intend to propose during the upcoming executive sessions of the Employment, Manpower, and Poverty Subcommittee devoted to the consideration of bills to extend the Economic Opportunity Act. My amendment would raise the authorization of Project Headstart, included in Senator NELSON's bill, to $578 million—an increase of $240 million.

I ask unanimous consent that this amendment be printed in the RECORD at the close of my remarks.

The VICE PRESIDENT. The amendment will be received, printed, and appropriately referred; and, without objection, the amendment will be printed in the RECORD, as requested by the Senator from Minnesota.

(See exhibit 1.)

Mr. MONDALE. Mr. President, the need for this immediate yet modest increase in the authorization became evident during the recent hearings which

the Employment, Manpower, and Poverty Subcommittee held on S. 2060, the Headstart Child Development Act of 1969. It is reinforced by an understanding of the administration's proposals to substitute full-year Headstart programs for many of the summer Headstart programs which are currently being funded.

The overwhelming thrust of the testimony on S. 2060 was that we now know more than enough about ways to prevent proverty from crippling children's intellects to begin acting on this knowledge. The testimony pointed to the critical effects of the first years of life, the way poverty and deprivation can prevent a child from reaching his full potential, and the effectiveness of early childhood programs which provide health care, nutritional aid, and educational stimulation to impoverished children. The hearings revealed, very simply, that by adequately funding many of the very promising early childhood efforts that can now be mounted, we can prevent the cycle of poverty from being passed down from generation to generation.

While few would contend that we have found all the solutions to early childhood problems, these hearings clearly indicated that we know how to prevent a great deal of nutritional, health, and intellectual damage from occurring. They revealed that we know that by providing health care and nutritious diets to infants and young children, we can prevent and correct conditions that otherwise could damage, and that by providing proper educational stimulation we can help disadvantaged children get a more equal start in school. They showed, in short, that we know a great deal about how to help poor children gain a better chance to reach their full potential.

The Headstart Child Development Act of 1969—the subject of these hearings—was designed to greatly increase our commitment to early childhood and our ability to fund adequate efforts in this area. It provides authorizations of $1.2 billion in 1970, increasing to $5 billion by 1974, so that, in combination with other programs, substantive early childhood programs from birth to age 6 could be made available to all needy children. It provides funds for the rental, purchase, alteration, renovation, and construction of necessary facilities for early childhood efforts. It provides training opportunities for professionals and nonprofessionals in early childhood development.

It is my hope that the bill will be the suoject of further hearings this fall as the subcommittee continues its thorough review of the needs and potentials in early childhood. I continue to support it as a realistic and necessary effort that will be required to give substance to the "new national commitment to the crucial early years of life" that President Nixon has proclaimed. I remain pledged to the goal of early enactment and adequate funding of S. 2060.

In the interim, and as an important stopgap measure, I introduce this amendment calling for a moderate increase in the authorization levels for Project Headstart that are included in Senator NELSON'S bill to extend the Economic Opportunity Act. The specific figures requested in this bill are based on an understanding of the value in the administration's proposed movement from summer programs to full-year Headstart programs, and also on a very firm belief that this shift must not lead to a substantial reduction in the number of children receiving Headstart services. Very simply, I do not believe that knowledge which suggests full year programs are more effective than summer programs permits us to decrease the number of children we are serving by Headstart. On the contrary, I think we have a responsibility to make early childhood development services available to considerably more impoverished children, and S. 2060 would do just that. But at a very minimum, I believe we have a responsibility to at least maintain the current level of Headstart opportunities while we seek to make these Headstart opportunities more promising and hopefully more effective.

It is my understanding, however, that the administration's proposal to shift the Headstart focus from summer programs to full-year programs involves a substantial limitation of the Headstart program as we know it. Indeed, while the administration proposes to increase year-round Headstart opportunities from 214,000 to 249,800—an increase of some 36,000—to accomplish this increase they would cut in half the summer Headstart opportunities from the current 450,000 to only 225,000. In sum, the administration's proposals for fiscal year 1970 mean that there will be Headstart opportunities for approximately 190,000 fewer children than there were this past year.

I do not believe that such a cutback can be justified. Just as we are learning more about effective ways to help disadvantaged young children, it seems unfair and unwise to propose serving fewer children.

My amendment is designed to permit this shift from summer programs to full-year programs to occur without requiring a cutback in the scope of the program. In other words, my amendment seeks to provide programs of more substance to at least the same number of children receiving services today, rather than to provide programs of more substance to substantially fewer children than are receiving services today.

The mathematics of the cost of converting summer programs to full-year programs are quite clear. It costs approximately $800 more to provide a full-year Headstart experience than it does to provide a summer Headstart experience. Based on the rather conservative estimate that 300,000 of the current 450,000 summer Headstart slots could be converted to full-year programs by the end of 2 or 3 years, this conversion would cost approximately $240 million. My amendment would permit this amount of conversion to take place without requiring any cutback in the number of Headstart opportunities that are available to disadvantaged children.

I am hopeful that by authorizing this additional amount for the Headstart program we can keep open the possibility that a cutback in Headstart will not be required, and that by appropriating sufficient funds each year, we can guarantee that such a step backward will not occur.

The amendment (No. 152) submitted by Mr. MONDALE, was referred to the Committee on Labor and Public Welfare, as follows:

EXHIBIT 1

AMENDMENT NO. 152

On page 2, line 14, strike out "$2,180,000,000" and insert in lieu thereof "$2,420,000,000"

On page 2, line 23, strike out "$1,032,700,000" and insert in lieu thereof "$1,272,700,000".

On page 2, line 24, strike out $338,000,000" and insert in lieu thereof "$578,000,000".

AMENDMENT OF SOLID WASTE DISPOSAL ACT—AMENDMENT

AMENDMENT NO. 153

Mr. BOGGS. Mr. President, for some time many of us have been concerned about this country's lack of a national materials policy—one that would allow the United States to use more effectively its resources and technology, to anticipate future needs and to improve environmental quality and conserve materials.

I have been interested in this subject primarily as it affects our environment. One of the most reasonable methods of preventing the clutter that threatens our streams and roadsides, I am convinced, lies in the development of materials and technology which would allow for the recycling of solid wastes.

During the last 2 years I have had the good fortune to be the recipient of two very knowledgeable reports on this subject. The first, published by the Committee on Public Works in January of 1968, was a survey of the "Availability, Utilization and Salvage of Industrial Materials."

The second, published this year by the committee, is titled "Toward a National Materials Policy." This report was written by a group of some of the most outstanding men in our materials community, representing government, private industry, and private research groups.

After a detailed description of our lack of any coherent policy regarding materials, the report recommends the establishment of a national commission on materials policy. Such a commission would be charged with a full study of a possible national materials policy which would include:

Projected national and international materials requirements;

The relationship of materials policy to national population and the enhancement of environmental quality;

Recommended means of development of materials susceptible to reuse;

Opportunities and incentives for the free enterprise system to complement and further national materials policy;

Means to effect coordination and cooperation among Federal departments and agencies in materials usage; and

The desirability of establishing computer inventories of national and international materials requirements, supplies, and alternatives.

Mr. President, this seven-member commission would be funded in the amount of $2 million and would be appointed by the President with the advice and consent of the Senate. It would report to the President and the Congress no later than June 30, 1971.

Mr. President, the recommendations of this study group have been incorporated in an amendment to S. 2005, which I now submit with the cosponsorship of Mr. BAKER, Mr. BAYH, Mr. COOPER, Mr. EAGLETON, Mr. HARTKE, Mr. INOUYE, Mr. MONTOYA, Mr. MUSKIE, Mr. PEARSON, Mr. RANDOLPH, and Mr. SPONG.

I ask unanimous consent that the amendment be printed at the conclusion of my remarks, together with excerpts from the report entitled "Toward a National Materials Policy."

The VICE PRESIDENT. The amendment will be received, printed, and appropriately referred; and, without objection, the amendment and excerpts will be printed in the RECORD.

The amendment (No. 153) was referred to the Committee on Public Works as follows:

AMENDMENT NO. 153

On page 10, line 11, insert the following:

"TITLE II—NATIONAL MATERIALS POLICY

"SEC. 201. This title may be cited as the 'National Materials Policy Act of 1969.'

"DECLARATION OF PURPOSE

"SEC. 202. It is the purpose of this Act to enhance environmental quality and conserve materials by developing a national materials policy to utilize present resources and technology more efficiently, to anticipate the future materials requirements of the nation and the world, and to make recommendations on the supply, use, recovery, and disposal of materials.

"ESTABLISHMENT OF COMMISSION

"SEC. 203. (a) There is hereby created the National Commission on Materials Policy (hereafter referred to as the 'Commission') which shall be composed of seven members chosen from Government service and the private sector for their outstanding qualifications and demonstrated competence with regard to matters related to materials policy, to be appointed by the President with the advice and consent of the Senate, one of whom shall be designated as chairman.

"(b) The members of the Commission shall serve without compensation, but shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in carrying out the duties of the Commission.

"DUTIES OF THE COMMISSION

"SEC. 204. (a) The Commission shall make a full and complete investigation and study for the purpose of developing a national materials policy which shall include, without being limited to, a determination of—

"(1) national and international materials requirements, priorities, and objectives, both current and future;

"(2) the relationship of materials policy to (a) national and international population size, and (b) the enhancement of environmental quality;

"(3) recommended means for the extraction, development, and use of materials which are susceptible to recycling, reuse, or self-destruction, in order to enhance environmental quality and conserve materials;

"(4) recommended opportunities and incentives for the operation of the free enterprise system in such a manner as to complement and further the national materials policy;

"(5) means of exploiting existing scientific knowledge in the supply, use, recovery, and disposal of materials and encouraging further research and education in this field;

"(6) means to effect coordination and cooperation among Federal departments and agencies in materials usage so that such usage might best serve the national materials policy; and

"(7) the feasibility and desirability of establishing computer inventories of national and international materials requirements, supplies, and alternatives.

"(b) In order to carry out the purposes of this Act, the Commission is authorized—

"(1) to request the cooperation and assistance of such other Federal departments and agencies as may be appropriate;

"(2) to appoint and fix the compensation of such staff personnel as may be necessary, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to the provisions of chapter 51 and subchapter III of such title relating to classification and General Schedule pay rates; and

"(3) to obtain the services of experts and consultants, in accordance with the provisions of section 3109 of title 5, United States Code, at rates for individuals not to exceed $100 per diem.

"(c) The Commission shall submit to the President and to the Congress a report with respect to its findings and recommendations no later than June 30, 1971, and all authority under this Act shall terminate ninety days after the submission of such report.

"(d) Upon request by the Commission, each Federal department and agency is authorized and directed to furnish, to the greatest extent practicable, such information and assistance as the Commission may request.

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 205. There is hereby authorized to be appropriated the sum of $2,000,000 to carry out the provisions of this Act.

"Renumber remaining titles and sections accordingly.

"Amend the title so as to read: 'To amend the Solid Waste Disposal Act in order to provide financial assistance for the construction of solid waste disposal facilities, to improve research programs pursuant to such Act, to establish a National Commission on Materials Policy, and for other purposes.'"

The excerpts, presented by Mr. BOGGS, are as follows:

TOWARD A NATIONAL MATERIALS POLICY

I. INTRODUCTION

The purpose of this report is to present an informed opinion as to national action in the field of materials that is judged to be needed now in furtherance of the national interest.

The report identifies significant issues that require assessment and policy decision. It proposes a means to make these issues more visible, to examine them in depth, and to develop conclusions and recommendations for their resolution.

Sound policies for supply, use, and disposal of materials are regarded as essential for the attainment of national objectives. Adequate resources and their prudent use have long been a national concern. Indispensable for the production of useful goods in peace and war, materials are now also perceived to be a cause of environmental degradation. As human society becomes more and more populous, as living standards rise, and as the benefits of industry and technology are extended to a larger proportion of the inhabitants of the globe, more and more materials are consumed, and more and more waste products threaten to degrade the environment.

In the historical evolution of the United States, the role of materials in commerce has undergone periodic change. Initially, materials were principally an article of export. Then processing industries developed and began to consume increasing percentages of materials at home. Exports were mainly of manufactured goods, and an increasing proportion of total imports were of raw materials. In copper, for example, the United States has moved in the past half-century from the position of the world's leading exporter to one of the world's leading importers.

World War II provided a dramatic lesson as to the role of materials in national defense. The deep concern for insufficiencies in materials experienced in that war led to the creation of the national stockpile, to provide essential reserves for future possible war emergency. During the Korean war, the President's Materials Policy Commission, under the chairmanship of William S. Paley, made a comprehensive survey of national requirements and supplies of materials, including energy sources and water. This landmark study, now nearly 17 years in the past, provided valuable guidelines for the Nation. Many of its recommendations were followed; some were not.

In particular, the Paley Commission foresaw that many changes would occur in industrial technology, in consumer demands, in conditions of overseas supplies of materials, and in patterns of conservation, reclamation, and disposal of waste materials.

The Commission concluded that national materials policy could not possibly be prescribed for once and for all. It would require periodic reassessment. This, said the Commission, should be a regular and continuing function of Government. It should not be that of an operating agency. Its energies "should be directed to broad, long-range analysis and not diverted into immediate problems of operation." It could call attention to the need for new projects or changes, coordinate public and private activities, and "survey the total pattern of activities in the materials and energy field." In the words of the Commission:

There must be, somewhere, a mechanism for looking at the problem as a whole, for keeping track of changing situations and the interrelation of policies and programs. This task must be performed by a Federal agency near the top of the administrative structure.

Such an agency [continued the statement], at the level of the Executive Office of the President should review all areas of the materials field and determine how they can be best related to each other. It should maintain, on a continuing basis, the kind of forward audit which has been this Commission's one-time function, but more detailed than has been possible here; collect and collate the facts and analyses of various agencies; and recommend appropriate action for the guidance of the President, the Congress, and the Executive agencies.

Contemporary expansion of world trade, and enlargement in world requirements for industrial materials, have occasioned concern for the future adequacy of materials and raise once more the issue of reliance on sources abroad versus development of self-sufficiency at home. On this issue the Paley Commission said:

* * * The United States must reject self-sufficiency as a policy and instead adopt the policy of the lowest cost acquisition of materials wherever secure supplies may be found: self-sufficiency, when closely viewed, amounts to a self-imposed blockade and nothing more.

Materials continue to be indispensable in the application of technology in the modern world. Vast advances have been made in materials since the Paley Commission completed its assignment. The effect of technology on increased purity of materials has had a far-reaching effect on industry. (See app. B.) New technology in materials has contributed indispensably—often creatively—to many new

industries of the present day, such as: solid-state devices, computers, lasers, composite materials, aerospace, deep-diving submarines, titanium, nuclear power, desalinization, and many more. (See app. C.) Many new alternatives and options, in the solution of materials problems, have become available. Modern information technology is producing means of information transfer and coordination not previously available. At the same time, the problems presented to the modern world by needs, uses, and disposal of materials have become more complex and more serious. Therefore, it is now time for a reassessment at the national level of policies regarding materials. (See apps. D and E.)

II. THE SUPPLY/REQUIREMENTS PROBLEM IN MATERIALS

All energy- and product-oriented economies are heavily dependent on materials. The maintenance and expansion of our already prosperous economy will draw on materials to a substantial degree, although, as that economy is balanced more toward services than products, the rate of growth of demands for materials will not parallel that of the rate of growth of the economy as a whole. Nonetheless, the increasing population in the United States, as well as the growth of the economy, will lead to increased, and not lessening, demands for materials.

Simultaneously, the United States has long recognized, as a national objective, the desirability of encouraging the development of prosperous economies abroad. Despite the ravages of World War II, an advanced stage of industrial development enabled European nations to ingest large amounts of United States economic assistance and translate that assistance into the increased productivity of goods and, more recently, services. Accordingly, European demands for materials have gone up very rapidly on a per capita basis, probably more rapidly than that of the United States.

By their very nature, the developing countries, at a lower stage of technology, have responded less rapidly and less efficiently to an influx of support from the United States and from other countries. Nevertheless, their economies have grown and so have their demands for materials. As many of these economies approach a point of increasing self-sufficiency in an economic sense, it can be expected that they will have explosive demands for new materials in order to satisfy the needs of their burgeoning populations for goods. As a basis for expansion of their economies, many of these countries have become international suppliers of raw materials. As their economies mature, more and more of those raw materials will be upgraded in order that the advantages to the local economy of adding value to the export will be realized.

While the United States is still an important producer of raw materials, it is increasingly dependent on world supplies. In the changing raw materials economy of the world, demand threatens to rise faster than supply; the economic security of the United States, to the extent that it depends on materials from abroad, is thereby in jeopardy. Fortunately, the higher degree of technological sophistication in the United States makes it possible to increase the degree of interchangeability of materials so that more available materials can be substituted for less available ones. This element of technology has reduced the tension and the dependence of the United States on some of the products which are available largely or solely from abroad. Nevertheless, the competition for materials can be expected to grow and, as the underdeveloped world becomes more mature economically, to grow at an increasing rate.

Programs of education, technological research, economic analysis, and political policy formulation should now be in the process of development in order to insure that the United States anticipates the alternative futures which it will confront as a result of its internal growth and the growth of the rest of the world, and the combined demand of the United States and world economies for raw materials.

Materials in the earth's crust are finite in their extent. But since most materials are not used up but can be recycled, the limits to their continued availability—apart from costs of extraction and inflexibility in patterns of use—are set much further out. The levels of reuse are determined largely by ability to overcome difficulties in recovery and reprocessing that impose varying costs. Science and technology can help to overcome costs of primary extraction and secondary recovery. However, they need to be purposefully developed, long in advance of need, because the leadtime in making technological changes in materials usage patterns is inherently long. Quick, forced changes are likely to be costly, inefficient, wasteful, and altogether unsatisfactory.

What dislocations in materials supplies can be anticipated? World-wide population and income growth can be expected to cause increased needs for materials. Per capita consumption of many materials in the United States is as much as a hundred times that in some populous regions abroad. Economic development in lagging regions will surely reduce this disparity. As world patterns of supply and demand alter, there will be awkward dislocations. These can be eased by discoveries of new sources of materials, by improved technology of mineral extraction, and by more effective recycling and reuse. The injurious effects of such dislocations can be minimized by anticipating them, by taking precautionary measures in advance, and by adopting appropriate policies when they occur. (See app. F.)

The precise strategies to be followed to meet any particular crisis will depend on the circumstances at the time. The more complete and reliable the information that is available at the time concerning all aspects of materials, the better able the Nation will be to choose the best strategy. At the present time, information is less than comprehensive and up to date on per capita consumption of materials in the various countries of the world, the rate of change in these figures, and projections for long-range future changes in the supply and requirements of essential materials. Nor is there available adequate means of applying this information—if it were available—to afford guidance to applied research and technological development, to modify the policies and operation of the national stockpile, or to develop other possible options in advance of need.

The Paley Commission concentrated its attention on an analysis of the supply/demand problem of the United States, based on projections of the growth of its economy, the changing demand for materials, and the changing pattern of supply. While there has been much subsequent study of the supply/demand issue by a variety of institutions in and out of Government, there is still no provision for the maintenance of an inventory of U.S. sources of materials which takes into account various future economic and demand situations. Hence, the supply/demand issue will have to be given appropriate attention by any future commission established to study national minerals and materials policy problems.

III. THE PROBIEM OF THE INTERACTION OF MATERIALS AND ENVIRONMENT

Uses of materials have increasingly become recognized in the United States as a major facet of environmental quality. The interactions of materials and environment are complex. Scientific inquiry has only begun to provide parameters for investigation.

In a broad way, the problem can be characterized: An increasing population, with a rising living standard, is consuming and discarding an increasing variety and quantity of materials. The results are an increased quantity of municipal and industrial wastes: increased loads of effluent to be carried away by surface streams and by the atmosphere, and increased loads of solid wastes to be dumped on land or in the surface waters of the earth. These forms of waste disposal are causing an increase in the rates of physical deterioration of air, water, and land, and biological impairment of plants and animals in the degraded environment. (See app. G.)

While major industries have been organized to produce materials and products made from them, limited attention has been paid to the ultimate disposition of materials. Unfortunately, the total cycle from production to disposal has not adequately been put into perspective; our technology, economics, and public policy have emphasized production and initial processing. Since materials disposal is currently having such a profound effect on the environment, because of its steeply rising scale, a new analysis of relevant technological, economic, and policy issues would be appropriate.

Moreover, the quality of environmental degradants is also changing. For example, technology has created many new chemicals, which put new impurities into the air and water. The scientific determination of the ecological consequences of any particular level of any single impurity is a huge undertaking. To determine the consequences of all impurities, singly and in various combinations and synergisms, is beyond the reach of human capability. Yet solutions must be found to the major problems implied.

As a general proposition, we should do the best we can to hold environmental degradation at tolerable levels as we can define them, with periodic review as to where they are, and a clear understanding of the implications. This raises such problems as identifying the agents and their physical and economic consequences, and such issues as conflict of action with other objectives.

IV. SUSTAINED DEFINITION AND ACHIEVEMENT OF A COHERENT SET OF NATIONAL MATERIALS GOALS AND OBJECTIVES

In summary, materials—their availability, use, and disposal are significantly related to national goals of physical health and well being, economic health and prosperity, national defense and security.

Events and developments are causing many impacts on these relationships. Many agencies of Government share the numerous functions that involve materials. Decisions are being made piecemeal, with partial information. There is no central source of information about materials to warn of approaching dangers, to call for needed corrective actions, to search for preferred alternative courses of action, to relate national goals and objectives for materials with the broader goals of the United States. Ultimately, national materials policies must continue to rely on private industry for their implementation. The role of Government is to provide information on what needs to be done, and why, and what the constraints are; in some cases, Government may need to enforce the constraints, assist in the motivation, or fund research. But the primary initiative will remain with industry itself.

(A) *Identification and continuing appraisal of national goals of materials*

A number of general goals can be stated for the materials posture of the United States. Detailed quantitative goals will always be short-range in character, and even broad qualitative goals need to be adjusted

from time to time. Nevertheless, it can be said that U.S. goals in materials today encompass the following:

A healthy, efficient, domestic materials-producing industry;

Assurance of adequate supplies of materials at prices established in competitive markets;

Assurance of reserves of materials for military production, under the conditions of supply that might prevail in time of war emergency;

Efficient use by manufacturing industry of the materials being processed;

With due regard for national security and foreign policy considerations, a national trade policy that permits materials users to draw their supplies from sources of lowest cost;

Avoidance of sudden, wide, and costly fluctuations in materials supply/demand relationships, in materials costs, and materials production and supply patterns; and

Avoidance of the discharge of waste materials into the environment in amounts and ways that threaten to impair human health and comfort, injure the ecological balance, and degrade the esthetic quality of man's surroundings.

There are undoubtedly other important goals that should be added to this list. The group made no effort to develop an exhaustive enumeration of such goals, and suggests that an important function of the proposed commission would be to prepare more definitive statement in this regard.

(B) Completeness, appropriateness, and coordinated management of national materials programs

Numerous Government agencies have responsibilities in the field of materials. For example, at least 19 departments and agencies sponsor applied research in materials, 15 are involved in long-range policy planning, 20 perform materials information management functions. The potential for conflict, duplication, and serious gaps in materials programs is clearly present. (See app. L.)

(C) Technological and political changes affecting the materials supply/requirements balance

As the demographic configuration of the United States changes—from agrarian and semi-rural to an urban civilization, important shifts occur in materials problems and program priorities. Different kinds of housing are needed. Transportation requirements change. Agricultural production becomes more capital-intensive. Recreation needs are both different and greater. Congested communities require more efficient patterns of materials flow, with a lessened volume of residual wastes.

World supplies of materials are also undergoing changes, in response to both political and economic forces. Political uncertainties and nationalistic trends render some resource areas insecure. Some of the principal sources of tin, antimony, copper, nickel, bauxite, niobium, manganese, chromium, and tungsten have a low confidence factor. The world may not, as a whole, be pinched for resources, but there are likely to be dislocations in the years ahead. Will they be of short or prolonged duration? What can be done in advance to anticipate and minimize their adverse impacts?

Another question concerns the priority of programs to develop the resources of the oceans and the ocean floor. How important is this new source for strengthening the U.S. position in materials? What kind of legal and institutional regime would best serve the broad interests of the United States in developing these new opportunities?

From the aspect of national policy, the three fields of materials supply, engineering choice of materials in design, and waste disposal may be related. Engineering design practices, for example, may reduce waste volume. Ways of processing wastes can reduce dependence on new supply. Selection of materials in designs can help to extend reserves. Since all aspects of materials are of public concern, it would seem to make sense to look for opportunities of high effectiveness and low cost to accomplish these related purposes. However, at present there is no central point from which to coordinate a concerted effort. (See app. H.)

There is a need to improve the predictability of prospects of all aspects of materials. This kind of forecasting provides a basis for selection of research and development projects of significant national importance.

(D) Methodology for integration of materials information and information management

The management of information concerning all the different aspects of materials presents appalling difficulties. Yet, if decisions are to be wisely made, they must be made on a sound factual basis. Many different kinds of information need to be systematically gathered, accessibly maintained, and systematically analyzed. Examples of useful information generally not available in suitable scope and quality include—

A running inventory of the natural occurrence of minerals, by location, occurrence, extent, concentration, and probable cost of extraction;

Interindustry input-output information on materials flows;

Applied research projects in materials, cross-referenced to type of material and purpose of research.

Modern techniques of computerized information management offer important promise of performing information storage and manipulation tasks hitherto impossible. The amount of information that can be processed at a time is increasing all the time. So is the depth with which units of stored information can be retrieved. Storage can accommodate numbers, facts, even pictorial information. It is now necessary to combine the study of what needs to be done with the study of what can be done, in order to exploit new information management tools for national purposes of materials surveillance. (See app. I.)

(E) Establishment of a national consensus on materials policy and action

Attention has been repeatedly directed to the need for a changed attitude on the part of the American public toward resource management. The assertion has been reiterated until it has become trite that the wasteful exploitation of the wealth in the ground, the growing timber, the soil, and the other riches of nature can no longer be permitted. Put in this way, the proposition is generally accepted. But this statement is not an adequate guide to public or private policy. Physical waste is not the same as economic waste. The individual entrepreneur cannot afford to take the initiative to alter disposal policies that would place him at an economic disadvantage. The authority of Government is needed to achieve concerted action. But this authority must be used sparingly, and only under conditions of generally recognized need.

The question of combining conservation with efficient utilization and disposal of materials ought to be resolved to the reasonable satisfaction of all. In mining, for example: What research should be undertaken to make more efficient the digging of ores and the extraction of values from them, so that the added costs of conservation practices can be met?

In uses of material and products: Should producers of products have an obligation that the product not add unnecessarily to the wastage of materials, or the generation of waste? It so, then how might this goal be accomplished? Should there be a strongly supported research effort to make durable goods more durable, and items quickly discarded more rapidly self-destroying?

In waste disposal and salvage: Should efforts be intensified in the education of the public to channel discarded materials responsibly so that they become available for re-use, rather than accumulate as litter? Should research be expanded in the ongoing effort to enable municipal waste disposal operations to reduce their product to the least possible volume, in the least polluting form (solid versus liquid versus gaseous), or converted into useful products where possible?

Although there are many kinds of operations and programs that would be beneficial in improving the usefulness of materials to man, the changing context of modern society is such that the most immediate task is to develop a national understanding of the facts and their implications. (See App. J.) The preservation and restoration of the environment, and the inspirational appeals to "keep America beautiful" need to be backed by an understanding that some of the things that must be done are costly. These costs must be met if the goals are to be achieved. A national consensus on this issue must include a willingness to pay the costs and to distribute them equitably.

V. PROPOSAL FOR A NATIONAL COMMISSION ON MATERIALS POLICY

In the light of the foregoing considerations, it is judged timely and essential that a national commission be chartered and organized to study the present stance of the United States with respect to materials, and to make recommendations based on its finding. The objectives of the commission should be:

1. To identify the relationship of the broad subject of materials in all their aspects to national goals and objectives:

2. To define materials goals and objectives of the Nation;

3. To contribute to a broader understanding and awareness of materials problems and opportunities;

4. To maximize, to the extent permitted by the constraint essential to the national interest, the opportunities for free enterprise to function efficiently in the materials field;

5. To recommend a way in which the Federal Government can be equipped to—

Coordinate governmental policies and programs relating to supply-demand-disposal balance;

Exploit the capabilities of scientific research and technological development to encourage practices and procedures in materials supply, use, and disposal to make them increasingly compatible with the national interest;

Coordinate or conduct long-range studies of materials prospects and problems;

Strengthen provisions for education and academic research in the expanding areas of expertise relating to materials;

Coordinate the development of an information management system in materials, to satisfy all essential requirements of national policy formulation and program design; and

Coordinate the development of programs affording a reasonable array of possible alternatives to meet future exigencies in the field of materials management.

The Commission should consist of from three to seven members, including a chairman and vice chairman. The members should have outstanding qualifications in industry, education, or Government service. The commission should be supported by a staff, headed by a staff director. In the recruitment of the staff, an effort should be made to obtain persons with solid and relevant experience and training, drawn in roughly even proportions from industry, academia, and Government. (See app. K.)

The commission should be funded sufficiently (on the order of $2 million) to sup-

port housekeeping functions, pay staff and consultants, maintain adequate secretarial and clerical support, engage the services of appropriate research organizations, hold field hearings, and produce an adequate final report wtih supplementary papers for wide public distribution. Duration of the commission should be on the order of 18 months.

Partisan bias attaches to some issues in the field of materials. In the forming and staffing of the commission, the nonpartisan nature of its task should be carefully preserved. The commission should attempt to approach matters at issue with a highly objective attitude. It is suggested that the commission be sponsored and directed by congressional resolution. It would be expected that provision would be made for the commission to draw on appropriate agencies in the executive branch for technical and professional support as needed. (See app. L.) With the further addition of staff support obtained under agreement with the academic community and industry, the analytical and review proceedings of the commission would recognize the continuing concern and interest of all segments of the Nation, and thus contribute to the development of a national consensus.

APPENDIX D

THE NEED FOR A NEW ASSESSMENT OF NATIONAL POLICY IN MATERIALS

(By Franklin P. Huddle)

From the philosophical standpoint, our national objective is to preserve and enlarge the political and economic freedom of individual choice of all our citizens.

The role of materials, in support of this objective, is to contribute to the improvement of the human environment.

An essential additional objective for materials has been the assurance of adequate supplies for the manufacture of the implements of defense and war.

The primary method to assure an adequacy of materials, and to manage their conversion into useful products, has been the application of science and technology to the production, processing, and shaping of materials for the consumer under the motivation of profit to the entrepreneur. No basic change is now foreseeable in our main reliance on this system.

In its classic simplicity, the system of free enterprise is automatic: production creates demand; the employee is the consumer; the loop of supply and demand is closed.

In practice, however, the operation of this system has entailed many kinds of governmental intervention. Mercantilist economic theory called for the imposition of protective tariffs to encourage infant industry.

The requirements of military preparedness called for the maintenance of some production sources and reserves that the operation of a free market economy would not support. Unmanageable surpluses caused economic crises that were alleviated by governmental programs of production control and administered prices. Depressed regions, committed economically to the production of cotton, bituminous coal, wheat, corn, or some other single commodity, required welfare measures as their markets contracted. More recently, patterns of technological application have caused recognizable impairment of the human environment of such potential hazard as to require national regulation.

In short, the Government has had some form of national policy on materials ever since Alexander Hamilton, as Secretary of the Treasury, prepared his famous Essay on Manufacturers for the Congress, during the Presidency of George Washington.

Yet, there has been no really comprehensive study of the role of materials as a coherent feature contributory to the goals of the American commonwealth. Great epochs are associated with the quest for some particular commodity—the gold rush, King Cotton, the New England whaling industry, to name only a few—but a systematic historical analysis of the role of materials in the evolution of the American civilization has not yet been prepared. Materials stand in important relationship to the evolution of industry and commerce, the national defense, advances in science and technology, population movement and growth, and major issues of national politics.

Within the memory of most of us, materials policy in the United States has undergone a series of phases in response to changing conditions.

During the 1920's, unmanageable surpluses resulting from the overstimulation of World War I needed to be liquidated, and production capability needed at the same time to be contracted.

Subsequently, during the depression years, artificial scarcity was attempted by Government action in coal, petroleum, and basic agricultural commodities.

Real scarcities occurred in World War II, caused by a combination of large new needs, coupled with interruption of prewar patterns of foreign trade. World War II dramatized the dependence of military forces on logistics support, and the dependence of an industrialized economy on an abundant flow of materials. The Nation resorted to many costly and inefficient expedients to make good the lack of materials long taken for granted.

The early postwar years are almost impossible to characterize. Many cross-pressures developed, with regard to national policy in materials. There were a variety of programs to correct weaknesses in the national preparedness structure that had been pointed out during the war—by stockpiling, conservation measures, and extensive analyses of military supply requirements balance for future mobilization. Expanding programs of foreign aid were assessed both as to their effect on materials requirements, and as a vehicle to expand the availability of materials from the countries receiving aid from the United States. Pent-up demand for durable consumer goods underwrote a general expansion in the flow of materials from source to end products. The impacts of the cold war on national materials policy were numerous and subtly complex: interruptions in the flow of essential materials from customary sources, increased uncertainties as to political reliability of source countries, apprehensions as to the motivations underlying unusual commercial transactions by leading Communist countries, and encouragement of materials production from new sources for political as well as economic advantage.

The Korean war, beginning in June 1950, accelerated a movement, already in progress in recognition of the bipolarity of the postwar world, toward a kind of regional autarchy: the development of a free world self-sufficiency in materials, coupled with a mutual denial of materials to and from the Communist bloc. It was at this point in time that the Paley Commission, the President's Materials Policy Commission, was convened to make its assessment of the adequacy of materials to meet national needs in the foreseeable future.

The Paley Commission was the first serious attempt on a national basis, to assess fully the ramifications of a comprehensive materials policy.

It attempted also to forecast the future balance sheet, for 23 years into the future—up to 1975—as to supplies and requirements for major industrial materials.

It identified and made recommendations concerning a long list of problem areas in materials.

However, its most important two recommendations concerned the ability of the Nation to anticipate and react to future materials problems of major proportions. It recommended—

(*a*) The maintenance of a data base of current information in the greatest possible degree of fineness of grain, concerning supply, requirements, utilization, and disposal, of all pertinent materials;

(*b*) The maintenance of two continuing organizations, one governmental, and the other privately sponsored, to maintain a constant surveillance over materials facts and problems, present and prospective, and to recommend corrective actions for administrative decision or congressional enactment.

Many of the detailed recommendations of the Paley Commission were indeed implemented. The administrative recommendations received quite serious attention—I can testify—from the very substantial team of materials experts in the Department of Defense. However with the passage of time there has been a reduced interest and vigor in the pursuit of materials policies and programs in the Department: the fine study team that was assembled in the Munitions Board, numbering some 80 persons, has completely departed, and personnel in the Office of Defense Research and Engineering concerned with materials research and development have been reduced in numbers. There has been a reduced concern with programs of materials conservation, less insistence on the inclusion of materials engineers on design teams, and less effort to maintain a systematic relationship between military planning and logistic support in materials.

On a national basis, materials policy has not been ignored since 1952. In fact, a remarkable number of reviews of national policy and national status have been conducted since then. I hesitate to try to enumerate them all because I am sure to leave out some. But to my knowledge, there have been three major assessments by Resources for the Future, three by the National Academy of Sciences, one by the Office of Emergency Planning, and a very considerable recent survey of minerals status and forecast by the Bureau of Mines. There have also been many detailed partial surveys of materials problems and issues—by the Materials Advisory Board of NAS, the Federal Council on Science and Technology, PSAC, by groups in USDA, and undoubtedly others. The annual forecasts of technological trends by BDSA represents a further significant contribution to materials data and problem identification.

The difficulty, in fact, lies in the very multiplicity of studies, analyses, and data collections. Policy is, indeed, benefited by being based on a variety of inputs. But it also requires integration, synthesis, reconciliation, even mediation. There are many able students of materials policy here in Washington, and around the country. But unless they can all be brought together with a common data base, and mutually acceptable methodologies of analysis, disagreement will persist and there will be no concerted national action toward goals we all share.

It has been more than 16 years since the Paley Commission made its report. What review has been made of its recommendations—and of the results of the actions taken in response to many of them? What have been the actual figures for materials supply and requirements in comparison with the Paley Commission forecasts—especially since 1962 when RFF made its comparison? What factors have intervened to skew the actual figures away from the forecasts?

More important—what new national problems have appeared or seem likely to confront us in the future, that the Paley Commission could not have foreseen?

What new techniques of analysis are now available for Government or private use to shed new light on the needs of the present and future? Surely we can do much more effective data management with the new

time-sharing computers; we can manage specific programs more precisely with the cost/effectiveness calculations of the PPB system. We can design larger information structures, and progressively refine them.

The need for a new Paley Commission, however, goes beyond all these considerations. In my very brief and tentative analysis for Senator Boggs and the Committee on Public Works, I tried to identify a few of the major trends in our society that seem likely to influence our future policy in materials. For example, there have been unmistakable shifts in our curves of population and age distribution, and more significant further changes are in prospect. The world pattern of consumption and distribution of materials is changing, and promises to change more significantly in the future. There are real prospects of political shifts in many countries. There are changes in the technology of materials discovery and extraction, actual or potential. There are important new developments in materials properties, with particular reference to the greatly abundant materials. There is certainly a greatly increased interest in salvage and waste utilization, and related to it a deep concern for pollution and degradation of the human environment. The question is raised as to the responsibility, and the technological feasibility, of calling upon design engineers for concepts to improve salvage value and to decrease unusable wastes.

How will these—and many other trends—relate to the national goals of our society? What role should materials play in furthering progress toward these goals? What should be our national policies to insure this? What actions should we take in the short- and long-term future to enable materials to make their full contribution to our national goals?

I suggested in my paper that a materials policy for the future might have four major considerations.

First, the determination of the critical factors of our society and its economy that are of foremost importance in influencing our materials policy—in other words, our assumptions as to the future. Second, consideration of availability. Third, utilization, and Fourth, considerations of materials salvage and disposal.

With respect to the first item, I proposed that the general policy governing the management of materials would be sustained yield, at beneficial terms, contributing to gradual but sustained rates of improvement of the environment in the light of longer range future analysis, planning, and programing. This suggests a posture of flexibility within a generally stable society, with continued technological search for environmental optimization, and the response in a measured way to internal or external perturbations, challenges, and dislocations.

With respect to the second item, supply, I suggested that a general principle would be the achievement of a flexible policy of dynamic stability, maintaining the flow of materials to meet as precisely as possible, without waste or surplus, the changing needs of industry under long-range planning and programing. Implicit in this posture would be a national reserve of materials, a detailed inventory of mineral deposits, further progress in the technology of mineral detection, and continued expansion in electrical energy.

Furthermore, the anticipated future national requirements for materials possessing unprecedented and extreme properties would be determined systematically and routinely; research approaches to attain these properties would be blocked out and initiated far enough in advance of need so that useful social projects would not be obstructed for want of requisite technology.

Periodic surveys would be undertaken of national materials posture, trends, potential weaknesses and vulnerabilities; material strategies would be devised to strengthen the national posture, and then implemented; potential impacts of new technology on national materials supply would be forecast, evaluated, and provided for.

With respect to the utilization of materials, I suggest that national policy needs further refinement. At present the primary considerations in the selection and utilization of materials are price and physical properties. I suggest that other criteria may warrant study and possible inclusion in the list of criteria. Moreover, while I provided some examples of possible additional criteria, it seems evident that this is an area requiring the greatest sensitivity and statesmanship; we should not blunder into it, offering prescriptive formulas without the fullest appreciation of the consequences.

Our capacity for efficient utilization of the total pattern of available materials requires not only criteria by which to measure its real efficiency in social terms. It also requires systematic scientific and technological development to enable us to meet these criteria. What projects and directions of research should command the highest priorities relative to these criteria? I offered six examples, but it should be obvious that each student of materials policy would develop his own list. The role of a national commission would be to weigh the contributions of many individuals, and arrive at a real national consensus as to a balanced and rewarding program of technological advancement, not merely in scientific terms, but in terms of total national need.

In the fourth area, salvage and disposal, it is evident that we have performed most poorly in the past. This area has been least amenable to automatic correction under a free market pricing system. Moreover, as our society becomes more affluent, traditional methods of salvage become economically less attractive, the volume of waste increases, and our standards of environmental quality tend to rise.

In this area I suggest as a conceptual goal the achievement of a nearly "closed" system in which materials retained value throughout the system and were recycled rather than discarded. In this area, the pricing system needs to be supported, I think, by public investment in technological innovation, by public assistance in the employment of technologies to preserve and improve the environment, and by public regulation to compel reduction in the rate of specific degradations and to obstruct the introduction of new technologies that degrade the environment.

There are, I suggest, three important principles here. First, there is no reason to suppose that a perfect environment is conceivable, let alone attainable. The goals of environmental management need to be reasonable, rather than arbitrary.

Second, it will always be possible to identify environmental defects, and there should be progress in correcting these defects on a rational priority basis, and at a reasonable rate. Direction of movement is important, but the end point is negotiable, and so is the rate of progress.

Third, a distinction should be made between environmental degradation that is a matter of degree, and degradation that is absolute and irreversible. Any decision, for example, to adopt a technological innovation needs to be made with reference to this factor. If it is irreversible, and does more harm than good, should its correction deserve a higher priority than some other form of impairment that can be reversed?

At the conclusion of my paper, I submit eight questions that I should like to offer as possible candidates for the agenda to be considered by a commission on national policy for materials, meeting in 1969 to consider the course to be charted for the rest of our century. Briefly, these are:

(1) What legislative decisions concerning materials are needed to strengthen our Nation now for the long-range future?

(2) Are we making any irreversible decisions now, by default, that warrant immediate priority attention? (That is, what corners are we painting ourselves into?)

(3) What organizational and administrative arrangements do we need to implement effectively our national materials policy?

(4) What should be our long-range national goals for materials research and development?

(5) What materials data systems do we need to create?

(6) What value can we assign to the preservation of our environment?

(7) What new motivations do we need to invent, to supplement the profit motive, and to what purposes relative to the protection and improvement of our environment?

(8) How can we exploit the concept of multiple benefits in the design and implementation of materials-oriented programs of the Government?

In conclusion, I should like to thank the many knowledgeable people who have responsibility for the formulation of materials policy, for their help in the preparation of my study, and for their responsiveness to the questions it raises. I am particularly grateful to Senator Boggs for initiating the inquiry that led to this study, and for his insistence that it be followed by a program of action.

NOTICE OF HEARINGS ON S. 2487, AMENDING THE LONGSHOREMEN'S AND HARBOR WORKERS' COMPENSATION ACT

Mr. WILLIAMS of New Jersey. Mr. President, I wish to announce that the Labor Subcommittee of the Committee on Labor and Public Welfare will begin hearings on S. 2487, a bill to amend the Longshoremen's and Harbor Workers' Compensation Act, on September 23 and 24. Further hearing days will be announced shortly.

The hearings on September 23 and 24 will be in room 4232, New Senate Office Building, beginning at 10 a.m.

Those wishing to testify or submit statements for the record should contact the subcommittee, room G–237, New Senate Office Building, extension 3674.

NOTICE OF HEARINGS ON OCCUPATIONAL HEALTH AND SAFETY BILLS, S. 2193 AND S. 2788

Mr. WILLIAMS of New Jersey. Mr. President, I wish to announce that the Labor Subcommittee of the Committee on Labor and Public Welfare will begin hearings on two occupational health and safety bills, S. 2193 and S. 2788, on September 30 and October 1. Further hearing days will be scheduled and announced shortly.

The hearings on September 30 and October 1 will be in room 4232, New Senate Office Building, beginning at 10 a.m.

Those wishing to testify or submit statements for the record should contact the subcommittee, room G–237, new Senate Office Building, extension 3674.

NOTICE OF HEARING BY COMMITTEE ON GOVERNMENT OPERATIONS

Mr. MUNDT. Mr. President, the Committee on Government Operations will hold a hearing on S. 2701 to establish a Commission on Population Growth and the American Future next Monday, September 15 at 10 a.m. in room 3302, New Senate Office Building. Persons wishing to testify or submit statements regarding this bill should contact the clerk of the committee on extension 7469.

NOTICE OF RESCHEDULING OF HEARINGS

Mr. KENNEDY. Mr. President, I announce that due to the passing of the minority leader, the distinguished Senator from Illinois, Everett McKinley Dirksen, who was a member of the Subcommittee on Administrative Practice and Procedure of the Committee on the Judiciary, hearings of the subcommittee originally set for Wednesday and Thursday, September 10 and 11, have been rescheduled.

On Friday, September 12, at 9 a.m., in room 5110 New Senate Office Building, the subcommittee will hold the first in a series of hearings on citizen involvement in agency decisionmaking and agency responsiveness to public needs. The hearings will be based on responses to questionnaires sent by the subcommittee to many Federal agencies and bureaus last February. The first set of hearings will cover the questionnaire responses of the Federal Trade Commission, and the witnesses will be the members of that Commission.

RESCHEDULING NOTICE OF HEARINGS

Mr. McCLELLAN. Mr. President, in view of the loss of our colleague, Senator Everett McKinley Dirksen, the Committee on Government Operations has postponed the hearing and executive session scheduled for Thursday, September 11 until the following Thursday, September 18.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Richard A. Pyle, of Oklahoma, to be U.S. attorney for the eastern district of Oklahoma for the term of 4 years, vice R. Bruce Green resigned.

Robert McShane Carney, of the Virgin Islands, to be U.S. attorney for the district of the Virgin Islands for the term of 4 years, vice Almeric L. Christian.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Tuesday, September 16, 1969, any representations or objections they may wish to present concerning the above nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Bart M. Schouweiler, of Nevada, to be U.S. attorney for the district of Nevada for the term of 4 years, vice Joseph L. Ward, resigned.

Rex Walters, of Idaho, to be U.S. marshal for the district of Idaho for the term of 4 years, vice Anton Skoro.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Tuesday, September 16, 1969, any representations or objections they may wish to present concerning the above nominations, with a further statement whether it is their intention to appear at any hearing which may be scheduled.

VIETNAM: CEASE-FIRE AND STANDDOWN

Mr. MANSFIELD. Mr. President, may I say that I fully endorse the action of President Nixon in putting into operation on his initiative an unofficial 3-day cease-fire and holding open the possibility of a continuance if the other side acts accordingly.

I ask unanimous consent that a statement which I issued on Vietnam on Saturday, September 6, and also a news story by Orr Kelly carried in the Washington Star for September 5, 1969, both be printed at this point in the RECORD.

There being no objection, the statement and news story were ordered to be printed in the RECORD, as follows:

VIETNAM: CEASE-FIRE AND STANDDOWN

(Statement by Senator MANSFIELD)

The announcement by the Viet Cong and the North Vietnamese that they would put into effect a cease-fire for three days, beginning Monday next, should, in my opinion, be matched by a similar announcement on our part. Following this prelude, an initiative on our part would be possible which would propose an unlimited cease-fire and stand-down applicable to both sides. If press reports are correct, moreover, it is anticipated that President Nixon probably will announce plans for the next withdrawal of troops from Viet Nam within the first week of his return to Washington on Monday. That announcement might then be tied in with the offer of an unlimited cease-fire and stand-down. This sequence would present the possibility of a further diminution in the fighting and, consequently, a further reduction in costs, damage, and, most important, casualties.

An unlimited cease-fire and stand-down may or may not be accepted either officially or unofficially. In my opinion, it is worth a try as a step towards resolution of the Vietnamese war. Such a step would not in any way prevent our forces from acting in self-defense, but it may offer a means of breaking through the present impasse. It may offer an alternative to a continuation of the *status quo*, with casualties accumulating at the present rate. It may offer an alternative to a step-up of the war which is a course that seems to me inadvisable in any event. The present course means continuing casualties and costs whereas a cease-fire and stand-down—if it can be achieved at this time—in view of the circumstances surrounding the question of succession to Ho Chi Minh—might offer a possibility for peace. There is everything to be gained by taking a chance for peace at this time.

[From the Washington Star, Sept. 5, 1969]

DISCLOSURE NEAR ON NEW PULLOUT

(By Orr Kelly)

President Nixon probably will announce plans for the next withdrawal of troops from Vietnam within the first week of his return to Washington Monday night, Defense officials said today.

The announcement had originally been expected by Aug. 15, but it was delayed after the beginning of what appeared to be an enemy offensive on Aug. 11 and 12. Enemy-initiated attacks fell off after that time, however.

Defense officials declined to say how many men would be involved in the next withdrawal because that decision has not yet been made by the President. But they left little doubt that a sizable withdrawal would begin in the near future.

Assurance within the administration that a withdrawal can be carried out safely was reinforced this week after Army Secretary Stanley R. Resor returned from a two-week trip to the Pacific with an encouraging report on improvements in the South Vietnamese Army.

In talking to reporters while in Vietnam, Resor stressed the improvements that must still be made, especially in leadership and training. But defense officials were heartened by his report on his return about the progress that has been made.

Final Defense Department recommendations on the rate and numbers involved in withdrawal plans are being made personally by Defense Secretary Melvin R. Laird.

The first increment of the withdrawal announced by Nixon June 8, of 25,000 men, was essentially completed last week.

ALIEN LABOR SITUATION IN VIRGIN ISLANDS

Mr. ALLOTT. Mr. President, during the recently concluded congressional adjournment, the Office of Economic Opportunity released a federally financed study entitled "A Profile and Plans for the Temporary Alien Worker Problem in the U.S. Virgin Islands." This research was performed pursuant to a contract with the OEO by the Social, Educational Research, and Development, Inc., with headquarters in Silver Spring, Md.

Although I have not had an opportunity to study in depth the complete report, which comprises 153 pages, I have reviewed in some detail the conclusions and recommendations which are found within the report itself, some of which I would like to share with other Senators at this time.

Mr. President, I have been following this question of the deteriorating condition of alien workers in the Virgin Islands for some time. This is a situation which is going to require the most thoughtful attention of Members of Congress as well as affected representatives of those Federal departments which are charged with the responsibility of overseeing matters in the Virgin Islands. Unless the most thoughtful energies of

our Federal Government are brought to bear upon this situation at an early date, and in an effective way, the situation which is depicted in the report is going to continue to deteriorate. I have great confidence that Gov. Melvin Evans as well as others in the island government who are charged with some responsibility relating to the alien worker situation will find methods to alleviate some of the conditions which continue to plague the Islands in this most critical area. On the other hand, I remain apprehensive that those who are charged with the responsibility on a Federal level have not yet taken the reins of their responsibility in an effective and forthright manner to deal honestly and effectively with this situation.

Mr. President, I ask unanimous consent that certain portions of the report entitled "A Profile and Plans for the Temporary Alien Worker Problem in the U.S. Virgin Islands" and an article published in the New York Times of Friday, August 29, which further discusses this important issue, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

A. THE UNITED STATES VIRGIN ISLANDS

Virgin Islands—St. Croix, St. John, and St. Thomas—are among the most beautiful tropical settings in the world—lush greenery, clear water, beautiful beaches, and nearly perfect weather. As a result, they are one of the most rapidly growing segments of the United States. The population has grown from about 29,000 in 1955 to somewhere in the neighborhood of 80,000 to 90,000 today. The number of tourists visiting the islands has jumped from 81,000 in 1955 to nearly a million this year; tourist expenditures are now about $100 million per year. The boom in population, commerce, private housing, and the tourist industry began in the late 1950's and the early 1960's and is the single most important reason for the need of the Virgin Islands to import workers.

At the peak of the tourist season, about half the population in the Virgin Islands are alien workers, because the local labor force is not large enough to keep up with the needs. Almost all aliens come from neighboring Caribbean islands. There are four groups of aliens—permanent resident aliens, visitors and aliens on student visas, temporary alien workers, and illegal aliens.

Illegal aliens are just that—they enter without assistance from immigration authorities or overstay on visitors' visas. Estimates vary on the number; there may be as many as two or three thousand at any one time.

Legal aliens (commonly called bonded aliens) are admitted under the provisions of the Immigration laws. The number in the islands has been steadily increasing. During the spring of 1969 (after the peak of the tourist season), there were about 12,000 in the islands—down 4,000 from the peak. Visitors are also foreign nationals who enter officially as visitors, but most come to seek work, visit their spouses, or are children coming to live with parents. Presently, there are about 16,000 in the islands.

B. WHY THE STUDY

Aliens are unique. First, they comprise more than half the labor force. Second, the prospects are slim that many of them, given present immigration laws, will ever become citizens. Third, the assumptions of laws and procedures that admit aliens is that these people are temporary workers, but they are really not for the Virgin Islands economy will continue to grow and need them. Fourth, there is confusion over how procedures operate; employers and aliens alike complain of delays and difficulties in getting papers processed.

Because they are viewed as temporary workers, aliens are denied most social services. They cannot legally enroll their children in public schools. Despite recent changes, most are not eligible for public housing or welfare agencies. It is next to impossible for them to get bank loans. Once unemployed, they must leave the islands, hence they are not able to receive unemployment compensation. When affected by urban renewal, aliens are evicted and not found suitable housing as are citizens. The status of aliens is one of "non-persons" and suggests a variety of questions such as: the effectiveness of rent control laws and regulations, the availability of health services, relations between aliens and the police, the effectiveness of minimum wage regulations, the quality of alien housing, and most important, how a democracy can survive with a large proportion of the population cut from the democratic process.

C. FINDINGS

Some major findings are:

There are at least 2,500 to 4,000 illegal aliens in the Virgin Islands.

Contrary to generally held opinions, about 9% of the alien population is unemployed.

If the survey is representative of alien children of school age, there are about 2,000 who should be in school.

The regulations governing the admission of aliens state that the Secretary of Labor must certify: "that qualified persons in the United States are not available and that the employment of the beneficiary will not adversely affect the wages and working conditions of workers in the United States similarly employed."

If the regulations are not being violated, they are being very liberally interpreted: (1) aliens do adversely affect wages and working conditions, and (2) qualified workers are available—Puerto Rico for example, has an unemployment rate of about 11.6%.

The enforcement of minimum wages is a serious matter. The study found many cases of aliens working as mechanics or at skilled levels, but paid as laborers. This also includes aliens working for the government.

Domestics face the most serious problems. Many are required to work more than 40 hours per week without overtime; others are hired as "live-in" maids and provided poor housing. Many do not have social security deducted from their salaries.

The housing situation for the alien population is a crisis. The majority live in substandard housing.

Alien life is one of personal and social disorganization. Many who come to the islands have left wives and families on their home island and have established a second family in the Virgin Islands.

The majority of aliens are existing on substandard wages. The hourly wage rate for aliens averages less than $1.50 per hour. Assuming a 45-hour week and standard deductions, the typical alien takes home about $50 per week.

Aliens are almost totally excluded from participation in the local community.

The round-ups of illegal aliens seem to be brutal affairs with the aliens (not employers) forced to pay the penalty. When caught, they are required to leave with little chance to settle personal affairs.

The total Virgin Islands population is grossly underestimated. Official estimates from the Bureau of Census place the population at about 54,000. According to the study, this estimate excludes over 40,000 aliens which brings the total population close to 100,000.

Federal agencies almost totally ignore alien problems. The Department of Interior which has Federal responsibility claims its role in the Virgin Islands is "advisory" and "that we take initiative only when requested to do so." Other agencies—the Department of HEW and the Department of Labor also eschew responsibility. Virgin Islands agencies generally conclude that most problems are "Federal."

D. BASIC RECOMMENDATIONS

In an earlier report on the alien situation, SERD provided a list of recommendations for alleviating and/or correcting alien problems. (Social, Educational Research and Development, Inc. *Aliens in the United States Virgin Islands: Temporary Workers in a Permanent Economy*, January 1968, revised December 1968, 76 pp.). Some are still valid.

The most basic problem that must have attention is that it is completely inimical to the democratic process to cut off so completely from participation in society a group such as the aliens. This separation is the basic ingredient of which violent social conflict is made.

Minimum wages should be raised to at least $1.60 an hour.

Labor unions should be encouraged to organize and represent alien workers.

The situation among household service workers is close to a crisis. No agencies or organizations serve to enforce the "contract" or regulations (however vague they may be) regarding wages and working conditions.

An ombudsman for aliens should be established in the Office of the Governor.

A crash program should be implemented to enroll alien children in the public schools.

Housing is serious. Employers should be required to contribute.

Virgin Islands agencies such as OEO should devote more resources to the solution of alien problems.

Private agencies and religious organizations should be encouraged to take a more active and positive role in the solution of alien problems.

The bonding system is largely unworkable and should be recognized as such. A new program is needed which has these elements:

a. Federal legislation should be passed to permit at least 1,000 aliens each year to become permanent resident aliens.

b. Recruitment of aliens in the future should be from the so-called Independent Countries of the Western Hemisphere such as Barbados, Jamaica, and the Dominican Republic, which have relatively high immigration quotas.

c. The Labor Department should take a more conservative view of the certification process and should define the labor market area to include Puerto Rico and other parts of the United States.

d. Education programs should be developed jointly by the Immigration and Naturalization Service and the Virgin Islands Government to encourage permanent resident aliens (when they become eligible) to apply for citizenship.

The process whereby foreign nationals use a visitor's visa to enter the islands and look for work should be replaced by first, bringing in American citizens, and second, the development of an employer-financed recruiting scheme of off-island recruiting in the Independent Countries of the Western Hemisphere.

There needs to be a careful look at economic trends. Such an examination will probably suggest that economic growth should be redirected and/or leveled off. Further, we think that these factors should be examined:

a. Consideration should be given to eliminating most of the free port status of the Virgin Islands. The sale of liquor, jewelry, cigarettes, etc., without a tax attracts visitors to the islands who only stay one or a few days and this activity probably adds very little to the overall well-being of the islands while considerably taxing social services such as roads, sewerage, and telephones.

b. If the Virgin Islands embarked on a crash program to improve social services, from where would workers come? Obviously, this would necessitate the importation of more aliens which, in turn, will increase the social services problem. Therefore, the study recommends slowdowns and cutbacks in the tourist industry and the gift shop and free port industries to divert resources for improving the social services.

The Governor should submit an annual report on aliens indicating the program of activities undertaken during the previous year plans for the coming year, problems, and the anticipated solutions to these problems.

All federal agencies should examine very carefully their programs and activities which can be strengthened to implement and improve the alien situation. The study makes reference to the U.S. Department of Labor in terms of manpower development and training, apprenticeship programs, minimum wages, and the certification process. In addition, the U.S. Department of Health, Education and Welfare should examine welfare programs, vocational rehabilitation, and especially all elements of Office of Education programs to insure that maximum benefit is made to the Virgin Islands as a whole and the alien community specifically.

Congressional committees should examine and plan hearings in such areas as:

a. The need for new legislation, especially in terms of the immigration process.

b. The wages and working conditions of aliens.

c. The inclusion of aliens in migratory labor programs.

The Virgin Islands Government has many untapped sources for tax income—increased property taxes (currently the lowest in the country), liquor tax, sales tax, etc.—which can be used to finance social services.

E. THE FUTURE

The future will be more of the past: all the labor force, economic, and demographic data that the study gathered indicates that the economic growth will continue in the future. There is no evidence to indicate that the native labor force can or ever will be able to substantially supply workers for this growth. Thus, the only source of workers will continue to be workers from places other than the Virgin Islands. The Department of Labor has wide latitude in deciding whether or not a shortage of workers exists in the United States, and hence, where the workers in the Virgin Islands will come from. However, at this juncture, it seems that the present situation will continue and hence, the proportion of alien workers in the Virgin Islands wil continue to grow.

[From the New York Times, Aug. 29, 1969]

ALIEN'S LIFE BLEAK ON VIRGIN ISLANDS—FEDERAL STUDY DEPICTS DULL EXISTENCE FOR WORKERS

WASHINGTON, August 28.—For about a million tourists each year, the United States Virgin Islands, often seems like a tropical Eden, but for the thousands of "alien" workers who make up half the labor force, the isles are no paradise.

A federally financed study released today by the Office of Economic Opportunity here paints a bleak picture of life for this alien population of about 12,000 that swells to 16,000 during the peak tourist season. The aliens are nearly always black immigrants who come from the neighboring Caribbean Islands to find jobs and better living conditions in the United States territory. They do mostly construction, service and domestic work connected with the booming tourist economy.

Based on interviews taken by aliens with 400 randomly selected fellow aliens, the report says that the immigrants are regarded as "nonpersons," often denied decent wages, voting rights, adequate housing, and such social services as public schooling for their children.

The study contends that "Federal agencies almost totally ignore" the alien problem. "The Department of Interior, which has Federal responsibility, claims its role in the Virgin islands is 'advisory' and 'that we take initiative only when requested to do so' according to the report. "Other agencies such as the Department of Health, Education and Welfare and the Department of Labor also eschew any responsibility. Virgin Islands agencies generally conclude that most problems are 'federal.'"

ON COMMUNITY PARTICIPATION

The report further asserts that aliens are "almost totally excluded from participation in the local community," with only the local Office of Economic Opportunity having aliens on its policy board.

The report was prepared for O. E. O. this summer by Social, Educational Research and Development, Inc., with headquarters in Silver Spring, Md. The 153-page study's title is "Profile and Plans for the Temporary Alien Worker Problem in the U.S. Virgin Islands."

In 1967–68, the research organization also prepared a study on aliens, but that report was limited to the aliens' place in the Virgin Islands economy. The new study includes analysis of a wide range of alien social and personal problems.

Alien workers are admitted to the islands under provisions of the Immigration and Nationality Act. An employer theoretically informs the Virgin Islands employment security agency that he needs a specific type of worker, such as a domestic. If the agency certifies that there is no native labor available, which is normally the case because of a shortage of unskilled labor, an alien is imported to fill the slot. Included in the process is the employer's posting of a $10 bond for the alien.

SOME STAY ILLEGALLY

Many times, however, an alien will enter the islands on a 29-day tourist's visa, find a job and overstay his limit. The study estimates that there may be 2,500 to 4,000 illegal aliens in the territory.

The study said, "The bending of certification process seems to be unworkable at least on a legal level. Employers and agencies in the Virgin Islands wink at aliens working and seeking work while on visitors' visas; we found instances of aliens who were bonded by one employer and working for another. We found many cases of illegal aliens unaware of their status."

John McCollum, president of the company that prepared the study, said in an interview today that the alien dilemma stemmed from "economic discrimination" from the majority black native islanders who dominate the territory.

"Racial and social discrimination are almost non-existent," Mr. McCollum said. "Aliens freely mingle with native islanders and whites, but they feel discrimination precisely because they are aliens—people with no economic, social or political rights. It's not because they are black. If they had the money, they could buy anything anyone else can."

Last October, a community organizer from Mr. McCollum's company working on a contract from the College of the Virgin Islands helped from the Alien Interest Movement on St. Thomas.

The organization was described by Mr. McCollum as an "alien community union" or "social protest group" similar to the Congress of Racial Equality on the mainland. "But they're nonmilitant in the sense as some of our domestic civil rights groups. They are militant in the Caribbean sense, though, because they challenge authority. On the islands, there is no strong tradition of aggressiveness. The tempo is lower."

Nathaniel Richardson, a 29-year-old upholstery repairman from St. Martin, is president of the group. In a recent telephone interview Mr. Richardson contended that his group, which can draw about 100 aliens to a meeting, hopes to organize a credit union, as well as a drive for better wages, housing and medical facilities.

In April, the organization encouraged about 75 aliens to march on Government House on St. Thomas to demand better housing. Mr. Richardson has also met with Dr. Melvin Evans, the territory's Governor.

No specific programs have been worked out, however, and the movement's main activities have been the holding of fund-raising dances and the publishing of a newsletter.

Another group composed mainly of aliens, the Citizens-Noncitizens Commission, which apparently has about 20 members, has discussed alien problems with the island government. Representatives have also met with Governor Evans.

A small elementary school at Barren Spot on St. Croix, moreover, is administered by aliens, who also teach the classes.

The study estimates that about 2,000 alien children are not attending the territory's crowded schools. Often the children are barred because of their uncertain or temporary status.

Yesterday, however, Governor Evans issued an order that permitted aliens to register their children with the Department of Education, according to the Governor's administrative aide, Leopold Benjamin. Governor Evans is attending a Governor's conference in Colorado and was not available for comment.

THE MARINE CORPS AND BLACK POWER DEMANDS

Mr. TALMADGE. Mr. President, admirers of the Marine Corps, myself included, were disheartened by the recent acquiescence on the part of the Marine Commandant to militant Black Power demands.

Last Friday's Atlanta Journal contained an editorial column written by associate editor John Crown—a retired marine officer—who compared the commandant's action with that of some college presidents who gave in so readily to radical students during the wave of campus riots that swept the country last spring and fall.

Since the founding of this country, the U.S. Marine Corps has built for itself a well-deserved reputation as the world's most elite and efficient fighting organization. It has been with a great deal of regret on my part that we have witnessed over the years an undermining of Marine Corps training and esprit de corps by erstwhile do-gooders who somehow seem to think that the Marine Corps trains choir boys and not fighting men.

Now Commandant Chapman has himself struck a blow against the tradition of the Corps by granting a special dispensation to Marine Black Power advocates, as outlined in Mr. Crown's column.

Like Mr. Crown, I should think that the Marine Corps would be the last to buckle under to such nonsensical pressure.

I bring Mr. Crown's column to the attention of the Senate and ask unanimous consent that it be printed in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

[From the Atlanta Journal, Sept. 5, 1969]

THE U.S. MARINE CORPS—THERE ARE SUPPOSED TO BE NO DIFFERENCES

(By John Crown)

As one who has always had a special feeling for the United States Marine Corps, it was with dismay and shock to see the current commandant cave in to militant demands as though he were a college president.

There was even contradiction in what he said.

On the one hand he announced that "Afro" haircuts would be permitted for black Marines and that under given circumstances the Black Power clinched fist salute would be tolerated.

On the other hand he said there would be "total impartiality" in dealing with Marines of all races, colors and creeds.

How he reconciles "total impartiality" with a special dispensation for "Afro" haircuts and a Black Power clinched fist salute escapes me.

This coming November the Marine Corps will observe its 193rd anniversary.

In those years the Leathernecks have caught the public fancy as an elite military organization, noted for its esprit de corps and readiness to fight in the national interest.

As an assault echelon, the Corps pioneered in the military use of helicopters. And it tailored itself as a unique self-contained air-ground team capable of dealing any enemy mortal blows.

What has kept the Marine Corps alive—even in the face of concerted and powerful efforts to abolish it or merge it with the Army—is its team spirit, the selfless feeling within each individual Marine that he is a part of the over-all organization and that his contribution is important to the Corps as a whole.

The Marine Corps has had "characters," individuals who have stuck out as different.

But until now it has not had groups of faceless individuals who were determined to act contrary to the team—to ignore Marine traditions and regulations—and who were able to get official sanction for doing just that.

The Marine Corps has had minority groups within it since its inception, but they have molded into an effective cohesive group.

It seems to me that giving dispensation for special quirks will, in time, intensify the difference that exist. And as they intensify, the foundation on which the Marine Corps rests will be jeopardized.

Past events have shown that to give concessions under duress only serves to whet the appetite of the recipient.

Gen. Leonard F. Chapman, Jr., commandant of the Marine Corps, noted that one of the complaints was that "soul music" was not played in Marine clubs. He said that in future such music would be played.

What about the other minority groups? Will they, too, get special dispensations on the music they want to hear in the clubs, on special type haircuts, on special type salutes? Where does it end?

That is the fallacy of caving in to minority group demands and recognizing special differences within an organization that is supposed to contain no differences. There are always other minority groups and if you recognize one you should recognize all. Continuing recognition of differences will destroy whatever cohesive organization you might have had.

Since the news of Gen. Chapman's announcement has been published, it has been both interesting and sad to see the scope of reaction among my colleagues. Both former Marines and those who have never been connected with the Corps have had caustic comments to make.

"I never thought the Marine Corps would be the first to crack," one non-Marine associate commented as we passed each other in the hall.

I do not doubt that Gen. Chapman has serious problems to solve. After all, problems are part and parcel of being commandant of the Marine Corps.

But this response has the familiar ring of the response from Harvard University and Columbia University and all the other cream puff colleges.

It is not the response I would expect from a Marine.

TAX EXEMPTION ON MUNICIPAL BONDS

Mr. HOLLINGS. Mr. President, pending before the Committee on Finance is a rather extensive and far-reaching tax reform bill. Certainly, every Senator should be interested in tax reform and fiscal responsibility with an eye toward equitably spreading the tax burden of our Nation's economy. There is, however, a portion of the bill which causes me grave concern. It concerns the elimination of the tax exemption on municipal bonds. There is a major question as to whether a case has been made for such a proposal, but, more important, at this stage it seems quite clear that such a program would cripple municipal governments in their capital improvements. In that regard, the city council of the city of Newberry, S.C., on August 12, 1969, promulgated a resolution opposing such proposed legislation for sound and competent reasons which I commend to the attention of this body.

I ask unanimous consent that the resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

STATE OF SOUTH CAROLINA, COUNTY OF NEWBERRY, CITY OF NEWBERRY

Whereas, there is now pending before the Senate Finance Committee certain measures pertaining to tax reform passed by the United States House of Representatives, and

Whereas, certain proposals included in these tax reforms would adversely effect issuance of municipal bonds by removing the present income tax exemption status, and

Whereas, the proposed "Federal Subsidies" to cities included in the proposal would not adequately compensate for the increased interest cost on municipal bonds, and

Whereas, municipalities, both large and small, are faced with near insurmountable financial problems with no "built-in" tax resources tied to the economy such as the State and Federal levels of governments enjoy, and

Whereas, the provisions which would eliminate tax exemption on municipal bonds, if enacted by Congress, will completely cripple municipal governments in so far as major capital improvements are concerned, including those financed in part by Federal Grants-in-Aid, since municipal bond issues are the sole source of revenue for such expenditures, whether by local initiative or on a "matching funds" basis, and

Whereas, leading public officials, economists and sociologists throughout the nation have expressed the view that the "urban crisis" and/or "plight of the cities" can best be solved on a local level and have strongly advocated a greater cooperation between municipal and federal governments, and

Whereas, in the light of these facts, the House passed version of the tax reform measures pertaining to municipal bonds would seem illogical and ill-conceived, leaving much to be desired in the way of "greater cooperation,"

Now, therefore, be it resolved, that the City Council of The City of Newberry, South Carolina does go on record as *strongly opposing* the proposed legislation relating to removal of tax exempt status of municipal bonds and could only view enactment of these measures by the United States Congress as a "direct attack" on the municipal governments of these United States, and

Be it further resolved, that a copy of this Resolution be forwarded to the Congressional Delegation of South Carolina, The National League of Cities and the Municipal Association of South Carolina, with a request that all the resources of their command be brought to bare to prevent passage of the suggested legislation.

Done this 12th Day of August, 1969, in Council duly assembled.

CLARENCE A. SHEALY, JR.
Mayor.

CECIL E. KNAIRD,
Councilman.

JOHN ORMAN,
Councilman.

D. GARDEN, JR.
Councilman.

CARMAN BOUKNIGHT,
Councilman.

CLAUDE W. PARTANO,
Councilman.

W. PRESTON MCALBANY,
Councilman.

Attest:

WINIFRED CULCOSURE,
City Clerk.

SENATOR HAROLD E. HUGHES

Mr. MANSFIELD. Mr. President, one of the bright lights in the Senate—and there are many—is the outstanding junior Senator from Iowa (Mr. HUGHES). I have watched his career with interest and am very much aware of his great record as the Governor of Iowa—a career which I predict will be more than matched by his work in the Senate.

As some writers have described him, he is "a man of balanced contradictions." But as a Senator he has been steady and modest but determined in his objectives. He minces no words, and one always knows where Senator HUGHES stands.

He has done an outstanding job as the chairman of a subcommittee tackling the problems of alcoholism and drug addiction—both of which are becoming increasing curses on the American scene and both of which have received too little attention up to this time. I want the Senate to know that I am very proud of the way Senator HUGHES has been conducting the hearings of the subcommittee of which he is chairman, that I wish him well in his continuing attack on these problems, and that I am looking forward to legislation which will result from the initiative he has shown in these and other respects. I am only hopeful that the subcommittee which he heads, now operating with neither funds nor staff, will be provided with enough money to undertake the thorough and detailed study of the problems which it has tackled, to the end that benefits for all our people—both young and old—will result.

Mr. President, I ask unanimous consent to have printed in the RECORD an article by Arlo Wagner, published in the

Washington Daily News of Saturday, September 6, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, Sept. 6, 1969]

SENATOR HUGHES IS BEING TALKED UP FOR VICE PRESIDENT

(By Arlo Wagner)

Freshman Sen. Harold E. Hughes (Iowa), who is being increasingly mentioned as a possible Democratic vice presidential nominee in 1972, is a recovered alcoholic who heads a new Senate sub-committee on alcoholism and narcotics.

This new post is nothing unusual for Sen. Hughes, who has frequently turned his personal experience with alcoholism to political advantage. Popularly admired for having licked his problem, he was elected governor of Iowa in 1962 on a seemingly contradictory campaign pledge to institute liquor-by-the-drink sales in the state—a promise he quickly carried out in his effort to dry up bootlegging.

Once described by a writer-friend as "a man of balanced contradictions," Sen. Hughes is an avid outdoorsman whose office walls are hung with hunting trophies including an American elk's head. But he favors strict gun controls.

He constantly and affectionately supported Lyndon B. Johnson, but carried strong complaints to the then-President in 1967 from Democratic governors. "We minced no words," he said afterward.

CUSS AND PRAY

Former Indiana Gov. Roger Branigan once said Sen. Hughes could cuss out people at a meeting and then lead them in prayer. He has privileges as a lay minister by virtue of Southern Methodist University correspondence courses, but he can and does cuss like the truck driver he was.

Altho his new sub-committee has neither funds nor staff, Sen. Hughes already has called drunks, alcoholics, convicts, dope addicts, judges, crusaders and police to tell what they know and have experienced.

He thinks alcohol is America's biggest executioner, considering the part it plays in heart attacks, cirrhosis of the liver and auto accidents. Combined with the problems of marijuana, heroin and dream drugs, Sen. Hughes figures his job is comparable to solving simultaneously the Vietnam war and civil rights disorders.

TREATMENT CENTERS

He is co-sponsor of a bill which would research the alcohol-narcotics problem and build treatment centers. He is indirectly critical of President Nixon's plan which critics say overemphasizes the arrest and jailing of drug users.

"The turned-on younger generation can't be turned off by simply flicking a switch labeled 'stiffer prison sentences,'" he said.

Sweeping his feet off his desk and stretching brawny arms above wavy black hair, he poured out supportive statistics, paused and added apologetically: "As you can tell, I'm something of a zealot on this."

Sen. Hughes, 47, is six-foot-two. Most of his 230 pounds seem concentrated in a muscular chest. Thirty years ago, he was nicknamed "pack" because he was like a pachyderm in the Ida Grove, Iowa, high school football line.

FOOTBALL AND MUSIC

He was an all-state guard, all-state tuba player and discus champion. His baritone sounded in a Methodist choir loft and he tasted whisky first when he was 18 at the State University of Iowa on a modest football scholarship, working part-time as a steamfitter.

When he was 19, he married Eva Mae Mercer. The first of their three daughters had been born when Sen. Hughes was drafted for World War II service. The Army trained him to be a BAR (browning automatic rifle) man because it took the largest man in the squad to carry it. Because it was such a devastating weapon, the man who fired it was a prime enemy target. He fought thru Sicily and Salerno, as he puts it, "like an animal, to stay alive."

Sen. Hughes had learned soon after his first drink that he was one of those "who couldn't quit until the bottle was empty." But, back from the war, he figured he had earned a right to drink and did. Until 15 years ago. He quit "cold turkey" when he woke up one day in Des Moines, 120 miles from home, and didn't know how he got there.

He then switched "vices"—to politics. A trucker, he was angered by the Iowa Commerce Commission, wholly manned by Republicans, which he thought ruled consistently for big truck lines. He joined the Democrats. He ran for and got elected to two terms on the commission. And after one previous primary-election defeat, Sen. Hughes got nominated for and won the 1962 gubernatorial race with a campaign for a realistic liquor law. He appealed to Iowans' revulsion for hypocrisy, pointing out that private "key clubs" and taverns were selling liquor by the drink even tho state law permitted only package sales.

The effect was, he said, that Iowans were getting their whisky by circumventing the law, encouraging illegal bootlegging and, incidentally, depriving the state of taxes on the contraband liquor.

IGNORES ADVICE

Sen. Hughes ignored advice to take it easy because Republicans still controlled the legislature. He said in his inaugural address: "It is sometimes said that the knack of skillful government is to hang back, do as little as possible and make no mistakes. I hope there is another way for, between you and me, this prospect does not invite my soul."

As governor, he disposed of several traditions. Refusing to cut ribbons opening stores, he said: "I didn't know the people wanted their governor to be a darn fool."

He flouted the traditional use of middle-priced cars and National Guard planes. He got a Lincoln Continental and a $60,000 six-place plane—and won his next election by 429,000 votes.

An alcoholism rehabilitation system was established, prisons were reformed, capital punishment abolished, tax structure overhauled, aid to schools quadrupled and property taxes on household goods repealed.

He clings to as much privacy as possible on Sundays at church and home with his wife, Eva, and their 17-year-old daughter, Phyllis. Two older daughters are married and living away.

PROTOTYPE TO STRETCH DEFENSE DOLLARS

Mr. HART. Mr. President, for months news about military procurement has been dominated by reports of huge cost overruns on major weapons systems. The C–5A, the gigantic cargo plane ordered from the Lockheed Corp., has been the topic of several congressional committees. The General Accounting Office estimates, assuming the purchase of 115, that the total bill will be $5.2 billion, some $1.8 billion above original estimates and more than $2 billion above contract target prices. Some increase is attributable to inflation, but at least $400 million of the overrun comes from "technical difficulties," requiring redesign of several elements.

In June the Defense Department announced the cancellation of an $875 million procurement of the Cheyenne helicopter gunship. The Army said the contractor failed to meet performance specifications, and the Government apparently will lose most benefits of this estimated $193.5 million research and development.

A few weeks ago an Assistant Secretary of Defense revealed that the Minuteman II missile is expected to cost almost $4 billion more than originally estimated. He also disclosed that the price of a rescue submarine has increased 2,700 percent.

Mr. President, I hope none of us has forgotten the lessons of the F–111 program, originally called the TFX—Tactical Fighter Experimental. It was one of the largest tactical airplane programs ever contemplated by the U.S. Government. The TFX was to be an all-purpose plane, capable of great operational flexibility in the performance of tactical missions with a unique variable-geometry swept-wing design which would enable the plane to operate at high supersonic speeds as well as low subsonic speeds. It was designed to be used by the Air Force as a bomber, fighter, or reconnaissance plane, and to be used by the Navy and Marine Corps for off-the-carrier and air-to-air combat in both limited and general war.

The TFX program called for the production of over 1,700 planes, of which 235 would be for the Navy. The cost of these planes was estimated by the Defense Department to be about $6.5 billion.

During most of 1962, the Boeing Co. and General Dynamics Corp. actively engaged in a competition—I call attention to the fact that it was a design competition only, what is often referred to as a "paper competition"—for the research, development, and production contracts.

On three successive occasions in 1962 Boeing was recommended by the military services through the Source Selection Boards as the contractor. Each time the civilian Secretaries ordered both companies to return to their drawing boards to rework their proposals.

In November 1962 the fourth evaluation was completed; it was decided by the Board that the Boeing plane could be produced for $100 million less than its competitor, while it had superior operational capabilities including a ferry range of over 1,000 miles more than the General Dynamics design, a bomb carrying capability more than 50 percent larger and other features the Tactical Air Command considered of great advantage.

Again the civilian Secretaries considered the matter and on November 24, 1962, reversing all recommendations, announced that the contract would go to the General Dynamics Corp.

Mr. President, the first TFX, called the F–111A, was delivered in October 1964 and made its first flight in December of that year. The Navy received its version—called the F–111B—in May 1965 and the Strategic Air Command received

its fighter-bomber version—termed the FB–111—in July 1967. All versions began to undergo test and use in combat. Three were lost in Thailand in March 1968 and the remainder were returned to the United States. An F–111A crashed in Nevada and 42 were grounded in May. In August there was a ground fatigue failure during test. In early September all combat flights were suspended and training flights were restricted. On September 23 there was an additional crash of an F–111A, and all F–111 flights were suspended.

In the meantime, the Congress had denied fiscal year 1969 funding for the F–111B, and the British Government had canceled its order for the F–111K. Secretary Clifford called for a cutback in the program during the closing months of 1968, and today the program is but a fraction of the size originally proposed.

Mr. President, I dwell on the TFX program because it is a classic example of the "paper competition," where no testing of a flyable airplane is contemplated or possible until long after the procurement contract has been let. The Nation commits itself to production of a weapons system purely on the basis of designs submitted and representations made by prospective contractors.

The action of the Senate and House of Representatives in calling attention to these huge overruns is certainly a public service, and I congratulate especially the Senator from Wisconsin (Mr. PROXMIRE) and his Subcommittee on Economy in Government of the Joint Economic Committee, Representative PIKE, the Senator from Mississippi (Mr. STENNIS), and the Armed Services Committee. The public interest has been served well by their rooting out and disclosing these facts.

I agree with my colleagues that the Congress must get more information and make detailed reviews of the defense procurement process. For that reason I cosponsored an amendment offered by the junior Senator from Pennsylvania, added last month to the military procurement bill (S. 2546), which would set up a systematic quarterly contract reporting mechanism, and would give the General Accounting Office authority to audit a contractor's books and subpena his records.

But I am concerned—and I know they are, too—about the root, the source, of the problem.

I ask: What can be done to get to the cause—as opposed to the result—of these vast overruns?

I ask: Is the answer in the method of procurement of these billion-dollar weapons systems?

I ask: Can competition in procurement—much greater competition than presently exists—help to eliminate or ameliorate these problems?

Last year, the Subcommittee on Antitrust and Monopoly began a study of the effect of the Defense Department procurement policies on competition and concentration. Our interest arose out of the great reduction in competition, especially in the area of large weapons systems, over the last several years, and out of the increasing economic concentration within the defense industry. In fiscal 1968, about $44 billion, almost one quarter of the entire Federal budget, was spent on defense procurement. Only 13.4 percent of military contract awards, in terms of dollars, was awarded on a formally advertised competitive basis in fiscal 1967. That figure in itself seems extremely low, but I have to report that it dropped 11.5 percent in fiscal 1968. Procurements of a single-service nature constituted 58 percent of the total, in terms of dollars, for fiscal 1968. These figures show a record low for competition and a record high for single-service procurement in 1968, when compared with the past 5 years. I think it is clear that the Subcommittee on Antitrust and Monopoly has a legitimate interest in defense procurement.

At our 1986 hearings, a suggestion for more competition, termed "parallel undocumented development," was made by one of the witnesses, Dean Ralph C. Nash, Jr., of the National Law Center at George Washington University. I regard this proposal as being of the greatest importance.

Dean Nash called for competitive award and pricing of production of weapons systems on the basis of demonstrated prototypes, instead of relying on paper studies, theoretical plans and elaborate proposals. This requires sustaining two or more contractors well into the period of engineering development.

This is not the first time prototyping has been suggested to the Defense Department. In 1958 the Rand Corp., an Air Force contractor then and now, submitted to the Air Force a paper, "Military Research and Development Policies," containing some of the most important elements of Dean Nash's recommendation. The authors, Burton H. Klein, W. H. Meckling and E. G. Mesthene, described "a good development policy" as one which frequently would include having two or more alternatives and would call for a decision only after initial test data showed their relative merits. Such a policy, they said, would make only modest financial commitments to a specific configuration until test results are available. Likewise, they said, a good development policy would require that equipment be brought to a test as early as possible at each stage of a development program.

During the TFX procurement in 1963, when the contract had been awarded to General Dynamics Corp., Boeing offered to prototype additional planes for the purpose of testing and cost evaluation. Boeing actually submitted a figure of $105 million each for two additional planes—one of the Navy type and one of the Air Force type—so that a demonstration could be performed for both services. The proposal was not accepted.

In 1963, Rand Corp. submitted to the Air Force a memorandum entitled "The Role of Prototypes in Development (U)." The authors of this paper were Burton H. Klein, T. K. Glennan, Jr., and G. H. Shubert. The paper reviewed thoroughly the desirability of prototyping aircrafts during the course of development. In using the term "prototype" the authors referred to a vehicle or component, the primary purpose of which is to test a design concept and to obtain the information necessary for making sound decisions on weapons systems development. I prefer this usage, but I point out that in some cases the term "prototype" simply refers to the first production item off the production line.

In examining alternative procurement techniques, the Rand study called attention to the "development-production" approach, which called for large, early financial commitments, based on design competitions, with large production contracts awarded at the conclusion of design competitions. An example of this type of approach used at the Pentagon in recent years is the "total package" procurement concept. Rand listed certain inherent disadvantages to this system:

First. The strategic uncertainty of military hardware should not be disregarded—expensive and important mistakes can be made in judging enemy capabilities 5 to 10 years hence; second, predicting the course of technology is difficult and uncertain; third, the cost uncertainties of this approach raises question marks—making major decisions at a time when only design studies are available may not lead to the desired cost result.

On the other hand, Rand favored the "expedited-prototype" approach, which would put airplanes and subsystems very quickly into test, before big money decisions are made. Rand argued that with this approach it is possible, for a given sum of money, to have more programs underway at any given time and thus possible to cover a wider range of strategic contingencies.

So far as the problem of technological obsolescence is concerned, prototype programs obviously can provide a hedge against this kind of uncertainty. If there are several alternative aircraft to perform an anticipated mission or group of missions, there is a higher probability of achieving the desired capability. Finally, Rand pointed out that the prototype approach promised an efficient and relatively economical method of determining what is being bought.

Rand concluded its study with the flat statement that it had been unable to find consistent support for the advantages claimed for the "development-production" method of procurement, whereas the "expedited-prototype" method seemed to offer substantial practical advantages. It appears that not a great deal of attention was given to the Rand study.

Following our hearings in 1968, I suggested to the Comptroller General of the United States, Mr. Elmer Staats, that he and his staff evaluate parallel undocumented development as a method of procurement. I am pleased to report to the Senate that the Comptroller and his staff made a most thorough investigation. More than 80 persons were interviewed in the Department of Defense, including the military services, the Bureau of the Budget, NASA, the Office of Science and Technology, at a considerable number of military contractors and universities and at the Rand Corp. In an Antitrust Subcommittee hearing

on July 14, 1969, the Comptroller General presented his report to the Congress, "Evaluation of Two Proposed Methods for Enhancing Competition in Weapons Systems Procurement".

In his report, the Comptroller General described parallel undocumented development as having three elements: First, it requires competitive engagement to be sustained through further, more substantive stages of development, second, contractor selection would be based on demonstrated performance of hardware, and third, most Government-purposed documentation would be deferred until the winning contractor is selected.

To understand this proposal, one must be aware that, at present, most new weapons systems are taken through two phases—concept formulation and contract definition. These are work frames designed to be logical networks of planning events. Each event in each network is intended to be derived from and conditional upon success of its predecessor.

Weapons systems or other technological hardware, expected to cost $25 million or more in R. & D. costs, or $100 million or more in total production costs, generally are studied throughout both stages. The winning contractor is seleted at the end of contract definition.

The Comptroller General pointed out that the end products of contract definition studies have often been more speculative than substantive. They are usually a set of performance specifications, models and mock-ups, technical and management plans and briefings of source selection officials. It is important to note, however, that at the end of contract definition the decision is made whether or not to proceed into engineering development and which contractor is to be the winner for that phase. The same contractor often gets the production award, which follows, frequently for a huge dollar figure. The performance specifications, target prices and delivery schedules are spelled out in the contract signed at the end of contract definition. The winning contractor is thus elected the sole-source for follow-on production.

These processes are what I already have referred to as "paper competition." The proponents of parallel undocumented development contend that competition should be sustained further into the development phase. New weapons systems nearly always involve technological advancement, new integration of components, or novel configurations. Furthermore, it is a practical impossibility to visualize from speculative paper the attributes of competing designs—much less the probable cost—and confidently pick the best one. The logic of deferring such a grave decision until more unknowns are resolved seemed compelling to the Comptroller General.

Events of the last 10 years have shown us, Mr. President, that contractors respond to paper competition with more paper: Tons of data and drawings, elegant representations, sumptuous brochures, and other displays. Many people feel that some contractors succeed in buying in by outdoing the others with allurements of superior performance, lower prices, better schedules, and what is referred to throughout the industry as gold plating. I expect that some contractors buy in inadvertently because the paper exercise provides only a dim view at best of what detailed production drawings or test articles will reveal. A contractor's promises about complicated hardware that has never been built are simply not verifiable at this stage.

Mr. President, there are some indications that when this brief but very lively contest is over, the winning contractor's top talent is sometimes replaced by second stringers who actually carry through the contract. This gives the impression that the emphasis now is on brochuremanship and not on quality production.

The concept of parallel undocumented development has as an essential element the creation of operable prototypes, or "flyaways," before production commitments are made. The Comptroller General pointed out that this element is dependent on the premise that there can be no valid assessment of performance, price, or reliability—much less confidence in the design—unless physical particles are demonstrated and tested.

For example, a new Air Force fighter, the F–15, now is in the contract definition stage. It has not been prototyped, it has not been flown, it will be a product only of paper competition unless plans are drastically changed.

Mr. President, I would be the first to agree that leadtime in weapons acquisition is quite important, but I suggest that this factor has been overemphasized by those who are opposed to prototyping. They say that prototyping takes too much time, that development time is already very long with the present system. They say that it takes time to build several prototypes and to test them, and to redesign when improvements are suggested.

I suggest that the time element may not be as important as has been indicated in the past. I agree with those who argue that the military services sometimes overstate the urgency of their programs. Urgency in development probably is one of the leading causes of the cost overruns of recent years. As a result of this urgency, the technique of "concurrency," that is, production which is simultaneous with development, has been used. One element of concurrency is the element of telescoping development planning. This brings about the paralleling of planning events, even though many knowledgeable authorities indicate that these planning events are best conducted in sequence. Telescoping brings about the shortcutting of such events as component reliability tests, environmental tests, and other qualifying steps.

Mr. President, I agree with those who suggest that time might be saved by prototyping because proven hardware boosts confidence in the design of a weapons system. I am not surprised to hear it argued that when a design has been approved, production commitments can be made with a greater confidence that substantial design changes will not appear later to cause further delays.

It is argued in the Pentagon that prototypes are very costly. High-priced contractor and Government staffs must stand by while prototypes are tested and evaluated. Fears are expressed that the testing which is involved in prototyping may add as much as a year or even more to the development time. But, Mr. President, I agree with the Comptroller General that if a billion-dollar failure can be avoided by the early test of hardware, the cost of prototyping is not significant.

If a concept is poor and is canceled out as a result of prototyping, this is much less expensive at this stage than it would be after contracts are signed, production lines are set up and the time of initial operational capability has arrived.

Furthermore, I suggest that the cost of a product is going to be much more visible after prototyping than it can possibly be at the end of the present contract definition phase. I believe that this is probably one reason why we have experienced these huge cost overruns. Very probably, there has been some rather tenuous cost-estimating in the contract definition phase as we know it.

Mr. President, if two contractors were undertaking the design of a system, working in a competitive environment, building prototypes, knowing that only one would be awarded the ultimate contract for the manufacture of the system, I believe this would provide the strongest possible inducement to design a system that is economical to manufacture and to operate. I believe that this competition would be good for the military and good for the taxpayers.

During our hearings, representatives of the Comptroller General gave the opinion that prototyping major subsystems would have caused cost reduction on the C–5A. The Cheyenne helicopter—now canceled—they said, could have been a parallel development with two prototypes produced by competing contractors. The Comptroller General's staff felt that this would have given greater visibility as to costs—and the cost estimates would have been more valid. They felt also that it would probably have been useful to prototype the TFX, where production costs have been quite high compared to development costs.

Certainly I agree that "fly-before-you-buy" makes sense. I am not at all sure that there is any weapons system, except perhaps a space vehicle, that is so expensive that prototyping would not be a wise technique to use. I suspect that the procurement people are concerned about obtaining funds from Congress for prototyping, which does admittedly involve paying for something you will never use. But I suggest that Congress in the future will be more observant with respect to the early contract phases of important weapons systems. The action last month on the amendment offered by the Senator from Pennsylvania is evidence of this development.

Essential to the concept of parallel undocumented development is the idea that Government-purposed documentation is expensive and inhibits parallel development of hardware. Elimination of this could balance the cost of prototyping.

Austere development—that is, development that shortcuts or bypasses institutionalized procedures and formalities and requires documentation later of the winner's product only would be used. The Comptroller General's investigation of this aspect turned up no hard information as to how much money could be saved by austere documentation. But estimates are that 20 percent of development costs could be saved if such documentation were not required. There is no doubt that the present documentation techniques substantially increases the cost of developments.

I think also these documentation techniques tend to slow down the development period. It is very interesting that Lockheed developed and delivered the U–2 plane, which became perhaps the world's most famous surveillance aircraft, within 90 days after development was initiated. I understand that General Dynamics developed its Charger aircraft on a relatively undocumented basis, using only corporate funds. Testimony also indicated that the French develop aircraft in this manner.

Those who propose prototyping on a relatively undocumented basis, argue that there is a great deal of waste in early data about procurement, maintenance, support, training, and other factors, because the final system is not yet visible and the design changes are practically certain to occur.

It was brought out in our hearings that the Rand Corp., and some people in industry feel very strongly that with austere development the costs would go down and research and development would be improved enormously. There would be a freer climate for design approaches, for innovations, so that the contractors would feel challenged to do their best. A witness from the General Accounting Office pointed out that the whole competition would be much livelier under an unrestricted research and development climate where each contractor is working under broad general specifications rather than under requests for proposals which are extremely detailed. He pointed out that the RFP for the F–15 aircraft totals about 2,500 pages, a fantastic amount of detail.

It is argued that good engineers design for maintenance reliability and operability, and that documentation during the development stage simply diverts them from the central job of development.

Also, the Government staff presently assigned to a contractor's plants during the development stage could be substantially reduced if austere documentation were the rule. The contractor's liaison staff can be reduced or even eliminated—some of those interviewed by the Comptroller General's staff estimated the liaison ratio as high as 5 to 1. In investigating prototype in France, the Rand Corp., learned that Dassault, which developed and produced the Mirage aircraft, produced a prototype of the Mirage III, regarded by some as the best fighter in the world, with 14 engineers and draftsmen, plus 70 shop fabricators. The military projects staff at Dassault consists of only five to 20 people.

Instead of restricting developers with detailed design specifications, those who favor austerity argue that the developers should be given performance requirements only and should be allowed free rein to try new approaches, find novel solutions, and perhaps accomplish technological breakthroughs. In other words, stimulate creative people to create, rather than disparage their interest and imagination with onerous detailed instructions. Let them see what they are developing: A prototype is a much better energizer of innovation and advancement than designs on paper.

In March 1969 the Assistant Secretary of the Navy, Robert A. Frosch, discussed the question of documentation in a speech. He pointed out that it is a vast waste of time and effort to consider maintainability, reliability, and operability from the very beginning of the process. To have a complete plan for the logistics of the maintenance of a ship that has not yet been designed is ridiculous, according to Secretary Frosch. He referred to overruns in expenditures generated by a complete maintenance and reliability plan for what was no longer the design and had not been the design—of a weapons system—for 3 months.

I suggest, Mr. President, that attention be given to the elimination of plans of this type.

The Comptroller General concluded his study with support of parallel undocumented development as an acquisition strategy for advanced weapons systems, and other military hard goods which first, seek substantial innovation, second, are to be produced in quantity, and third, have a low or moderate ratio of development to total acquisition cost.

He stated these reasons for favoring this concept: First, rival performance of physical hardware can be tested and compared before the production go-ahead decision is made. Second, the overrun problem should diminish because contractors would not be forced to price out manufacturing costs before critical unknowns have been dispelled. Third, two or more design responses to mission requirements can be appraised. Fourth, it should be easier to back away from doubtful design concepts before heavy investments are sunk in them. Fifth, it provides flexibility to respond to new technology and the design can be revised or cancelled before Government and contractor are over committed. Sixth, there should be stimuli to creativity at work in which more innovations may be achieved. Seventh, the competition would tend to stimulate the marketplace; contractors would seek to excel in manufacturing economies and achieve superior reliability, maintainability, and operating cost effectiveness in their competing products.

Mr. President, the Comptroller General calls attention to the fact that there are programs now in early development which may be candidates for competitive prototyping under austere conditions. He mentions the F–15 fighter aircraft, the Subsonic Cruise Armed Decoy (SCAD), and the AX close support aircraft. I have sent a copy of the Comptroller General's report to the chairmen of the Armed Services Committee and the Appropriations Committee in both the Senate and House of Representatives, and have asked that these committees give consideration in particular to this recommendation. I do not suggest that my judgment or the Comptroller General's judgment on this be considered as authoritative, although I call attention to the fact that the Comptroller General's staff interviewed a great many people who are quite knowledgeable in the area before he came to his conclusion.

I think that if the situation is unclear, these committees may wish to obtain a judgment from independent and qualified experts. The Comptroller General suggested that experts from the Office of Science and Technology or experts referred to the committees or to individual members by the Office of Science and Technology might provide valuable and knowledgeable judgments on this question. I commend this point of view to the committees and their members.

It appears that during the next 10 years a total of perhaps $17 billion may be spent on procurement operation and maintenance of the F–15. About 700 planes currently are planned.

The Comptroller General testified that he understood that the proposal made by Rand Corp., last year for prototyping the F–15 has not been accepted by the Department of Defense. He did not know how much detailed consideration was given to this recommendation, nor do I know. I would hope, however, that further consideration will be given to the possibility of prototyping this most important aircraft in view of the huge sums involved over a long period of time. I can understand how there would be substantial costs, in terms of development, which would have to be financed if this proposal were adopted. Over the long term, however, substantial sums might be saved and a superior performance for this aircraft might be gained if there were a prototyping technique used now. Add to this the possibility of prototyping with only austere documentation, and it seems to me that there is a real possibility of doing the Nation an important service.

I invite attention to the fact that the Comptroller General has suggested that prototyping is useful where there is a low-to-moderate ratio of development costs to total cost. He cited, as an example, a weapon, such as an advanced fighter aircraft, that will be needed in substantial quantity over a period of years and will remain in the defense inventory 15 to 20 years or more. He said to us:

> Life cycle costs are the ones that really count. Competition on performance and price during development can affect billions of dollars of future outlays. But if competition is absent in initial development, it is forever lost.

Mr. President, it is clear from the Senate's consideration of Defense authorization bills that a harder look at the Defense Department budget and in particular at the sums being allocated for the purchase of weapons systems is now ac-

cepted. I believe that in the post-Vietnam period, which we hope is not far away, defense costs can be cut without damaging the national security. If we do not find ways to do that, the Defense budget can rise to more than $100 billion during the next few years.

Prototyping, then, and in particular the concept of parallel undocumented development, can contribute to the national security and welfare. If we can reduce the military budget, and add the billions we should save by this process to our expenditures for our domestic programs—transportation, housing, pollution, and many others—we will have taken, indeed, a giant step for mankind.

SENATOR EVERETT McKINLEY DIRKSEN

Mr. HOLLINGS. Mr. President, our hearts are a little empty today as we pay tribute to one of the greatest Senators and truly great Americans who ever graced this Chamber with his presence. Everett Dirksen, as much as anything, was a Senator's Senator and as such was respected by everyone who met him. Senator Dirksen's mark on history will be recorded not so much for his stand as an unflinching Republican leader, but as a man who was able to see needs and fulfill them, see trends and interpret them, see humor in serious problems and lighten our load with his quick smile and ready wit. As a politician, he was without peer. But I think what endeared him to most of us was his humanity, his gentleness, and his everlasting spirit. The Senate will not be the same without him because no one can fill his shoes. To many of us, Everett Dirksen symbolized what is great about the U.S. Senate. He had the affection of his fellow Senators and the admiration of the American people. The last page has been turned in one of the unique chapters of American political history. I fear we will not see his equal for a long time to come.

THE INTERNATIONAL CANCER CONGRESS TO MEET IN HOUSTON

Mr. YARBOROUGH. Mr. President, I invite the attention of the Senate to the 10th International Cancer Congress, to take place in Houston, Tex., in May 1970. The congress is sponsored by the International Union Against Cancer, a nongovernmental voluntary organization dedicated to control of cancer. Seventy nations are represented in the International Union.

Its hosts in Houston next May will be the National Academy of Sciences and the University of Texas M. D. Anderson Hospital & Tumor Institute.

This meeting of research and cancer control organizations from all over the world will bring together the world's knowledge on the causes and treatment of this still unconquered threat to human life. It will also afford a perspective on the avenues of further investigation that are most promising in leading to cure and prevention of this disease.

The choice of the M. D. Anderson Hospital & Tumor Institute as a host to the Congress is highly appropriate.

While the hospital is devoted to care of cancer patients, the institute is devoted to basic medical research and medical education. Its current clinical investigations seek the cause of cancer, its diagnosis, and the effect of various treatments.

As chairman of the Subcommittee on Health, I look forward to the session of the Tenth International Cancer Congress and its conclusions. The war against cancer is one of the great unfinished wars of medical science. To find the means of controlling cancer deserves to be one of the goals of the decade of the 1970's, and it is not a goal only for Americans, but for all mankind.

SENATOR EVERETT McKINLEY DIRKSEN

Mr. McGEE. Mr. President, our flags are at half staff for a great American and a great public servant. I dare say the Senate of the United States has lost one of its all-time favorites with the death of Everett McKinley Dirksen. Commentators are recalling that Senator Dirksen, who often allowed as how he had aspired to a career as an actor, provided a dash of theatrics to the national capital scene. Indeed, he did, and he was probably more beloved for doing so.

To those of us who worked with Ev Dirksen, however, there is much more to remember than his flamboyant eloquence. It masked but could not hide a serious dedication to this country and its people. It was the finishing touch to a thorough and wily knowledge of parliamentary maneuver—a skill in which Ev Dirksen was unmatched.

Senator Dirksen was not without honors, of course. As the leader of his party in the Senate, he proved an able, articulate spokesman and a capable tactician. We who live on the other side of the political fence, however, remember well that Ev Dirksen's philosophy could not abide blind opposition for opposition's sake. We can recall that his word was his bond and that his graciousness was as great in defeat as it was in victory. And we know well that one never dared count him out until all the votes were in, for he was tenacious, adaptable, convincing, and persuasive.

Ev Dirksen's passing is hard to believe and harder to accept. It will be difficult to replace him and, no doubt, impossible to do so in kind. This great Capitol itself has taken on a new historical presence and will echo the distinctive voice of the Senator from Illinois for thousands upon thousands of Americans from this day on.

Ev Dirksen's passing, then, is like a death in the family, for the Senate and for the entire country. With my colleagues, I mourn his loss, and particularly grieve for his widow and his daughter, the wife of our distinguished colleague from Tennessee (Mr. BAKER).

ANOTHER CALL FOR A BAN ON DDT

Mr. NELSON. Mr. President, at the 47th convention of the Izaak Walton League of America this summer in Cincinnati, Ohio, the league delegates unanimously approved a resolution supporting a national ban on the use of DDT and related persistent chemical pesticides. I ask unanimous consent that the league's resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

THE IZAAK WALTON LEAGUE OF AMERICA RESOLUTION CALLING FOR A BAN ON DDT

Whereas, the use of DDT and like persistent chemical pesticides have an adverse effect on most forms of life and seriously threaten the quality of the environment; and

Whereas, other pesticides and control measures have been and are being developed which do not have such effects;

Now, therefore, be it resolved, by the Izaak Walton League of America, in convention assembled at Cincinnati, Ohio, this 10th day of July 1969, that it supports enactment of legislation to ban the use of DDT and like persistent chemical pesticides.

UCLA FOLKLIFE CENTER ENDORSES S. 1591

Mr. YARBOROUGH. Mr. President, as I have stated on numerous other occasions this year, I feel that the preservation of our rich and varied folk culture is a matter of great urgency. Last spring, I introduced S. 1591, a bill to create an American Folklife Foundation which would be charged with preserving this valuable heritage.

Recently, I received an endorsement of this proposal from Mr. Wayland D. Hand, who is the director of the Center for the Study of Comparative Folklore and Mythology at the University of California at Los Angeles.

Mr. President, I ask unanimous consent that the letter from Mr. Wayland D. Hand, dated August 5, 1969, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF CALIFORNIA,
LOS ANGELES,
Los Angeles, Calif., August 5, 1969.

Senator RALPH YARBOROUGH,
Senate Office Building,
Washington, D.C.

DEAR SENATOR YARBOROUGH: I should like to give my wholehearted support to you in your efforts to create The American Folklife Foundation, as provided in S. 1591.

Your statement on the need for The American Folklife Foundation, as contained in the CONGRESSIONAL RECORD under date of Thursday, March 20, 1969, is admirable indeed and I compliment you on the fine perception you have shown and the means you set forth for the conservation and study of America's wonderful folklore heritage.

I am sure that the professional folklorists throughout the country will rally behind you, and if there is anything I can do to help, please let me know.

Yours sincerely,

WAYLAND D. HAND,
Director.

SENATOR EVERETT McKINLEY DIRKSEN

Mr. PASTORE. Mr. President, the whole world was shocked into sadness Sunday by the unexpected death of U.S. Senator Everett McKinley Dirksen.

For the whole world had a deep affection for this great orator—this "old-

fashioned American" as he liked to call himself—distinguished statesman as we knew him—and the stanch friend it was a privilege to possess through these 19 years of his and my Senate service.

With the Dirksen eloquence absent from this Chamber, the Senate cannot be the same. And we shall miss his priceless wit and wisdom.

His was a voice to charm, speaking out of a heart of courage and compassion. His was a kindness to encourage the ambitious—to understand and assist the weak—and not desert them.

His was a senatorial wisdom geared to the security of his country that he had served in uniform. His was a gift to contribute commonsense to a worried land—a land that loved him personally regardless of party.

Everett McKinley Dirksen believed—as he said—in the Declaration of Independence and the Constitution of the United States.

He understood the challenges of our changing times—and he met them. He could talk down the high and haughty, and he could speak up for the underdog.

Great legislation of our time, more often than not, owed its enactment to the patriotic commitment of this man.

Each of us has a precious memory of his helpfulness. An aisle might divide us on issues, but no aisle divided the innate decency of this man—always the gentleman—ever the friend.

Many voices in many tongues will speak the eulogy of Everett McKinley Dirksen, and history will write the epitaph for this powerful figure of his times.

So—humbly—we shall speak of him as an old-fashioned American, with a love of family that inspired decency, a love of country that inspired dedication, grateful for freedom's blessings—concerned that these blessings might be preserved and shared by all—an able advocate of the American dream and the American destiny.

Out of our hearts we speak our sympathy to his dear ones—those who had the special fortune intimately to love him—and intensely to be loved by this good man.

PRESIDENT NIXON SHOULD GRASP THIS GREAT OPPORTUNITY TO ACHIEVE PEACE

Mr. YOUNG of Ohio. Mr. President, the decision to agree to a 3-day cease-fire in Vietnam to mark Ho Chi Minh's death offers President Nixon a new opportunity to make a fresh beginning toward bringing about peace. He missed that opportunity when he took office this last January. Now, the death of President Ho Chi Minh, with its incalculable impact on North Vietnam, gives him an unexpected opportunity to hasten peace in Vietnam and to enable us to withdraw our Armed Forces. The VC announced a cease-fire during a period of 3 days. I propose that President Nixon announce that we Americans not only favor a cease-fire for 3 days but propose that both sides stop all offensive action and that we have a cease-fire throughout the entire month of September. Thieu and Ky who could not remain in control in Saigon without the support of our Armed Forces will oppose this. Their militarist regime represents but 20 percent of the entire population of South Vietnam. President Nixon should not let this militarist tail wag the dog.

During this period of mourning, U.S. commanders in South Vietnam have been ordered to fall back to defensive positions where this is feasible, to avoid casualties and to withhold support from South Vietnamese troops. By announcing that this cease-fire will continue throughout September and perhaps longer, President Nixon has a golden opportunity to make it clear to the new rulers in Hanoi that the United States sincerely desires an end to the fighting in South Vietnam. I am hopeful that the President will take advantage of this new chance that has been opened to him in the search for peace in Vietnam.

The most important question at this time is not what happens next in Hanoi, but rather what occurs here in Washington. To make the most of his second chance the President will have to instigate changes in his policy of troop withdrawal and in his attitude toward the Saigon militarist regime.

Of course, the Saigon militarist regime headed by Thieu and Ky will strenuously object to any extension of the cease-fire or to any change in our policy, just as they originally refused to accept a 3-day cease-fire. The fact is that these tinhorn dictators could not remain in power for more than 3 days without the support of our Armed Forces. They are well aware of the fact that once there is peace in Vietnam, they will be forced to flee and to join their unlisted bank accounts in Hong Kong and Switzerland.

The much heralded withdrawal of 25,000 troops from Vietnam has been moving at slower than a snail's pace. At best, it was a mere token gesture. Our total troop level in Vietnam is now only about 2,500 below what it was when President Nixon was inaugurated on January 20, 1969.

Under President Nixon as our commander in chief, at this time we are maintaining more than 587,000 of our Armed Forces in Vietnam, Thailand, and offshore from Vietnam. Furthermore, unfortunately, from January 20 to September 4, 1969, 61,159 Americans have been killed and wounded in combat. At the same time 45,920 so-called friendly forces—too friendly to really fight—of South Vietnam have been killed and wounded.

At the present rate of withdrawal a couple of hundred of years could elapse before we finally withdraw from that ugly civil war in Vietnam. The administration policy remains one of talking withdrawal, but not acting on it. It is obvious that Ambassador Bunker, who is subservient to the regime of Thieu and Ky, and American military leaders in Saigon, have been successful in their efforts to slow down or completely halt the pace of withdrawal.

The facts are that the Nixon administration has not really applied pressure to Thieu and Ky to put together a broad-based regime including all political elements in South Vietnam. On the contrary, Thieu recently formed a new regime remarkable for its narrow base and lack of popular appeal. After months of talk about broadening his government during which he was unable to attract a single representative of any forces except the military clique which he himself represents, Thieu has eased out Prime Minister Huong and replaced him with yet another general representing that same militarist clique.

If there is ever to be peace in Vietnam, it must be based on compromise. It is clear that Thieu will not move in that direction unless President Nixon compels him to do so.

Ho Chi Minh's death and the agreed-to 3-day cease-fire offer the President a chance to break the deadlocked Paris negotiations. It is anticipated that for a period of from 6 to 8 weeks there will be a lull in VC activity while Ho's successors form a new government and establish themselves in power. While it is too early to know what the attitude of these men will be, we may reasonably hope that they will be less intransigent than Ho, who demanded what appeared to be unconditional surrender by the United States.

If the administration is sincere in its desire to end our involvement in Vietnam and to withdraw from that ugly war, then extending the 3-day cease-fire to at least a month can be the beginning of that effort. We have nothing to lose. We have everything to gain.

THE PESTICIDE PERIL—XLV

Mr. NELSON. Mr. President, the threat to our environment from the continued use of persistent, toxic pesticides should be of concern to every individual in the United States.

It was 7 years ago that Rachel Carson first brought this controversy into full public view when she warned in her book, "Silent Spring," that the world environment would quickly become despoiled by pesticides that persist and accumulate in the environment. However, it has only been in the last year that public pressures have finally brought about some significant action in providing improved controls. Since the beginning of this year, when Sweden became the first country to ban the use of DDT, Denmark and the States of Michigan and Arizona have also taken steps to ban this pesticide. Many other countries and States of our Nation are at present considering measures to restrict and regulate DDT and related persistent pesticides.

Citizens of New Jersey have particular reason for alarm. This summer, the U.S. Department of Agriculture revealed that Newark Airport and McGuire Air Force Base were among 56 U.S. military and civilian airports which have received massive applications of dieldrin, a pesticide 40 to 100 times more toxic than DDT, during the past decade to safeguard against exotic species of potentially harmful insects coming into the United States from overseas.

This news sparked a major conservation dispute which resulted in the Department of Agriculture announcing a

30-day halt to all its pesticide program pending further study. After the expiration of the 30-day investigation, the Department announced that the use of certain pesticides would be restricted in the agency's Federal-State pesticide control programs. However, the agency unfortunately decided to delay action on its pest control programs at airports and is still giving the matter further consideration.

Two articles written by James M. Staples, and published in the Newark, N.J., Evening News, report on this matter. I ask unanimous consent that they be printed in the RECORD together with another article by Mr. Staples reporting on the findings of a 2-year survey by the U.S. Bureau of Sports Fisheries and Wildlife which revealed the presence of DDT in 584 of 590 samples of fish taken from 45 rivers and lakes across the United States.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

ADMIT PESTICIDE USE AT NEWARK, MCGUIRE

(By James M. Staples)

Newark Airport and McGuire Air Force Base are among 56 U.S. military and civilian airports which have received massive applications of dieldrin, a highly toxic pesticide, during the past decade, an official of the U.S. Department of Agriculture said today.

The latest in a growing number of national controversies over continued indiscriminate use of pesticides, the dieldrin revelation brought shocked protests from conservationists.

An Agriculture Department spokesman in Washington said the new dispute has brought a temporary halt in the dieldrin treatments around airports, pending discussions with "concerned parties."

He said the reasons for the heavy dieldrin dosages are to safeguard against exotic species of potentially harmful insects coming to the United States from overseas, and accidental transfer of American pests, such as the Japanese beetle, abroad or elsewhere in this country.

Like DDT, dieldrin retains its chemical identity for years in the natural environment. Scientists say that both chemicals, members of the family of chlorinated hydrocarbons, break down gradually under natural conditions into other chemical forms which often are as dangerous as the original materials.

MORE TOXIC THAN DDT

"Dieldrin is from 40 to 100 times more toxic than DDT," said Roland Clement, executive vice president of the National Audubon Society, New York. "It's use in such concentrations and in such a widespread way is an outrage."

U.S. Sen. Gaylord Nelson, D-Wis., a leader in campaigns to ban use of DDT and related pesticides like dieldrin, revealed 56 airports had been blanketed with the latter chemical. He renewed his appeal today for a ban on pesticides in the DDT family.

Nelson also noted that a pending Agriculture Department recommendation that DDT no longer be applied by air anywhere it can wash into waterways, lakes or estuaries "is merely a step in the right direction . . . but not enough."

Donald Shephard, director of the Agriculture Department's plant pest control division, confirmed the Newark and McGuire treatments, which "are considered still effective." He said his department considers five to seven years as the "effective" period after application of three pounds of granular dieldrin per acre.

"The dieldrin in this form is too heavy to blow in the wind, and is always applied by hand or machine—never from the air—in order to insure its being restricted to the target zone," Shephard said. "We concentrate on areas where cargo planes are loaded and unloaded, plus a larger perimeter area where insects could escape into the grass."

Such use of dieldrin has been blamed for a recent fish kill in Little Creek, a stream which receives runoff from Dover Air Force Base in Delaware.

A Delaware state official who requested anonymity said that he understood that dieldrin was applied over most of Dover Air Force Base just prior to a heavy rainfall on June 14–15. The fish kill occurred on June 16, involving mainly catfish and eels, two of the toughest species of fish known.

Chemical analysis of the water in Little Creek was performed in Delaware, proving that metallic compounds were not present in enough strength to be responsible. A similar kill several years ago was traced to metal plating wastes washing into the stream from aircraft maintenance shops at the air base.

Samples of the dead fish and eels were packed in dry ice and sent to federal water pollution control laboratories in Edison and Cincinnati, Ohio, for pesticide testing which is still underway.

Ecologists and conservationists are mounting a growing attack on DDT, dieldrin and other chlorinated hydrocarbons. Recent studies have shown that DDT remains in microscopic particles which wind and rainfall have carried to all parts of the earth.

Even penguins in Antarctica contain DDT in their bodies, according to one investigator. Others have proven that many species of birds such as hawks and eagles are becoming extinct because DDT causes eggshells to be so weak from lack of calcium that eggs are crushed by the mother's weight during incubation. Others report that humans are potentially endangered by genetic damage caused by such pesticides.

Frank McLaughlin, executive director of the New Jersey Audubon Society, which is unrelated to the National Audubon Society, said, "This is horrible. It's poisoning our whole environment. Compared to dieldrin, DDT looks like baby food."

AIRPORT PESTICIDES BAN IMPOSED PENDING REVIEW OF U.S. POLICY

(By James M. Staples)

A U.S. Department of Agriculture official said yesterday that massive usage of dieldrin and related pesticides at public and military airports will be halted for 30 days, pending a review by the Interior Department.

A major conservation dispute was touched off two weeks ago when it was revealed that Kelly Air Force Base in Texas was to receive a massive application of dieldrin to safeguard against the spread of insects which might arrive from overseas.

Objections of conservationists halted the scheduled Texas application, but U.S. Sen. Gaylord Nelson, D-Wis., later revealed that 56 airports, including Newark and McGuire AFB in New Jersey, had already undergone dieldrin treatment during the last decade.

Donald Shephard, head of the plant pest control division of the agriculture department, said, "We are reviewing our treatments and putting down on paper all the possible alternatives, along with their advantages and disadvantages. Then we will consult with the Interior Department to draw out views of ecologists and other experts there."

Shephard said the airports received the strong pesticide applications to keep foreign pests from gaining a foothold here, and to keep problem insects from being carried from one part of the United States to another.

NO RECENT USE

McGuire AFB near Trenton was originally tested with dieldrin. But, chlordane has been used on the 5,000-acre air base since 1963, an Air Force spokesman said.

Dieldrin was used from five to seven years ago at Newark, LaGuardia and Kennedy airports, said a spokesman for the Port of New York Authority, which owns and operates them.

"The U.S. Department of Agriculture wanted it done, we paid for the chemical and they applied it. None has been applied since those initial doses," said the PA spokesman.

Shephard confirmed that some public and military installations have received chlordane or heptachlor treatments because of local conservation problems.

Sunlight tends to break down chlordane and heptachlor quicker than dieldrin, he noted.

Because chlordane is less toxic than dieldrin, the agriculture department experts say it should be applied at the rate of 10 pounds per acre to equal the potency offered by three pounds of dieldrin.

Being shorter-lived than dieldrin, chlordane must be applied more often and thus represents a more expensive protection, the same authorities said.

Dieldrin, deemed from 40 to 100 times more toxic than DDT, and heptachlor are among five chlorinated pesticides which the National Audubon Society has said should be banned. Others on the list are DDT, aldrin and endrin.

Chlordane is a similar pesticide which the National Audubon Society advises be used only by professional applicators under conditions of exceptional need. In this category, established by Audubon, are three other pesticides: BHC, endosulfan and toxaphene.

Audubon officials cite the near extinction of the bald eagle, falcon and osprey as examples of the effects of the chlorinated hydrocarbon pesticides, such as DDT. They retain their chemical identity 10 or more years and are passed upward from lower to higher orders of creatures through their food supplies.

Enzymes produced in hawks and eagles to combat the effects of the pesticides cause the cutting of calcium supplies, resulting in thin eggshells which collapse under the weight of incubating mothers.

The effects of such chemicals in humans are still debated, but recent Russian research suggests that effects are noticeable only after about 15 years of exposure, an Audubon spokesman said.

It is known that every human carries concentrations of DDT dissolved in his body fats, making research difficult because there is no comparison with DDT-free humans.

A recent incident at Dover AFB in Delaware is being cited by conservationists. Little Creek, which flows through the base, was the scene of an extensive killing of catfish and eels. State officials blame the use of dieldrin at the base.

Although less dramatic and of less direct concern to humans, the Dover incident in being compared by naturalists with last year's biological accident in Utah. About 6,000 sheep were killed when winds carried deadly nerve gas outside an Army testing area.

"It happened that a heavy rain hit after Dover AFB received an application of dieldrin pellets. This caused poisoned water to drain into Little Creek. It rained June 14 and 15, and the fish were killed on the 16th," said a Delaware official.

PESTICIDES' TOLL ON U.S. WILDLIFE CONFIRMED

(By James M. Staples)

A white perch taken from the Delaware River near Burlington contained the highest concentration of DDT of any fish found in

the United States during a two-year federal survey, according to a government paper.

It contained 45.27 parts per million. The U.S. Food and Drug Administration recently set five parts per million as the maximum DDT amount in fish which is considered safe for human consumption. The parts per million measurement is the ratio of pesticide to body weight.

The report has prompted the Delaware River Basin Commission to request its fish and wildlife technical assistance committee to evaluate the pesticide pollution in the river and its tributaries. The committee is an advisory group of fish biologists from New Jersey, New York, Pennsylvania and Delaware.

The survey by the U.S. Bureau of Sports Fisheries and Wildlife during 1967 and 1968 showed DDT in 584 of 590 fish taken from 45 rivers and lakes.

It also showed high concentrations of dieldrin, a close but far more toxic chemical relative of DDT, in Delaware River fish. The highest single dieldrin reading came from yellow perch in the Connecticut River.

ESTABLISHMENT BASE READINGS

A bureau spokesman said the samplings were taken in February and September of 1967 and 1968, and are to be continued to measure differences from the base established those two years.

The Burlington site was the only sampling location in the Delaware River. The Hudson River, which also showed high pesticide readings, was sampled at Poughkeepsie, N.Y.

Sen. Gaylord Nelson, D-Wis., revealed the content of the bureaus survey. It is scheduled for government publication in September.

Nelson said, "The study confirms . . . Rachel Carsons assertion in 1963 that there will be an environmental disaster unless this is quickly brought under control."

Similar studies are being completed for ducks and starlings.

One spokesman said New Jersey is just about the last state in the Northeast to persist in using DDT for mosquito controls, which might account for the unusual concentration of that pesticide in the Delaware River fish."

USED ON TOBACCO CROPS

He said the dieldrin concentrations in Connecticut River fish probably could be traced to its use on tobacco crops along that river's shores.

In addition to DDT and dieldrin, the study included aldrin, chlordane endrin, lindane, heptachlor, heptachlor explode and toxaphene. Dieldrin is considered from 40 to 100 times more toxic than DDT.

All are chlorinated hydrocarbons, which ecologists and conservationists charge retains their chemical identities for many years after application, threatening many species of birds and may be endangering man.

Fish, birds, animals and humans build up concentrations of such pesticides in their body fats. It is estimated that every American carries 12 parts per million of DDT in their bodies. Once introduced into the environment, the chlorinated hydrocarbons are borne by winds and water throughout the world.

They accumulate in bodies of microscopic creatures and their concentrations increase as one species devours another. Thus ospreys, eagles and gulls build up higher concentrations than are found in any fish they may eat.

From five to eight white perch were sampled at Burlington each of the four times. DDT concentrations were February 1967, 31.72 PPM (parts per million); September 1967, 36.73 PPM; February 1968, 45.27 PPM, and September 1968, 34.12 PPM.

Dieldrin concentrations in white perch from the Delaware, for the corresponding periods were .81, 1.24, .22 and 25 PPM. The Food and Drug Administration's safety limit for dieldrin in fish is only .3 parts per million.

For the Hudson River, the highest single DDT reading was a goldfish, with 14.4 parts per million, in February 1968.

Spokesmen for the Bureau of Sports Fisheries and Wildlife emphasized that the limited testing done so far has failed to turn up any national seasonal trends in pesticide concentrations. They said also that some slight variations in findings could have resulted from analysis being made by more than one laboratory.

Delaware River fish samplings also included catfish and suckers, neither of which had readings as high as the white perch. It was noted that the perch eats other fish and insects while the catfish and suckers are "bottom feeders" consuming tiny life forms which are lower on the food chain.

Another important factor is that the perch carries more fat in its body than catfish or suckers.

The federal survey found DDT also appeared in concentrations of more than five parts per million in Cooper River, South Carolina; St. Lucio Canal and Apalachicola River in Florida; Tombigbee River, Alabama; Rio Grande River, Texas; Lake Ontario, Lake Michigan, the Illinois River in that state; the Arkansas and White Rivers. Arkansas, and the Sacramento River, California.

Dieldrin samplings of more than .3 PPM also appeared in the Savannah River, Georgia; the Apalachicola, Tombigbee, Rio Grande, Illinois, Arkansas and White Rivers, plus the Red River, Minnesota; San Joaquin River, California; Rogue River, Oregon, and Lakes Ontario and Huron.

THE 350TH ANNIVERSARY OF THE LANDING OF FIRST NEGROES AT JAMESTOWN ISLAND, VA.

Mr. SPONG. Mr. President, the first Negroes landed at Jamestown Island in Virginia 350 years ago and this significant event in our Nation's history will be commemorated at ceremonies at Jamestown Festival Park on Sunday, September 21, at 3 p.m.

Few Americans, I expect, realize that the Negroes' roots run so deeply in this country or that persons of African descent arrived so early at Jamestown, where our Nation was born.

The principal speakers at the commemoration ceremonies will be Dr. Charles H. Wesley of Washington, D.C., who is executive director of the Association for the Study of Negro Life and History, and Dr. Samuel DeWitt Proctor, Sr., dean of the Graduate School of Education at Rutgers State University, New Brunswick, N.J.

Both Dr. Wesley and Dr. Proctor are educators, authors, and former college presidents. Dr. Wesley has been the president of Wilberforce University and Central State College, both in Ohio. Dr. Proctor is the former president of Virginia Union University in Richmond, Va., and A. & T. College in Greensboro, N.C. In addition, Dr. Proctor served a tour of duty as association director of the Peace Corps in Washington.

The Commonwealth of Virginia will be represented at the commemoration program by Lt. Gov. Fred G. Pollard.

The committee for the commemoration of the 350th anniversary of the landing of Negroes at Jamestown consists of a number of Virginians who are prominent in both the Negro community and the business and professional life of our State. In planning the program at Jamestown, they have set four objectives, which are as follows:

1. To contribute to the development of a healthy pride and respect among Negroes and Americans generally for our forebearers of African descent.

2. To promote historical accuracy as to the struggles of the American Negro to achieve his rights as a person and as a citizen of the United States.

3. To apprise the public of the contributions of Negroes to the life, technology and culture of Virginia and of the United States.

4. To stimulate interest in the erection of a suitable marker in honor of the arrival of these persons of African descent.

Mr. President, I am confident much thought and hard work has gone into the planning of a program of this type and I hope it will contribute to a greater understanding by all Americans of our rich, historical heritage.

The steering committee for the commemoration program is composed of W. Lester Banks, P. B. Boone, Oliver W. Hill, Esq., Mrs. Helen Howard, Dr. Walker Quarles, Rev. Melford Walker, S. W. Tucker, Esq., and Dr. J. Rupert Picott.

Other committee members are:

W. E. Barron, Paul S. Bell, Raymond H. Boone, John M. Brooks, Charles E. Brown, Theodore N. Burton, C. Clayborne Bush, Mrs. Virginia Carrington, Miss Elaine Carthly, John Culver, Mrs. Mary E. Culver, J. H. Dillard, A. G. Edwards, Melvin W. Elliott, Mrs. Willa Elliott.

Rev. Egbert J. Figaro, Rev. L. Francis Griffin, Sr., David E. Gunter, Rev. Curtis W. Harris, Sr., Linwood Harris, Dr. John B. Henderson, Dr. Thomas Henderson, Dr. Robert M. Hendrick, Jr., Mrs. Beresena Hill, Mrs. Bertie Huggard.

John Q. Jordan, Joseph A. Jordan, Jr., Rev. Calvin C. Knight, Moses D. Knox, David E. Longley, Henry L. Marsh III, Esq., M. C. Martin, William T. Mason, Esq., Rev. Raymond S. Mitchell, David Muckle, Mrs. Bernetta West Munford.

J. Jay Nickens, Jr., Royal A. Patterson, Mrs. Bessie Pryor, Dr. W. L. Ransome, Dr. Wm. Ferguson Reid, R. L. Scales, H. H. Southall, Mrs. Helena Stolls.

Rev. J. B. Tabb, Bernard E. Taylor, Dr. J. M. Tinsley, Clarence Townes, Jr., Mrs. Ruth Valentine. Franklin Waller, Mrs. Pauline F. Weeden, J. B. Williams, Dr. Philip Y. Wyatt.

THE AGLAIAN STUDY CLUB OF GALVESTON, TEX., SUPPORTS 100,000-ACRE BIG THICKET NATIONAL PARK

Mr. YARBOROUGH. Mr. President, the Aglaian Study Club of Galveston, Tex., has adopted a resolution calling for the establishment of a 100,000-acre Big Thicket National Park in southeast Texas. They recognize that unless action is taken to preserve this unique and beautiful wilderness, it will be soon destroyed by the insensitive acts of modern industry.

Not only is the Big Thicket renowned for its rich and diverse plant life, it is important as a natural sanctuary for many species of birds. In addition to the 300 species of birds that live in the Big Thicket year around, the area is a major resting place for countless numbers of migratory birds. It also is the only area in the United States where the legendary

ivory billed woodpecker, once thought to be extinct, may be found.

Unfortunately, the Big Thicket is disappearing at the rate of 50 acres per day. We must act now if we are to save this natural wonder for the enjoyment of our people and future generations.

Mr. President, I ask unanimous consent that the resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas, the Big Thicket of Texas is a meeting place for eastern, western and northern ecological elements; and

Whereas, this is the last stand in Texas of the nearly extinct Ivory-billed Woodpecker; and

Whereas, this beautiful and unique area is rapidly being destroyed by bulldozer and chain saw; therefore

Be it resolved that The Aglaian Study Club of Galveston, Texas, urges the preservation of at least 100,000 acres containing the most unique areas of the Big Thicket, these areas to be connected by environmental corridors; and

Be it further resolved that the Interior and Insular Affairs Committee of the Senate of the United States be requested to set immediate hearings on S4 which would create a Big Thicket National Area.

Mrs. R. L. MONTGOMERY, Jr.,
President, Aglaian Study Club.

PROTECTION OF FOREST LAND

Mr. METCALF. Mr. President, I had occasion recently to read an excellent editorial in the Western News, a fine weekly newspaper published in Hamilton, Mont. The editorial calls for the protection of land that has been set aside for forest land and should, in my opinion and in the opinion of Western News Editor Miles Romney, remain set aside.

I think the editorial states in a poetic way the concern of a man who hopes that a part of our past should be preserved so those in the present and future may enjoy it. I agree wholeheartedly with Mr. Romney's comments, and recommend the editorial to those who care about our heritage. I therefore ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LOOKING FOR PREY FROM UP IN THE AIR

The eagles fly high in great circles. Often a single eagle is soaring through the air, another time a pair, and sometimes a family. They revolve in great patterns. Often the giant bird seems to float through the air, hardly moving a feather in its widespread wings. It rides upon the air currents and for minutes moves not a wing.

Again this bird exerts itself in flight with a number of wing strokes which propel it as it desires into another pattern of circular soaring. It is a remarkable sight. No wonder that man watched these giant birds and yearned to fly himself—and finally did!

It may be a long time but at some point in the eagle's flight the soaring ceases and the bird drops toward earth like a bullet, a living bomb of feathers following two sharp talons which have uncanny ability to strike, kill and hold some prey which the sharp eyes of the eagle has discerned when it was soaring aloft.

That is the eagle's mission in life, to sight, catch, kill and provide the prey as food for itself and its young. The mastery of the air which led us to watch the bird with awe, marveling at the precision and beauty of its flight, is but part and parcel to maintaining life for its kind, keeping a ratio between the various types of life, and doing this through its ability to see that which is below upon earth to its personal advantage. It is not putting on a show just to win plaudits from admiring humans.

Last week two turbo-prop airplanes carrying 18 members of a so-called land use committee of the Western Forestry and Conservation Assn. and about ten U.S. Forest Service officials, flew over the Bitter Root and other parts of the northwest. The planes carried their passengers over not only the Bitter Roots but the Idaho Primitive Area, the White Clouds area of the Stanley National Forest, the Seven Devils Scenic Area of the Snake River, the Sawtooth Primitive Area, the middle fork of the Salmon River, the Magruder Corridor, and along the east side of the Selway-Bitter Root Wilderness Area.

The members of the association are concerned about the withdrawal of lands from multiple use said one of their spokesmen.

It might be asserted the group were concerned also with looking for prey upon the face of the earth covered in form of the remaining bits of the national forest purportedly owned by the public. While they did not plummet to earth, like the predatory eagle, they may see fit to return to the areas visited again in another manner. There is reason to wonder if the forests possess any protectors of that national reserve created during the Cleveland administration, amplified during the administration of Theodore Roosevelt, held in reserve for whom, until the bulk of privately owned timber was exhausted?

There is no quarrel with the legitimate harvest of timber but by the same token there should be no quarrel with preserving a small segment of the what was once a vast forested area in this nation, for the uses of the masses of Americans who in theory are the owners of the property. Multiple use forsooth, what use remains of the ravaged carcass of the rabbit once it becomes the prey of the eagle?

SECOND NATIONAL AIR EXPOSITION

Mr. CANNON. Mr. President, for 3 days last month the National Aviation Club of Washington, D.C., staged the second National Air Exposition at Dulles International Airport.

It was a great air show, and I was privileged to be a member of the National Aviation Day Honorary Committee. It was free to the public, and the public responded. Estimates of total attendance ran over 400,000 for the 3 days.

I compliment the cooperation given the National Aviation Club by the Department of Defense and the Department of Transportation.

This great air show was well described by an editorial published in the Washington Evening Star of August 19, 1969. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DULLES AIR SHOW

Three cheers and an oak leaf cluster to the National Aviation Club and its hundreds of helpers for a remarkably well-done job of organizing and staging the weekend's air show at Dulles.

It may be no match for the Paris Air Show as yet, but the operators are on the right track.

Of course, the airplanes and accessories on display were impressive, and the aerial demonstrations fascinating. But in many years of air show watching, never have we seen one so geared to accommodation of the people in the stands. First aid stations and lost-children tents were accessible. Announcers actually told you what was going on. There were none of the usual long, dull spells. Traffic control was excellent. There were soft drinks and snacks everywhere. And, best of all, so were rest rooms.

Then there was the grandeur of the technology. Britain's manta-ray shaped Vulcan nuclear bomber and supersonic Lightning fighter. Canada's spectacular forest fire fighting amphibious water bomber. The French navy's Breguet patrol plane. And America's fantastic F–111 in a 700-plus mile per hour pass in front of the stands. Plus all manner of other airplanes and helicopters doing everything aircraft are supposed to and a lot of things they aren't. And right in front of nearly a quarter-million people each day.

But in the end, the show was stolen from even the Navy's Blue Angels. Lockheed stole it with a spectacular performance by the C–5 Galaxy. As the huge craft took off the roar of its engines was almost drowned out by the sighs of astonishment from a crowd that hardly thinned until the aeronautical giant had long disappeared over the horizon.

PUBLIC RAPID TRANSPORTATION TRUST FUND

Mr. CRANSTON. Mr. President, several weeks ago, President Nixon showed that he appreciates the magnitude of the transportation crisis facing the country when he proposed that $10 billion be made available over a 12-year period to assist in the development of an adequate public rapid transportation system in and around America's cities.

However, as I stated at that time, I am deeply disappointed that the President did not propose that the trust fund system be utilized as the means by which the necessary funds would be obtained.

An overwhelming majority of the Nation's mayors and transportation leaders have said that the trust fund offers the best opportunity to insure a constant flow of Federal funds for the development of an adequate public transportation system.

The Federal highway system, which is funded by the use of a trust fund, has been a tremendous success insofar as financing is concerned.

I believe we must utilize a similar type of trust fund to finance the development of a desperately needed public transportation system.

Clearly, the adoption of the trust fund method of financing would enable mayors and other local officials concerned with providing adequate public transportation to plan their programs with greater confidence and flexibility.

With this in mind, I have introduced in the Senate legislation which was initiated by Representative KOCH in the House which would establish a trust fund providing $10 billion over the next 4 years to meet the Nation's public transportation needs.

I have also joined the Senator from New Jersey (Mr. WILLIAMS) as a cosponsor of his mass transit proposal which establishes a trust fund providing $1.8 billion over the next 5 years.

Under the President's proposal the mass transit financing would depend on

appropriations by Congress from the general fund. In my view this method of financing the Nation's mass transit needs is clearly inadequate since the availability of funds would depend on the whim of Congress rather than on an independent and assured source of revenue.

My State of California with its large metropolitan areas is particularly in need of Federal assistance for public transportation.

Recently the California Senate and Assembly passed a joint resolution urging Congress to enact legislation setting up a trust fund for the development and support of urban public transit systems.

Additionally, the Los Angeles Times, in commenting editorially on President Nixon's mass transit proposal, strongly endorsed the trust fund concept as the means to assure stable financing for public transportation.

Mr. President, I ask unanimous consent that the joint resolution by the Senate and Assembly of California as filed with the secretary of state on June 25, 1969, and the Los Angeles Times editorial of August 27, 1969, entitled "Transit: A $10 Billion Answer" be printed in the RECORD:

There being no objection, the items were ordered to be printed in the RECORD, as follows:

S.J. RES. 19

Relative to federal funds for urban public transit

Whereas, At the present time, federal participation in urban public transit programs is in no way comparable to the more adequate federal participation in aviation and highway programs; and

Whereas, It is impossible for state and local governments to plan expenditures and initiate programs in the area of urban public transit without having adequate and dependable assistance from the federal level; and

Whereas, A trust fund, similar to that set up for highway programs, which does not depend upon yearly congressional appropriations, is needed for urban public transit in order to allow for planning over a reasonable period of time; and

Whereas, There is now legislation before Congress embracing this trust fund concept and which is a step in the right direction; and

Whereas, It appears that urban public transit is a necessary adjunct to our highway system in California and throughout the nation, as a means of transporting the large populations of certain metropolitan areas; and

Whereas, The urban public transit trust funds should be drawn from a source other than highway trust funds, since in California, and other states, even at present rates of collection and expenditure of trust funds, highway needs will not be met; and

Whereas, Such federal assistance should also provide for protection of the interests of employees of presently existing transit systems which may be affected thereby with respect to collective bargaining rights, continuation of pension rights, paid retraining programs, reemployment priorities, and dislocation allowances; now, therefore, be it

Resolved by the Senate and Assembly of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the Congress of the United States to enact legislation setting up a trust fund for the development and support of urban public transit systems with provisions to protect the interests and welfare of employees of existing transit systems; and be it further

Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to the Secretary of Transportation, and to each Senator and Representative from California in the Congress of the United States.

TRANSIT: A $10 BILLION ANSWER

President Nixon's proposal to drop $10 billion in public transportation fareboxes both pleased and disappointed officials of local government.

Although no other administration has offered so comprehensive a support program, the means of financing mass transit systems has stirred growing controversy.

Mr. Nixon's own party generally has held that developing alternatives to the private automobile is primarily the responsibility of local jurisdictions. House Republicans even opposed the modest transportation assistance program now in effect.

The Administration bill, however, declares that rapid urbanization "has made the ability of all citizens to move quickly and at reasonable cost an urgent national problem."

Local officials liked the Administration's rhetoric but not the results of White House arguments over financing the 12-year program. The mayors wanted a trust fund, similar to the means of paying for the interstate highway system. What they got was something called "contract authority."

The President's program, in essence, would commit Congress to the spending of $10 billion in 2–1 matching grants to local jurisdictions for capital outlay and research projects. Funding, however, would be subject to congressional appropriation each year.

Such a plan may look good on paper, the mayors contend, but it provides no basis for the kind of long-term bond financing needed for the building of transit systems. The same argument was made by Transportation Secretary John Volpe, who also pushed for a transit trust fund.

The Times believes that adequate public transportation is so important an urban need that Congress should establish a trust fund to assure stable financing.

As President Nixon himself said "Until we make public transportation an attractive alternative to private car use, we will never be able to build highways fast enough to avoid congestion."

Some of the revenue now going into the highway trust fund for use in urban areas, therefore, should be diverted to the financing of transit system construction. Taxes on highway users would be well spent if they slow the proliferation of vehicles and make city and suburban freeways less congested.

Even with proper financing, the $10 billion program cannot ease all the traffic jams of a nation whose cities will have another 100 million population by the year 2000. California, for instance, could only expect a maximum of 12½% of the available funds in one year—hardly a bonanza for Los Angeles, San Francisco, San Diego and other cities.

Yet Federal help could be a significant factor in accelerating the Southern California Rapid Transit District's more flexible approach to mass transit, which involves more innovative use of buses as well as other transportation modes.

Congress should act this year on effective financing for alternatives to the private automobile—and the concrete, congestion and fumes it causes.

OUTDOOR WRITERS ASSOCIATION OF AMERICA HONORS TWO TEXAS WRITERS

Mr. YARBOROUGH. Mr. President, at their annual meeting in June 1968, the Outdoor Writers Association of America presented Evinrude Writing Awards to Henry Stowers of the Dallas Morning News and Dan Klepper of the San Antonio Express & News for their outstanding articles on the preservation and use of our natural resources. The association makes these awards annually to those members whose work best creates an awareness of the need to preserve the natural beauty of the Nation's waterways and of their potential for recreational use.

Mr. Klepper's article, "The Battle of Braunig Lake," tells how a 4-year crusade for public access to a large reservoir started with a no fishing sign, and culminated in a 100-acre recreational area. Mr. Stowers in his article, "The Trinity River Scandal," takes a critical look at one of Texas' major rivers which he refers to as "a 500-mile sewer."

The conditions which these talented authors describe are not limited to Texas. They are all common in all of our more heavily populated States. Man's pollution of his environment is a critical problem to which we must soon face up if we are to maintain life as we know it today.

Mr. President, I ask unanimous consent that the award-winning articles, "The Battle of Braunig Lake" by Dan Klepper from the San Antonio Express & News, and "The Trinity River Scandal" by Henry Stowers, from the Dallas News, which were reprinted and published by Evinrude Motors in the second edition of their publication, Let's Protect Our Waterways, be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the San Antonio (Tex.) Express-News]

THE BATTLE OF BRAUNIG LAKE

(By Dan Klepper)

(NOTE.—A four-year crusade for public access to a large reservoir started with a no-fishing sign and culminated in a 100-acre recreational area.)

NO-FISHING SIGN

Let's take a look at three lakes, one owned by a private company, another owned by a river authority and a third owned by a public utility.

All three reservoirs serve the same purpose . . . almost. The three lakes provide sources of cooling water for generating station.

Alcoa Reservoir, owned by the Aluminum Company of America, is a 703-acre lake near the town of Rockdale in Milam County.

The reservoir has been open to fishermen for a number of years, and it continues to produce excellent strings of fish.

A concessionaire sells bait and rents boats. A fisherman can launch his own boat for a nominal fee. Only small motors may be used on the lake.

Another cooling system lake is Bastrop, a new reservoir on Spicer Creek. The 906-acre lake is owned by the Lower Colorado River Authority.

Bastrop will be opened to fishermen June 1. The LCRA will lease concession rights to someone for the sale of bait and the rental of boats.

Two access points have been provided. Boats can be launched for a nominal fee. Certain areas of the lake will be off limits to boaters for safety reasons.

A ski area will be marked with buoys and fishing areas will be restricted to small motors. The lake will be open from sunrise to sunset.

Fisheries biologists report the lake is full of bass.

Lake Braunig in the southeastern part of Bexar County is a 1,350-acre reservoir owned by the City Public Service Board of San Antonio.

It is larger than either Alcoa or Bastrop, and it, too, is capable of producing fishing for a large number of people.

But there is a no-fishing sign at Braunig.

I contacted the City Public Service Board last September and learned that "discussions" with the city had taken place regarding the lake and the possibility of the city operating recreation facilities on the reservoir.

More than seven months have passed. Nothing more has taken place.

A couple of weeks ago a fellow fished a small section of the lake and caught 15 black bass in 45 minutes before he was told to leave. The largest bass weighed four pounds.

Last Sunday, News photographer Bill Goodspeed drove by the lake and saw 22 fishermen crowded around a small part of the lake that extends beyond the CPSB's wire fence and under a highway.

Goodspeed said the fishermen had more than 100 black bass, including one that appeared to weigh about six pounds.

Last September I wrote a column headlined "Will Braunig Lake Produce the Fish?" I pointed out that, as a boiler cooling reservoir, the heated water pouring back into the lake might keep the waters warm enough to allow year-around growth of fish.

Braunig was filled with water from the San Antonio River. Pumps on the river are located below the mouth of the Medina River and the canal that carries treated effluent from the sewage treatment plant into the river.

Inland fisheries biologist Elgin Dietz accompanied me on the inspection tour of the lake last September. He said he would be willing to make a study of Braunig to determine what the high fertile content of the water will do to fish.

He pointed out, however, that he could not begin the study unless requested by the CPSB or the city to do so. He has not been contacted by either agency.

It appears that the question already has been answered. At least a section of the reservoir seems to be full of fish.

If the remainder of the lake can provide as good fishing as one small cove and if the fish are in good condition, anglers are missing out on what could be some of the hottest bass fishing in this area.

RUMOR SQUELCHED

The City Public Service Board announcement that Lake Braunig will remain closed to fishermen should squelch the rumor that "the lake will be opened next month." This rumor has been as consistent as a clock. It has been cropping up each month for the past year.

In a statement issued Monday at the insistence of board member John H. Morse, the CPSB said it cannot open the reservoir to fishermen until a public health official assures the board there is no danger involved in taking and eating fish from the contaminated water.

The announcement probably will have little effect on fishermen now using the lake. Anglers undoubtedly will continue to fish "over the fence," and trespassers toting rods and reels will continue to slip through the barbed wire fence at night.

The CPSB has known for months that the waters of the lake are "polluted." The board drew up a "white paper" on the situation, detailing why the lake cannot be opened, several weeks ago but did not release the contents of the paper until Monday.

Braunig was filled with water from the San Antonio River. The water in the lake . . . and the river . . . contains treated sewage effluent and it harbors coliform bacteria, an organism that, according to the board, "can transmit disease or virus infections."

We've been living with this bacteria since year one. And we're not likely to get rid of it. A few of the organisms aren't bad.

The method of checking the amount of sewage pollution in a given body of water is to make a "coliform bacteria count." The U.S. Public Health Service then sets up maximum allowable standards.

For example, drinking water can contain up to 50 coliform bacteria per hundred milliliters.

The bacteria will be found in most—if not all—surface water in the United States. "Death of the Sweet Waters," a book published this month, author Donald E. Carr, tells about a battle between fishermen of the lower Columbia River in the Northwest and sewage effluent.

"The fishermen wanted a coliform standard for the river of 150, which is very low," Carr states. "It is swimming-pool quality, unheard of in a modern river."

The standard was adopted in the States of Oregon and Washington by the Public Health Service, but, as Carr points out, it remains to be seen whether it will be enforced.

The coliform count in Braunig is high. An average of 25 months of testing, according to the CPSB, showed 5,595 coliform bacteria per hundred milliliters. The CPSB did not point out that from August of 1964 through August of 1965, the average lowered considerably . . . to 4,100.

If Braunig is too polluted to allow "contact" recreation, including fishing, other waters in this vicinity might be in the same . . . or worse . . . condition.

Consider the river itself. Coliform bacteria counts in the San Antonio River near Braunig run much higher than in the CPSB's reservoir. Yet, no one has suggested we ban fishing in the river.

Tests were made on Woodlawn Lake in October, 1963. Six samples were taken from various areas of the 45-acre lake. The coliform bacteria count ranged from 880 to 240,000 and averaged 92,980! Yet the lake was not closed to fishermen.

Mitchell Lake probably has the highest coliform bacteria count in this area. Duck hunters have boated on it, stuck their hands in it, waded in it and have eaten ducks killed on it for decades. Many of the ducks fed on the aquatic products the fertile waters provided.

Yet no one suggested we ban hunting on the lake. In fact, the hunting was stopped only within the last three or four years when the reservoir came under the jurisdiction of the city.

Fishermen cannot expect a public health official to step forward and say, "There's no danger to catching fish in or eating fish taken from Braunig Lake."

Too little is known of the coliform bacteria. Virus organisms so far have not been isolated from treated sewage water.

Since this is the case, the CPSB's attorneys have advised against opening the reservoir to the public. The attorneys feel serious legal liability might be involved.

"The lake, one of the first of its kind in this section of the country to utilize sewage effluent, has attracted the attention of a number of water scientists," says the CPSB.

Perhaps fish scientists also should be invited to study the reservoir, for even though the board insists that the lake "was not contemplated for any other purposes than furnishing cooling waters for the power plant," sooner or later the multiple use concept must be applied to every foot of available water.

The growing horde of recreation-seeking Americans will demand it.

OVER THE FENCE FISHING

The main fishing area is maybe 60 yards wide and one man deep. Fishermen line the rocky embankment almost shoulder to shoulder.

And they do a lot of talking between bites. Mostly about the lake, the fish that are in it, the catches they have made or have seen.

They have casting hazards. The main fishing area borders a county road, and they must cast under wires strung on telephone poles.

They also have a fine rest for their rods and reels and cane poles. It's the taut, barbed-wire fence that separates the fisherman from the water.

There's another fishing area across the road. The water cuts through a deep channel beneath a bridge, then spreads over an acre or so of land.

Fishermen sit on the bank and fish here. Or they wade it. It is shallow, not more than waist deep in most areas, but it has yielded some mighty big fish, the fishermen say.

On the rock embankment on the west side of the road many of the fishermen use surf-casting rods, heavy lines and big reels. They make prodigious casts into the arm of the lake.

And then they sit back and wait for a bite. Fish-eating grebes bother the fishermen. The little birds, expert swimmers and divers, steal the big minnows on the fishermen's hooks. But the fishermen fight back.

When a grebe shows an interest in someone's bait, the fishermen use slingshots to hoist rocks in the grebe's direction to frighten it away.

These are the fishermen who fish "over the fence." It has become such a popular fishing spot with residents of southeastern Bexar County that no other words are needed to describe the location.

If a fisherman says he has been fishing over the fence, he refers to the "public" part of Braunig Lake, the City Public Service Board's big reservoir off Corpus Christi Rd.

The other side of the fence is an inviting place. The long arm of the lake stretches toward the tall, impressive-looking power plant.

To the left is the lengthy, earthen dam. To the right, the man-made bar that will separate the warm from the cool as the lake water is drawn through cooling towers.

Signs prominently displayed on the fence proclaim "No trespassing," and across the fence are signs that read "Danger keep out—Premises patrolled by Stanley Smith Detectives, Inc."

The signs mean what they say. Guards patrol the lake's shores day and night in radio-equipped Scouts. But neither guards nor signs stop the trespassers.

A lot of fishermen cross the fence, a guard remarked. Most of them are caught and told to leave, but a few slip by the guards. He told of recently seeing two fishermen run for the fence with so many fish they had to drag them.

P. W. Ricks, retired San Antonian, is an ardent member of the over-the-fence-fishing clan. He says he has caught some big fish from the road, including black bass to 7 pounds and catfish to 7½ pounds.

A few days ago he had three bass that weighed a total of 21 pounds.

The lake covers 1,350 surface acres. It was filled with water from the San Antonio River, and it was stocked with black bass by the Parks and Wildlife Department in May, 1963.

The CPSB has not opened it to fishermen. Nor has the city-owned utility announced to the public why fishermen have not been allowed to use the reservoir for recreational purposes.

Members of the "over-the-fence" brigade talk a lot about this. Some are convinced the lake will be opened in the near future. Others are convinced it will never be opened.

They sit and watch their corks or the tips of their rods. And they look yearningly at the broad expanse of water on the other side of the fence.

A HEARING SET

A hearing on Rep. Jake Johnson's bill to open Braunig Lake to fishermen is scheduled this afternoon in Austin, and it appears the hearing before the Game and Fish Committee of the House will be well attended.

The hearing is set for 2:30 p.m. in the old Supreme Court room on the third floor of the Capitol.

The San Antonio Bass Club, which has voted in favor of the measure, will send representatives to the hearing, as will the San Antonio Anglers Club, the Alamo Bass Club and the Hill Country Casting Club.

The board of directors of the 650-member Anglers Club voted last week to support Johnson's attempts to open the City Public Service Board reservoir to the public.

Johnson said he also will have several other witnesses appear to give testimony on the measure.

I talked with five of the 10 Bexar County representatives last week and found a couple only lukewarm to the bill.

They all said, however, that if Johnson can produce a public health official who will say there is absolutely no danger to the water in Braunig, they would be in favor of opening the reservoir to anglers.

Braunig was filled with water from the San Antonio River. Since a large—a very large—part of the river's flow south of San Antonio is provided by treated sewage effluent, the CPSB maintains that the lake waters are contaminated and polluted.

Johnson will not be able to find a public health official who will say without reservation that it is safe to fish in Braunig. After all, the lake does contain sewage effluent.

By the same token, it is doubtful that any public health official would go out on a limb to say it is perfectly safe to fish in the San Antonio River south of the city.

The count of bacteria in both the river—and in the city's Woodlawn Lake—is higher than in Braunig, and if this county's representatives choose to oppose the bill on the basis that no public health official will certify Braunig's waters are danger free, then perhaps these same representatives will sponsor legislation to close the river and Woodlawn to fishing until some health official gives these waters an "all-clean" signal.

Several of the representatives I talked to apparently did not realize that fish are being caught from Braunig at this time.

The truth is, fishermen have been using the lake—in spite of no-trespassing signs, pollution signs and regular guard patrols—for the last four years.

The lake was stocked with black bass by the State Parks and Wildlife Department in May 1963. More than 23,000 black fingerlings went into the reservoir.

A City Public Service Board employe made application for the fish. He used the CPSB's mailing address for the return address on the application.

The Parks and Wildlife Department complied with the request and stocked the fish. And they grew rapidly in the fertile water.

Three years later fishermen were regularly taking bass weighing four to six pounds from the reservoir. Some of the anglers were fishing that small arm of the lake which crossed under a public road.

They lined the barbed wire fence almost shoulder to shoulder to cast into the water.

The CPSB put a stop to that by erecting an earthen dam across the little cover.

But the CPSB has not been able to stop fishermen who sneak into the reservoir at night and on gray days when visibility is poor.

Although the lake is patrolled night and day, it is so large it is difficult to patrol successfully.

Braunig covers 1,350 surface acres of water, and the number of fishermen sneaking in to fish at night seems to be increasing.

"I was out last Saturday night," one fisherman said, "and there were so many cigarettes being lighted they looked like fireflies."

Rep. Jake Johnson's bill to open Lake Braunig to fishermen received a warm reception Tuesday by members of the Parks and Wildlife Committee of the House.

The bill, which was the subject of a two-hour debate late Tuesday afternoon, is in hands of the attorney general where its constitutionality is being determined.

If the attorney general rules the measure is constitutional—and there is very good reason to believe he will—the bill will be sent to a subcommittee for some changes and probably will be reported favorably back to the full committee.

All of the problems of opening the City Public Service Board's 1,350-acre cooling reservoir to the public were aired during the hearing.

Two witnesses appeared in opposition to the measure. They were J. T. Deely, assistant manager of the CPSB, and the board's attorney, James Baskin.

Both contended that fishing in the lake is a "local problem which should be solved locally."

I agree. But San Antonio sportsmen have been trying to solve the problem locally with the CPSB for the past three years, and after finally tiring of butting their heads against the board's brick wall, they took the only alternative they felt they had left . . . local legislation.

Deely gave two reasons why the board has kept the lake closed. One, the possibility that the water, which is primarily treated sewage effluent, contains virus diseases, and, two, liability of the CPSB in case someone gets sick from fishing in or eating fish from the reservoir.

Deely also pointed out that the board is considering making the lands surrounding the reservoir a bird and wildlife sanctuary—complete with nature trails.

He said the San Antonio Zoological Society is interested in establishing a branch of the zoo to house rare animals and birds.

Witnesses appearing for the bill included Charles McTee, representing the 77-member Hill Country Casting Club; G. G. Gale, representing the 250-member San Antonio Bass Club; Tom Brosig, representing the 80-member Alamo Bass Club; Jack Martyn, representing the 650-member San Antonio Anglers Club; Jerry Henckel, assistant San Antonio city manager; Bill Wells, sewage treatment engineer for the City of San Antonio; Dr. Herman Wigodsky, San Antonio physician; and this writer.

An impartial witness, but one whose testimony perhaps carried the greatest impact, was G. R. Herzik, chief of environmental health of the State Health Department.

Herzik quoted at length from a letter to Johnson from Dr. James E. Peavy, commissioner of health for the Texas State Department of Health.

Herzik said that contrary to what has been said, the State Department of Health "has not said fishing on Braunig should be prohibited."

Herzik paid tribute to Wells and the San Antonio sewage treatment facility when he said:

"We feel that the effluent in Braunig is such high quality that it is better than you'll find in waters in some of the rivers in Texas which contain no effluent."

"Braunig's waters are of such quality that we have no fears about its health potential," he added. "We don't think we should swim in it or ski on it, but attempts to prohibit fishing would not be realistic.

"We have been unable to find where any disease has been transmitted from fish taken from waters similar to Braunig's. We do not feel prohibiting fishing in water of this quality would be desirable or recommended."

When asked about the possibility of contracting hepatitis from the water, he said, "we have no record to show that hepatitis is more prevalent in areas where fish are taken from this type of water than anywhere else."

Wells testified that the lake has constantly continued to improve itself. He said the chemical quality of the water compares with U.S. Health Department standards for drinking water and that the biological content of Braunig's waters is far better than waters in portions of the San Antonio and Medina Rivers and Woodlawn Lake.

BRAUNIG LAKE TO OPEN

Braunig Lake, the City Public Service Board's 1,350-acre cooling reservoir, will be "officially" opened to the public early next year.

The board announced Monday it has signed a lease agreement with the San Antonio River Authority to operate the lake solely for public outdoor recreational activities, primarily fishing.

The agreement, which will be for 25 years, is contingent on the approval of the river authority's board of directors. The board is scheduled to meet Tuesday morning to act on this matter.

If the board approves, SARA will assume control of the lake and a 100-acre tract of adjacent land around the lake.

Under this five-year lease, the river authority will reforest these tracts with seedlings to provide wooded areas for the future.

Braunig, which is located near Elmendorf in the southeast section of Bexar County, has been the center of a two-year controversy over fishing rights.

Braunig was the scene of a highly publicized "fish-in" May 2. Apparent purpose of the fish-in was to protest the CPSB's refusal to open the lake to fishermen.

The reservoir was filled with water from the San Antonio River, which contains a high degree of treated sewage effluent.

The CPSB maintained that the water is too contaminated for fishing, but State Health Department officials have stated that the fish are safe to eat if properly cooked.

Fishermen have continued to fish the lake in spite of no-trespassing and posted signs. They have encountered little or no interference from security guards since the fish-in.

The lease agreements were the result of discussions between David Brune, manager of the river authority; O. W. Sommers, general manager of the CPSB; and board attorney W. L. Matthews.

SARA will operate the lake and the 100-acre tract on a financially self-sustaining basis by charging entrance and boat launching fees.

The 100 acres under 25-year lease will be developed as a park. Facilities will include picnic tables, cooking grills, drinking water, launching ramp, concession building, comfort station, roads, parking area, information center and toll gate.

A contract concessionaire will sell bait, tackle, picnic supplies and beverages and will rent boats and motors.

The river authority's plans call for facilities to be completed and fees to go into effect March 1, 1968.

No fees will be charged until facilities are completed, Brune said. "Unauthorized" fishing will be allowed from Dec. 1 until March 1 except in the construction area on the west side of the reservoir.

Regulations set for the use of Braunig are tentative and subject to change. They call for the lake to be open approximately 10½ months out of the year. The reservoir will be closed for 42 days, probably during late December and January, to allow for employee vacations.

Certain areas of the lake around the power plant, intake and outlet will be buoyed and will be off-limits to boaters and fishermen.

Use of the facilities and the lake will be by permit only after March 1. Permits will be issued only at the information gate at the entrance to the recreation area.

Permits will cost $1 for persons 14 and over and 50 cents for children 7 to 14. In addition, $1 will be charged for launching privately owned boats.

There will be no charge for children under 7 years old.

Users of the lake and picnic area will be issued tags which they must wear and which must be relinquished when the holder leaves the area.

Plans call for the lake to be open only during specified hours, probably between 45 minutes before sunrise to 45 minutes after sundown.

Bank, wade and float fishing will be allowed only in certain areas. Hunting will not be allowed on the reservoir or adjacent lands, and there probably will be a horsepower limit on outboard motors.

Swimming and water skiing will be prohibited on the lake.

[From the Dallas Morning News]

THE TRINITY RIVER SCANDAL

(By Henry Stowers)

AUGUST 1, 1967

A trip down the Trinity River from Dallas should be a pleasant outing. But it isn't. It will make you sick. That is what it did for me.

This summer I had the opportunity to visit along and on most of the Trinity's 550 miles as it twists and winds to the Gulf at Trinity Bay near Galveston. And I have never seen worse pollution, especially in the Fort Worth-Dallas area and for fifty miles below Dallas.

I talked to veteran canoers such as Ben Nolen and Bob Narramore, president and vice-president of the Canoe Association of Texas, who have made many trips on all of Texas' rivers that will float such craft. "The Trinity takes first prize," they stated flatly. "That is if there were a prize for being dirty."

On one trip recently Nolen and Narramore counted 55 dead hogs and cows floating in the river along a stretch less than five miles.

These, according to area farmers, were probably found dead in truck shipments and dumped into the river at isolated spots. And the area was practically in the Dallas city limits.

A. W. Cullum III, president of the Dallas Woods and Waters Club, and I saw occasional dead cows in the river above Dallas during a recent canoe fishing trip. We figured they had gone down the muddy bank for water and bogged down.

Fishing above Dallas is still popular on the East Fork of the Trinity. But you have to go a long way below Dallas, as far as 50–60 miles, before you see an angler. For down there all fish except garfish and some rough fish like carp have long been killed by polluted water.

I've talked to many old timers in the area, and very few can remember when fishermen caught channel catfish, bream and crappie below Dallas. One is Harvey Campbell, Dallas News proofreader. "That was 65 years ago, though," he said.

The Trinity has a huge watershed, one which covers over 17,000 square miles.

Because of this watershed's moderate to heavy rainfall, the Trinity has a flow of almost 6,000,000 acre-feet near its mouth, exceeded only by the Neches, Red and the Sabine River Basins.

Rising in its East Fork, West Fork, Elm Fork and Clear Fork in Grayson, Montague, Archer and Parker Counties, the main stream of the Trinity begins with the junction of the Elm and West Forks at Dallas.

In the Trinity valley there are more people and industries than in any other river basin in the state. Six big reservoirs, Garza-Little Elm, Lake Worth, Eagle Mountain Lake, Bridgeport and Lake Lavon, have already been completed. Numerous others down the river will be built as the Trinity Canal project is completed. That target date is 1980.

Dallas has one of the most modern sewage treatment systems in the country. It removes 93 per cent of the pollution strength from the effluent it discharges. Other cities and communities along the Trinity are improving their methods.

Maybe it is a dream, but the Trinity Canal and its numerous lake reservoirs could become a fisherman's paradise. By the time it is completed, Texas should have well over 10,000,000 people. And judging by present figures, half of them will want to fish.

It is not an easy problem. Water pollution has not only endangered or wiped out fish and wildlife near many large urban areas, but it has become an urgent health problem for humans. Chicago and other cities on the Great Lakes are highly apprehensive over rising contamination of water.

The Houston-Galveston area, particularly the bays that link the two cities, have almost been ruined for fishing and swimming by the dumping of raw sewage and enormous amounts of industrial waste. Fishing in Galveston Bay used to be excellent. Today it is poor. Residents I have fished with said they would not eat fish, shrimp or oysters taken from the bay. Parks and Wildlife Commission biologists told me the bay and ship channel were terribly polluted.

Yet it seems that with good planning we could someday have 550-miles of river fishing in addition to the lakes enroute, good, clean swimming and camping areas and even additional pure water sources.

It will either be all that, or it will remain a 550-mile sewer that we will bequeath to our children and grandchildren.

AUGUST 3, 1967

Trinity River pollution is scandalous, everyone agrees. But what to do about it before it can be restocked with fish, before canoers and campers can cruise the stream without risking hepatitis or other diseases, brings confused answers.

The 3,000,000 people who live in the watershed, a vast area of over 17,000 square miles, can do a lot. Town sewage disposal plants could be much more efficient. Manufacturers could work out some way in which wastes and detergents would not be dumped in the river. And farmers and ranchers could watch their use of crop sprays, weed killers and other insecticides more carefully.

Small communities along the river could see that the river is not used for trash and garbage disposal. We found many places where old salvaged automobiles, rotten lumber, sawed down trees and limbs and even old furniture were dumped into the river channel.

During flood seasons these cast-offs are floated downstream and form trash and log jams, some very large and complicated.

Old dams, still partially blocking the river, could be cleared out and this would permit better water passage, also eliminating the backed up water and acres of foam from detergents to sit for days.

A raise in the fees for fishing and hunting licenses appears to be a partial solution, making it possible to hire more game wardens and to provide more funds for them on such projects.

Charged with the care of Texas waters and keeping them clean are the State Parks and Wildlife Department, the Railroad Commission, State Health Department, Water Development Board and the Water Pollution Control Board (changed this year to the Texas Water Quality Board).

All are virtually penniless when it comes to fighting river pollution.

There is no way known here of how to clean up the Trinity River without spending a lot of money.

And we are faced with the prospect of having to re-use our water after it has been treated in sewage plants, something we are going to need a lot of educating about before we accept the fact.

A vote of yes on the bond projects next Tuesday will give Dallas flood control money badly needed, as well as funds for water and sewage treatment needed now. Dallas water department representative Cecil W. Williams said several communities pooling their money could come up with more efficient and less expensive treatment plants, an example of this being done now found in Dallas, Irving and Grand Prairie.

Congress has approved the 550-mile Trinity Canal. Money should be appropriated early next year after the Corps of Engineers has completed the second feasibility study. And work on it will probably start soon thereafter.

Curing the cause of an epidemic is much cheaper than treating the patient. If through a campaign 10,000 farmers and ranchers could be induced to dispose of their trash and garbage without dumping it into the river, if 200 towns and cities would see that the same is done, and if industries would take even more severe precautions, the river can be cleared of contamination before the canal is built, and at far smaller cost.

Most of us want to see the Trinity Canal become a fact. We know it will be a great economic asset. And Texas is also in dire need of more recreational facilities, fishing areas, boating areas, camping and swimming spots and hunting sites.

And blessed would be the names of the state's leaders who get on the ball and see that this is done before it becomes like Galveston Bay and the Houston ship channel area—too little and too late.

THE ENVIRONMENTAL QUALITY: THREAT TO THE EVERGLADES

Mr. TYDINGS. Mr. President, the Everglades National Park, in south central Florida, is one of the Nation's unique and priceless natural resources. It is a fragile ecological system where the beauty and serenity of nature exists in unrivaled fashion.

Over a million people visit the park each year and come away awed by its splendid magnificence.

Now, in the name of "progress," the Dade County Port Authority wants to build the world's largest jetport a few miles north of the park. This will deprive Everglades of its water supply, upon which it is utterly dependent. The result will be the destruction of this great park.

What is particularly disturbing is that this incredible project has the financial support of the Federal Government, through the FAA and OHSGT.

Conservationists across the Nation are incensed by the insensitivity and sheer stupidity of the project.

Fortunately, the Senate, through its Committee on Interior and Insular Affairs, has recognized the threat. By its hearings a joint study by the Department of Transportation and Department of the Interior has been authorized to evaluate the environmental impact of the airport on the park. But this could be insufficient, for 2 miles of completed runways already disrupt sections of the great wilderness. Decisive, immediate, top-level action is required.

Such action should be taken by the newly formed Presidential Environmental

Quality Council. The Council is a response to the need for a high-level body capable of establishing and coordinating policies and programs regarding environmental quality.

It is precisely the body that should act. Since the Department of Transportation is a member of the Council, as is the Department of the Interior, they should be required by Dr. Lee DuBridge, the Council's Executive Secretary and Science Adviser to the President, to report on what they are doing to maintain environmental quality in the Everglades National Park.

I have written to Dr. DuBridge, urging him to convene a meeting of the Council for this purpose. I ask unanimous consent that my letter to Dr. DuBridge be printed in the RECORD, as well as the articles on the Everglades in the September 5 issue of Life and the July Sierra Club bulletin. Additionally, I ask unanimous consent that the Evans and Novak column from the August 8 Miami Herald also be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

SEPTEMBER 2, 1969.

Dr. LEE A. DUBRIDGE,
Executive Secretary, Environmental Quality Council, Washington, D.C.

DEAR DR. DUBRIDGE: I am deeply distressed by the threat to Everglades National Park posed by the construction of the new Dade County airport.

The airport will be the world's largest, thirty-nine square miles with runways six miles long. Just six miles from the Park, the airport will wreak havoc with the fragile and unique ecology of the Everglades. The national park, third largest in the nation, is dependent for water on sources beyond its boundaries. The airport will block much of the superficial drainage to the park and contaminate with pesticides, petroleum residue and other pollutants the ground water that does reach Everglades.

Additionally, air pollution from the projected 900,000 annual jet operations will pour thousands of tons of carbon monoxide and nitrogen oxide on the park. Perhaps even more important, the noise of the aircraft will destroy the peace and solitude of this magnificent natural refuge.

I feel strongly that Everglades National Park is a priceless and irreplaceable natural treasure. No effort should be spared in preserving it.

The Department of Transportation, in an apparent violation of Section (f) of the Department of Transportation Act, has already provided over $800,000 to Dade County for planning and developing of the airport. Regrettably the Department appears determined to proceed with construction regardless of the disastrous impact this will have on the park.

Within the Executive Branch, only the Department of the Interior has raised a lonely voice of protest.

When the President established the Environmental Quality Council he created a mechanism whereby such examples of departmental insensitivity to the environment could be reviewed and rectified. I respectfully urge you to convene a meeting of the Council to establish a policy and program that will protect Everglades National Park.

As the Department of Transportation is a member of the Council, they should be required to issue a full report justifying their action. As the Interior Department is also a member, they should provide information on the environmental abuse which this airport will bring to the park. The Council is thus a particularly useful vehicle to insure that responsible Federal action is taken concerning Everglades.

With best wishes.

Sincerely,

JOSEPH D. TYDINGS.

[From Life magazine, Sept. 5, 1969]

THE EVERGLADES: UNLESS THE WORLD'S BIGGEST JETPORT IS STOPPED, WE WILL LOSE A UNIQUE WILDERNESS

(By John D. MacDonald)

In the beginning you do not see very much or hear very much, and you do not understand.

Then one afternoon there was no movement of the air. There was heat, sweat and a silence so vast that when I heard a mosquito near my ear, it was exactly like a night sound of long ago in Mexico, hearing a truck in its lowest gear whining down the mountains miles away. A thunderstorm moved toward me and toward the west. By the time it began to stir the air in hot gusty puffs, it was a startling indigo wall across the world, a constant rumbling, and I stood in strange golden yellow light waiting for it.

Cooler air then, and good wind, with each gust making its own shape as it came across the saw-grass pastures. Fat pink lightning banging down, and then the oncoming roar from far away of the smashing, drenching rain. When it ended, I could hear the same roar, receding, hurrying west. Incredible smell of a well-washed twilight, and 10 trillion frogs and toads and peepers welling into a deafening rain-chorus. Birds in that straight, no-nonsense flight pattern of heading for the rookery. Fragile insects flying. (How did they escape the smashing rain?) Some blooms closing, and leaves folding, and other blooms, spicier, opening on the hammocks and uplands where the tree frogs are.

Then I began to understand that it is not memorable fragments, but a complex unity, all of it a savage and symmetrical pattern of interwoven, interdependent lives, from gator to gnat, from bald cypress to microdot of green algae, from giant metallic dragonfly to spider-shaped invisibility of the redbug. It is a complexity which took eons to style and plan itself for this special place, climate condition, through unending trial and error.

Now we are on the brink of destroying that complex unity. Experts in such matters—biologists, hydrologists, geologists—have all come to the same alarming conclusion: if we proceed with the plans to establish a commercial jetport squarely across the last natural watershed in south central Florida, we will kill what is left of the Everglades, kill the Everglades National Park, upset the water tables and the water supply in all south Florida, cripple the shrimp industry, stunt commercial and sports fishing, invite salt intrusion and possibly even alter the very climate of the Florida peninsula.

The jetport tract, all 39 square miles of it, is 45 miles west of Miami, about 55 miles east of Naples on the gulf, roughly a third of it in Dade County, the rest across the line to the west in Collier County. In late September of 1968, less than a week after the first parcels of land were acquired by condemnation proceedings, the Dade County Port Authority at Miami let a contract for a two-mile east-west jet training runway with taxi strips and aprons. The strip is completed. It is the first phase of the plan to build the world's largest jetport—big enough to enclose Los Angeles Airport, Dulles, Kennedy, San Francisco and a cluster of several smaller fields as well. Federal funding for this monster project could exceed half a billion dollars.

The commercial-political-financial establishments of Dade, Collier and Monroe counties are sweaty with the excitement of a new boom, huge profits, explosive growth. Every bit of this silent wilderness land around the jetport site is privately owned, and much of it has already changed hands in heavy-risk commitments. One Miami real estate agent has assembled a package almost as big as the proposed jetport itself for a single corporate buyer. Collier County leaders have stated in Naples that they intend to make the jetport area the largest industrial center in Florida, and boosters are already talking about such projects as cutting a deep-water canal from the gulf to the jetport to barge in the jet fuel and construction materials, and getting the authorized extension of Interstate 75 from Tampa to Miami officially realigned to bisect the jetport, with a thousand-foot right-of-way from the gulf to the Atlantic.

The Everglades National Park is already in such fragile condition that only by the most careful planning could it be nurtured back to health and stability. So why save a sick park when it stands in the way of progress?

If it were merely that it is a unique 1.4 million-acre wonderland, visited by over a million people a year, merely an eerie, silent environment for gator, wood ibis and tree snail, one might be able to make some kind of a feeble case for the proposed jetport location. But over the last 40 years the U.S. Army Corps of Engineers has demonstrated for all of us what the death of the Everglades might mean.

The Engineers came clanking into the central Florida area in the late 1920's and built the Herbert Hoover Dike to tame Lake Okeechobee, arbitrarily lowered the water level of the lake by five feet, and later dug arrow-straight canals to help the gentle meandering rivers carry the fresh sweet rainwater more hastily into the sea.

Rainfall is the secret of the Everglades, of the park, of all south Florida. It averages 63 inches a year, falling mostly during the subtropical rainy season from gigantic thunderstorms grumbling and banging and drenching their crisscross pattern through the great river of saw grass, then trickling and seeping its way down the long gentle slope from the central lakes and rivers, through the saw-grass prairies with their island hammocks of cypress, live oak and palmetto, down to the semicircle of mangrove coast bordering Florida Bay and the gulf from Biscayne Bay to the Ten Thousand Islands. This slow movement effectively extends the nourishment of the rainy season into the dry season, and the only source of fresh water for south Florida is the rainfall.

The Engineers kept "improving" things, shuttling the life-giving water into the sea when there was more water than the drained and filled cane lands, pasture lands, vegetable lands south of the dike system needed. But there are cycles of wet years and dry years, and during the dry years, the rain-deprived Glades began to parch and burn, because the Corps of Engineers had stolen its margin of safety.

The worst disaster came during the Second World War. By 1945 the Everglades was burning night and day, and the people on both coasts were choking in acrid smoke, watching water wells turn brackish, canals dry up, salt intruding into the soil at the rate of 1,000 feet a day as tides came up the canals; watching cattle die, and groves die, and tomatoes and sugarcane die. They demanded that somebody do something.

So a Water Control District System was established in Dade County, and by 1947 the Corps of Engineers began establishing a Flood Control District. A vast system of canals, dikes and gates was constructed in Florida's eastern watershed so that water could be diverted from the Everglades Park during dry spells, and excess water dumped on the park during wet spells. So now the park, as Art Marshall, a biologist with the

Bureau of Sports Fisheries, puts it, "gets instant drought or instant flood."

The effect on the park has not been happy. Thanks to man's management and the work of the Army Corps of Engineers, the water level has fluctuated from one bad extreme to the other, and decimated the park's plant life and wildlife.

When the Glades die, not only is there destructive salt intrusion (from the ocean waters backing up into the park), but the exquisitely productive balance of the brackish estuaries in the mangrove hem of the wide skirt of the park is also upset. According to a University of Florida study, this skirt is "one of the richest breeding grounds for marine life on the continent."

Despite the obvious lessons of the immediate past, the Corps not long ago got around to "improving" the lovely meandering Kissimmee River flowing into Lake Okeechobee from the north. They straightened it, diked its marshy banks, turned it into a sandy-banked drainage ditch. Now heavy rains that took weeks to crest down into the lake can come racing down in a matter of days or hours, as if the Engineers sought to justify the flood control system by arranging for a higher incidence of floods. This enables them to shunt even more runoff water into the Glades and park when least needed, and run even more off into the Atlantic Ocean.

Now that the Corps of Engineers has turned the water supply system in the eastern watershed into a menace instead of a blessing, the only hope left for the Everglades Park is the western watershed, which up until now has retained a reasonably natural seepage-flow from Big Cypress Swamp north of the western end of the park. It has been survival insurance, to some limited extent.

The jumbo jetport will go right in the path of this ancient flow, and even if great care is taken within the jetport areas to keep that flow moving as naturally as possible, the urban growth and industrialization around the jetport would make such concern futile.

It is the entire complex that will finish off the park, mostly by dramatically altering the volume and the characteristics of the essential water flow. That southward flow will be used water, treated and released. It will leave so much nitrogen-compound nutrient from animal and human waste in the water that, according to Frank Nix, longtime hydrologist at the park, the explosive growth of undesirable algae would crowd out the natural algae, fundamental to the life support system of the Glades and the park.

In addition to water pollution, there will be soil pollution—the inevitable fallout from the unburned components of jet fuel, inefficiently consumed at low altitudes, and unburned fuel jettisoned in emergency situations.

Nor is jet noise compatible with that strange and unique flavor of the Everglades, with a silence so brooding and intense that the sudden slap-splash of a feeding fish is as startling as an explosion. What such noise might do to the reproduction rate of the wild birds, already diminished thanks to the ingestion of DDT in the food chain, is not yet known, but one could hardly expect it to be beneficial.

The Everglades and the national park cannot survive this final insult. The ramifications of the death of an entire ecological system have always been more grave, more far-reaching, more deadly to man himself than anyone realized until the process of decay was too far along to be reversed.

Conservation efforts, concerned with water tables and marine productivity as well as with the existence of one of the great national parks of the world, are met with the customary amused, patronizing derision typical of all such opposition.

William Burrows, writing in a big national travel magazine's recent special gee-whiz issue about air travel, makes the condescending observation that the proposed jetport in the Everglades "makes almost everyone happy except conservationists. The latter are afraid that planes winging over the swamps may collide with wood storks and dump excess fuel on alligators, turkeys, wild hogs, and other animals."

Alan Stewart, director of the Port Authority, lumps all the bird life in the park into one species called "yellow-bellied sapsuckers" and calls the conservationists "butterfly chasers." Stewart says that cities always rise up around airports. "If the conservationists want to stop industrial and commercial development," he says, "they are going to have to save their pennies and buy up the land." On the 23rd of last April, 19 national conservation organizations, including Audubon, Sierra, National Wildlife Federation and the Natural Area Council, demanded a construction halt at the jetport. A letter was sent to Department of Transportation Secretary Volpe urging that he stop the construction by cutting off federal funding.

At this point, the Senate Committee on Interior and Insular Affairs scheduled hearings on the potential environmental problems of the jetport. During these hearings Transportation Secretary Volpe and Interior Secretary Hickle authorized a special study under Dr. Lunar Leopold, senior scientist of the U.S. Geological Survey, directing a team of scientists to examine in detail the threat of harm to the park. The study team used a three-stage approach to the problem—possible damage by the jet training port alone, possible damage by the training port plus the passenger jetport, and possible damage by the jetport plus the urbanization-industrialization of the surrounding privately owned lands, where the surveyors are now so busily aligning their transit bubbles and driving their county stakes.

The report, which has now been completed and will soon be officially submitted to Volpe and Hickle, indicates that the present jet training port will cause progressive damage to the park, and if the passenger jetport is built, the destruction will be irreversible.

Meanwhile, the Dade County Board of Commissioners has hired former Interior Secretary Stewart Udall to prepare a plan for mitigating or eliminating adverse effects of the proposed jetport and to consider alternate sites. Conservationists hope that Udall's proposals will point to the same conclusion as Dr. Leopold's report—that the only solution for the jetport is not to build it at the present site.

This time the decision can be made before death occurs. The equation is simple, clear and elegant. Is this the place where, finally, we stop brutalizing our environment in the name of that sort of progress which makes things quite different—but never any better, and usually worse than we could have believed?

[From the Sierra Club Bulletin, July 1969]

DADE COUNTY PORT AUTHORITY

The nation's third largest national park is in trouble, serious trouble. As Undersecretary of the Interior Russell Train stated at the June Senate Interior hearings on the Everglades, "Everglades National Park has the dubious distinction of having the most serious preservation problems facing the National Park Service today. . . ." Everglades National Park is in as much jeopardy as the 22 endangered species of fish and wildlife that find refuge within its boundaries.

The fragile, unique ecology of Everglades National Park is utterly dependent on a reliable supply of pure, fresh water. But the sources of this supply exist outside the park's boundaries, in the sloughs and sawgrass savannahs of the Everglades to the north, in the strands and marshes of the Big Cypruss Swamp to the north and west, in Lake Okeechobee almost 70 miles north, and even in the Kissimmee Prairie beyond the lake. And, ever since the 1880's, man has been busy as the proverbial beaver draining, diking, ditching, and otherwise "managing" this water.

The real trouble began in 1948 when Congress authorized the construction of a gigantic flood control, drainage, and reclamation project north of Everglades National Park. Still under construction (at latest count it was $170 million old and still only 48 per cent complete), the project already has the capability of completely shutting off the park from its source of surface water, which was proved during the long and severe drought of the early 1960's.

Designed and built by the Army Corps of Engineers, the project is administered by a state agency, the Central and Southern Florida Flood Control District (FCD). Both of these agencies have been notably more understanding of the project's other water users: citrus growers, beef ranchers, sugarcane growers, vegetable farmers, real-estate developers, and municipal water users. However, since the appointment of conservation-minded Chevrolet dealer Robert W. Padrick to the chairmanship of the FCD's board of governors, the national park has fared considerably better.

But there is no way to insure that the next FCD chairman will be as understanding of the park's problems as Bob Padrick; so the only long-range solution is to secure for Everglades National Park a guarantee to its miniscule, but absolutely necessary share of the project's water. The Corps has several times entered into agreement with the National Park Service, but has backed off each time. The people of the United States have been waiting 21 years now for this guarantee, and in each of those 21 years Congress has appropriated several millions of public dollars to advance construction of the flood control project. It's high time for Congress to secure for the people of the 49 other states their interest in Everglades National Park. That's precious little to ask for all that equity in the water project.

THE NEW ENEMY

But, while conservationists and the National Park Service were engaged in this long struggle to secure the park's water supply, Everglades National Park took a mean blow below the belt from an entirely different foe. On September 18, 1968, ground was broken in the ecotone between the Everglades and the Big Cypress Swamp for the world's largest airport. Just imagine, an airport of 39 square miles, large enough to hold Kennedy, Los Angeles, San Francisco, and Washington national airports with plenty of room left over to spare; with runways six miles long, capable of handling the largest and fastest jet transport aircraft—and just six miles away from, and "upstream" of, Everglades National Park.

Though not exclusively a water problem, the jetport certainly will have an impact on this resource. First consider the degradation of the waters flowing into Everglades National Park from the use of pesticides, fertilizers, and detergents on the airport site, from the inevitable fuel spills, from the effluent of the 35 to 40 million passengers it is expected to serve by 1985. Then, consider the tons of hydrocarbons, petrochemicals, and carbon particulates from unburned and partially burned fuel that will be dumped into water on its way to the park during approach, landing, takeoff, and climbout.

Perhaps even more important is the broad threat to both water quality and quantity posed by the massive development of the Big Cypress Swamp that will be spurred by the construction and operation of the world's largest jetport. It has been estimated that a city of 500,000 to one million inhabitants will spring up in the wilder-

ness of the Big Cypress Swamp. The drainage required by a development of this magnitude (remember, this is Florida swampland) would siphon off a substantial portion of the park's Big Cypress water supply. And the potential pollution of the rest is fantastic.

In April of this year, the Sierra Club joined with 20 other conservation organizations to oppose the jetport's development at the present site and requested Secretary of Transportation John Volpe to withdraw his department's support and to actively encourage the relocation of the facility.

Jetport backers, including not only the Port Authority but also other Miami and Dade County economic interests and several major airlines, are quick to point out to conservationists that the Big Cypress lands in Collier and Monroe counties are subject to undesirable development whether or not the jetport is developed at the present site. True, but the jetport will accelerate and magnify the development. As Nathan P. Reed, special assistant to Governor Claude R. Kirk, pointed out to the Senate Interior Committee:

For years competent biologists and ecologists have wondered what would happen to the park if the peripheral Big Cypress lands were ultimately developed. Due to the money squeeze, the problem remained insoluble. In my opinion, the park cannot be saved for future generations if the Big Cypress is allowed to be developed. Even "planned development" will surely wreak havoc with the water route.

Without the development catalyst of the jetport there might, just might, be time to acquire enough of the Big Cypress and to zone enough of the rest to preserve the western Ten Thousand Islands section of Everglades National Park. With the jetport, that slim chance is lost.

TRANSPORTATION ACT VIOLATED

Last year, at the urging of Senator Henry M. Jackson, Congress amended the Transportation Act to require consultation between the Secretaries of Transportation and Interior prior to approval of any transportation program or project which uses park, wildlife, or recreation lands of federal, state, or local significance. This language was designed to prevent just the sort of disaster that now threatens the Everglades. The FAA has made an airport construction grant of $500,000 to the Dade County Port Authority without the required consultation between the Secretaries of Transportation and the Interior, and without the required demonstration that (1) there was no "feasible and prudent alternative" and that (2) the airport program included "all possible planning to minimize harm" to Everglades National Park and State Water Conservation Area 3, an important state outdoor recreation area. Not only that, but the Department of Transportation's Federal Railway Administration has announced a $200,000 grant to study high-speed ground transportation connecting the jetport with Miami, 52 miles to the east, and plans are under way to route Interstate Highway 75 connecting Tampa-St. Petersburg and Miami past or through the jetport site.

Port authority and FAA officials have lately been given to public expression of conservation platitudes, but the record is clear: it's the same old flim-flam. The memorandum from the Port Authority staff to the Dade County commissioners recommending the jetport project mentions Everglades National Park just once: "The Everglades National Park south of the site at Tamiami Trail assures that no private complaining development will be adjacent on that side." This great national park was seen exclusively as a buffer, "with no one to complain about the noise except the alligators." And as for the "environmental concern" the jetport sponsors profess to share with the Interior agencies and private conservation organizations, *Aviation Week & Space Technology* published the following statement in their May 22, 1969 issue—before the rising tide of public concern began to well up:

"The bulk of the takeoffs will be out over the 15 miles of clear zone of the undeveloped state-owned water conservation area. . . . Climbouts could then turn south over the Everglades National Park, providing what the airport officials believe to be optimum environmental operating conditions."

This doesn't pass muster as sound environmental planning.

At present the air over Everglades National Park is pure and clear. But what will it be like if the jetport is developed at the present site? Figures on pollutant emissions from jet aircraft engines are readily available from the Department of Health, Education, and Welfare or the Society of Automotive Engineers and are highly reliable. But some inside-outside figure can be calculated to provide an idea of the magnitude of the air pollution problem. Based on 900,000 flights a year—the projected operation level as a full-blown commercial jetport—the airport's annual contribution to the Everglades atmosphere will be something like this:

Carbon monoxide: 9,000 to 72,000 tons.
Nitrogen oxides: 4,150 to 6,000 tons.
Hydrocarbons: 13,000 to 40,250 tons.
Aldehydes: about 1,000 tons.
Particulates: 1,260 to 3,250 tons.

That is big-league air pollution.

And the prognosis for noise pollution isn't much rosier. The supersonic transports the jetport is being built to accommodate (the sign at the gate bills it as "the world's first all-new jetport for the supersonic age") are expected to be noisier than the current generation of jets. And how noisy is that?

When the Anglo-French Concorde made its maiden flight this past winter, NBC reported, "On takeoff, the rear of its four engines could be heard in villages 20 miles away." And the Concorde is expected to be even noisier on approach. Last year *Aerospace Technology* reported, "It is expected that the Concorde will exhibit sideline noise levels of about 118 PNdB [decibels of perceived noise], according to U.S. engineers, and may show a rather startling 124 PNdB figure during approach. . . ." Boeing's studies show that its larger, faster, and more powerful SST will probably generate a sideline noise level of 122 PNdB. As a yardstick, 120 decibels is considered the threshhold of pain. The current subsonic commercial jets at takeoff generate noise levels three miles away in the range of 120 PNdB.

It is difficult to determine what the noise levels would be within Everglades National Park, but it's a safe bet that they would be considerably higher than a typical national park "noise"—the rustling of leaves, which is rated at 10 decibels. Talk about uproar; if the jetport is developed at the present site, it will turn the wilderness quietude of Everglades National Park into bedlam. Nine hundred thousand flights a year average out to more than 100 flights an hour, 24 hours a day, 365 days a year.

NEEDED: ONE HELL OF AN UPROAR

Fortunately, Section 4(f) of the Transportation Act gives the Department of Transportation a clear mandate to move the jetport if a "feasible and prudent alternative" exists. At the June 3 hearing before the Senate Interior Committee, alternative sites were identified by two state witnesses: Nat Reed of the governor's office and FCD Chairman Padrick. The sites they identified are both on state-owned land, so a land swap with the Port Authority would make things relatively simple.

But the push for another site isn't going to come from Miami, not while either alternative would benefit Fort Lauderdale, West Palm Beach, and other cities north of Miami along Florida's Gold Coast. The push is going to have to come from Washington, by shutting off the federal subsidy for development at the present, destructive site. And Washington isn't likely to push too hard without a push from the general public. Everglades National Park might well become the first national park to be dis-established, unless the American people stand up in its defense. So far, through the various federally supported programs and projects of diverse agencies and departments, the American public has unwittingly been subsidizing the destruction of Everglades National Park.

As long as the various federal departments and their agencies pursue their separate ways, ignoring the several laws that exist to promote—and that even require—inter-departmental coordination and sound environmental planning, there can be no hope for preserving and restoring the American environment. In many ways the Everglades problems are symptomatic of an even larger problem. Hopefully, President Nixon's new Environmental Quality Council will roll up its collective shirtsleeves and go to bat for Everglades National Park. For if the Everglades are lost, America will have gone one hitless inning toward losing the whole environmental ballgame.

The first step down the long road toward saving Everglades National Park is moving the jetport away from the park. As Senator Nelson observed, moving the jetport will cause one hell of an uproar in Dade and Collier counties. But the jetport isn't likely to be moved unless there is one hell of an uproar in the 50 states of the Union over the threat to Everglades National Park. Conservationists who want to see Everglades National Park given at least a fair chance of survival, are writing President Richard M. Nixon, as well as their senators and congressmen. If the jetport isn't moved, say goodbye to the continent's only subtropical national park and to the world's only Everglades.

[From the Miami (Fla.) Herald, Aug. 8, 1969]

NIXON'S WORD COULD BLOCK GLADES JETPORT

(By Rowland Evans and Robert Novak)

WASHINGTON.—President Nixon will soon give the first clear sign of his future course on politically explosive conservationist questions when he decides whether to protect the irreplaceable Everglades National Park in Southern Florida from a huge new jetport.

The reason the President himself has to decide is a sharp backstage disagreement inside the administration. The interior Department, surprisingly conservationist under Secretary Walter Hickel, not only opposes the jetport but is insisting privately that federal law prevents the Transportation Department from approving it. Secretary John Volpe's Transportation Department favoring the jetport, vigorously disagrees. Thus, if the jetport is to be blocked, it will be up to Nixon.

Immediately at stake is a priceless national resource. Sen. Gaylord Nelson of Wisconsin, a leading conservationist, charged during a Senate interior committee hearing that construction of the jetport would be "a disaster and the end of the Everglades as a unique wilderness."

But beyond the Everglades, the White House decision will be an unmistakable sign of its direction in the increasingly political issue of environmental control. While pleased by Hickel's new interest in these issues, conservationists in and out of Congress are watching the Everglades case as it reveals presidential policy.

The Interior Department joined the issue inside the administration on May 29 when it wrote a privately circulated legal opinion, contending that section 4F of the Transportation Act bars Volpe from approving any project endangering a national park unless he can prove the project is essential and there is no alternative site. In the case of the Florida jetport, say Interior Department officials, no such proof has been offered.

But at the Transportation Department, 15 blocks away, the law is read differently. Volpe's lawyers say he has no legal authority to deny federal sanction to the jetport or refuse navigational guidance for it.

Thus, it is clear that the transportation department will not impede jetport development unless there is White House intervention. "If we get President Nixon on our side," an Interior Department official told us, "we might be able to stop this jetport. If we don't, we haven't got a chance."

Backing up the Transportation Department are major airlines who see the jetport as essential to ease over-crowded conditions at Miami International Airport. The jetport's first runway will open next month as a training facility for Miami-based pilots and crews with 150,000 annual training flights planned for the single runway.

If this were the extent of the jetport, conservationists would not be so apprehensive. But Interior Department officials are convinced that Dade County envisions the biggest jetport in the world—the major airline terminus of the southeast, capable of handling new jumbo jets and futuristic supersonic transport. The construction that would proliferate around such an airport would doom Everglades Park, polluting its waters and destroying its unique ecology they feel.

Actually, a decision in favor of the jetport was made at the Transportation Department long before the Republicans took over. During the Johnson Administration, the Federal Aviation Administration (FAA)—part of the Transportation Department—granted $500,000 to the Dade County Port Authority to start the jetport.

Moreover, the Transportation Department's lame duck Democratic officials last December approved—but did not announce—an additional $200,000 grant for research on high-speed ground transport from Miami and Tampa. Word leaked out only when Dade County officials announced $200,000 contract for the study to TRW, Inc., the giant construction firm.

But the Transportation Department under Volpe shows no basic disagreement with those decisions. It has just approved another $163,000 grant for landing lights on the existing single runway—thereby antagonizing Sens. Nelson and Henry M. Jackson of Washington, the interior committee chairman, who had criticized the earlier $700,000 in grants made without studying their impact on the environment.

JETPORT COMES BEFORE GLADES

WASHINGTON.—Development of a super jetport in the Florida Everglades west of Miami is more important than protection of Everglades National Park, the Florida secretary of transportation said Thursday.

"I am more concerned with people than alligators," Michael O'Neil said during a news conference in Gov. Claude Kirk's Washington office. "I am not an ecologist. I call Everglades National Park a swamp. My children can't play in it. It's a wonderful natural resource, I'm sure, but I think people come first and I think transportation comes first."

O'Neil said he had just completed two days of meetings with officials of the Department of Transportation and found them "very enthusiastic about the jetport."

Location of the 39-mile-square airport on the northeastern edge of the national park has been vigorously protested by the major conservation organizations. They claim it will cause air, water and noise pollution that will have adverse effects on the park.

During a recent hearing on the park's problems by the Senate Interior and Insular Affairs Committee, Nathaniel P. Reed, special assistant to Gov. Kirk, testified the Dade County Port Authority did not consult any state agency before choosing the site.

"Had they," he said, "I would be willing to say another site with less ecological impact could have been found. But before we knew it, sir, that field was there."

O'Neil disputed this. "The governor has not indicated that to me at all," he said. "The governor was in Miami and was briefed on the jetport plans while they were still being developed."

O'Neil said he and Reed disagree on the effect of the jetport on the park, but he thinks they can work out their differences.

The Dade County Port Authority has given assurances it will protect the park, he said.

"Right now, this week, Dade County Port Authority officials are in California meeting with the National Academy of Sciences to discuss this problem," O'Neil said.

The jetport will have to be licensed by the state, he said, and his agency will provide the license.

TAX REFORM BILL

Mr. McINTYRE. Mr. President, one of the most important pieces of proposed legislation being considered by this session of Congress is the tax reform bill, recently passed by the House and pending before the Senate.

I wish to speak briefly today about what I consider to be one of the most significant parts of this legislation—its provisions affecting private foundations and other charitable organizations.

In the United States, private philanthropy has come to play an important role in providing resources for numerous activities with which Government cannot or does not involve itself. Charitable organizations establish experimental programs on the frontiers of many different fields of endeavor. They serve to enrich the pluralism of our social order.

The valuable contribution of charitable organizations to our society has long been recognized in our tax laws. The Internal Revenue Code has for many years provided preferential tax treatment for such organizations. Not only has it exempted such organizations from income tax, as with many other nonprofit institutions, but it has also granted income, gift, and estate tax deductions to persons contributing funds to them.

Unfortunately, some individuals have sought to take advantage of these tax benefits and to turn them into instruments for their own personal profit. The Department of the Treasury documented a number of such abuses in its report to Congress in 1965 on the activities of private foundations.

That report showed several instances of self-dealing between foundations and those who controlled them. It showed, for example, that one foundation received approximately $400,000 in deductible contributions from the owners of a grocery chain, distributed a small portion of the funds to charitable organizations, and then used the remainder to construct buildings which were immediately leased back to the donor's grocery chain.

The report also showed instances of undue delay in the distribution of foundation income. It showed, for example, that 25 percent of all private foundations did not expend for charitable purposes annually an amount equal to their net income. Thus, while an immediate deduction was being allowed for gifts to these foundations, there was a substantial delay in the flow of their funds into charitable undertakings. In fact, one foundation was shown during the 17 years of its existence to have distributed only one-tenth of 1 percent of its funds to charity. Its only real purpose had been to function as a tax-free holding company for its donor.

And the report showed many instances of excessive foundation involvement in the active conduct of business enterprises. This part of its discussion was highlighted by its reference to one foundation with a controlling interest in 26 separate corporations, 18 of which were going business concerns. One of these was a large metropolitan newspaper, with gross receipts of many millions of dollars. Another operated the largest radio station in the State. Also controlled were a lumber company, several banks, three large hotels, a garage, and a number of office buildings. Concentrated largely in one city, these properties represented an economic empire of substantial power and influence. And, because of their favorable tax treatment, these businesses had a distinct advantage over their taxable competitors.

These and other well-documented abuses are the direct cause of those provisions of the House-passed tax reform bill affecting charitable organizations. As the examples I have chosen make clear, some of these abuses have been serious indeed. They obviously require correction, and I heartily endorse those provisions in the House-passed bill which would in fact correct them.

My purpose today, however, is to call attention to several other provisions in the House-passed bill. These provisions would do little to remedy past abuses of which a minority of foundations have been guilty, but they would do much to interfere with the vitally important work in which the majority of foundations are engaged. They present a blatant case of overkill and seriously threaten the role of charitable organizations of all kinds in our society.

Our Finance Committee will begin hearings tomorrow on the private foundation related provisions of the House-passed bill. I hope that the committee will examine all of these provisions with the utmost care and that it will see fit to eliminate any which would hinder legitimate charitable endeavors. I would like to focus my remarks today on just four provisions which, even in the absence of any detailed hearings, are obviously in need of amendment or deletion.

First. The 7½-percent tax on the investment income of foundations: This is clearly not a provision designed to eliminate past abuses. It singles out all foundations, good and bad, and accords them less favorable treatment than charitable organizations generally. It is obviously predicated on the belief that foundations are less worthy than other charitable organizations.

Even if this were true, such a tax would be a dangerous precedent. If foundations can be taxed now, then why not any other charitable activity in disfavor at some future time, such as churches, schools, hospitals, and so forth. A tax on

foundations would be an opening wedge against the whole tax-exempt status of charitable activities.

And clearly it is not true that private foundations are less worthy than other charitable organizations. The basic function of private foundations is to make their funds available to other such organizations, and if foundations are hit by this tax, these other organizations will themselves be affected by the fallout. I know, for example, that Dartmouth College—my alma mater and a leading educational institution in the State of New Hampshire—has been receiving from foundations approximately $1.5 million per year. If its contributors are hit by this punitive tax, Dartmouth itself will feel the effects. What could be more senseless at a time when tuition rates at our leading universities are already being raised practically every year?

Second. Gifts of appreciated property to private foundations: Much of what I have just said can be repeated here. I see no reason why a gift to a private foundation should not receive the same treatment as a gift to any other charitable organization. This provision, too, is a clearly punitive rather than an abuse-correcting measure. It, too, constitutes a dangerous precedent and threatens harm indirectly to many organizations not directly subject to it.

Third. Limitations on the programs of private foundations: The objectives of the program limitations in the House-passed bill are quite proper. Foundations should stay away from lobbying and from the support of individual political candidates. Unfortunately, the language of the House-passed bill is so broad that it would clearly encompass many activities which cannot fairly be regarded as lobbying or electioneering. Many well-known and widely accepted charitable organizations conduct activities which necessarily go well beyond the "nonpartisan research and analysis" permitted by the House-passed bill. In an appendix to this speech I have listed 13 such organizations. Their activities are such that I believe both lawyers and foundation trustee would be very reluctant to make further grants to them if the present language stands. Mr. President, I ask unanimous consent to insert this list of organizations, and a brief description of their respective activities, in the RECORD at the conclusion of my remarks.

Fourth. Penalties on foundation trustees: The House-passed bill would impose a punitive tax on any foundation trustee who approved a grant which did not meet the program limitations of the bill. There is no better way that I could indicate the harm threatened by this tax—which would be equal to 50 percent of the amount of the grant in question—than to refer to a letter I received recently from the trustee of an important foundation in my own State. His remarks were basically as follows:

These Trusts don't seek to influence legislation directly nor to support "propaganda." But I would be scared to death if this bill became law to make a grant of $53,000, such as I just did, to the New Hampshire Hospital Association to study how the State might improve ambulance service. It is likely that any such report and study will suggest a number of inadequacies in existing ambulance service. It is very likely to suggest legislative remedies. Were this to be classed as "an attempt to influence legislation" or an attempt to "support propaganda", I would be subject to a personal tax of $26,500. I am not that generous nor rich an individual. As a foundation executive forced to operate under such a threat, I would undoubtedly withdraw into a tight shell and make grants only to the "Genteel Society for the Study of Etiquette and Tea Service conducted by the ladies auxiliary of some church of a well-accepted Protestant denomination." If other foundation executives have no more courage than I, the proposed legislation could take an awful lot of vitality out of foundation activity.

Mr. President, there are other provisions in the House-passed bill which bother me also. My purpose has not been to be inclusive, but by reference to some of the most obvious problems to draw attention to the critical task which confronts our Finance Committee when it begins its hearings in this area tomorrow. I trust that the committee will seek out and eliminate all provisions in the House-passed bill which would hinder the activities of charitable organizations in our society. I trust that it will do all it can to expand, not contract, the ability of the private sector to contribute to a solution of our social problems. And I pledge my own continuing efforts to this end. It is my intention to make a further statement in this field, with my own detailed recommendations, in the very near future.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

APPENDIX

QUALITY OF THE ENVIRONMENT

Conservation Foundation

The Foundation advises local and regional conservation organizations, citizens and communities on conservation concerns. It engages in public education and in efforts to organize citizens for sustained action on behalf of regional planning, clean rivers and conservation legislation. The organization publishes a bi-weekly newsletter with a circulation of 20,000 in which it frequently takes an editorial position. Its comments have often reached the general news media. In addition, it has received a number of quantity orders for specific issues, such as one requested by the National Center for Air Pollution Control for 10,000 copies of an issue that focused on this problem. The Newsletter's articles and commentaries frequently discuss and take a stand on conservation legislation, including all major bills pending in Congress.

Massachusetts Audubon Society

This 74-year old organization does conservation research, conservation-oriented education on all levels, and acquires land for conservation and operates some 30 wildlife sanctuaries. The Center has assembled an extensive source file on environmental problems in the New England area and now serves several hundred local and regional newspapers and radio stations with two weekly news columns. Other public information programs include a magazine for young people and a series of analytical reports on conservation topics ranging from mosquito control to noise pollution. The program of the Center was actively involved in promoting the passage of several key pieces of legislation. These include a wet-lands protection bill in Connecticut and a constitutional amendment in New Hampshire for reform of property taxes.

National Audubon Society

The Society's main objective is to improve the physical environment through a variety of activities, including prominently the publication of information highlighting environmental problems and marshalling support for their solution. One of the means the Society uses to gather public support for its goals is its semi-monthly newsletter. The 2,000 newsletter copies go to the Society's officers and affiliated organizations. Another is the monthly magazine *Audubon*, with a circulation of some 80,000. The bulk of these are distributed to the Society's national membership. However, some 5,000 non-members also subscribe to the magazine. The Society addresses itself extensively to pending conservation legislation. It features a column on the "National Outlook," describing federal programs and pending legislation. Lately it has reported extensively on problems raised by the use of DDT and other pesticides, culminating in a nationwide campaign to "Ban DDT," which received wide news coverage at a time when several bills dealing with pesticide control—one to prohibit the sale or shipment of DDT for use in the United States—were (and still are) pending in Congress.

CRIMINAL JUSTICE

National Legal Aid and Defender Association

NLADA was organized to promote organized legal services for the poor. One of its main goals is to obtain local community support for its program, much of which requires legislation. It advises local people how to go about achieving needed reforms. Local defender project directors speak before Rotary, Lions, PTA and church groups, and the national director speaks at bar association meetings, law schools and Law Day programs. Statewide public defender systems have been implemented in a half-dozen states and in all cases, the NLADA has been a major force behind this effort.

The American Law Institute

The Institute's main purposes are to promote the clarification and simplification of the law and its better adaptation to social needs, to secure the better administration of justice and to encourage and carry on scholarly and scientific legal work. A.L.I. does legal research, restatements of the law and drafts model legislation. It publishes its views and recommendations. It attempts to affect the opinion of lawyers and judges, whose views have special weight on a wide range of legislation. It is associated with the American Bar Association in a Joint Committee on Continuing Legal Education, which publishes materials and organizes conferences and courses. The Institute has drafted a Model Code of Evidence, a Code of Criminal Procedure, a Model Penal Code and the Uniform Commerical Code, which has now been adopted in almost all states.

REGIONAL PLANNING

Regional Plan Association, Inc.

RPA conducts studies and prepares plans for the New York metropolitan region (22 counties). Its reports have highlighted trends and major issues for decision, in a concentrated projection for specific future years of job and population locations, travel patterns, retail patterns, open space demands, and other concerns of planners. It has engaged in a major effort to alert and educate the public to projected needs of the metropolitan area, through publications, the organization of many public meetings and through an effective public relations program to secure effective and continuing news coverage of proceedings, findings and recommendations. Among its public education efforts has been a series of five television shows ("Goals for the Region Project"). RPA has consistently been involved in promoting legislative action consonant with its objectives,

such as the establishment of the Tri-State Transportation Committee by New York, New Jersey, and Connecticut; higher state appropriations for support of commuter railroads; fast rail service, between Boston and Washington, support for five New York State bond issues for park acquisition, and for the World Trade Center.

Greater Philadelphia Movement

The organization's purpose is to promote governmental, economic, social and physical improvement in the Philadelphia metropolitan area. GPM's program is specifically aimed at citizen education on regional issues and encouragement of citizen action to promote regional cooperation in solving problems such air pollution which cross state boundaries. The educational objectives are accomplished through a 38-member tri-state Committee on Regional Development. A broad-based regional citizens' organization is now being developed to provide continuing citizen education at the grass-roots level on recommendations of the Committee for regional action. GPM is engaged in rallying public opinion in support of draft legislation on airport and other transportation development, as well as air pollution control.

Metropolitan Fund, Inc. (formerly Southeastern Michigan Metropolian Community Research Corp.)

The Fund is engaged in research and education on problems of the six-county region of Southeastern Michigan centered on Detroit. It finances research to identify metropolitan needs and aspirations and to suggest alternative policies and programs, and it seeks public support for these policies and programs. The Fund's publications are widely circulated in the area. It sponsors a "citizen information-education-response" program in which local citizens groups gather for discussion sessions with civic leaders and public officials on regional issues.

Through its studies, the Fund has been deeply involved in promoting the establishment of at least two regional governmental devices which required local legislative action—the Southeastern Michigan Council of Governments, and the Southeastern Michigan Transportation Authority. It is now engaged in generating support for legislative action on such issues as building code reform, joint purchasing arrangements, disposition of abandoned vehicles, and solid waste disposal.

ADMINISTRATIVE REFORM

Citizens conference on State Legislatures

The major purpose of the Conference is advancing legislative modernization at the state level. It attempts to build a constituency for legislative reform on subjects ranging from state legislators' salaries to staffing the committee structure, and the length of legislative sessions. It has been the prime source of support for approximately fifteen citizens commissions. Much of its work is done by marshalling public support, through press conferences, assistance in the preparation of magazine articles, issuing reports and generally seeking to generate interest in and concern for reforms of state legislatures. The organization's purpose is to affect the whole legislative process on the state level—with reform activity underway on a variety of problems in 40 of the 50 states.

The council of State governments

The broad purposes of the Council are to strengthen state government and its public services and to preserve its role in the American federal system; to promote cooperation and more effective working relations on the state-local, interstate, and state-federal levels. The Council is an organization which serves as the staff arm for several affiliates: The National Governors Conference, the Conference of Lieutenant-Governors, the Conference of Court Administrators, and the Council of State Planning Agencies. Approximately 16 other orgnizations in such fields as parole, probation, mental health, civil defense, and personnel work with the Council. The Council makes studies and reports, frequently at the request of affiliate or cooperating organizations. Reports are widely distributed, going to over 600 addressees on the Council's national mailing list. The Council also has two periodicals: *State Government Quarterly* and *State Government News*, which seek to enlist public support for Council goals. The Council's Committee on Legislative Modernization issued a report in December 1968 containing a number of recommendations; some of which have been adopted by some states.

National Municipal League

The purpose of the League is to assist citizens in the improvement of government, and to strengthen government at the state and local level. The National Conference of the League brings together public officials, editors, civic leaders, students and others for workshops on current issues. It develops and publishes background materials designed to build public support for the modernization of state and local government. The League of Women Voters regularly turns to the National Municipal League for help in this area. The League has often been involved in assistance to constitutional conventions, most recently in Chicago. There it convened a forum of state legislators who had filed to be delegates to the Illinois constitutional convention and arranged for them to meet with civic groups and experts on constitutional revision.

HOUSING

Urban America, Inc.

This organization assists in developing public policies and stimulating action to improve the quality of life in the nation's cities. Its Nonprofit Housing Center, has worked with hundreds of non-profit housing sponsors throughout the nation. In all cases, major emphasis has been on generating public opinion in favor of these organizations, and almost every instance involved some change in state or local legislation. Urban America publishes two periodicals (*City* and *Architectural Forum*) which analyze and report upon major public issues in urban affairs, including legislative events at all levels of government. Urban America, under contract with the Urban Coalition, also was responsible for the recently published book "One Year Later" which reviewed implementation of the President's National Advisory Commission on Civil Disorders and which made a major impact in the general news media. This, incidentally, was one of the many large-scale public information campaigns which the Urban Coalition is conducting in cities throughout the nation. Three statewide development corporations were developed with Urban America's aid, all having some measure of state government support and involving legislative change. The Housing Center took the lead in alerting non-profit sponsors to the dangers of language in the 1968 Housing Bill which would have required higher payments on low and moderate income projects. The States Urban Action Center of Urban America provides consulting services to more than a dozen states on a broad range of urban issues, aimed directly at bringing about legislative changes. Late in 1968, with Urban America's assistance, a small group of Congressmen and private urban leaders formed the National Committee on Urban Growth Policy for the purpose of developing recommendations for legislation needed in shaping urban growth. The group helped generate the creation of a new Congressional Committee, the Committee on Urban Growth.

Rural Housing Alliance

The Alliance provides educational materials, technical assistance and financial aid for the development of rural, and particularly self-help housing. One of RHA's major purposes is the education of the general public on the deficiencies of rural housing policies and programs. Two monthly publications—the *Low Income Housing Bulletin* and *The Self-Help Reporter*—regularly call attention to legislative developments related to rural housing and usually comment critically on the inadequate size and scope of rural housing authorizations. Annual conferences sponsored by RHA also discuss these matters with a view to stimulating action by conference participants to urge more federal attention to rural housing problems. Managers of projects which utilize RHA's advice and assistance are encouraged to keep their Congressional representatives informed of their problems and needs. The RHA staff keeps in close touch with relevant federal agencies, chiefly HUD, OEO and Farmers Home Administration (FMHA). They were heard by both the House and Senate Banking and Currency Committees on self-help amendments to the 1968 Housing Act. At the request of FMHA, RHA staff helped draft amendments to Title X of the Housing Act establishing self-help programs for rural areas under FMHA.

SENATOR EVERETT McKINLEY DIRKSEN

Mr. MURPHY. Mr. President, it is always difficult to bear the death of a close friend, but it is especially hard when the deceased friend was a symbol of vitality, spirit and life.

It is for this reason, therefore, that we suffer such deep and sincere distress at the passing of Everett McKinley Dirksen, for this beloved colleague of ours had that rare, divine gift of remaining intensely alive in his activities and of touching everything he did with the electrifying magic of his own philosophy and personality.

In addition, he understood better than any other man the art of objective compromise.

Consequently, he got things done, and much of the major legislation of his era, for which others frequently received the credit, would never have come into being without the careful guidance and exceptional craftsmanship of this great leader.

Furthermore, he kept things in perspective and acted accordingly.

When assaults on old-fashioned patriotism were abroad in the land, the mellifluous and inspiring voice of the senior Senator from Illinois could be heard reminding our Nation of the "Gallant Men" whose past heroism he recommended as a course for our future.

When the business of the Senate seemed about to become submerged in a quagmire of procedural formalities, an ingenious quip or an aptly recited quotation from our colleague would return the proceedings to their appropriate course.

When the complex and conflicting considerations surrounding the major issues of our time piled one upon another to form seemingly insoluble dilemmas for those charged with the responsibility of voting on them, Ev Dirksen made his decisions honestly and courageously ac-

cording to the dictates of his unshakeable integrity and his deep-rooted love of country, and in so doing he set an example of statesmanship which was both an inspiration and a guide.

It is said that Ev Dirksen thought he might have liked to be an actor.

My former profession would have welcomed him proudly, for he would have done us a great honor and he would have been a great performer.

I say this not primarily because of his outstanding oratorical ability and his remarkable innate showmanship, but because he had that magnificent insight into life which permitted him to recognize that there are two thespians' masks, one for tragedy and one for comedy, and that even the gravest problems which confront us must be viewed not only through the mask of tragedy but also through the other mask, which symbolizes the essential, God-given joy of life and man's need to preserve it.

Yes, Ev Dirksen loved life and its happiness, and his enthusiasm was catching.

Therefore, he would have been a star in any field of endeavor.

If we are, as Ev Dirksen would have reminded us with one of his frequent Shakespearean quotations, "merely players" on the stage of this world, then our colleague will always be remembered as one who accepted one of the most difficult parts ever presented to any Government leader in our history and whose performance in this vital and sensitive role will continue to make this a better land in which to live for untold generations to come.

More than all this, though, I shall miss his warm friendship, his wise counsel, and his deep dedication to his country, all of which, combined in my memory, will make me remember him as one of the greatest Americans it has been my privilege to know.

My most heartfelt sympathies are extended to Mrs. Dirksen and our late colleague's entire family.

EVERGLADES

Mr. NELSON. Mr. President, I ask unanimous consent that two items be printed in the CONGRESSIONAL RECORD at this point. The first is an excellent editorial published in the New York Times expressing support for the efforts of conservationists, the Department of the Interior, and now Florida Governor Kirk to prevent the construction of a superjetport in the area of the priceless Everglades National Park. The second is a resolution adopted by the United Southeastern Tribes, Inc., supporting the Miccosukee Tribe of Florida in calling for a halt to the construction of the Everglades jetport until a comprehensive study has been made to determine the ecological effects of such a jetport on the area. The Indian concern in this matter is one more important reason why appropriate action must be taken immediately to protect Everglades National Park and the surrounding areas, including the Indian lands.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

A JETLESS EVERGLADES

The battle to preserve the wildlife and ecology of Everglades National Park, the last great natural watershed in south central Florida, is being joined again only a few weeks after all hope seemed lost. Last-ditch efforts by conservationists and an aroused public have alerted the Department of the Interior and Governor Kirk of Florida to the urgent necessity for saving this national treasure before it dies under the pressure of commercial development and the killing fumes of jets.

It is the eleventh hour but not yet a lost cause. One long runway has already been completed and a second is being built on a 39-square-mile site that would become a major commercial jetport in the future. It would be used at first as a training facility for commercial fliers and aircraft and eventually serve the growing needs of the Miami area.

The threat to the Everglades is obvious. Even more than the pollution caused by a busy jetport, there would be the new wastes caused by industrial and commercial development springing up for many miles around. The plants, fish, animals and birds, including many species on the rare and endangered list, would face destruction. The silence of this subtropical wilderness would be replaced by the scream of the jet engine, the rasp of the motor car, the sound of the tossed beer can landing.

The Interior Department's study under Dr. Luna Leopold, senior scientist of the U.S. Geological Survey, should be released without hesitation. It is reported to show how gravely the Everglades would be harmed by a jetport. The Dade County Board of Commissioners has shown responsibility by hiring former Secretary of the Interior Stewart Udall to submit a plan for avoiding damage to the Everglades—and possibly recommending alternate sites away from the national park. Mr. Udall's plan ought to be made known before the bulldozers rip up more land for the runways.

Governor Kirk is said to be ready to offer state land that is north instead of west of Miami. This could be the solution to save the Everglades and at the same time meet the needs of the metropolitan area for a new airport. Such an offer, combined with the Leopold and Udall studies, would balance human and natural needs—and demonstrate again that destruction of precious parkland is not necessary in Florida or anywhere else.

RESOLUTION No. USET 19–69

To: Support the Miccosukee Tribe of Florida in Jet Port controversy.

UNITED SOUTHEASTERN TRIBES, INC.

Whereas, the Miccosukee Indians of Florida have for more than a century hunted and fished over the area of the proposed Everglades jetport, and have reservation land in the vicinity of the proposed jetport, and

Whereas, the United Southeastern Tribes, Inc., sympathize with the concern of the Miccosukee Indians that the proposed jetport and related commercial development will destroy the privacy, means of livelihood and traditional way of living of the Miccosukee Indians, threaten their health and safety through air and water pollution, and eliminate the animal life and natural habitat with which and from which the Miccosukee Indians have subsisted for so many years,

Now therefore, be it resolved, that the United Southeastern Tribes, Inc., petition the President of the United States on behalf of the Miccosukee Indians, that the United States shall in the proper discharge of its responsibility toward the Miccosukees:

1. Halt construction of the Everglades jetport until a comprehensive study has been made of the effects which it may have on the ecology of the area, especially in relation to the Miccosukee Indian people, and

2. If a determination is made that the jetport can be constructed with due regard for the interests of the Miccosukees, insure, by careful planning, the protection of the reservation lands of the Miccosukees, and their right to continue their traditional way of life in privacy, and make adequate provision to prepare the Miccosukees for any change which will be forced upon them because of their proximity to the jetport.

CERTIFICATION

This is to certify, That at a meeting of the Board of Directors of the United Southeastern Tribes, Inc., properly convened and held at Philadelphia, Mississippi, Pearl River Community, on the 13th day of August, 1969, the above resolution was duly adopted:

Attest:

———— ————,
Secretary, Inter-Tribal Council.
PHILLIP MARTIN,
Chairman, Inter-Tribal Council.

NEW YORK TIMES HIGHLIGHTS ACHIEVEMENTS OF WISCONSIN INSURANCE EXECUTIVE

Mr. PROXMIRE. Mr. President, one of our State's outstanding businessmen, Francis E. Ferguson, president of the Northwestern Mutual Life Insurance Co., was the subject of an excellent personality profile published in last Sunday's New York Times.

The article highlighted Mr. Ferguson's concern over, and deep involvement with, the problems of inflation and the condition of our cities. Mr. Ferguson, as president of the largest life insurer not located on the Atlantic seabord, is particularly troubled by the impact that inflation is having on fixed-dollar investments such as insurance. He points out:

When great pools of capital start to turn their backs on fixed-income securities, then our whole structure is in trouble.

Perhaps Mr. Ferguson is best known for the excellent job he is doing as chairman of the Life Insurance Committee on Urban Problems. The committee heads up the insurance industry's program calling for the investment of $2 billion in housing, job opportunities, and community facilities in inner city locations. This is a most important private effort, and it is being ably shepherded by Mr. Ferguson. In view of the interest that all Members of Congress have in this effort to channel private funds for the public good, I ask unanimous consent that the Times article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEELING THE PULSE OF HAVES AND HAVE-NOTS

(By Robert D. Hershey, Jr.)

Not many businessmen can appreciate as well as Francis E. Ferguson the magnitude of two of America's most pressing problems—inflation and the condition of our cities.

As president of the Northwestern Mutual Life Insurance Company he knows how the rising cost of living can affect the competition for investment dollars and how resulting high interest rates cause policyholders to invoke their right to borrow at below-the-market rates.

As chairman of the Life Insurance Committee on Urban Problems he guides an in-

dustrywide commitment to invest $2-billion in housing, job-creating enterprises and community facilities in city core areas.

More than most men, the tall, articulate executive (who some say looks very much like Lee Marvin, the actor) is in a position to feel the pulse of both the "haves" and the "have-nots."

That part of society with capital, property and earning power is interested, of course, in protecting its standard of living from the seemingly inevitable inroads of inflation. Particularly sensitive to such concerns is the insurance business, which by and large has come to terms with the demand for equity investments by promoting the sale of mutual funds and individual variable annuities as well as insurance.

Mr. Ferguson, however, is less than enthusiastic about the ever increasing demand for stocks that has occurred through the decline in fixed-income securities. He worries, in fact, about what he calls the delusion that equity investment is the answer, on any large scale, to inflation.

"Our society is being trapped into believing that there is a hedge against inflation—and that just isn't so. Maybe you and I can come out ahead, but when great pools of capital start to turn their backs on fixed-income securities, then our whole capitalistic structure is in trouble," Mr. Ferguson said in a recent interview. "Inflation is an exceedingly serious national problem, one that, one way or another, we'll have to control," he added.

Insurance is a pivotal business in this regard. Most of the policies sold are fixed-dollar investments; indeed that is the traditional chief selling point. But if more and more people believe they must buy mutual funds or buy term insurance and invest the difference the industry itself is less able to invest in fixed-income securities.

Northwestern Mutual, the seventh largest life insurer and the largest not based on the Atlantic seaboard, has more than $2-billion invested in bonds.

Mr. Ferguson, who has just completed his first year as president of the Milwaukee concern, finds his company particularly vulnerable to inflation. Northwestern specializes in writing individual, ordinary insurance in large blocks. Its average policy is about $50,000, about five times the industry average.

Inflation causes interest rates to soar and the large, often sophisticated Northwestern policyholders are borrowing at a very heavy pace on their policies at the contract rate of 5 per cent a bargain when blue-chip corporations must pay 8½ per cent plus.

Beyond the lost opportunities to invest this money at much higher rates, there is always the danger that the money will not be replaced and that policies will be allowed to lapse.

Policy loans at life companies rose by a record $233 million in June and ran in the first half of the year about 30 per cent higher than in the 1968 period. They are nearly five times as heavy as in the period before 1966.

In passing, Mr. Ferguson suggested that he would favor a free-market, instead of a contractual, rate on policy loans. "It's the only part of the life insurance contract that isn't competitive," he noted.

When wearing his "urban revitalization" hat, Mr. Ferguson's job is to help channel the money pledged by 118 life insurance companies for investment to create housing and jobs for the poor. The industry pledged $1-billion in September, 1967, and an additional $1-billion last April, when the first phase was nearly completed.

This money is for loans that would otherwise not be made under normal life insurance lending practices (though they may be guaranteed by the Government) at interest rates no higher than regular market levels.

"The second billion will place more emphasis on job-creation facilities than on housing," Mr. Ferguson stated. "With employment comes greater dignity and housing will then come eventually."

Mr. Ferguson, who was not chairman of the committee when it was first organized, conceded that there had been some early "misunderstandings" and "skepticism" that led some minority groups to question the investments. These, he said, had been ironed out and the program was in full swing. "The second billion will go faster than the first now that the companies are all geared up to make these loans," he stressed.

Mr. Ferguson, who is 48 years old, rose quickly in Northwestern's ranks, serving just before assuming the top job a year ago as vice president in charge of mortgage loans. Born in Batavia, N.Y., he attended school in the nearby town of Bergen and left to serve four years in the Air Force during World War II, rising to captain.

The B–17 he was piloting was shot down over Schweinfurt in a raid on an important German installation. "In five missions I lost four airplanes," he quipped; and he spent 19 months in a prisoner-of-war camp.

He returned from the war to graduate from Michigan State University with a degree in agricultural economics and joined Northwestern as an agricultural economic specialist in the mortgage-loan department in 1951 after jobs with the National Farm Loan Association, the Federal Land Bank of St. Paul and Michigan State.

Shortly, he will be leaving on a hunting trip to Manitoba, one of three he takes each year to Canada, Georgia and Nebraska. Upland bird shooting, he maintains, is his favorite form of recreation. "Last year I realized a life-long ambition," he exulted. "I got a well-trained pointer; the first quail I shot over that dog was one of the greatest thrills of my life."

Mr. Ferguson and his wife, Patricia, have two daughters. Susan Lee was married last month in San Francisco; Patricia Ann is to leave Tuesday to begin college at Arizona State.

Home is a large place in River Hills, Wis., a semirural area entirely surrounded by Milwaukee.

RECORD OF THE SENATE ON HUMAN RIGHTS CONVENTIONS

Mr. PROXMIRE. Mr. President, the International Year for Human Rights 1968 came to a close with the United States having ratified only one convention out of the nine which the General Assembly invited the member States to ratify by 1968. The status of human rights conventions in the United States is as follows:

	Date ratified
I. Ratified with advice and consent of the Senate:	
Slavery Convention	1929
Nationality of Women	1934
Supplementary Convention on Slavery	1967
Protocol Relating to the Status of Refugees	1968
	Date transmitted by the President
II. Pending in the Senate:	
Freedom of Association	1949
Genocide	1949
Political Rights of Women (Inter-American)	1949
Forced Labor	1963
Political Rights of Women (UN)	1963
Employment Policy	1966

Four of the conventions recommended by the General Assembly have not even been sent up to the Senate for its advice and consent. They are the UNESCO Convention Against Discrimination in Education, two ILO conventions, one concerning Discrimination in Respect of Employment and Occupation and the other concerning Equal Remuneration for Men and Women Workers for Work of Equal Value; and the International Convention on the Elimination of All Forms of Racial Discrimination.

Mr. President, it is a sad commentary that the U.S. Senate has failed to ratify the Convention on Genocide, which would commit us as a nation to the prevention and abolition of genocide; the Convention on Political Rights of Women, which would commit us as a nation to equal political rights for women; and the Convention on Forced Labor, which prohibits forced or compulsory labor for the purpose of political coercion or punishment.

The Senate has failed to ratify over half of the human rights conventions transmitted to the Senate. Let us begin to correct the record and ratify these human rights conventions.

OIL AND POLITICS

Mr. PROXMIRE. Mr. President, it is quite apparent that many of the governmental subsidies to the oil industry are going to be changed this year.

Congress, consumers, and the administration are reevaluating the many subsidies received by the oil industry: their tax privileges, the mandatory oil import program, and so forth.

In order to reach a rational decision we must have first rate, accurate information about the issues and the environment in which these issues arose. Ronnie Dugger, who is a first-rate reporter, spent 6 months investigating the background and the issues involved in many of the Federal Government's subsidies to the oil industry. He has taken the time to evaluate many of the arguments which have been tossed about glibly without any real analysis of their underlying rationale.

I consider his article to be one of the most important pieces I have seen. Both he and the Atlantic Monthly are to be commended: Mr. Dugger for having the ability to analyze and explain the issues so clearly and the Atlantic Monthly for having the courage to publish it.

I ask unanimous consent that Mr. Dugger's article, entitled "Oil and Politics," published in the September issue of the Atlantic Monthly, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OIL AND POLITICS

(By Ronnie Dugger)

(Note.—Taxes and efforts to avoid them are always with us. The price the public pays—in lost tax revenues and in high prices—because of a device called the depletion allowance is examined here in detail. The forty-three-year-old provision in the tax laws benefits all who profit from taking oil and other minerals out of the American soil and even

companies that traffic oyster shells. Now battle over the controversial but durable depletion allowance has been joined in Congress. Another battle over oil-import restrictions, with even larger stakes for the oil companies and the consuming public, looms ahead. The subject is a difficult one, but taxpayers as well as tax-avoiders are urged to immerse themselves in this carefully researched study by a diligent and literate journalist.)

Oil troubles the water it floats on this year from the Pacific surf to the Potomac, and even water where it isn't, along the deep blue coast of Maine, is sullen against it. The 27.5 percent oil depletion allowance is in actual danger for the first time since it was passed forty-three years ago.

In Washington, Wilbur Mills, chairman of the House tax-writing committee, has told his colleagues that "oil sticks out alone—it's just a target that way," and depletion must be cut if there is to be any tax reform at all. John Byrnes, the ranking Republican on the committee and "a tested friend of oil," insisted on knowing why Atlantic Richfield, having just drilled two wells into what its partner Humble says is probably the largest oil field ever found in North America, banked its last half billion dollars' profit without paying a cent of federal income tax.

"Is there any justification at all," Senator Edward Kennedy of Massachusetts asked in the spring, "for the present tax treatment of depletion, intangible drilling costs, and foreign royalties, all of which result in countless billions of dollars of lost taxes to the U.S. Treasury?". The last of the Kennedy brothers asking such a question characterizes the situation. The year-in, year-out liberals have been joined by more powerful men in seeking a substantially different approach to one of the country's most political industries. The debate about depletion has spread to oil's basic conditions and arrangements—overinvestment and oversupply, concentration in large companies, government-enforced limitations on production and imports, U.S. prices rising while world prices are falling, even the meaning of the slogan "national security" as a defense for oil's special privileges. The point is getting around that the government, as the Senate Democrats' antitrust economist, John Blair, puts it, has been "implementing a cartel" for the oil companies by using the import program and the thirty-five-year-old state production control system to limit the supply of oil. Current investigations into the curious oil import "ticket quota" system may lead to revelations and repercussions even more serious for the industry than tax reforms.

The emotional basis of the situation is a certain national disgust with all things Texan, including, therefore, oil. The events that made oil an "issue" were President Johnson's 10 percent surtax to fund the unpopular Vietnam War, the leaking oil well off Santa Barbara that befouled California beaches and marinas, and the oil companies' price increases soon thereafter. The catlyzing event was a statement by the Secretary of the Treasury in the last days of the Johnson period in Washington, Joseph Barr.

"I will hazard a guess," he told Congress' Joint Economic Committee, "that there is going to be a taxpayer revolt over the income taxes in this country unless we move in this area" of tax reform. "The revolt is going to come," he said, not from the poor, who, he said, do not pay very much in taxes, but from the middle class, "who pay every nickel in taxes at the going rate. They do not have the loopholes and the gimmicks to resort to." The tax system is voluntary, he said, and will not work unless people support it. They want to feel they are not paying more than their share, and they believe everyone should do his part. "This does not happen," Barr said, "when you are running a corporation and you look at the international oil companies and see they pay little or no taxes. They pay huge taxes including royalties to other governments, but not to this government."

The context of this warning was, after all, the revolt of students, blacks, and many adults against the war, our domestic social failures and the increasing militarization of the society, and the distraught national reaction against and awareness of the power of protest. No one needed to explain the possibilities of a tax revolt to politicians, many of whom no doubt damned Barr in their cocktails, and oil's battalions of publicists and cosmeticians must have felt that left-wing Lucifer himself was orchestrating the conspiracy of events.

The alert spread swiftly into four neighborhoods, the House Ways and Means Committee, the Senate Subcommittee on Antitrust and Monopoly, the Senate Finance Committee, and the offices of the oil industry. Oil-state congressmen began feeling the pressure to get cracking in the industry's defense.

Oil has five or six special tax benefits, of which depletion is only the biggest one. Even President Nixon, whose promise in Texas on the depletion allowance—"As President, I will maintain it"—could hardly be stronger, is letting his people at the Treasury Department make plans for other reforms in oil taxation. Carefully explaining the foreign tax credit as it works to oil's special advantage, Edwin Cohen, the Assistant Secretary of the Treasury for tax affairs, says, "The President has not indicated to us that the oil tax system is not to be changed."

"There's got to be a *substantial* change in taxation of income developed by extractive industries, which include oil and gas," Chairman Mills said in the midst of his committee's work on the tax bill. He said he himself favored a cut in 27.5 percent depletion, and by more than a token two or three points, and a scaling down of the rates for other minerals. Oil producers have been selling rights to their future income in order to change the timing of their earnings to reduce their taxes, and this, Mills said, will be "cut out entirely." There was also some feeling, he said, against allowing depletion on foreign oil production.

Sensing that something was going to give, oil's defenders began looking around for anything but oil. Late one afternoon Senator Russell Long of Louisiana, the chairman of the Finance Committee, emerged from a lecture by the Democrats' leading tax-reform expert, Stanley Surrey, once an assistant Secretary of the Treasury, to the Senate Democratic Policy Committee, and exclaimed, "The biggest single defect causing people's not paying any tax is capital gains. Then there's the way they tax real estate. Another one is so-called charitable deductions. I got out a list of all the people who made all the money and paid no taxes, and I didn't find out any of them did it because of the depletion allowance. Depletion might have been a part of it. . . . Capital gains—that's the big one!"

Under so many strains, the tanker of "oil industry unity" sprang some leaks. In Texas one learned that certain discussions were going on behind closed doors between the House taxers and the independent oil producers, who do not get as much out of depletion, even proportionally, as the majors. From a spokesman for a major importer one could deduce that 27.5 percent was not quite as necessary to him and his associates as their foreign tax credit arrangements. Then the president of the Texas oil independents, Netum Steed, made public a letter he wrote to Nixon stating that if oil taxation had to be a subject of tax reform, "some reduction in the 27½% depletion factor might well be sustained without irreparable injury," provided a change was made to give smaller producers more depletion than they get now. An executive of an oil association said of men he works with from the major oil companies, "The're scared." The Mills commmittee showed why, when it recommended cutting depletion to 20 percent. The New Englanders were united against the Southwesterners in a grim struggle for very large prizes, with public indignation working for the Yankees—and the power of oil, as usual, easing in from Texas.

The theory of the oil depletion allowance depends on the assertion that an oil venture's capital is not the same thing as its capital investment. Oil, it is explained, is an irreplaceable "wasting asset," a limited quantity of an elusive substance that is being depleted. Therefore, we are told, when oil is discovered in the ground, it becomes capital that should be valued on the basis of its selling price. Once capital investment has thus been eased over into the more adaptable idea of capital, the conclusion is drawn that the income tax, being a tax on income, should not apply to that portion of the income from the oil which is a return of capital.

By this one turn in economic doctrine, an oilman's capital is cut loose from his actual investment. "No account is taken . . . of the actual cost," explains political scientist Robert Engler. The purpose of the allowance, said *Business Week* back in 1961, is "to permit . . . tax-free recovery of the value of the deposit."

But why should the allowance be, as Paul Douglas of Illinois said when he was a senator, "27½% of gross income up to 50% of net income, world without end, amen"? By the doctrine, the resulting annual deduction "represents the reduction in the quantity" of the oil. It is "the loss in value in the process of working a wasting asset." In the elegant formulation of Humble Oil's economist for many years, Dr. Richard Gonzalez, "The depletion of reserves by production creates a reduction in capital values." The allowance was granted, explained former Jersey Standard president M. J. Rathbone, "on the basis that when a prospector found an oilfield and produced that oilfield, he was in effect going out of business." The calamity increases, the more oil you sell. As you make your profit, you are losing about half of it, even though you keep all of it.

Despite this rather special misfortune, when the time comes to tell the stockholders how much money has been made, oil companies figure it out in the ordinary way. By investment they mean their actual costs. Profit is income in excess of those costs. The effect of percentage depletion in the financial accounts is a reduction in taxes and a higher net profit.

The thought that oil is capital rather than more like a groceryman's stock on the shelf is an article of faith in the oil industry, but is subject to argument. Louis Eisenstein likes the conservative idea that "the capital of a business consists of the actual investment in the enterprise." Or again, "Is it not clear," asked Solicitor General (then Harvard Law School dean) Erwin Griswold, "that income derived from oil production is business income?" Griswold thought this was clear.

Until 1918, oilmen, when figuring their income tax, deducted their costs like other businessmen. That year, however, after the war was over, ponderous, cynical Boies Penrose, the political boss of Pennsylvania and probably the most powerful Republican in the country at that time, spoke a few strange lines on the floor of the United States Senate, and ever since then oil producers have had about half their income tax-free, year after year.

The Wisconsin Progressive Robert La Follette knew what was happening that day in the Senate and cried out in the wilderness he knew so intimately, but the three Republican Presidents of the twenties, Harding, Coolidge, and Hoover, stood mute on depletion while their Secretary of the Treasury, Andrew Mellon of Gulf Oil, profited from it.

Depletion had its beginning in the original income tax law of 1913, which provided for a

depletion deduction up to 5 percent of gross income, limited overall to the original cost of the property or its market value in 1913. The market value option was the pinprick in the law that has been expanded in the course of fifty years into what Douglas calls "a truckhole."

Under the 1916 tax law, to get any depletion an oilman had to show that his actual production was declining, and he could not get back overall more than his actual costs (except on acquisitions before the income tax had gone into effect). Early in 1918 the Bureau of Internal Revenue was issuing instructions on how to compute the actual investment in oil and gas wells.

Later that same war year, a Committee of prominent oilmen was formed to obtain tax relief for the industry and warned that the high war taxes would discourage the oil wildcatters who were discovering new fields. The chairman of the committee, who helped lobby through its program, was later rewarded by the industry with $20,000, a trifle, everything considered.

The small companies, said the oil committee's spokesman to the Senate hearing, were discouraged by the high wartime tax rates. And then he mentioned another matter that could be dealt with "in almost a moment . . . a reasonable allowance for depletion without statutory restriction." Oklahoma's Senator Thomas Gore, who was later to become an oil lobbyist himself, first mentioned the new theory, saying that the major part of produced oil represents not profit, but capital. A lobbyist for the big companies testified before the Senate Finance Committee that the oilman "sells his capital assets from the day he begins producing," and it is not fair to treat his business like banking, manufacturing, "and other going industries."

Senator Penrose, the ranking Republican on the committee, was a man of legendary appetites. Someone with an obscene sense of history recorded that one evening Penrose consumed for his dinner a dozen oysters, chicken gumbo, a terrapin stew, two ducks, six kinds of vegetables, a quart of coffee, and several cognacs. On another occasion his repast consisted of nine cocktails, five highballs, twenty-six reed birds in a chafing dish, wild rice, and a bowl of gravy. He weighed 350 pounds.

All sources seem to agree that Penrose sedulously served the large corporate interests. He received their political gifts—on one proved occasion, $25,000 from John Archbold of Standard Oil—and passed out funds to functionaries, but never kept a rakeoff for himself. The last of the old-style bosses in Pennsylvania, born to wealth, he was no hypocrite or small-timer. His principal cause was the protective tariff. He told an associate that he had decided early to "control legislation that meant something to men with real money and let them foot the bills." By 1918, the Pennsylvania business baron to whom he looked for cues and support was Andrew Mellon, a leading member of the banking family that had become dominant in Alcoa and Gulf Oil. Two years later it would be Boies Penrose who would say to Senator Harding, "Warren, how would you like to be President?", and then it would be Boies Penrose who would say to Mellon, "I want you to be Secretary of the Treasury."

On December 17, 1918, Penrose presented the Senate the Finance Committee's proposal to stop limiting depletion to the capital actually invested and to base the deduction thereafter, for wells not bought in "proven fields," on the value of the discovered oil. His argument occupies just twenty-one lines in the *Congressional Record*. When, for example, a ton of coal is sold, he said, part of the excess of the price over cost must be treated as a "repayment of what was invested." But then—in one short phrase—Penrose told the Senate that the proposal based depletion for wells and mines on market value "instead of cost."

Arguing for the House tax bill, which adhered to what is now called cost depletion, La Follette warned that under the Penrose plan a mine or oil well might cost $100,000, but on the basis of its enhanced value because of a discovery, the cost might be deducted ten times. He understood, and he opposed. He got only seven votes, including those of William Borah and George Norris.

The chairman of the House tax committee, Claude Kitchin of North Carolina, told the full House that he was opposed to the several provisions for mines and wells as "pieces of special favoritism." He was the House Majority Leader, but he had been pilloried and his influence reduced because of his opposition to Wilson on our going into the war, and one can see in the look of his words on the page that he did not expect to be heeded. He was not, and thus it was that half a century ago depletion was broken free and clear of any limitation to a producer's actual investment.

In our period, Treasury studies show that average oil and gas depletion deductions are ten times what the actual cost depletion would be. In 1948 and 1949, oil and gas producers were deducting more than nineteen times their cost each year. On a group of products, including iron, copper, and silver, depletion deductions in 1960 were *ninety-one times* cost depletion each year. C. Wright Mills has written, "The important point of privilege has less to do with the percentage allowed than with the continuation of the device long after the property is fully depreciated." The late Senator Robert Taft of Ohio said that when a man has gotten back his entire costs, "it does not stop," and another leading Republican critic of depletion, Senator John Williams of Delaware, makes this point even more clearly: "There is no limit."

The Mellons' Gulf Oil and other oil companies began collecting the extra profit the 1918 amendment gave them. Mellon, a spare, handsome, and aristocratic man, stayed on in the Treasury job throughout the twenties. He appears never to have spoken publicly about depletion, but he became entailed in a public "battle of the millionaires" with Senator James Couzens of Detroit, who succeeded La Follette as depletion's nemesis in the Senate. Couzens, who had been in effect Henry Ford's original partner in the Ford Motor Company, charged that Gulf Oil and other corporations had been unduly begifted by tax rebates involving, in part, depletion. In the one year 1919, according to an inquiry Couzens conducted, Gulf's depletion allowance had been 449 percent of its net income.

As administered, discovery-value depletion had not been limited to newly discovered wells. The 1918 law was only three years old when a Treasury tax official who had been working in the minerals section attacked discovery depletion as "an enormous privilege," "really a gift in the form of tax-free income." He explained how, under an artificial definition of what a "proven field" was, thousands of wells were qualifying, making this "unquestionably one of the greatest loopholes of escape from taxation to be found in the entire statute." With the deduction often exceeding the entire income from a well, Congress in 1921 limited it to 100 percent of profit, but again in 1924 a Missouri congressman warned of "a great leak" in the tax law because of the way a proven field had been defined, letting every well drilled in six square miles get "discovery" depletion. The deduction was limited to 50 percent of profit that year, but just about every well was still getting it. Of 13,671 claimants studied by the Couzens investigation, only 35 had been the discoverers of new oil pools; only 3.5 percent of the depletion was going to wildcatters. In Mellon's Treasury, depletion had become a well of flowing gold for th oil companies.

In equity, this was as great a scandal as Teapot Dome was in fraud, and could have been the basis for reform, but there was another difficulty—there had been administrative problems. How could anyone estimate the value of the oil under a well in the 1920s? You had to know how much oil there was down there and its fetching price in the future; one guess multiplied by another one, as a senator said.

One day late in 1925 Mellon's spokesman had just told the House tax committee that depletion should be limited to "the man who makes the discovery" when the chairman of the committee said he wanted to wipe it out entirely because it was a wartime measure and was no longer justified. Representative Cordell Hull, who wrote the original income tax law, agreed. The committee, however, limited itself to reporting that obviously discovery depletion, "the purpose of which was to encourage the wildcatter or pioneer, should be limited to those who make an actual discovery."

Disregarding this report, Senator David Reed of Pennsylvania, whose father had been one of the original members of the Mellon syndicate in Gulf, suggested simplifying things with "an arbitrary percentage for all taxpayers." Reed related to his fellow Finance Committee members that he had been told by the president of the Mid-Continent Oil and Gas Association at lunchtime that the industry had spent more money for drilling in 1925 than the value of their oil production. "So," concluded the senator, "the industry can truthfully say that it has not made a cent on all its business of last year." The Mid-Continent man, Reed added, had suggested a deduction of 25 percent of their gross income. This appears to be the earliest printed proposal of a rate for percentage depletion.

Senator Reed Smoot of Utah, one of Russell Long's predecessors as chairman of the Finance Committee, assured Senator Samuel Shortridge of California that in taxing income from mineral production, the cost of production didn't matter, it just didn't matter:

The CHAIRMAN. There is no depletion on this program. The question of depletion is entirely wiped out.

Senator SHORTRIDGE. Well, what would be the basis then?

The CHAIRMAN. That is for us to determine. . . .

Senator SHORTRIDGE. No matter what it cost to produce it? . . . the cost of producing an ounce of gold may vary extremely in different sections.

The CHAIRMAN. Well, it would not matter whether it was of the same value or not. You can produce gold perhaps cheaper in California than we can in Utah, but we can produce silver cheaper than you can.

Senator SHORTRIDGE. Yes. . . .

Senator REED of Pennsylvania. In other words, you take account of depletion by giving them a lower income tax rate?

The CHAIRMAN. That is exactly it. . . .

Senator REED. We deduct depletion based on gross income.

The CHAIRMAN. Oh, we want depletion done away with entirely . . . we would get away with the question of depletion entirely.

Not from. He said with.

Reed carried the 25 percent proposal in the Senate debate, contending that the oilman's "capital is constantly disappearing" as it is "depleted by the flow of oil and gas." Couzens, himself forty times over a millionaire, tried to limit depletion to actual investment. Discovery depletion, he said, had awarded $4 million to Gulf Oil alone in two years, and Gulf was hardly a wildcatter. With the war over, the supply of oil ample, and the wildcatters all but forgotten as the pretext for the allowance, Couzens remarked, he did not see why "the Standard Oil Company, the Gulf Oil Company, and other big oil companies" could not pay their income taxes like every other company.

It was a bitter debate. Couzens and an oilman-senator from Oklahoma named William Pine differed over whether one of them was a liar or the other an ignoramus.

"We owe it to the people of the country to simplify this law," Senator Reed stated. "The whole thing is in the line of simplification, getting rid of this everlasting accounting." By one vote the Senate defeated an amendment to approve a rate, not of 25 percent, but of 35. A member of the Finance Committee, William King of Utah, called what the Senate was dong "gross favoritism . . . under the guise of simplifying the law." In what reads now, after the passage of years, as resignation, Senator King, a Mormon and former jurist said, "I cannot understand this great solicitude for the Standard Oil Company, the Shell Oil Company, the Sinclair Company, and the other great organizations, whose annual profits are many hundreds of millions of dollars. . . . I am afraid we are blinded because of the power and the bigness of great corporations and sometimes deal unjustly with the people." The Senate approved 30 percent by a vote of 48 to 13, and the conferees accepted (as a compromise on behalf of some sentiment in the House for 25 percent) the figure of 27.5 percent.

Although rattled by Couzens' attacks on him, Mellon had maintained his crusade to lower taxes on wealth and business, and the 1926 revenue bill was widely regarded as his triumph. When President Coolidge signed it into law, Mellon was standing beside him. During Mellon's tenure as Secretary of the Treasury, his family's Gulf Oil more than doubled its assets.

Bromides about the history of depletion often emphasize that 27.5 percent was adopted in 1926, but the killing off that year of the restriction of the privilege to wildcatters' newly discovered wells was a change at least as important as the percentage system. The original idea of a specific incentive to expand U.S. oil supplies was blurred, and a new privilege began to generate its adaptable new reasons for existing.

As soon as the Democrats swept in, President Roosevelt began trying to abolish percentage depletion. His Treasury Secretary, Henry Morgenthau, Jr., told House taxers in 1933 that it was "a pure subsidy to a special class of taxpayers" and should be eliminated. Among the few senators who agreed was Russell Long's father, Huey, who said its elimination would prevent "those who have already had 100 percent coming back and getting another 100 percent." In 1937, two weeks after Lyndon Johnson was sworn in as a freshman congressman, Roosevelt sent Congress a message condemning depletion and other loopholes as attempts "to dodge the payment of taxes" and "mulct" the Treasury, and Morgenthau called depletion "perhaps the most glaring loophole." In spite of the Depression, the New Deal, and Roosevelt, Congress did nothing.

Came the war, "the crisis of democracy." Six weeks after Pearl Harbor, Morgenthau again spoke against depletion and was promptly told by the chief lawyer of the Independent Petroleum Association of America that "this issue, if pressed, will force practically every oil producer in the country to abandon his work and come to Washington." Morgenthau implored the Congress: "This loophole," he said, "is a special privilege," and the money was needed for the war. Senator Taft observed that 27.5 percent was "to a large extent a gift . . . a special privilege beyond what anyone else can get." For the industry, former Senator Thomas Gore said depletion had worked, providing an adequate domestic supply of oil, "and we are now asked to abandon that policy in time of war." The Congress answered the Administration's appeal by extending depletion to ten new minerals, including ball and sagger clay. When Roosevelt vetoed the 1944 tax bill, citing as reasons the extension of depletion to potash and mica and a comparable special treatment for timber, Congress overrode him.

"I know of no loophole . . . so inequitable," President Truman told the Congress in 1950. It bore, he said, "only a haphazard relationship" to encouraging oil exploration. In 1942 Morgenthau had tried to stop oil's second most important tax privilege, the immediate writing off of intangible drilling and development costs on successful wells; Truman's Treasury chief told Congress that depletion plus the write-off provided a mechanism for pyramiding oil assets without paying any or much income tax.

Finally, a reform movement with staying power took hold on the Hill. "It began in 1951 when they brought in a new tax bill," Paul Douglas recalls in his office in Washington. "Hubert Humphrey organized a seminar. A man would come in from the Treasury in secret, at night. It was like Christians meeting in the Catacombs."

The Truman Administration was on record, but, Douglas says, "They didn't mean it. They gave us no help. Truman didn't really mean it on civil rights, didn't really mean it on tax reform." The band of liberals pressed the fight, but felt increasingly isolated, abandoned, and assailed.

Sam Rayburn, a rural Texan, was Speaker of the House. Dwight Eisenhower, a Republican born a Texan, became President. Lyndon Johnson, an ambitious Texan, took over the Senate. And then Robert Anderson, a canny Texan who was intimate with each of the other three, became Eisenhower's Secretary of the Treasury. In such a context, the demands of La Follette, Couzens, Roosevelt, Morgenthau, and the others that depletion be abolished were given up as hopeless, and the reformers retreated to a strategy cajoling for reductions. How about 15 percent? No? Well, then, what about 15 percent just for the very biggest oil companies? No, the question in the fifties was not, would oil lose depletion; the question was, what else would it get?

The history of depletion was summarized, somewhat personally, by Speaker Rayburn in an interview in 1960, the year before he died. "Depletion has been in effect for thirty-four years, and the Democrats have been in control twenty-eight of those," he said. "Do you suppose if we'd wanted to do anything about depletion that we wouldn't have done it by that time? But," said Rayburn, who regarded oilmen as ingrates at election time, "they just hate." They had tried "to destroy me. Destroy Lyndon Johnson. Destroy me." His biographer, C. Dwight Dorough, said Rayburn was close to tears and covered his face with his hands.

Even so, sentiment for reform had built steadily. In 1951 only nine senators voted for Humphrey's cut in depletion. Seven years later thirty-one voted for Proxmire's. Five years ago thirty-three voted for the Williams cut and thirty-five for Douglas'. Douglas and Humphrey are gone, but so are Johnson and Rayburn.

As chairman of the powerful Finance Committee, Russell Long is the most strategically placed congressional ally of the oil industry. He is probably the shrewdest and most active defender of depletion in the Senate. He knows the subject and pounces at once when someone slips in debate. He often cites statistics prepared at his request, as he says, by the staff of the committee; his chairmanship entails his managing the tax bill on the floor. Whatever the House was to do on depletion this year, no one gave the reformers much chance in Russell Long's committee. They would have to make their charge from outside the walls as in the days of yore.

"We gonna move heaven and earth to protect 27.5 percent," says Long's friendly, country-style administrative assistant, Bob Hunter, "I couldn't kid you if I wanted to—we're *violently* interested. We're not gonna be lulled by 26 percent, 25, 24 . . ."

Senator Long is also an oilman. He readily acknowledges that he inherited valuable oil and gas properties and that he has participated in drilling thirty or forty wells. He says his income from the inherited properties exceeds what he makes in the Senate. When asked how much he has also made in drilling wells, he answers vaguely.

Hunter says that the few shares of stock Long held in the Win or Lose Corporation were "worth quite a bit. He has these oil holdings all over the state because of that. He has no conflict of interest."

During the full debate on depletion in 1964, Long placed charts on the oil industry's profits in the rear of the Senate chamber. Senator Douglas observed that they were well-fashioned and bore evidence of being an expert job, but left out the income from overseas operations.

There was an unusually personal exchange between Long and then Senator Joseph Clark of Pennsylvania. Clark, a committed foe of depletion, remarked that for many years his own main source of income had been his royalties from Humble Oil holdings. Long observed that as a matter of fact, under the Douglas amendment to cut depletion on very large oil incomes, which Clark was at that moment supporting, Clark's income would have been protected from a depletion reduction.

"The oil depletion allowance is so unconscionable that I cannot sleep very well some nights when I realize that I am the beneficiary of it," Clark retorted to Long. Unfazed, Long asked Clark if he was making more than a million dollars a year from his royalties—no, $60,000 to $70,000 a year, Clark replied. Well, then, said Long, the Douglas amendment left Clark "well protected."

"In my judgment," Clark said, "there is no conceivable excuse for my getting tax-free income because my great-grandfather . . . had the good fortune or the good luck to squat on that land."

Senator Long's Populist father, Huey, went into the oil business under dubious circumstances in the last year of his life. Those were brazen days in Louisiana. The Kingfish had such total control of the statehouse that his wealthy foes called him a dictator, and with cause. After he was elected to the Senate, his hand-picked successor as governor, O. K. Allen, and the entire Long slate were elected by the believing people. The time was the fall of 1934, about six months after Huey had sided with Kenneth McKellar's amendment to abolish percentage depletion.

From its inception the Win or Lose Corporation looked like a political oil company. The president was State Senator James A. Noe, a good friend of Huey's. The vice president was Colonel Seymour Weiss, whom one Long biographer called Long's "prime minister and chancellor of the exchequer," perhaps because Long did too. The company's secretary was Huey's personal secretary, Earle Christenberry. And these three men were the only incorporators.

Russell Long says Senator Noe told Huey Long that he wanted to apply for a state oil lease in the part of the state he represented (the leases were not awarded by competitive bid in those days), and that his father told Noe that he was agreeable to going into the business if it wasn't going to cause him "a political problem." Lease No. 309, executed on behalf of the state by Governor O. K. Allen, gave Noe the right to drill a minimum of fifty wells on state lands in the bed of a river and five bayous. This is the start that gives Russell Long his inherited oil income, because as of 1940, as records on file in Baton Rouge show, Huey's widow owned thirty-one shares, a third of the company, and was the president. When it was liquidated in 1951, she owned eleven shares, and Russell Long six. O. K. Allen, Jr., had four.

After Huey Long was assassinated in 1935, the company obtained a number of other state leases, Russell Long says; but he emphasizes that he of course had nothing to do with this. "What I inherited," he says, "was the equivalent of 6 percent of the stock in the company."

In addition, Russell Long has participated, with his mother, brother, and sister, in the drilling of about thirty or forty wells in Louisiana's Sligo field and in De Soto Parish south of there, the senator says. It began when his mother was offered the opportunity to participate as a partner in drilling a well between a dry hole and a gas well. With "the children's insurance money," she went in on it, and a very good gas well came in. "As a partner she participated in other wells, and because she had good fortune, she offered her children the opportunity to participate in it."

Long was elected to the Senate twenty-one years ago. How much has he made from this drilling? "I guess we're probably ahead, but not by a great deal," he says. "In drilling and producing we've probably made . . . we're doing . . . at least it's made me conversant with what we're talking about."

In 1957 Long defended 27.5 percent in the name of Grandma Jones, the holder of a little bit of stock in an oil company who would lose $5 a year under a proposed reduction of depletion. Holding forth in the best Louisiana tradition, he declared, "I would like to protect Grandma Jones's little $20 dividend." It appears that he is also protecting his own oil income of some sum in excess of $42,500 a year. The oil depletion allowance enriches him personally.

Senator William Proxmire of Wisconsin, vice-chairman of the Joint Economic Committee, asked what he thinks about oilman-senators taking part in debates and votes on oil matters, said at once, "Certainly those with oil interests ought to disqualify themselves on the issue." There is no way to know how many senators this would silence on depletion, since their statements on their holdings are shut from public view in sealed envelopes in the U.S. Comptroller General's office, but if Proxmire's opinion were the rule, the chairman of the Senate Finance Committee would have to step aside.

Long sees no conflict or impropriety in the situation. "I come from an oil-producing state, and if I was not cooperating with oil against those people who are out after it, I really don't think I'd be representing my state" he says. In Louisiana, he says, just about everybody who has much is in oil. It also brings the state 74,000 jobs. "I've never heard anybody complaining about someone from a state that produces cotton being interested in cotton"—and the same goes for electronics, or tobacco, he says.

Once he and Senator Eugene Millikin of Colorado were discussing this very subject, Long says, and Millikin told him that anytime he, Millikin, had a financial interest in something "parallel to the best interests" of his own state, he never worried about it. By that doctrine, Long says Millikin told him, the Colorado senator had an interest in shale oil.

Besides, when Long was in state government as an aide to the governor, he says, he helped treble the state servance tax on oil and gas. "I don't know of any way you coulda raised my taxes more than that."

He contends, "We just haven't come down to the thing yet that a legislator has to have no interests or dispose of his outside interests. Theoretically a legislator is not expected to be unprejudiced and unbiased . . . If someone has a conflict of interest, that's something that should be considered when he's up for relection."

His argument is not unprecedented. Senator Robert Kerr of Oklahoma, as the second-ranking Democrat on the Finance Committee in the fifties and early sixties, candidly and effectively protected depletion while profiting from it himself. Senator Douglas remembers how Kerr would hunch his chair around to share the head of the committee table with the chairman, Harry Byrd, who was getting old. Kerr parried charges of conflict of interest with the argument that the people of Oklahoma knew he was in the oil business and elected him because they approved of what he was doing.

Kerr and his family owned about a fourth of Kerr-McGee Oil Industries, Incoprorated. Records at the Securities and Exchange Commission show that in the seven years before Kerr died, this company paid less than 13 percent income tax on total aggregate profits of $77 million. This was about usual for oil companies at that time. In 1958, for instance, companies producing oil, gas, and the products of these and coal paid 13 or 14 percent federal and state corporate income tax. The effective rate for all industries was 50 percent. With oil and gas paying a third of that paid by other industries, Senator Kerr had something to defend, just as Senator Long does.

In the protection of the industry's privileges, oil money in elections is even more important than oilmen in high office. One of Congressman Lyndon Johnson's services to the New Deal was raising money, including Texas oil money, for Democrats running for the U.S. House in 1940. The notoriety of contributions from such Southwestern oil millionaires as H. L. Hunt and the late Roy Cullen cannot rival the ubiquity of contributions, season after season, from the nation's leading oil families. Only the historically famous slipup involving $2500 shadily offered to a righteous senator prevented a bill to free natural gas from federal price control from becoming law in 1956. Officials of twenty-nine of the largest companies gave (in sums of $500 or more) a recorded $344,997 to Republicans and $14,650 to the Democrats in the 1956 general election campaign. That same year, three family groups whose wealth is associated with oil—the Mellons, Pews, and Rockefellers—contributed $469,554, all of it to Republicans. In the year of the Kennedy-Nixon campaign, officers and directors of the American Petroleum Institute gave Republicans a recorded $113,700 and Democrats $6000; in 1964, a significantly different situation, $48,310 to Republicans and $24,000 to Democrats. And these figures are just the spray from the gusher.

When a man gets roughly half his income tax-free, his idea of common prudence often impels him to invest some of it in the election of his political friends, and usually he can decide who they are by how they vote; but new candidates can be a special problem. In the midst of the intensifying assaults on depletion in the Senate in 1957–1958, oilmen had more than the usual interest in how the new candidates of 1958, especially the unreliable Democrats, might vote if elected.

One consultant and functionary of the Democratic senatorial campaign committee was dispatched to the West with certain instructions. According to former Senator Douglas, who says the consultant told him the story while the two of them were driving one night from Pullman, Washington, to Lewiston, Iowa, Frank Moss, a county attorney, was running for the U.S. Senate in Utah. The Democratic messenger reached Moss by telephone and said to him, "Judge, would you like $10,000?"

"Would I like $10,000?" Moss exclaimed. Why, it could make the difference between victory and defeat. He could finance two TV programs and probably three on radio, which would mean a great deal in a state like Utah. "Have you got the $10,000?" he asked.

"Well, I'm sorry to say there's a catch to this. You can have the $10,000, provided you will agree to maintain the 27.5 percent allowance on oil."

There was a silence on the other end of the line, and then Moss said, "Well, I don't know. We've struck oil in this state. It may be all right. But I don't *know* about it. I don't know about it, and I don't want to commit myself on something I don't know about. If the only way to get the $10,000 is to be for something I'm not sure about, I'll just have to say I won't accept it."

The man from Washington said, cursing to himself, "Oh, my God, we've got an honest man, and we're sending him down to defeat."

He then telephoned a wealthy liberal Democrat in New York and told the story. The Democrat asked the candidate's name again, and where he was running, and wrote a check for $10,000, with no strings attached. Douglas told this story in Utah and thinks it made the difference: Moss won.

Moss gave his own interestingly different recollection of the incident. "It's basically correct," he said. "I do remember this man calling me and saying he could get me some money and that all I would have to do would be for him to be able to assure the donor that I would support the oil depletion allowance when it came before the Senate. . . . He just said, 'I can get you this money if I can assure them . . .' "

Moss says the man did not name the donor, nor does Moss recall a sum being specified. "I have heard him say since that he had tears in his eyes even though he had had to be the conduit for the offer," the senator adds. Moss has always felt friendly toward the man for going on and helping him in the campaign.

The emissary, who works in Washington now for a union-related group, says the conditional offer he bore west that year was not just for Moss, but for a number of senatorial candidates.

"I was informed that if I could get some of these fellas out west to express their fealty to the golden principle of 27.5 percent, there might be a pretty good piece of campaign change involved," he says. Operating out of Los Angeles, "I passed the word to a number of the candidates." He named, offhand, five of the candidates in whose races he took or sought to take a hand.

Although Senator George Smathers of Florida was chairman of the Democratic senatorial campaign committee in 1958, Lyndon Johnson ran it, along with Bobby Baker. That year the committee reported expenditures of $319,000.

Who was the donor, or who were the donors, behind the political munificence in 1958? "Oh, that wouldn't be fair," the messenger said. And what did the other candidates say? He laughed. "You figure that one out," he said.

Of the other four candidates he named, one was not elected; another was elected but has since died. A third, Senator Gale McGee (Democrat, Wyoming), who now upholds depletion, says that he recalls no discussion with the man on it nor any contributions from its beneficiaries, who, McGee says, backed his opponent that year. The fourth, Senator Howard Cannon (Democrat, Nevada), says he "did meet" with the man in 1958, but they definitely did not discuss the depletion allowance. The messenger later said that Moss was the only senator he talked to personally about it.

Senator John Kennedy voted to reduce depletion, but when he ran for President with Johnson on the ticket, he needed campaign money; he equivocated on depletion. As President he proposed certain reforms to increase the industry's share of the tax burden, but when Senator Williams asked Kennedy's Treasury Secretary, Douglas Dillon, if 27.5 percent itself should be changed, Dillon replied, "We have studied that matter at some length. We probably have not studied it enough. I do not know how to study it enough."

Oilmen figured correctly they had little to fear from Johnson on depletion (everybody

understood that, and the debate just died away). Robert Kennedy was out of the question for the oilmen—they sensed in him an enemy—but Eugene McCarthy's record was complicated. His first five years in the Senate he voted in committee and on the floor to reduce depletion, but early in 1964 he voted against the same reduction he had supported before. He characterizes his record as always voting for a reduction "when the procedure was orderly or had some chance of success." There are some reports that he raised $40,000 for his campaign one day at the Houston Petroleum Club. He recalls that the guests were listed as a business group, not oilmen particularly, and says that while contributions may have developed from the meeting, he does not know in what amount or from whom. J. R. Parten, a liberal Houston oilman who supported McCarthy, was present, and it was on this same occasion that Senator Ralph Yarborough of Texas (who votes for depletion on domestic production while criticizing allowing both depletion and huge foreign tax credits on foreign production) became one of the few senators to endorse McCarthy.

Vice President Humphrey was yet another question. Murray Seeger has reported in the Los Angeles *Times* that when Humphrey's man refused to assure a group of oil millionaires in the Houston Petroleum Club that Humphrey would support 27.5 percent, they shut their wallets against him. Richard Nixon was still for depletion, like a substantial majority of Republicans in Congress, and his campaign was funded accordingly. Preliminary reports indicate that the Mellons gave the Nixon campaign $215,000 and the Pews, of Sun Oil, contributed $84,000.

The oil industry has three distinct kinds of privileges, or, if you prefer, incentives: proration, import controls, and tax advantages. One of the choice moments during the Hart antitrust committee's hearings on oil imports last spring occurred in the context of the melancholy amusement of Dr. Blair, the group's chief economist, that such energetic proponents of free enterprise rely on state intervention to such an extent. Harold McClure, Jr., president of the Independent Petroleum Association of America, was on the stand.

BLAIR. Your industry enjoys various exemptions from the antitrust laws. . . . You do not have a free market.

MCCLURE. In the *United States* we don't have a *free market?*

An oil industry program to get a production-limitation movement going in the 1920s was aborted when the U.S. Attorney General ruled in 1929 that the plan, advanced in the name of conservation, would be an attempt to win immunity from the antitrust laws. The companies then turned to the states. In 1930 the great East Texas field came in, leading to overproduction, waste of oil, and very low oil prices. As W. J. (Jack) Crawford, the tax administrator of Humble Oil, says, "We had to let a president of Humble quit to become governor to establish proration," that is, production control. Governor Ross Sterling, the former Humble president, ordered state troops into the oilfield to stop all that wasteful free enterprise. According to an oil history subsidized by Jersey Standard, the commander of the troops "had been called away from his duties as chief counsel for the Texas Company."

The system, which is most significant now in Texas and Louisiana, tells producers exactly how much oil, and no more, they may legally produce each month. The total production is in effect what the buyers want to buy. On rare occasions when the state oil agencies have authorized more production than the companies have wanted, the companies have refused to buy the excess. This is called "pipeline proration."

Control of production entails control of prices to whatever extent the scarcity of the product affects the prices for it. Thus the states and the federal government (which bans "hot oil" in interstate commerce) are acting in effect as the production limitation division of an oil cartel. If the companies did the work themselves they would be violating the antitrust laws. Proration is perhaps the last significant persistence of the early New Deal experiments in the collusion of government and big business to control production and prices.

Officials of the oil states generally insist they do not intend to maintain prices and that their only purpose is conservation. There is general acceptance of the need to protect each owner's rights in an oil pool and to get the most oil out of it that is technologically feasible. Neither objective, however, entails limiting production to set prices, which is the import and effect of the states' "market demand proration."

As a high Jersey Standard official said in 1939, "Price has influenced the proration authorities. . . . The record is so clear that it would be stupid to say it hadn't. . . . It is quite natural."

When he was chairman of the Texas Railroad Commission, the oil-regulating agency in Texas, William Murray conceded that if the commission dropped oil production way down, the price would go up, and, "If we let the stocks [the above-ground supplies of oil] run up, we would create waste, and you would also break the price." The companies realized proration was to their interest, he said, and "became the biggest policing agents of all. They even had their own detectives."

The U.S. proration system, the Senate Small Business Committee concluded in 1949, forms "a perfect pattern of monopolistic control over oil production and the distribution thereof . . . and ultimately the price paid by the public." A lifelong student of the oil industry, Cornell economist and dean Alfred Kahn, told the Hart committee that as the postwar corporate tax rates increased, skyrocketing the value of the depletion allowance, the industry developed surplus oil that would have lowered prices—except for the sharp production cutbacks which were ordered by the Texas Commission. Instead of falling, U.S. prices rose. Proration, Kahn said, lets the majors "fix their own prices and make them stick."

Even this system, however, could not by itself have protected U.S. oil prices from cheap Arabian imports in the fifties. The Middle East has about 60 percent of the world's oil. It flows up the pipes so powerfully out there, the average well produces 5000 or 10,000 barrels a day compared with the average American wells fourteen barrels a day; it costs only ten or twenty cents a barrel to produce; and it can be delivered to our East Coast for $2, about $1.25 cheaper than U.S. oil. Freely imported, it could sharply reduce the price of U.S. crude oil and everything that comes from it—gasoline, heating fuel, raw materials for the petrochemical industry, and therefore also plastics, tires, sweaters, medicines, antifreeze, detergents, and other things. The fact that this has not happened is not an accident in an open marketplace.

In 1952 the Federal Trade Commission staff reported that seven international oil companies, including the five American giants, constituted an international oil cartel that owned two thirds of the world's oil. These seven—Jersey, Gulf, Texaco, Standard of California, the firm now called Mobil, and the two foreign-based internationals—limited production, divided up markets, shared territories, and followed a system of pricing that eliminated price differences among themselves to any buyer, at any given destination point. So said the staff of the FTC. The pricing system, "Gulf plus," set all prices at the proration-maintained Texas coast price plus freight. Thus the Texas-based system became the foundation of a world oil cartel.

The great Middle Eastern fields were well known before World War II, but the majors did not produce much from them. During the war, the American firms in Saudi Arabia sold Arabian crude to the U.S. Navy for $1.05 a barrel, although its cost, including royalty, was 41 cents; and thus the postwar pricing pattern was initiated. As the FTC report said, the diffeernce between low-cost Arabian crude and the higher-cost Gulf Coast oil was "intercepted by the major oil companies." The world market was not as pliable as the U.S. market, and the world price fell relative to rising U.S. prices. The majors' imports of the cheap Arabian oil into the high-price U.S. market began at the end of the 1940's.

The question was, how much would be too much? At what point might even the U.S. price break? The majors' interest called for the highest combined profit from their U.S. and foreign sales, kept in a ratio that would not endanger the U.S. price. Meanwhile the domestic producers became concerned that they were losing out in the market to the majors' increasing interest in the $1.25 profit difference on the imports.

Apart from straight protectionism, the only argument for import controls has been the contention that lower U.S. prices would cause high-cost U.S. producers to quit and exploration in the United States to decline. Oil and gas now provide three fourths of the nation's energy supply, and visions are conjured of enemies torpedoing our tankers and America "running out of oil" during a national emergency. The traditional protectionist solution would have been a sharp increase in the ten-cents-a-barrel tariff. The Kefauver antitrust committee suggested this, noting that the revenue would become the government's; Yarborough of Texas proposed 84 cents a barrel but could not get his bill out of committee.

Instead, there somewhat mysteriously appeared, in the 1958 Trade Agreements Act, an authorization for the President to establish mandatory controls over oil imports if he found that they threatened to impair the national security. (They did not have to impair it—the threat was enough.) Majority Leader Johnson had declared the year before that the imports were "an immediate threat to national security." In 1959, with Robert Anderson presiding over the Treasury, Eisenhower promulgated a mandatory quota program which gave the profit differential not to the government, but to owners of U.S. oil refineries. Importers and the domestic majors were mollified by this one stroke, at once so costly to the government and consumers. The "import tickets" given to the refineries were worth about $1.25 a barrel and have actually become negotiable; they are bought and sold among companies. The oil-worker union's publicity director, Ray Davidson, says they are "just currency issued by the Department of Interior." Oddball arrangements like the "Brownsville turnaround" for Mexican oil and quota allocations in U.S. territories justified by related social purposes have contributed to a certain uneasiness among the informed, some of whom have said aloud that it's a wonder there hasn't been a scandal.

In 1962 the approved import percentage became 12.2 percent of the demand east of the Rockies. Today about one fifth of the nation's oil consumption is provided by imports. Jersey estimates that in another fifteen years the imports will be meeting about three fourths more of the U.S. demand than they are now.

U.S. independents, who naturally want imports reduced, have been looked upon as the guarantors of competition in the industry, but a certain fatalism about their plight seems to have set in—even in the dens of the Hart committee, where competition is the code word. Economist Henry Steele of the University of Houston told the Hart panel that $2-a-barrel oil in the United States would entail the loss of only 5 percent of U.S. production. Others estimate that

such a change might save U.S. consumers between $2 billion and $7 billion a year by forcing down prices. Republican Senator Roman Hruska of Nebraska warned that the more-imports line of the liberals like Senator Philip Hart of Michigan would be "driving all the business into the hands of the majors," but the antitrusters were not fazed. The newer question among them is whether imports can be increased rapidly enough so that U.S. prices can be reduced. The wishes of the importers are fugitive in words, but have been approximated (by a New York oil investment banker testifying for the industry this spring) as "modest relaxation of the import quotas year by year." Nothing too sudden, such as Machiasport.

Senators Kennedy and Edmund Muskie of Maine, two leading figures in Democratic presidential politics, have joined their fellow New Englanders in support of an ingenious proposal that would in effect exempt New England from the import controls. The federal government would authorize Occidental Petroleum to import its low-cost crude oil from Libyan fields into a "free trade zone" at Machiasport, Maine, refine it in Maine, and sell the products, especially heating oil, at lower prices in New England. Virtually the whole American oil industry opposes this, for it would breach the high-price dike.

Washington, one can see, has awakened to the question the majors started worrying about at least twenty years ago: how much is too much, or, to phrase the issue from the consumers' point of view, why aren't gasoline prices falling?

An important segment of American industry is also becoming restive. Perhaps there is, as a Houston banker has remarked, a kind of gentleman's custom in business circles that unless your own interests are directly affected, you do not criticize another segment of business, but the petrochemicals people believe they are being hurt directly by the import controls. They say the liquid raw materials (called "petroleum feedstock") on which they soon must rely will cost them 60 percent more than foreign petroleum companies pay, and the U.S. oil industry has been trying to raise the U.S. prices even further. Threatening to build their new plants abroad so they can get the cheaper feedstock, the nine biggest petrochemicals firms have banded together to seek their own exemption from the import program—their own Machiasport, as it were.

John Blair engaged in a revelatory colloquy during the Hart hearings with M. A. Wright, president of Humble and therefore a top official of Jersey Standard, of which Humble is the wholly owned domestic subsidiary. Blair presented facts showing that in the last few years, Jersey has lowered its price for Arabian oil in Japan while the price of gasoline in the United States has gone up four or five cents a gallon. Then:

BLAIR. Are we to conclude therefrom that at the same time that you were raising the price to the American consumer, your company was reducing the price to foreign buyers?

WRIGHT. You are working in two separate worlds when you speak about what you do in the U.S. compared to what you do abroad, and what you say is exactly right.

Blair said it would seem to weaken, not strengthen, national security to have Americans paying higher prices for their basic materials while foreign competitors get lower prices. Wright said the purpose of the system is our assuring ourselves of an adequate supply of oil within the United States.

"And when we have controls," Wright added, "we naturally are supporting a price situation. That is true."

Everything seems to be cohering now in this controversy. Look here, remarked Dean Kahn earlier in the year, the first five companies that raised U.S. oil prices all produce more than 70 percent of their own crude oil, which they also buy from themselves: they are increasing their own profits in their end products. Ah-*ha!* charged in Proxmire staffer Marty Lobel. Paying themselves more for their own oil, they increase their apparent profit at the producing end so they can claim more depletion!

Instead of deducting all their costs, oilmen can ring up, free of tax, 27.5 percent of their gross income on oil and gas production, up to a limit of 50 percent of their net income from it. In practice this means that in the oil- and gas-producing business, between 40 and 50 percent of net profit is tax-free, year after year as long as the production continues. When depletion passed in 1926 the corporation tax rate was 12.5 percent. The impact of the formula was magnified by the World War II rates. Taking the present corporate rate and surtax into account, the effect of the original formula has been quadrupled.

In 1960 the oil industry received 44 percent of its pre-tax income tax-free. The Treasury's 1958–1960 depletion survey indicated an even higher rate of about 55 percent tax-free, with the realized rate as a percentage of the gross running just a point or two below the 27.5 percent maximum. For these three years, Treasury said, all mineral producers, considered together, claimed as depletion more than 50 percent of their net income from extraction.

The income thus placed beyond the reach steadily. Early in World War II the estimate of the tax collector has been increasing was $80 million—then $200 million. By 1950 it was half a billion; by 1960 $2 billion; by 1962, the Treasury estimates, the total depletion allowances for all minerals were close to $4.5 billion, $2.3 billion of that for oil and gas companies.

Looking at it from the investor's interest, *Fortune* (April, 1963) estimated that the thirty largest U.S. oil companies took $1.9 billion in depletion deductions in one year early in this decade. The top ten companies had $1.5 billion. The estimated one-year tax-free allowance for Texaco was $216 million, for Gulf $228 million, and for Jersey $399 million.

It seems conservative to estimate that depletion will have placed $20 billion of pre-tax oil income beyond the reach of U.S. income taxation during the 1960s. This means that other taxpayers have forked over an extra $10 billion or so in one decade. The Johnson Administration Treasury Department tax-reform studies of 1968 say the tax loss from depletion is now $1.3 billion a year. If the government doesn't get the money it needs out of one hide, it has to take it out of another.

Corporations get about nine tenths of all depletion, and naturally the bigger corporations get most of that. One percent of the crude oil and gas and petroleum refining companies got 87 percent of oil's corporate depletion in 1960—they were the three dozen companies which each had total assets of $100 million or more. The bulk of the companies, 95 percent of them, got just 4 percent of the depletion. They were the twenty-nine hundred companies that each had total assets of less than $10 million.

This is the pattern that gives a sharp edge to former Senator Douglas' long-standing proposal, now being carried forward by others, to leave the allowance at 27.5 percent for taxpayers making less than $1 million and drop it to 21 percent for those between $1 million and $5 million, but cut it to 15 percent for those making $5 million or more. Very carefully, (for their big brothers really are watching) some of the independents are now explaining in Washington that since the smaller operators are often the high-cost producers, they have a lower net in ratio to gross, and therefore the 50 percent of net limitation should be graduated to carry out the purpose of the Douglas proposal.

Little by little, through analogy but mostly by political tit-for-tat, oil's percentage depletion has spread into all the natural resources industries. Fearing, perhaps, that water fountains or air conditioners might be next, the Congress has actually specifically excluded "soil, sod, dirt, turf, water, mosses, minerals from seawater, the air, or similar inexhaustible resources." That tiny concession to 1913 market value, granted because of a court decision, thus gives us a classic example of the self-enlarging capacity of a loophole. Tax-free income is now allowed, at rates ranging from 5 to 23 percent of the gross but always limited to half the net, in every mining business "from aluminum to zinc"—coal, sulfur, iron ore, uranium, clay, stone, oyster shells, clam shells, even sand. Almost 1500 companies took depletion on sand, gravel, and stone in 1960. Timber gets 50 percent of its operating income exempt from tax. Humble's Jack Crawford thinks one might well ask why coal gets a 10 percent allowance when we have enough coal to last us 1000 years. "Or oysters." Gulf Oil's uppermost officials take the more usual industry approach—they warn, or exult, that "any change in the depletion law will affect every extractive industry from gold to gravel." One is almost grateful that we don't have diamond mines.

In ordinary industries, capital costs have to be deducted over a period of years. In oil and gas, the costs of dry holes are deductible at once as losses, "even though in the large," the tax-reform study says, "the expense of nine dry holes is part of the cost of one producer . . . a 90% writeoff in one year is an enormous advantage under a tax rate of 48%." There is more. If a well comes in, from 75 to 90 percent of the capital costs of drilling and developing it can be and usually are also deducted as they are incurred. These costs are called "intangibles" and include labor, fuel, overhead, land clearing, and in general all costs other than equipment with salvage value. Economist Kahn calls this write-off "clearly a special privilege in every sense." Expenses similar to intangibles in industries other than natural resources must be capitalized and written off over a number of years. The tax-reform study says the tax loss from the intangibles write-off is $300 million a year.

As Treasury Secretary John Snyder explained in 1950, if 90 percent of the costs of a producing well are recovered tax-free at the outset, only 10 percent of the investment remains to be recovered through depletion; hence depletion based on the entire income in effect overlaps the deductions for intangibles. This leads critics to charge that "a double deduction" is being allowed—"a double benefit," Stanley Surrey, Johnson's Treasury tax expert, calls it. Industry people say that two different concepts are involved. Since intangibles are not depletable, the two deductions are mutually exclusive, a California Standard spokesman insisted in 1959.

Oilmen can also, because of intangibles and dry hole deductions, "drill up" their profits in a given year to the extent they find advantageous on their tax returns. As Senator Williams says, a man can make a million dollars and live off the nontaxable depletion allowance "by piling all his other income into intangible investments."

The effective income tax rate for all manufacturing is 43.3 percent; for petroleum, it is 21.1 percent. Only other mineral industries, lumber, and financial institutions receive comparable consideration, nor do even these figures showing oil paying half the going rate reach the extent of the matter. The tax-reform study says that the 21.1 percent is derived from returns that cover both extractive and nonextractive activities of the oil industry, whereas an integrated company

could earn equal amounts from each kind of activity, pay nothing in tax in production and 46 percent of the rest, and show an overall rate of 23 percent.

The industry counterattacks with figures showing that excluding excise taxes, it pays about the same percentage of its gross income in taxes (in the range of 5 percent) as other industry does. "The total impact on your business is the important thing, not the technique for collecting the tax," says Crawford. By the time Senator Long reaches the end of this line of thought, he is contending that "the oil industry pays more taxes than anyone else."

In recent years the minerals industry has been making tax use of contrivances called "carve-outs" and "ABC transactions." Both are based in "production payments," which are rights that are "sold" to profits from future production from a well or mine. Johnson's and Nixon's Treasury people agree that these devices are now costing the United States $200 million a year, and they are spreading. Nixon wants them stopped.

The carve-out works this way. The year the producer sells his "carved-out production payment," he reports the sale price as income subject to depletion. This lets him make an end run around the 50-percent-of-net limit on depletion by artificially increasing his "income" that year. But then his expenses in later years, to produce the oil he is making the payment with, are deducted from no or reduced income. He is "losing money" for tax purposes. By changing the timing of his income he pays less tax over the period.

A little oil company in the Southwest explained to its stockholders in 1968, concerning its sale of a $6 million production payment on one of its properties, "This transaction shifted taxable income from 1969 into 1968 and will produce a greater depletion deduction for the two-year period." Representative Sam Gibbons of Florida has explained how a company can operate two equally profitable properties with carve-outs timed to alternate each year so that they wipe out each other's taxes entirely and leave an additional loss to be deducted against income from other sources.

The ABC deal is a complicated and variable three-party transaction. A, the owner, sells his mineral interest to B for a reserved production payment, but then sells the production payment to C. A gets capital gains, B excludes the production payment from his income, and C gets income subject to depletion which is usually enough to eliminate his taxable income.

Atlantic Refining Company and then the merged Atlantic Richfield paid the United States no income tax at all from 1962 through 1967, although its net profits aggregated almost half a billion dollars. It was this situation that provoked the ranking Republican on Ways and Means, Byrnes of Wisconsin, to say, "Frankly, I no longer know what to write my constituents." Gibbons said it was rather inconsistent to report half a billion of income to the SEC and tell the tax collector you didn't make anything. No one contended it was illegal. The point is, it is legal. What is more, the New York *Times* has reported that the president of Atlantic Richfield, without a sign of emotion, will argue that the oil depletion allowance should be higher.

The company has recently offered a written explanation of its taxless years to the House Ways and Means Committee. It had acquired the oil-producing properties of two companies through an ABC transaction for $75 million, but one of the two firms' properties "did not generate taxable income until 1967." Atlantic also engaged in extensive exploratory efforts that "generated tax losses." In 1968 it made a small federal tax payment, and this will be increasing now. The company's big strike on the North Slope proved, the company said, that its program and the related tax incentives "have accomplished what they were intended to do." The company's 1968 annual report states $149 million in profits; there had been a stock split in the summer.

Senator Albert Gore, the Tennessee Democrat, and Representative Gibbons have called attention to an ABC transaction whereby Continental Oil Company bought Consolidation Coal, the world's largest coal company in terms of sales. Under the IRS rulings, the net effect was that the oil company paid no income taxes at all on its $460 million of profits from operating the coal company—profits with which it was buying the company—but *was* permitted to deduct its $128 million in coal-mining costs. The coal company paid no taxes on its income from the sale because it was liquidated under a certain section of the tax code. "I can foresee a situation, not far off," Gore warned, "when we will no longer have an independent coal industry. We may well have all major energy sources—petroleum, coal, uranium—under the control of a very few powerful corporations."

On foreign productions, U.S. companies can take the U.S. depletion allowance, reducing their potential U.S. tax liability. The Texas Independent Producers and Royalty Owners Association, which flirts with opposing foreign depletion publicly every few years, has pointed out that it gives majors a great advantage because net profits are so high abroad in relation to the gross. Johnny Mitchell, a past president of TIPRO, wrote the top officers of more than two dozen oil companies proposing that the foreign deduction be whittled down, but TIPRO pulled short of backing him up.

Of probably greater practical significance is the foreign tax credit, which is available to all U.S. firms abroad but is uniquely important in oil because of the high foreign levies on oil companies. Except for long-standing royalties of about 12 percent, U.S. oil companies apply their large payments to foreign governments, dollar for dollar, as offsets against the remainder of their U.S. taxes due on their foreign income. Usually this cancels out these U.S. taxes.

It is a fair question to ask how much U.S. income tax, on both foreign and domestic profits, is paid by the five international majors that dominate the U.S. industry, Jersey, Texaco, Gulf, Mobil, and California Standard. The answer is that during the five years 1963–67 these companies paid, on total net profits before income tax of about $21 billion, federal income tax of about $1 billion. Their five-year U.S. income tax rate was 4.9 percent. They paid foreign governments more than five times as much.

Jersey's five-year rate was 5.2 percent, Texaco's a percent, Gulf's 8.4 percent, Mobil's 5.2 percent, and California Standard's 2.5 percent. On the basis of figures in George Spencer's *U.S. Oil Week*, the twenty-three largest refiners in the United States, including the big five, paid in the same period $2 billion U.S. income tax on total earnings before income taxes of $30 billion. The aggregate rate for the twenty-three firms figures out to about 7.2 percent.

Compute these figures up, down, or sideways, they tell a similar story. Backing up the Texaco figures to the beginning of the sixties, the company's U.S. income tax rate for the first seven years of the Kennedy-Johnson era is 2.1 percent. On pre-tax income of almost $6 billion in the decade 1958–1967, Gulf paid U.S. income taxes of a third of a billion, a rate of 5.7 percent. California Standard's ten-year average is 2.3 percent, Mobil's 4.4 percent. In 1967, twenty-nine larger oil companies with net pre-tax income of $8 billion paid 8.6 percent U.S. income tax, compared with 20.9 percent which they paid to foreign governments and some states.

The foreign tax credit probably lies behind an interesting inversion in Jersey's tax patterns since World War II. Through 1953 the federal income tax the company paid as a portion of both U.S. and foreign income was about 16 percent, while its payments to foreign governments averaged another 19 percent of its pre-tax income. In 1954, however, as foreign-earned income came piling in and the foreign tax credit and foreign depletion worked their wonders, Jersey's U.S. tax payments dropped to 11 percent as its foreign payments turned upward. By 1958 the nation's largest oil company paid the U.S. Treasury one percent, while it paid foreign governments 40 percent, of its pre-tax income.

For Gulf the turnaround year was 1952. It had been paying about a fourth of its U.S. and foreign pre-tax net to the U.S. Treasury, but the fifteen years from 1953 to 1967, its U.S. income tax on total pre-tax income of about $7.6 billion was less than $400 million. For three straight years in the late 1950s it was less than one percent. While turning over just one twentieth of its pre-tax income to the Treasury since 1953, the company the Mellons built has been paying more than a fourth of it to foreign governments.

This has been the pattern for California Standard, too. For the first nine years of the two decades 1948-1967, its U.S. income tax was five times its payments to foreign governments. In the rest of the period it paid about one seventh the U.S. tax rate it had before, while its rate of foreign government payments increased about threefold.

"I want you to tell me the whole story," Wilbur Mills said to Humble's M. A. Wright this spring. "Why is it a company that operates here and abroad can . . . pay an effective tax rate of 1.6 percent on its total tax income?"

The figures showing Jersey's tax rate at 1.8 percent or some such are quite prejudicial, the reasonable and equable Jack Crawford of Humble says, because first, they imply that other companies are paying the full statutory rate, whereas the investment credit alone can reduce taxes a fourth; second, Jersey, operating in seventy countries and earning half its income from abroad, has many factors applying to its tax rate, including the foreign tax credit; third, including foreign income in the U.S. corporations' tax rate is "patently unfair," and fourth, the foreign income tax paid is sometimes not even mentioned.

With a show of emotion evidently unusual for him, Crawford, discussing the situation in his Houston office, exclaims, "All you have to do is convince the man in the street that oil companies are getting away with murder. 'I'm paying 30 percent, and Standard Oil of New Jersey is paying 1.8 percent. Those rich ———!' "

Jersey's domestic subsidiary, Humble, earned $607 million in 1967, 51 percent of Jersey's total income. As a proportion of its domestic income only, Jersey's federal tax was about 26 percent. The company told the House taxers that the equivalent figure for 1968 is about 30 percent and that its U.S. and foreign income taxes are about 45 percent of its U.S. and foreign income. The Mid-Continent Oil and Gas Assocation has come up with a similar retort, to wit: eliminating foreign income from the figures, the twenty-one largest refiners paid 19 percent of their income in U.S. taxes in 1966 and 1967; including foreign income and taxes, they paid 37 percent of total income in U.S. and foreign incomes taxes. But are the majors' payments to foreign governments taxes, or are they actually royalties paid to the oil-owning governments and therefore ordinary business deductions? The difference is a dollar-for-dollar credit versus a deduction worth 50 cents on the dollar.

"It *is* an income tax," says Crawford. Chairman Mills, noting the similarity in the size

of the U.S. and foreign levies, agrees. They are "quite clearly royalties," says Senator Edward Kennedy. "If those same payments were made to the landowners in this country, they would be royalties and would be deducted, not credited." If a bird looks like a duck and quacks like a duck, you call him a duck, Kennedy said during the Hart hearings. "Someone was very clever in naming this as a tax."

A U.S. government taxman has acknowledged that in 1948 he briefed Saudi Arabian officials on "the difference of the effect on the [oil] company between a royalty and an income tax." In 1950 the government of Saudi Arabia levied an income tax for the first time. Subsequently the various foreign oil-owning governments have added what are called taxes of 50, 60, and even 65 percent to their take from the profits of the U.S. firms. The result has been to transfer U.S. income taxes to foreign countries.

Dr. Blair has estimated the tax loss to the United States. Working from income statistics for 1961, he concluded that in five major oil countries abroad, U.S. firms had almost $700 million in foreign taxes available to offset estimated U.S. tax liabilities of more than $500 million, which also resulted in $169 million in excess credits, applicable either against U.S. taxes due on income earned in other foreign nations or to carry back or forward to reduce taxes in other years. Dealing with the payments as royalties instead of taxes would have netted the United States about $175 million.

"The first thing you think about is, is this really a tax or a royalty?" says Nixon's taxman at the Treasury, Edwin Cohen. The idea that royalties only go up 12.5 percent is a mirage, he says. "We've found royalties up to 97 percent."

Cohen is also interested in the writing off of intangibles abroad, which lets U.S. firms generate tax losses deductible against U.S. income. The proviso is that they must be reporting to the United States from abroad on a country-by-country basis, but except for Jersey (which has an unusual situation), almost all the companies do. Drilling up on the margin to generate losses, Cohen says, "They never pay anything. We never get any benefit."

He is considering whether the intangibles writeoff overseas should be prohibited, or the companies required, when they find oil abroad, to restore to the United States the drilling tax losses they claimed earlier. Compared with this issue, he says, foreign depletion is an idle question. "We are subsidizing their foreign exploration and getting nothing in return." He is also weighing eliminating the country-by-country reporting option and dropping a tax wall between U.S. and foreign income.

The main objections to depletion and other U.S. oil policies now under criticism are that they are unfair to taxpayers and consumers and enhance monopoly trends in the oil industry. The central line of defense is that the national security requires a strong domestic industry, which in turn requires protections and tax advantages. Representative Lloyd Meeds of Washington says, "The salient fact is that the individual must bear the burden of this loss." Representative Charles A. Vanik of New York estimates that since it was first allowed, depletion has cost about $140 billion, "paid at the expense of almost all of the other taxpayers of the country." These men are members of the House Ways and Means Committee.

Their theme runs through the debate of the last two decades. Back in 1950 President Truman told of an oil millionaire who raked in $14 million over a five-year period but paid only $80,000 income taxes for the period, about half of one percent, compared to the lowest rate of 20 percent for a single man who earned less than $2000 a year. Senator George Aiken, the Vermont Republican, said in the 1957 debate that others must "dig into their pockets" to make up the money lost by depletion. Now Proxmire says the ordinary taxpayer must wonder why he pays 14, or 16, or 20 percent of his hard-earned money to the federal government when a company like Atlantic Richfield pays nothing whatever.

Another approach to the same point considers what the lost money could have been spent for. Ten billion dollars in the 1960s would buy a lot of model cities, an expanded public-housing program, more scholarships for college students, more war on poverty. A Yale research economist told the House taxers this year that the loss from depletion is three times federal spending on law enforcement, three times the school-lunch and food-stamp programs, six times our spending for public housing, three times the expenditure for the Alliance for Progress.

Then there is the dimension of unfairness to other industry. The IRS reported that in 1964 the petroleum industry reported net income after taxes of $1.7 billion as per the Internal Revenue Code, but $5 billion as per its own books of account. This ratio of 33 percent compared with a ratio of 88 percent for all nonpetroleum manufacturing.

The spread of the depletion privilege into other natural resources can only have contributed to the general cynicism about it. When professional football players seriously asked the Senate Finance Committee for a personal depletion allowance, Paul Douglas countersuggested allowances for movie actors, poets, and mathematicians, all of whom deplete themselves with the passing years. The late Senator Richard Neuberger of Oregon introduced a bill to let any taxpayer deduct one percent of his income for each birthday after he became forty-five on the theory that "a locomotive engineer's eyes, a schoolteacher's frayed nerves, a day laborer's legs, an author's brain . . . wear out, also. . . . We should have a depletion allowance for people."

Industry people often express pride that they are selling better gasoline for only slightly more, exclusive of taxes, than in 1926, and they predict that tampering with depletion will result in higher prices. Indignations about depletion are futile to whatever extent a higher corporation oil tax would be passed on to the consumers in prices. However, as Proxmire says, if it could all be passed on, why are the oil people "fighting like tigers"? Senator Williams says: "Yes, if we increase taxes, some of it does siphon down to the consumer, but not all of it."

Much of the argument for depletion is based on the riskiness of drilling for new oil. Before committees in Washington, oil's witnesses concentrate on figures showing that such drilling is down, rigs are stacked, oilfield employment is declining.

Gulf's president, Bob Dorsey, told House taxers this spring, "About one time in ten, those investing in wildcat drilling will find oil, but only about one in fifty has a favorable return on that kind of investment. Yet such investments have been made possible because of . . . percentage depletion." Senator Mike Monroney of Oklahoma makes the argument vivid: "People simply will not put nickels in slot machines unless there are nickels in the jackpot."

The often used one-in-ten (or one-in-nine) figure, however, applies to new-field wildcat wells, which make up only a seventh of the wells drilled. The success ratio is higher for every other type of well. The chances are three out of five that any of all the wells drilled will be a producer. The exploratory wells, including those "new-field wildcats," have two out of five chances of being producers. Three out of four of the development wells, which drain proven fields, are successful.

The majors drill mostly development wells. In 1967, Gulf drilled or participated in drilling 1242 wells, of which 964 were producers. Mobil drilled 397 producers and 133 dry holes. California Standard drilled 533 producers and 159 dry holes. It is the independents who do most of the exploratory drilling, 85 percent of it, says IPAA's McClure. Yet the depletion allowance goes in overwhelming bulk to the majors, not the independents, and it rewards not discoveries, but pumping oil out of the ground. For a dry hole, you get nothing.

"The oil industry has become a business for investors interested in precalculated expenditures and returns. . . . The little man can't get in the door anymore," says Texas independent Johnny Mitchell. Representative Minish says, "Oil has one of the lowest rates of failure in any business in the United States, and two thirds of the depletion allowances are claimed by companies with assets of over a quarter of a billion dollars."

If oilmen are so venturesome, why do they need subsidies? Representative Bush of Texas has divested himself of his oil holdings, but was in the business for eighteen years. On an NBC program, Representative James Scheuer of New York asked him, "Why should we take the risk out of your oil business? You don't want us to limit your profit, George, why do you want us to limit your risk?"

"The whole case for the 27.5 percent depletion allowance rests upon national security," says J. R. Parten of Houston. "We have fueled two world wars, largely out of our oil and gas resources, and in my opinion this would not have been possible without the tax incentives, depletion and the write-off."

In its statement to Ways and Means this year, Texaco said that the present tax treatment of oil has been one of the most significant factors in developing oil production and reserves essential to the national security and that any action to "impair the present incentives . . . would be to gamble with national security."

Giving oil every credit to which it is entitled, does the national security argument still hold? The rationale of the import system as well as percentage depletion is based on it.

As Kahn says, "People just say 'national security,' and everybody is supposed to turn his tail and run." Instead, Senator Kennedy begin inquiring last spring. "What," he asked Wright of Humble, "do you consider to *be* our national security? National security against what? A ground war in Western Europe . . . a land war in Asia . . . guerrilla wars. . ?"

"We're not thinking about protection from atomic war," Wright said with candor; "the thing we are endeavoring to guard against is the termination of imports abroad due to political emergencies." He mentioned strikes, turnover in political parties, and boycotts against shipments to the United States; but that was all. "These kinds of things we want to be able to survive," avoiding some other country having control over "our economic destiny," he said.

Senator Long would add the chance of war in the Middle East, and even with Canada. Senator Tower would consider rising Soviet power in the Persian Gulf and the Mediterranean. "We could conceivably get in conventional war with Russia, although I don't foresee it," Tower says.

To Proxmire, the national security argument is ridiculous. "Import controls and proration are programs to create an artificial scarcity and high prices." There is a lot of flexibility, he says, in our need for and supplies of oil. Kennedy, too, asks whether the remote possibility of rationing might be less costly than the present program costing $4 or $5 billion a year.

One is forced to the factual question, how

much oil have we and what other fuels could we use? In "proved reserves," the United States has about 31 billion barrels of oil. At present levels of consumption this is a ten- or eleven-year supply. Nuclear war would wipe out the cities where most of the oil is used: people, if any, would be needing drinking water, not oil. What kind of prolonged emergency, then, would require more than a ten-year supply of oil? If this is an awkward question, it is an even more awkward fact that our capacity to refine crude oil now exceeds our capacity to produce it by a million barrels a day.

"Proved reserves" is a concept that excludes known reserves for which available methods of production have not yet been installed. And secondary recovery methods (such as pumping water, gas, or even air into the oil reservoir) are frequently less expensive than discovering new oil. By 1965 one third of domestic oil was produced by such methods. The Interstate Oil Compact Commission estimated in 1966 that our proved reserves could be increased by *more than half* simply by installing additional equipment for these proved methods, and that more than 60 billion barrels more are probably physically recoverable by newer methods, including injecting steam or hot water into the reservoirs. This increases our actual probable U.S. reserves for emergency needs to about 110 billion barrels, a supply for fifteen to thirty years. And these figures do not include the new finds in Alaska.

Beyond this, other kinds of fuel are available. There are about 2000 billion barrels of shale oil in the West, 80 percent of it owned by the people of the United States, and even the established oil industry increasingly concedes that great quantities of this oil will become commercially available. Oil production from tar sands is another newly developing technology. The government is experimenting actively in the hydrogenation of coal into oil. Why, one might ask, has not the oil industry conducted a crash program to open up the fabulous oil shale reserves?

In sum, it is almost impossible plausibly to imagine a national emergency sufficiently prolonged that the United States is cut off from abundant foreign oil, runs out of its own oil, and cannot contrive substitutes. And if this analysis is correct, oil's main line of defense is chimerical.

However, some of oil's Washington critics have taken a different tack. As Jerry Cohen, staff director of the Hart committee, says, their idea is to hear out the tale of woe about declining exploratory drilling and shrinking U.S. reserves and then, instead of arguing, agree and ask, "Yes, well—since the policies we have are not working, what shall we change?" Having described the troubles of the industry, Wright found himself saying in effect that it's really not as bad as all that. "They're caught in their own trap," Cohen says.

Other serious challenges to the national security argument of the industry have come from a study conducted for Johnson's Treasury and finally (after much obfuscation and delay) made public. The CONSAD Research Corporation's technical study said percentage depletion is "a relatively inefficient method" of encouraging exploration for new reserves—more than 40 percent of depletion is paid for foreign production and nonoperating interests in domestic production. The report concludes in effect that for each $10 in tax benefits, we get only $1 more worth of oil reserves than we would be getting anyway. Wilbur Mills said that despite the industry's story about depletion and domestic reserves, "Now, we're not so sure."

The clamor against depletion is unfair, oil's defenders say, because it assumes that the companies are making unreasonable profits, and they are not. Oil's most aggressive counterattack relies upon statistics showing that on the basis of net assets, oil's profit rate is about the same as that for other manufacturing.

"The oil and gas industry does not make excessive profits," Texaco's J. Howard Rambin, Jr., told the House committee. "Studies by the First National City Bank of New York of corporate profits over the twenty-year period, 1949 to 1968, showed that the rate of return on the net assets of the oil and gas industry averaged 12.8 percent, virtually the same as the average for all manufacturing industries." During the last decade, he said, it was half a point lower than all manufacturing.

Crawford says he assumes that the producing end of the industry is making a greater rate of return than the rest of the industry. "I frankly don't understand," he says, "why we don't make more money than other industries." But, "if our profits are out of line, who can say that depletion is not justified?"

The industry's profits figures distort the realities in some ways. As Douglas pointed out in 1964, they may exclude foreign profits, which are dramatically higher than their domestic profits. Even so, profits are higher in the producing part of the business, to which depletion is solely pertinent, than for the integrated ("downstream") operations. First National City Bank figures for return on net assets of leading oil companies show a spread of two to five points between these two kinds of income in the last five years. In 1967 the bank's figures showed integrated operations making 12.7 percent and producing operations making 15.9 percent.

The example of Amerada Petroleum, almost entirely a producing company, is instructive. It had the highest rate of earnings on sales of any of *Fortune's* 500 industrials for every one of the eight years 1958 to 1965. By 1967 the foreign tax credit had become a factor for it, and on total pre-tax earnings of $104 million it paid less than $1 million U.S. tax.

There is also the question of the *bulkiness* of oil's profits. Jersey now makes $100 million a month.

The New York *Times* reports on 500 companies in the manufacturing and service industries. For 1967, the 33 oil companies in the 500 companies got more than one third of *all* the 500 companies' total earnings.

First National City Bank's "Monthly Economic Letter" for last April survey 2250 manufacturing companies in 41 categories with net income of $26 billion in 1968. Ninety-six oil producing and refining companies had a total net income of $6.1 billion, almost one fourth of the income of all 2250 companies.

Fourteen senators protesting the oil-price increase this year noted that the combined net profits of the twelve largest oil companies had increased by 33 percent in just four years and that each of them has set new profit records for itself in each of the last four years.

Perhaps another part of the explanation of the industry figures lies in the industry's high relative profit rate as a percentage of sales, instead of assets. As *Fortune's* reports show, oil and mining have the lowest sales per dollar of invested capital of any of the industrial groups. Taking *Fortune's* listing of the top twenty companies, the seven oil companies had a profit rate as a percentage of sales twice as high as the thirteen that were not oil companies, 10.4 percent to 5.3 percent. (In absolute terms, the one third that were oil companies had total profits that equaled those of the two thirds that were not oil companies.)

It does not seem likely, as Senator Williams has remarked, that the oil industry will have to pass the hat. But to whatever extent it is true that oil's profits are not, in reality, as high as one would expect under the circumstances, overinvestment may be indicated. Economists of the marginal analysis school in general believe that if there is a prospect of high profit in an area of business and free access to it, capital will flow into it until the prospect for returns declines toward or down to the level for other investment opportunities. It is in fact one of the weightier charges against depletion that it has caused a serious misallocation of economic resources in favor of oil and gas.

Finally, there are some problems of consistency in the industry's various defenses.

In 1959 Wilbur Mills told a panel on depletion that he worried that foreign depletion was shoring up oil production that might be "taken by somebody else and inure to their defense." Scott Lambert of California Standard replied that by and large the oil was available to us and helped develop our allies. Yet, Mills rejoined, we encourage the use of American dollars to develop the foreign resources and then "say it is contrary to the national interest for those same reserves to come to the United States." Lambert retorted, "But we are realizing the benefits fully when these resources are developed by our citizens and sold overseas. We are getting profits." That hardly put the question to rest.

By rewarding production rather than discovery, depletion encourages the depletion of domestic reserves, contrary to its frequently cited purpose of building them up for national security. The imports reduce the need for U.S. oil and the motive to drill for it. Yet both depletion and imports are defended in the name of national security.

The government in effect puts a floor under oil prices, but as Proxmire says, will not intervene to keep them from rising. Kennedy asks why imports are never increased as a means of offsetting unnecessary price increases.

In 1963, President Kennedy tried for four minor changes in the law affecting oil taxes; he got one, worth about $40 million revenue a year. "So you have reduced the special privilege by two and two-thirds percent," Douglas said to Secretary Dillon. "It is a small percentage," Dillon said. "A very small percentage," Douglas said.

Senator Kennedy proposes decreasing depletion to 15 percent for larger companies, eliminating it for the largest foreign producers, ruling out the fast write-off for intangibles, and eliminating the foreign tax credit for what are actually foreign royalties. He would make certain mineral production payments ineligible for capital gains treatment. Senator Abraham Ribicoff of Connecticut wants to stop the intangibles write-off and cut depletion in half.

The political power of oil is the main force at work against such reforms, but there is also a feeling that these subjects are impenetrably complex and nothing can be done with assurance. Yet, as economist Kahn has said, "it seems intolerable to have to decide about everything before deciding about anything."

Since "market demand proration" and the enforcement of its effects through the Connally "hot oil" act amount to government price-fixing for oil, such proration should be repealed, leaving actual oil conservation programs intact. Oil imports should be increased rapidly, as by the Machiasport and petrochemical companies' plans, until the U.S. oil price breaks downward toward the world price. To whatever, if any, extent controls continue to be justified, the "import ticket" system should be replaced by a straight tariff, giving the profit from the controls to the Treasury instead of the refiners.

These changes would help consumers, but hurt the highest-cost U.S. producers. Since these latter include many of the oil people who can be considered small businessmen, tax changes should help the independents and help retard monopoly trends in the industry.

One recurrent sophistry in the defenses of the depletion allowance is a refusal to distinguish between the major companies and the

rest of the industry in tax policy. "Today the oil-producing industry is sick and cannot afford the burden of increased taxation," John Connally, the then Vice President's sidekick and governor of Texas, told the House tax committee in 1963. There is an international oil industry dominated by five U.S. companies. There is a domestic oil industry, made up of companies varying from huge to small and of many individuals. Tax policy can make these distinctions.

The most notorious of the loopholes, percentage depletion, should be repealed, in gradual steps to ease the pain and facilitate necessary adjustments, but in the end, entirely. As La Follette, Couzens, Roosevelt, Morgenthau, and many others have said, the principle is entirely wrong. Profit from the sale of discovered minerals is income, not capital. Repealing percentage depletion would permit every businessman to continue to take full depreciation or cost depletion on all actual investment. Oil and mineral producers, like other businessmen, would also continue to recover all their operating costs, but then they would have to pay ordinary corporate tax rates. Such a thorough reform would go a long way toward assuring the public that Congress may also do what it should about the exclusion for capital gains, "charitable deductions," real estate write-offs, the tax "losses" of lobbyist-farmers, and the rest.

But if Congress will not repeal 27.5 percent, it should be graduated or restricted to benefit the independents and small companies that actually do the exploratory drilling. Certainly there is no sense in allowing companies foreign depletion for depleting oil that belongs not to them, but to foreign nations.

The fast intangibles write-off for the minerals industry is simple favoritism and should be stopped, except perhaps again for the drilling and development of wells or mines that are actually discoveries, or else according to a limit on the taxpayer's taxable income. The use of production payments to wipe out tax obligations obviously should be stopped and probably will be.

Proposals to cut or abolish the foreign tax credit meet the rejoinder that the foreign governments would increase their take from the companies for the difference. As the *Economist* says of the Middle Eastern governments, these oil-owning nations are getting better and better at "squeezing the oil companies without actually strangling them to death." The emergence of Arab guerrilla movements is also a factor.

In the alternative, the pre-1918 situation could be restored, whereby the U.S. companies are permitted to deduct their tax payments to foreign governments from their gross income. But the situation is too technical and too honeycombed with competitive effects on many companies in different environments for a simple solution.

As Treasury's Cohen says, the problem is not which rules to change but just to get a fair quantity of income from U.S. companies operating in the flush foreign oil fields. The write-off for intangibles should be disallowed abroad, and Cohen's other ideas should be listened to with attention. As it is, the oil companies are administering their own foreign aid program with U.S. money.

And there are deeper issues, still. Nine of the 20 largest industrial corporations in America, ranked by assets, are oil companies. Of the top 10 in profits, 5 are oil. In the last 13 years, 20 oil companies with assets of more than half a billion dollars have acquired 226 other companies and 18,737 gasoline service stations. This, in the national economic context now of the one hundred largest corporations owning nearly half—48 percent—of the nation's manufacturing assets.

Senator John Carroll, of Colorado, told the Senate during the depletion debate in 1958, "The moral question . . . is, Why did Congress enact such a tax law? Why has it remained on the statute books through the years? Why does Congress permit these huge tax windfalls?" Robert Engler wrote in *The Politics of Oil*, "Few questions are asked about this furthering of private wealth and power and its impact upon the American society."

The tax gifts from politicians are given back to them, in part, as political contributions. Legal or not, this is a kickback to politicians. "I'll give you tax money assuming that you'll give me some of it back for my career in politics." That, making due allowance for every principled exception, is the truth of it.

The nation should be producing its own oil from its naval reserves or offshore. This would give us an independent standard by which to evaluate the performance of the subsidized oil industry. The nation, through a public oil company, should be planning to produce oil for the public treasury from the publicly owned oil-shale reserves in the West. How else can the growing concentration of the industry in a few companies be stopped? How else can the public equities in public property be preserved?

On successive days last April on the Senate floor, two American senators, both Democrats, one from the South, the other from New England, summed all this up, in their very different ways.

"As one who represents a state producing a good deal of oil," said Russel. Long. "I do feel a sense of compassion for someone who so poorly understands Americans as to think they are corrupt and pirates when they are in fact good, hard-working citizens, trying to make an honest buck, the same as everybody else."

"The whole matter of quotas of oil importation has developed into a national scandal. It is a scandal," said John Pastore of Rhode Island the next day. "We in New England, perhaps naively, never really appreciate the depth and breadth of control that the oil industry had fastened on the government. . . . Can you imagine a company [Texaco] with a net profit of $754 million paying a federal tax which amounts to only 1.9 percent of its before-tax income? . . . the unholy alliance I spoke of before has in the past reached to the very highest levels of government . . . this is a time of consumer revolt. This is a time of taxpayer revolt."

CONCLUSION OF MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask that the period for the transaction of morning business be concluded.

The VICE PRESIDENT. Is there further morning business? If not, morning business is closed.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the unfinished business.

The VICE PRESIDENT. The bill will be stated by title for the information of the Senate.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

NOTICE OF POSSIBILITY OF A SATURDAY SESSION

Mr. MANSFIELD. Mr. President, for the information of the Senate, I think I should refer to the possibility of a Saturday session this week. It will depend upon developments on Friday.

I have discussed this matter with the distinguished chairman of the Committee on Armed Services and he has indicated he is willing to come in on Saturday if conditions warrant.

I would hope that the acting minority leader would make his views known on that subject.

Mr. SCOTT. Mr. President, I would agree with the statement of the distinguished majority leader. It is important that we dispose of this bill as soon as possible.

If a Saturday session is necessary, we will have to have it. Other than that, I would simply say that I am in entire agreement with what the distinguished majority leader has said.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The assistant legislative clerk called the roll, and the following Senators answered to their names:

[No. 81 Leg.]

Aiken	Gore	Murphy
Allen	Gravel	Muskie
Allott	Griffin	Nelson
Anderson	Gurney	Packwood
Baker	Hansen	Pastore
Bayh	Harris	Pearson
Bellmon	Hart	Pell
Bennett	Hartke	Percy
Bible	Hatfield	Prouty
Boggs	Holland	Proxmire
Brooke	Hollings	Randolph
Burdick	Hruska	Russell
Byrd, Va.	Hughes	Saxbe
Byrd, W. Va.	Jackson	Schweiker
Cannon	Javits	Scott
Case	Jordan, N.C.	Smith
Cook	Jordan, Idaho	Sparkman
Cooper	Kennedy	Spong
Cotton	Long	Stennis
Cranston	Mansfield	Stevens
Curtis	Mathias	Symington
Dodd	McCarthy	Talmadge
Dole	McClellan	Thurmond
Eagleton	McGee	Tower
Eastland	McGovern	Tydings
Ellender	McIntyre	Williams, N.J.
Ervin	Metcalf	Williams, Del.
Fannin	Miller	Yarborough
Fong	Mondale	Young, N. Dak.
Fulbright	Montoya	Young, Ohio
Goldwater	Moss	
Goodell	Mundt	

Mr. KENNEDY. I announce that the Senator from Idaho (Mr. CHURCH), the Senator from Washington (Mr. MAGNUSON), the Senator from Connecticut (Mr. RIBICOFF) are absent on official business.

I further announce that the Senator from Hawaii (Mr. INOUYE) is necessarily absent.

Mr. SCOTT. I announce that the Senator from Colorado (Mr. DOMINICK) is necessarily absent.

The VICE PRESIDENT. A quorum is present.

RECESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate now stand in recess subject to the call of the Chair.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Senate will stand in recess subject to the call of the Chair.

Accordingly, at 11:37 the Senate recessed, subject to the call of the Chair.

Thereupon, the Senate, preceded by its Secretary (Francis R. Valeo), its Sergeant at Arms (Robert G. Dunphy), and the Vice President, proceeded to the rotunda of the Capitol to attend the memorial services for the late Senator Dirksen of Illinois.

IN THE ROTUNDA OF THE CAPITOL

MEMORIAL SERVICES FOR THE LATE SENATOR EVERETT McKINLEY DIRKSEN

The Chaplain of the Senate, the Reverend Edward L. R. Elson, D.D., offered the following Scripture readings and prayer:

Blessed is the nation whose God is the Lord.

Bless the Lord, O my Soul, and all that is within me. Bless His Holy Name.

The souls of the righteous are in the hand of God, and there shall no evil touch them. They are at peace.

Blessed are the pure in heart, for they shall see God.

I am the Resurrection and the Life, saith the Lord: he that believeth in Me, though he were dead, yet shall he live: and whosoever liveth and believeth in Me shall never die.

Let us pray:

Almighty God, Father of mercies and giver of all comfort, deal graciously, we pray Thee, with those who mourn this day, that casting every care on Thee, they may know the consolation of Thy love, the healing of Thy grace, and the companionship of Thy presence; through Jesus Christ, our Lord.

Almighty and everlasting God, before whom stand the living and the dead, we praise and bless Thy holy name for the good examples of those Thy servants, who having finished their course on earth, now rest from their labors. We thank Thee this day for thy servant, Everett McKinley Dirksen, and for the sacred memories and hallowed recollections which cluster about this great life—his manly piety, his refined patriotism, his unending devotion and tireless efforts in behalf of our Nation and the world. We thank Thee for his faith in the invincibility of goodness, and the final triumph of justice. Help us to praise highly and to guard carefully the gifts which such loyalty and devotion have passed on to us. And grant that we may be true as he was true, that we may be loyal as he was loyal, and that we may serve our country, our world, and our God all the days of our lives, and leave the world better for having lived in it. Through Jesus Christ, our Lord. Amen.

The President of the United States, Richard M. Nixon, placed a floral tribute at the catafalque, and then made the following address:

The PRESIDENT. Mrs. Dirksen, Mr. Vice President, Mr. Chief Justice, Members of the Congress, Members of the Cabinet, Members of the Diplomatic Corps, Your Excellencies, and friends of Everett Dirksen throughout the Nation:

When Daniel Webster died more than a century ago, a man who differed strongly with him on many public issues rose in Congress to say this in eulogy:

> Our great men are the common property of the country.

Everett Dirksen of Illinois was and is the common property of all the 50 States.

Senator Dirksen belonged to all of us because he always put his country first. He was an outspoken partisan. He was an individualist of the first rank. But he put his Nation before himself and before his party.

He came to the Nation's Capital in 1932, and his public service spanned an era of enormous change in the life of our country. He played a vital part in that change. That is why it is so difficult to think of the Washington scene, of this Capital, without him.

Only his fellow legislators, the Senators and Representatives who have gathered here today and who mourn his loss across the Nation, know the full extent of his contribution to the process of governing this country. They know the time and concern he put into their bills, their causes, their problems.

They know another side to Everett Dirksen: The side in the committees behind the scenes where so much of the hard work and the hard bargaining is done, where there is so little that makes headlines and so much that makes legislation.

Through four Presidencies, through the adult life of most Americans living today, Everett Dirksen has had a hand in shaping almost every important law that affects our lives.

Everett Dirksen was a politician in the finest sense of that much-abused word. If he were here, I think he might put it this way: A politician knows that more important than the bill that is proposed is the law that is passed. A politician knows that his friends are not always his allies and that his adversaries are not his enemies. A politician knows how to make the process of democracy work, and loves the intricate workings of the democratic system. A politician knows not only how to count votes but how to make his vote count. A politician knows that his words are his weapons, but that his word is his bond. A politician knows that only if he leaves room for discussion and room for concession can he gain room for maneuver. A politician knows that the best way to be a winner is to make the other side feel it does not have to be a loser. A politician in the Dirksen tradition knows both the name of the game and the rules of the game, and he seeks his ends through the time-honored democratic means.

By being that kind of politician, this man of the minority earned the respect and affection of the majority, and by the special way he gave leadership to legislation, he added grace, elegance, and courtliness to the word "politician." That is how he became the leader of the minority, one of the leaders of our Nation. That is why, when the Senate worked its way, Everett Dirksen so often worked his way. That is why, while he never became President, his impact and influence on the Nation was greater than that of most Presidents in our history.

He was at once a tough-minded man and a complete gentleman. He could take issue without taking offense. And if that is an example of the old politics, let us hope that it always has its place in the politics of the future.

He is a man to be remembered, as we remember the other giants of the Senate—the Websters and Calhouns, the Vandenbergs and Tafts.

Some will remember his voice, that unforgettable voice that rolled as deep and majestically as the river that defines the western border of his State of Illinois that he loved so well.

Others will remember the unfailing, often self-deprecating sense of humor which proved that a man of serious purpose need never take himself too seriously.

Others will remember the master of language, the gift of oratory that placed him in a class with Bryan and Churchill, showing, as only he would put it, that the oil can is mightier than the sword.

But as we do honor to his memory, let us never forget the single quality that made him unique, the quality that made him powerful, that made him beloved—the quality of character.

Everett Dirksen cultivated an appearance that made him seem old-fashioned, an incarnation of a bygone year. But that quality of character is as modern as a Saturn V.

As he could persuade, he could be persuaded. His respect for other points of view lent weight to his own point of view. He was not afraid to change his position if he were persuaded that he had been wrong. That tolerance and sympathy were elements of his character; and that character gained him the affection and esteem of millions of his fellow Americans.

We shall always remember Everett Dirksen in the terms he used to describe his beloved marigolds: Hardy, vivid, exuberant, colorful, and uniquely American.

To his family, his staff, and his legion of friends who knew and loved Everett Dirksen, I would like to add a personal word: There are memorable moments we will never know again—those eloquent speeches, the incomparable anecdotes, those wonderfully happy birthday par-

ties. But he least of all would want this to be a sad occasion. With his dramatic sense of history, I can hear him now speaking of the glory of this moment.

As a man of politics, he knew both victory and defeat. As a student of philosophy, he knew the triumph and the tragedy and the mystery of life. And as a student of history, he knew that some men achieve greatness; others are not recognized for their greatness until after their death. Only a privileged few live to hear the favorable verdict of history on their careers.

Two thousand years ago, the poet Sophocles wrote:

One must wait until the evening
To see how splendid the day has been.

We who were privileged to be his friends can take comfort in the fact that Everett Dirksen, in the rich evening of his life, his leadership unchallenged, his mind clear, his great voice still powerful across the land, could look back upon his life and say, "The day has indeed been splendid."

U.S. Senator HOWARD H. BAKER, on behalf of the family, responded to the President's eulogy as follows:

Mr. BAKER. Mr. President, I speak for Mrs. Dirksen and the rest of the family when I express our deep gratitude to you and to the many Americans throughout this country who for the last several hours have so eloquently expressed their grief and their condolences. We are profoundly grateful to you and to them.

A century ago, another man from Illinois first lay in state on this catafalque, on this spot, described by Sandburg as "midway between House and Senate Chambers, midway between those seats and aisles of heartbreak and passion."

And so it was with Everett Dirksen—a man of his Nation who served long and well in both of those Chambers.

Everett Dirksen cherished Lincoln, but with a great humility that rejected any thought of comparison. He sought to follow many of the precepts of the Lincoln legacy. Both men understood with singular clarity that a great and diverse people do not speak with a single voice and that adherence to rigid ideology leaves little room for compromise and response to change.

A man of imposing presence and bearing, Everett McKinley Dirksen was nonetheless a man of eminent wit, humor, and perspective, who kept himself and others constantly on guard against taking themselves too seriously.

He was guided by a simple religious faith, carrying through life a sense of the presence of the Creator, and doing homage to the small, frail spark of immortality which defines the human spirit.

But perhaps most of all his hero was the people. He was of the people. Born of immigrant parents, his mother arrived in this country at an early age, speaking no English and with a tag about her neck instructing only that she be sent to Pekin, Ill. He knew firsthand "melting pot" America—its diversity and hardship, the brilliance of its people going about the business of forging a magnificent nation; and he loved them. All of them. And few are privileged to love so well. I think the people saw something of their own greatness in Everett Dirksen, and understood and respected him for it.

He was an idealist, but he was a realist as well, and in the end he chose calmly to risk his life, electing uncertain surgery in order to gain the opportunity to live and serve further; and he lost. But in losing he fixed with permanence the image of a noble man of the people.

The Chaplain of the Senate, Dr. Elson, thereupon pronounced the benediction, as follows:

Receive the benediction.

Now may the God of peace, that brought again from the dead our Lord Jesus, that great Shepherd of the sheep, through the blood of the everlasting covenant, make you perfect in every good work to do His will, working in you that which is well pleasing in His sight; through Jesus Christ, to whom be glory for ever and ever. Amen.

At 12 o'clock and 40 minutes p.m. the Senate returned to its Chamber, and was called to order by the Presiding Officer (Mr. EAGLETON in the chair).

DEATH OF SENATOR DIRKSEN—FUNERAL EXPENSES

Mr. PERCY. Mr. President, I send to the desk a resolution and ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. The resolution will be read.

The legislative clerk read as follows:

S. RES. 255

Resolved, That the Secretary of the Senate is hereby authorized and directed to pay from the contingent fund of the Senate the actual and necessary expenses incurred by the committee appointed to arrange for and attend the funeral of the Honorable Everett McKinley Dirksen, late a Senator from the State of Illinois, on vouchers to be approved by the chairman of the Committee on Rules and Administration.

The PRESIDING OFFICER. Without objection, the resolution is considered and agreed to.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum and ask unanimous consent that the time for the quorum call not be charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. SYMINGTON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. Under the previous order, the Senator from Missouri is recognized.

AIRLIFT—THE VALUE OF "REMOTE PRESENCE" IN FUTURE FOREIGN POLICY

Mr. SYMINGTON. Mr. President, on July 14, 1969, in an interview in U.S. News & World Report, I made the following statement:

Today we are spread all over the world, and it's terribly expensive. . . . Things cannot go on this way indefinitely if we are to remain a strong and viable Nation.

Prior to that observation, the headlines of July 10 clearly attested that the Nixon administration is responding to growing criticism of high military spending by cutting back the most expensve sector of the defense effort—manpower, both military and civilian.

The cost to the Nation of supporting overseas forces—and dependents—is particularly high. Such support is not only more expensive than in the United States; it also constitutes a continuation of the deteriorating balance-of-payments position of this country.

Congressional critics have been particularly outspoken on this subject, contending that "an overseas Military Establishment of 1.45 million troops, 500,000 dependents, and 250,000 foreign employees on 429 major and 2,980 minor bases is excessive."

Some of the rhetoric to the effect that "the Atlantic alliance is an anachronism" is exaggerated, but the point of these critics is well taken. An analysis of U.S. forces around the world shows that a great majority is currently in Asia, with the second heaviest concentration in Europe.

Since manpower and operations costs constitute some 60 percent of the $77 billion defense budget that is projected for 1970, it is obvious that major savings require significant reductions in U.S. forces overseas.

The most obvious opportunity for a substantial saving is the phasing out of the Vietnam war, after which it has been reported that the Pentagon plans to cut manpower back from 3.5 to 2.5 million men; but such a reduction is not really feasible unless a substantial repatriation of troops now stationed on foreign soil is also accomplished. That, in turn, would require some modification of our foreign policy, in Asia as well as in Europe. In Asia, particularly, a policy of what the Japanese cali low posture has been recommended by eminent experts.

With respect to a multilateral concert of forces in Asia, another expert recently observed:

Surely multilateralism should be the sine qua non of future American interventions: multinational efforts to assist developing nations; multinational efforts to cope with insurgency and multinational attempts to resolve open hostilities.

One can only agree wholeheartedly with those who believe that the right

role of the United States "is to regard itself as the center of a group of developed powers and not as the single-handed guardian of the whole internation system."

As perhaps first articulated by President Nixon, what needs to be established is an equivalent multilateral force structure for South and East Asia to replace the overextended concept of SEATO.

The concept of "remote presence" which we propose as a way out of the dilemma of how to meet proper foreign defense commitments without stationing large military forces overseas depends upon improved mobility of both troops and equipment that is now offered by new airlift technology. This new capability permits rapid deployment of significant forces over long distances to either conventional or unprepared landing fields; and exploitation of this capability would permit a military presence in support of overseas allies to be effected by relatively small—in many cases token—forces which, in emergency, could be rapidly reinforced by massive airlift.

Such a foreseen need for rapid deployment capability provided the rationale for the development of the heavy logistics transport as set forth 5 years ago by the U.S. Air Force's Project Forecast.

Arguments advocating use of this new technological capability designed to reconcile reduction of an excessive U.S. military presence abroad with an adequate "remote presence" have been advanced by many military and civilian strategic thinkers. The same arguments are applicable to Britain's force requirements in Singapore/Malaysia, also to Australian and New Zealand requirements in that region. The different mobility reserve force levels required of those three latter nations, however, will of course depend upon their different obligations; and the need, or threat, which can be credibly postulated for the relatively near future.

The size of U.S. Reserve Forces stationed in the continental United States—Conus—has heretofore been based on a threat scenario which involved a need to meet three military involvements at once; namely, two large-scale wars in Europe and South or East Asia, plus a small war somewhere else in the world.

Assuming these requirements to be imposed simultaneously upon an otherwise "normal" world situation—that is, current NATO force structure in Europe, and a pre-Vietnam distribution of forces in Asia—this scenario defines a certain airlift capability required for a specified force buildup at each of the critical theaters, and within a specified period. The period specified in the currently accepted scenario is long enough to permit deployment of significant forces by sealift; but in the case of the Middle East crisis postulated in the revised scenario herewith outlined, response by sealift would be too slow to play any decisive role in crisis resolution. Even in the case of an Asian crisis, a threat cannot be "nipped in the bud" by other than airlifted forces.

Such a scenario has been criticized as arbitrary and overly pessimistic in terms of requiring these three simultaneous deployments; and a more modest assumption of only two simultaneous crises would require a proportionately more modest airlift capability.

I also criticize this assumed scenario, but on two different grounds; namely, it is naive to assume as "normal" a continued U.S. military presence abroad which is excessive and could not be maintained even when welcomed in the host country; and, it is unrealistic to assume a major crisis in Europe as more probable than one in the Middle East.

It was Ambassador Reischauer, a former Ambassador to Japan, who stated:

> When we look across the Atlantic, we may find elements of uncertainty and change in our foreign policies, but when we look across the Pacific, everything seems in doubt. The outcome of the Vietnam war is still unknown; the reaction of the American people to this outcome is even less clear . . . Our chief alliance—with Japan—seems more threatened than our European ties; and the future of the 850 million people in the Indian subcontinent and the other noncommunist lands of South and East Asia is quite incalculable.
>
> Worst of all, we are not agreed on the underlying concepts for our trans-Pacific policies. While the conceptual basis for our trans-Atlantic relations need some refining, our whole approach in Asia must be rethought and reconstructed almost *de novo*.

Let us hope that the eventual military withdrawal of the United States will be accomplished in such a way so as to leave Americans still broadly concerned in the future of Asia, and also with Asians still looking to the United States for a continuing, if less conspicuous, and primarily economic, role in their part of the world.

Of all Asian relations, the most important to the United States are those with Japan, leading ally in Asia, second largest trading partner, the third most productive economy in the world and the world's fastest-growing major country.

Because of domestic political circumstances arising from her traumatic experience in World War II, Japan's present military posture is strictly defensive, but her military potential is that of a major world power; and although this great country is still sensitive to memories of the past, the Japanese now show signs of becoming a major source of economic and technological aid to that whole region, as manifested by their participation in the Asian and Pacific Council—ASPAC.

The maintenance of close and friendly relations with Japan is thus an important U.S. interest. This country is committed to defend Japan against all threats; and as a result Japan has been able to exploit that shield by devoting very little of her own GNP—less than 1 percent—to defense, concentrating instead on developing a burgeoning economy.

While understandably loath to give up this advantageous position, rich Japan must now think more of her own defense and eventually accept her responsibilities as a great power.

As the younger generation achieves power in the late 1970's, "Japan will look upon the international scene with a sense of balance, will establish positive diplomatic and security policies based on true national interest, and will take independent action to achieve national goals."

In the meantime, however, short-run political considerations demand attention. The continued presence of U.S. military installations in Japan is well known to be a constant source of irritation to leftist and conservative Japanese alike. That irritation has been adroitly exploited. These bases are the chief targets of a wave of demonstrations which during the past year have mounted greatly in size and violence and serve to focus protest against the Japan-U.S. Mutual Security Treaty which comes up for review in 1970, and also against the continued U.S. occupation of Okinawa.

These "minority protests" are getting through to the Japanese public. Recent opinion polls show that 45 percent of the populace—45 million people—believe U.S. bases are harmful to their country, whereas only 18 percent approve.

In the process of reevaluating this Mutual Security Treaty, the military value of these bases should be reassessed in the light of the political liability they also constitute.

With the advent of the Polaris fleet ballistic missile major current strategic deterrent, there would seem to be little need for the United States to retain Okinawa as a base for B–52 operations; and furthermore, today Japanese air bases are not available to the United States without "prior consultation."

If Okinawa operations are discontinued, Japanese bases would be much further reduced in value to the United States; in fact, our best interests might be served by turning said bases over to Japan as part of a revised treaty agreement whereby Japan would build up her own conventional defense forces as a prelude to eventually joining the "Pacific Community" of powers interested in preserving regional stability.

The stake of Japan in such stability is truly tremendous. That country is the world's largest importer of oil, 90 percent of which comes from the Persian Gulf through the Indian Ocean, the Straits of Malacca, and the South China Sea. In the most literal sense, Japan's booming economy depends, for its very survival, on daily traffic through the straits of 400,000 tons of imported oil, iron ore, and coking coal. This lifeline is vital. It must be defended against any threat to the Malay peninsula.

In view of the foregoing factors—public opinion in relationship to strategic/economic self-interest—it is clear that the trend of Japanese policy regarding the United States must be toward a reduction of U.S. military presence in that country to an inconspicuous level. This trend should, and I believe would, be coupled with a U.S. agreement to rapidly exert its "remote presence" in Asia, should the security of Japan's territory be threatened.

A reduced U.S. military presence in Asia would also affect Australia; therefore, it is clear that country would hope to keep the United States engaged in Asia, especially Southeast Asia, at all cost.

After reviewing its defense policy upon Britain's announcement of ultimate withdrawal from Asia, Australia elected to maintain her posture of "forward defense" by continuing, with New Zealand, to station forces in Malaysia and Singapore.

While generally laudable as an expression of a determination to live as part of an Asian community, and not withdraw to a "Fortress Australia," it would appear that a backup defense posture of "remote presence" based on rapid heavy airlift would lend substantial added force to the "forward defense" of its ANZUS allies as well.

In Europe the general situation is more stable, although many problems do persist, with the most basic one continuing to be a divided Germany, neither country recognizing the right of the other to exist.

The question from our standpoint with respect to this longstanding problem now would appear to be: How many American troops are "enough" so as to maintain the credibility of the commitment?

Comparing NATO and Warsaw Pact forces, Dr. Carl Kaysen has argued that the present U.S. force level is more than adequate. I agree; and, in any case, it is a fact that the economic and political position of the United States now make some force reductions inevitable.

Fortunately, the "remote presence" which is now made possible by rapid heavy airlift can permit a sizable force drawdown in Europe with no loss in NATO response credibility.

The economic appeal of such a force drawback is welcomed by strategists and politicians alike; but in order to reduce the requirement for that heavy airlift which could rapidly redeploy the troops and equipment needed overseas in a crisis, some analysts have suggested a scheme by which only the troops would be repatriated to the United States, with the equipment "pre-positioned"—that is, stored in Germany—for use by those troops which could then be flown from this country in conventional "people carrying" transports.

Even if one assumes, however, that concentration of such pre-positioned equipment could in fact be adequately maintained, guarded against sabotage, and defended against attack—highly doubtful—this so-called "pre-positioning" scheme has two flaws, one minor and one major.

The minor flaw is economic. In order to keep the repatriated divisions in question in a state of combat readiness, a duplicate set of heavy equipment would be required over here, at heavy cost.

The major flaw is both political and strategic; namely, the possibility to the point of probability that any new crises would occur in the Eastern Mediterranean or Middle East rather than in Western Europe, in which case combat equipment pre-positioned in Germany would be useless.

What would be needed would be instant application of the "remote presence" concept, by means of massive airlift from this country. Should the crisis blossom into a "blitzkrieg" type engagement, the pace of the action would in all probability be such that only the first round of sorties would arrive in time to be decisive.

To those inclined to the belief that the cold war is in its entirety a thing of the past, may we point out that the Soviet Union, whatever it may be doing elsewhere, is not practicing any detente with the United States when it comes to rapidly moving events in the Middle East.

We talk of a region which the West calls the "Middle East," but which, to the Soviet Union, is the "Near South"; and which, as the records of history point out, they have long coveted.

In the secret protocol to the draft 1940 four power pact, the Soviet Union declared that its "territorial aspirations center south of the national territory of the Soviet Union in the direction of the Indian Ocean."

Russia has already achieved that long-frustrated czarist ambition by means of the expansion of its naval power throughout the Mediterranean; and only the logistics problems posed by the present closure of the Suez Canal would appear to be preventing further buildup of Soviet fleets in the Arabian Sea and the Indian Ocean.

We know of the naval presence by which the Soviets have called into question NATO capacity to assist Yugoslavia from the sea in the event of a Soviet attack by land.

The Soviets have thus successfully begun the dispute of Western control of a major maritime passage and its continental surrounds; and if British withdrawal is completed as announced, they stand to achieve an even greater goal: namely, Russian hegemony east of Suez.

Of the potential dangers posed by Britain's withdrawal from the gulf states, the most obvious is possible interruption of the oil supply so vital to U.S. allies—50 percent of Western Europe's imports, 90 percent of Japan's, 65 percent of that for Australia; and recent events in Nigeria have shown that oil supplies may be cut off, not because some internal or external enemy wishes to do so, but because without a minimum of order, the oil industry cannot function.

The same situation could arise among one or more of the Persian Gulf states.

In addition to possible internal disturbances, conflicts between the States themselves could arise from conflicting territorial claims. But a few examples: Iran's claim to Bahrain, Iraq's claim to Kuwait, Saudi Arabia's claim to part of Muscat, Oman and Abu Dhabi; and of course we all know the problem incident to Israel.

Over the years these differences and disputes have not been pursued primarily because the parties concerned recognized that, while the British were present, temporary silence over a claim did not imply its forfeiture. The removal of British presence, however, could lead to a renewal of old disputes, and then turmoil into which the Soviets would be only too pleased to step at request. The consequences in Yemen of the 1967 British withdrawal from Aden suggest further future possibilities in the gulf.

Aside from threatening these strategic oil resources, a strong Soviet presence in the Middle East could have other serious political consequences and it is significant that the Soviets no longer hold to their policy of not setting up military bases on foreign soil outside of Eastern Europe. They have established a base at Alexandria from which even Egyptians are excluded; and they have rights to a base in Yemen. An additional possibility might be the development of the former British base at Aden. This could well inhibit the development of Elath by Israel, their only source of getting to the sea and to the south.

In summary, the Middle East situation presents multiple opportunities for conflict and as such constitutes a major potential threat to world peace. The Persian Gulf situation in particular does not admit improvement by readjustments of military posture. In contrast to the Malaysia-Singapore situation, in which the option of maintaining a token force backed up by "remote presence" is still open to Britain, the position in the Persian Gulf has changed radically.

Assuming a disastrous post-Vietnam scenario is not followed, the threat of major conflict in the developing countries of Asia, Africa, and South America is not considered great.

Minor conflicts within or between developing countries can only continue to occur; and when remote from the television cameras, internal conflicts will continue to be largely ignored, as currently the case in the Sudan; or deplored in the United Nations, as currently in the case of Nigeria. International disputes will warrant United Nations action, however, and, if considered necessary, intervention by U.N. task forces. It is in the support of such action by the United Nations that it would appear a special role for Canada has developed.

The original membership of Canada in NATO was the natural result of a post-war camaraderie within the Atlantic community. It has been said that, "although NATO's purposes are essentially military, and in this respect relatively unattractive to a people with a pacific tradition, the idea of defending the European wellsprings of Canadians' cultural heritage has been viewed sympathetically, until at least recent years, by almost everyone in Canada."

While a willing United Nations participant, however, Canada has been less willing than has the United States to look upon her involvement in European defense as crucially significant. In addition, in the mid-1960's, the immensely enhanced U.S. capacity for airlifting men across the Atlantic in a few hours suggests that, in fact, continued heavy physical presence might no longer be critical to Europe's defense; and of course the more recent development of technology for airlifting heavy equipment as well as men has reinforced that determination.

The contribution of Canada to NATO has thus become more and more a symbolic gesture of solidarity with its allies, no longer an operation which could be justified in military terms. But Canada is morally bound to assist, in one way or another, with the defense of the Western World; and to the same proportional extent as its friends.

Accordingly, Canada is apparently thinking more in terms of participation

in military and other functions of the third world rather than involvement in the strategic arrangements of the great powers.

In a perceptive article this year entitled, "A New Atlantic Role for Canada," Roy Matthew wrote:

> The rationale for Canadian concentration on the Third World is as follows: Rightly or wrongly, the United States is distrusted in many Asian, African and Latin American countries simply because it is big and powerful. In addition, all the larger European nations, as well as Japan, are suspect because of the imperial or neo-imperial behavior in the past.
>
> This problem provides an opportunity for a few countries that are not powerful or ex-imperial, but are wealthy enough to have some resources to spare, to fulfill an especially useful function in the underdeveloped and uncommitted regions of the world. Canada, like Switzerland, the Scandinavian nations and a handful of others, has become very active in this type of endeavor. There have been Canadian contingents in virtually all the peacekeeping forces and international supervisory operations since the War—Indochina, Palestine, Kashmir, Yemen, Gaza, the Congo, Cyprus.
>
> It is certainly arguable that such contributions may have done more for the peace and stability of the world over the past twenty years than have the Canadian military activities at home and in Europe. By extension, it has been suggested that Canada could engage in more such operations if its available forces were committed primarily, if not exclusively, to peacekeeping—first, because there would be larger numbers of men and materiel to devote to that purpose, and second, because the measure of nonalignment implied would presumably make Canadian servicemen that much more acceptable in the Third World.

In effect, it would appear that Canada has become an armed force of the United Nations; and if equipped with adequate heavy airlift capability, that nation could also serve as a "remote presence" for the U.N.

In summary, the redefined threat scenario as outlined in the foregoing section is considerably broader in scope than the one it attempts to improve. It involves the possible responses to a different variety of potential threats, not only by the United States, but also by a multilateral concert of friendly forces.

The military posture of the United States as assumed in this presentation was that of "low posture" in the region of the threat, backed up by "remote presence" in the form of massive heavy airlift capability. The posture of our allies in Asia was that of "forward defense," but also backed up this by "remote presence."

The current estimate of U.S. heavy airlift requirement, based on the heretofore accepted "2½ crisis" threat scenario—namely, the capacity to handle at one time two major wars and one minor—is six squadrons composed of 20 heavy logistics transports each. The revised and, hopefully, more realistic scenario involves but two simultaneous major crises; this in the hope that a low-order crisis could and would be handled by the United Nations.

In the interest of realism and a reduction of this unprecedentedly high military cost, however, this modified threat scenario also assumes a much reduced U.S. military presence overseas; that is, the "low posture" mentioned above. That in turn throws a far greater burden of response on the "remote presence," which would be obtained in emergency from the continental United States.

Without benefit of a detailed analysis of the logistics problems involved, it is not possible to make an exact quantitative estimate of the effect of this revised threat scenario on U.S. heavy airlift requirements.

It would appear certain, however, that this "remote presence" concept is the best method for fulfilling the present and future international obligations of the United States. Such a concept is much in our interest, from a political and military as well as an economic standpoint; and it could be the one way to handle our security and well-being without having the cost of our defenses creating even more serious problems for our already endangered economy.

Mr. RUSSELL. Mr. President, will the Senator yield?

Mr. SYMINGTON. Mr. President, I am glad to yield to the able chairman of the Appropriations Committee.

Mr. RUSSELL. Mr. President, I listened with great interest to the able, informative, and scholarly remarks of the distinguished Senator from Missouri. I congratulate him on encompassing in one brief address so much information as to the situation all over the world and the probable role and capacity of the various nations of the earth.

The Senator not only is an active member of the Committee on Foreign Relations, but he has visited nearly all of the leaders and foreign chancellories of the world, and he is qualified to speak in that area.

I am thoroughly familiar with his interest in the matter of air transport. A number of years ago the Senator was greatly concerned about the ever increasing tide of this country's adverse balance of payments that threatened not only what gold reserve we have but the very economy of the United States. He discussed it several times with me, and he kept stressing bringing some of the troops home from Europe, and Korea, for that matter. He finally said that if we had an adequate airlift capability, we could bring troops home. From that day I supported him to the best of my ability in trying to convince the Department of Defense that we should increase the airlift as a means of bringing home the troops and ending the great drain on dollars. It is the only hope we have.

I want to say here and now that people who really mean it when they say we should bring these troops home, had better provide for the airlift because you are not going to be able to bring them home until you have some means to send them back. I would be willing to bring them home without that assurance, but this Nation is not.

The Senator recalls that we examined Secretary McNamara on this matter several times when he was before the Armed Services Committee. Secretary McNamara at the time was highly favorable to the idea of bringing home our troops. I think the insistence of the Senator and some of those who supported him had a great deal to do with the current airlift program.

If we have an adequate airlift we can diminish the loss of dollars for the support of the military overseas to such extent that the country will be able to stand it. The dependents are a source of great expenditures in Europe. We all know that all the privates do not have their dependents there, but all of the upper grades, where the pay is more substantial, can have dependents in Europe and it causes a tremendous expenditure of American dollars there.

We can be just as effective with an adequate airlift in meeting our commitments as we could be if we had the troops stationed, or part of them stationed, back on the Rhine because we can fly defenses from this country to Europe as fast as we can move in armored carriers from the Rhine to Eastern Europe.

I congratulate the Senator and I hope this statement is taken to heart. I hope all Senators study and read the Senator's statement not only because of its effect on what takes place today, but also on the future of the country.

We cannot continue to bleed this country with this tremendous number of troops stationed all over the world. I think we will have to reduce them substantially, and we can, and any weakness coming from that can be remedied by having an adequate airlift capability.

The Senator is an expert in this area. He was the first Secretary of the Air Force in the United States, and he has been actively interested in this whole subject over a period of more years than I will state here now.

I congratulate him on the tremendous contribution he has made to bring down the overall cost of the military establishment of the United States.

Mr. SYMINGTON. Mr. President, the distinguished former chairman of the Committee on Armed Services, is very kind. Actually, I followed his leadership regarding the importance of airlift more than he did mine. It is my opinion, and I have said so on this floor many times, that he is the outstanding authority with regard to military matters in Congress today.

The Senator will remember when there was such heavy concentration on the strategic air force, he and I talked at some length as to the increasing importance of airlift from the standpoint of the security of the United States. I do not believe that we would have the C–130, the workhorse in Vietnam, if it had not been for the efforts of the able Senator from Georgia (Mr. RUSSELL); and believe, furthermore if we did not have the C–130, we would not have the C–141.

It is a logical development therefore, to go to the C–5A so that we can transport rapidly not only men, but also the required support equipment if it becomes necessary for the United States to move into any part of the world in the interest of national security.

For years, it has seemed to me that the question of whether it would be a "trip wire" or a "shield" under SHAPE or NATO in Europe became strictly theoretical after the withdrawal of France

from NATO. The idea that we can support great armies, after the first crunch, through the English Channel in this modern, nuclear space age, at the same time a possible enemy was pouring over the "plains of Prussia" in historical fashion, seems nothing short of ridiculous.

I believe our position would be enhanced if a large number of our troops in Europe were brought back here, and that these troops and their equipment be flown abroad in times of emergency.

I appreciate the reference of the able chairman to our balance of payments, and the fact that millions of Americans are now stationed in various countries all over the world, all of it being paid for by the American taxpayer.

Having studied this matter to the best of my ability, I can say with complete sincerity that it would appear the best way not only to reduce the dollar drain, but also to reduce overseas commitments and factors which could lead to additional commitments, would be to build a modern airlift capability. In that way, we would be able to reduce the tremendous number of bases which we have around the globe.

Mr. TALMADGE. Mr. President, will the able Senator from Missouri yield at that point?

Mr. SYMINGTON. I am glad to yield to the distinguished Senator from Georgia.

Mr. TALMADGE. Mr. President, I have listened with great interest to the entire speech of the Senator from Missouri, as well as to the remarks made by my senior colleague, Mr. RUSSELL, former chairman of the Armed Services Committee.

The Senator from Missouri was kind enough to send me an advance copy of his speech, which I read in great detail. I think he has made, today, one of the ablest statements I have ever heard since I came to the Senate on the military security of this country and what our foreign policy should be.

Mr. President, I have thought for a long number of years that our Nation has been overcommitted militarily, and overcommitted economically. That situation has come home to roost with the unfortunate war in Southeast Asia, from which we have been unable to extricate ourselves. We have seen it in our balance-of-payments problem, which places the integrity of the dollar in jeopardy, with a great drain on our gold.

The Senator knows, as the ranking member of the Armed Services Committee and the Foreign Relations Committee, the United States has thousands of bases scattered all over the world. We have hundreds of thousands of troops scattered all over the world. Those troops, in my judgment, and those bases in many instances, particularly from a public relations standpoint, have been counterproductive.

When foreign troops are stationed in a strange land, with different customs, different religions, different habits, and different rates of pay, they are bound to create a discordant note.

We hear the slogan, almost worldwide, "Yankee go home." We have worn out our welcome.

I have thought for a long period of time that we should bring home at least half the troops we have stationed in Europe.

I think the Senator has pointed out the correct solution, that if we can have an air capacity with the mobility to transport thousands of troops to any part of the world within a matter of hours, together with their equipment, it will give us a military presence which will be just as adequate as having those troops stationed there all the time.

Mr. President, the lessons of history teach us that any military power which lacks swift mobility with men and weapons is in serious danger of losing battles, or losing wars. All of human history has taught us that. If we read the lessons of the great military leaders of the past, we find that one thing responsible for their success was their swift mobility and their ability to get men and materiel to the scene of battle on a moment's notice.

Again, I wish to compliment my distinguished colleague on the speech he has made. I hope that the country, the Senate, and Congress as a whole, will take heed of the wise views he has offered here this afternoon.

Mr. SYMINGTON. Mr. President, I am grateful to my colleague from Georgia (Mr. TALMADGE). He is a member of the Finance Committee and one of those who follows carefully the condition of our economy. In my opinion, his remarks are solid from the standpoint of how we can extricate ourselves from spending billions and billions of dollars a month abroad.

I would hope that all Members of the Senate would read the wise observations just made by the Senator from Georgia (Mr. TALMADGE).

In this connection, the able chairman of the Foreign Relations Committee has assigned to me a subcommittee to examine this very matter of commitments. Hearings are scheduled to begin later this month; and based on material gathered by this subcommittee staff to date, I believe the results of these hearings will support the remarks made by the Senator from Georgia.

Mr. President, as I have stated many times in recent years, this Nation is overcommitted. The sooner we do something about it, the better it will be for the security and well-being of the United States.

Mr. President, I yield the floor; but before doing so I should like to commend the able, superb job being done by the Senator from Wisconsin (Mr. PROXMIRE) with respect to investigating a particular contract. I think it is one of the finest jobs ever done in the Senate. He has pointed out that there has been delay and waste; and as a result of his work, I believe the American taxpayers will be saved a great deal of money.

I would sum up the situation, as I see it this afternoon, that it may very possibly be a poor buy but, nevertheless, what is bought is impotrant to our national security.

Mr. YOUNG of North Dakota. Mr. President, I wish to commend the Senator from Missouri for a very able and informative speech on the airlift needs of this country. I recall that it was at least 8 or 9 years ago the chairman of the Armed Services Committee, the Senator from Georgia (Mr. RUSSELL), and the Senator from Missouri (Mr. SYMINGTON), first Secretary of the Air Force, advocated a much stronger airlift program. We are well underway toward having that necessary greater airlift capability. I think this is to the credit of those two Members of the Senate, and other Members of the Congress, that we have reached that point now. Those two Senators are due much greater credit than is the Pentagon itself. The Pentagon has never been a great advocate of airlift capability until the last few years. It was due to the two Senators to whom I have referred, to a large extent, that the Pentagon has more recently advocated it. The two Senators were far ahead of their time.

Mr. SYMINGTON. Mr. President, I thank the able Senator for his remarks.

It has been my privilege to serve with the Senator from North Dakota on the Defense Subcommittee of the Committee on Appropriations. Through his faithful service on that subcommittee he knows the whole story; and I thank him for what he has said about airlift.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. SYMINGTON. I yield.

Mr. PROXMIRE. I did not have a chance to hear the Senator deliver his speech, but he served me with an advance copy of it, and I have read it. I think it is an excellent speech. I mean that. I think it is the first intelligible explanation of the rapid deployment concept and its place in foreign policy that I have seen. By implication, of course, it provides an important rationale for the C–5A. The significance of the statement is enhanced by Senator SYMINGTON'S former position in the Air Force and by his present high stature in the Senate as a preeminent authority on both military and foreign policy.

I agree with the basic points in the Senator's statement. Certainly, our overseas military establishment is excessive. At the same time, mobility of both troops and equipment is a desirable objective. I suppose every military leader seeks mobility as well as strength. The question in my mind is, mobility for what? What national purpose does rapid deployment serve?

I note that the Senator quoted an expert's views on multilateralism. I will repeat the quotation used by Senator SYMINGTON:

> Surely multilateralism should be the sine qua non of future American interventions: multinational efforts to assist developing nations; multinational efforts to cope with insurgency and multinational attempts to resolve open hostilities.

Now, this quotation, which I have taken from the Senator's speech, raises a vital point about the future of our defense and foreign policy, and it also raises a question about the intended use of the C–5A. I can well understand the first and the last purposes of multilateralism cited by the expert. Indeed, the United Nations was established primarily to attain those worthy goals—rendering assistance to the developing nations and helping to resolve open hostilities.

But I wonder what the expert means by "multinational efforts to cope with insurgency."

The Senator from Missouri has been one of the most effective critics of the American intervention in Vietnam. That war is sometimes described as a product of insurgency. I just wonder what the implications are of a foreign policy which employs rapid deployment as a means of mobility and which enables some multilateral organization "to cope with insurgency." What do we mean by "insurgency?" What kind of insurgencies will the C–5A allow us to intervene in? I wonder whether the distinguished Senator from Missouri can enlighten us on these questions.

Mr. SYMINGTON. Mr. President, I am grateful for the opportunity to present my position on this particular matter. Inasmuch as there is a lot of opinion in the Senate that we should not have gone into Vietnam in the first place, not only among the so-called doves, but also among the so-called hawks, I would state that I was in Vietnam for some time in 1961 with Gen. Maxwell Taylor and Mr. Walt Rostow; and believe sincerely that if that matter had been handled with dispatch at that time, by bringing in quickly a relatively small number of troops—the priviso being that we should have gone in at all—it would have had the same effect as when President Eisenhower sent troops into Lebanon. If it is going to be a police action, then it should be a police action; and there are places in the world where, in the interest of our security, I think it could be wise to send a few hundred troops, with the necessary equipment. Thus the idea of the C–5A and the emphasis on airlift, is the idea that we would have no more Vietnams.

Mr. PROXMIRE. I very much appreciate that reply, but it raises the point: Are you going to have the United Nations use the C–5A, or will this Nation use the C–5A at the request of the United Nations? That is the first question——

Mr. SYMINGTON. No, if I may reply. I am not referring to the United Nations; the Senator from Wisconsin is referring to the United Nations.

Mr. PROXMIRE. The Senator from Missouri referred to multination action.

Mr. SYMINGTON. There are still places in the world which the United States may have to go into without the approval of the United Nations, especially since the United Nations today is, to a large extent, run by the less developed nations, not by countries of Europe.

I believe in the United Nations and hope it will some day become what we hoped it would in the beginning; but I do not think we can delegate our security to the United Nations especially as it is constituted today. That was the purpose of that statement.

Mr. PROXMIRE. I am glad that is clarified. The Senator referred to multinational attempts. That could be NATO or the Organization of American States. Is that what the Senator had in mind?

Mr. SYMINGTON. Yes. If Great Britain got into serious trouble, I believe the United States would want to consider rapid reinforcement; moreover, if Japan today, based on our treaty obligations, was seriously threatened by her close neighbors, it would be desirable for us to be able to check, very quickly, a situation of that kind with a dependable airlift. On the other hand, I do not think the United States can afford to go into major wars, especially major undeclared wars—and I put it that way because I believe the Senate should have something to say about another Vietnam—and, at the same time, maintain its economy on a viable basis.

Mr. PROXMIRE. I have one other point to make with regard to the Senator's speech. In developing a scenario in which this country would demonstrate its "remote presence" by means of massive airlift, the Senator has spoken of the possibility of a crisis in the Middle East, in which case pre-positioned equipment in Western Europe would be useless. Furthermore, if the crisis developed into a blitzkrieg-type engagement, in all probability "only the first round of sorties would arrive in time to be decisive." What the Senator seems to be saying here—and I am sure he will correct any of my impressions if they are erroneous—is that a sizable fleet of rapid deployment aircraft—namely, C–5A's—will be necessary for the United States to meet its commitments in the Middle East.

The size of the fleet, that is, the number of C–5A's, which would be required is, however, not specified. Further on in the speech the Senator states quite candidly:

> Without benefit of a detailed analysis of the logistics problems involved, it is not possible to make an exact quantitative estimate of the effect of this revised threat scenario on United States heavy airlift requirements.

Mr. SYMINGTON. If the Senator will bear with me, I will explain by saying that, as the Senator knows, there have been plans for two additional squadrons; that is, for a total of six C–5A squadrons. This bill does not have any money in it for those additional squadrons; therefore, this talk today—which was prepared against the able Senator's amendment—does not get into the two additional squadrons which have been under consideration in the Pentagon.

If the Senator will yield further, with respect to his mention of the Middle East, I would like to note that for several years I have been chairman of the Near Eastern and South Asian Affairs Subcommittee of the Committee on Foreign Relations. At the time when there was some disagreement among our allies incident to the situation in Egypt and the Middle East in 1956, the countries of France, Great Britain, and Israel decided they would attack the United Arab Republic. That attack was only stopped by the economic threats, primarily, as well as the political threats, that were made by this country to those three countries that decided to attack Nasser.

At that time, or shortly thereafter, the First Lord of the Admiralty of Great Britain Viscount Haisham appeared on a television program in this country, and one of the reporters asked him: "Aren't you regretful about the length of time it took and the delays that were incurred in such an attack on Egypt?"

Viscount Haisham replied, in effect, "No, we are not worried about it at all. You must remember that Alexandria is only 3 days sailing time from Malta."

As one who had been interested in air transportation, I thought that a somewhat anachronistic remark to make in the air age.

Later in the same year I asked the field general handling the Israeli troops about it.

He said, "Because of the delay involved, our schedule for getting to Cairo was 3 days, whereas the schedule for the British and the French was 2 weeks."

It seemed to me, at that time, these incidents showed the importance of following the policy of perhaps one of the greatest generals this country has ever had, Nathan Bedford Forrest, who said:

> I git thar fustest with the mostest men.

I appreciate this dialog with the Senator from Wisconsin about the C–5A, because I know he is not against the C–5A as such; he is merely questioning the number of C–5A's that should be built. Is that correct?

Mr. PROXMIRE. That is correct.

Mr. SYMINGTON. I believe the C–5A is an acceptable compromise between no action and a great land or sea action, as is so well exemplified today in the tragedy of Vietnam.

Mr. PROXMIRE. I appreciate that, but the Senator raises the question that we do not know how many we need. He said that in his speech. The whole purpose of my amendment is to determine the number needed. We should get additional information, so that the Senate will know whether four squadrons are needed or not. As the Senator from Missouri knows, studies of the C–5A made in the Office of Systems Analysis indicated that four squadrons were not needed, these studies were rejected by the Secretary, but that was the finding. The Senator from Missouri just said we do not know how many we need.

Mr. SYMINGTON. The position I was trying to present to the Senate, and especially to the able Senator from Wisconsin, after studying this matter to the best of my ability is that I am not now ready to say we need six squadrons, but do believe four squadrons are needed. That is why, despite my respect for the Senator from Wisconsin and admiration for the work he has done, I feel that I cannot vote for his amendment.

Mr. PROXMIRE. Why does the Senator from Missouri feel that 58 are not enough but that 81 may be enough?

Mr. SYMINGTON. This would be a story that one would have to get into division by division. But when we have a situation, as in Vietnam, for example, where today we have already shipped more in tonnage than we did to Europe during World War II, even though we have about one-eighth the number of troops in Vietnam that we had in Europe, I think it shows the need for sizable shipments; and I believe the quicker we can get the equipment as well as the troops there, the quicker it will be possible to put down a situation that we believe is in our interest to put down, in a relatively quick and less expensive man-

ner in both lives and treasure than if we wait too long, or are forced to incur the automatic delay encountered in going by sea.

Mr. PROXMIRE. The Air Force report itself says that they need only 40—not even 58, let alone 81—only 40 C–5A's to provide all the airlift needed for the outsize equipment. Then, when they go beyond 58 planes, their analysis shows that the other airlift planes are more cost effective.

If that be true, why should we not have study of this matter made available to us, so that we may have all the data before us before we go ahead with it?

Mr. SYMINGTON. I would hope the Senator from Wisconsin receives any and all information that he asks for. However, I respectfully suggest to him that sometimes these reports are ones that have been made when someone asks, as any good executive does, "Give me the negative side of the picture." On that basis they are not conclusive, and at times are also parochial.

What we have before us today, as I see it, is a compromise typical of democratic functioning. The Air Force wants six squadrons. Some people feel they should only have three.

I have studied the matter to the best of my ability; and, based on my background, would say, "Let us compromise with four, and study it from there."

Mr. RUSSELL. Mr. President, will the Senator from Missouri yield?

Mr. SYMINGTON. I am happy to yield to the Senator from Georgia.

Mr. RUSSELL. I do not particularly wish to get into a prolonged debate of this issue with the Senator from Wisconsin, but I understand that the studies to which the Senator refers start with the assumption that we need four squadrons, and raises a question with respect to the fifth and sixth squadrons. I have seen Secretary Laird's letter, and certainly that is what it said. It gave the reasons, the number of divisions and troops, and the number of days it would take with the four squadrons, as compared with six.

Mr. PROXMIRE. Mr. President, Secretary Laird wrote me and also sent two of his experts over to my office to brief me on the studies, and what one of the two studies showed was that if you use the planes more intensively, if you fly the planes 15 hours a day, you would only need three squadrons. That finding he later rejected.

The second study, made June 11, showed that if you have the other means of transportation available, and pre-position the equipment, and so forth, you need only three squadrons.

These assumptions behind both these studies were rejected by the Secretary of Defense and the Assistant Secretary for Systems Analysis. But there is not any question that the study showed that three squadrons were all they could justify.

Mr. RUSSELL. Based on the assumption that you can keep three squadrons of planes in operation on a 24-hour basis.

Mr. PROXMIRE. A 15-hour basis.

Mr. RUSSELL. With three crews. That is an assumption that certainly ought to be rejected, because no plane ever made had been capable of such service.

Mr. PROXMIRE. It was based on an assumption of 15 hours per day, for only a 10-day period.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. PROXMIRE. Certainly.

Mr. SYMINGTON. These reports made by civilian "experts," are sometimes disturbing. The Preparedness Subcommittee, of which I am a member, had the head of the tactical air aspects of Systems Analysis tell our staff that it was better to have two planes of inferior quality than one plane of superior performance. At that time, I began to question some of their decisions.

Mr. PROXMIRE. I am sure the Senator is correct. All I say is that we ought to have the information before we make a decision. There is no hurry. We will not have the first three squadrons until June 1971. There is ample time before they would finish a fourth squadron. So when we authorize it, we should do it with our eyes open and know what we are doing.

Mr. SYMINGTON. Mr. President, I congratulate the Senator from Wisconsin. There has never been a better job done in the Senate since I have been a Member than has been done by the disclosure of some of the information by the Senator from Wisconsin.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. FULBRIGHT. Mr. President, I did not understand the matter of 15 hours. For how long a period were the planes to be in service for 15 hours a day?

Mr. PROXMIRE. The assumption was made that they could be in service for 15 hours a day for a 10-day period, during which time it could be feasible to use C–5A's rather than other transportation methods. Once we get a little over 10 days or so, we can ship a whale of a lot more economically by ship than by airlift.

The airlift is practical for very short periods.

Mr. FULBRIGHT. The Senator meant for a period of 10 days. It is not reasonable to keep modern airplanes in use for that many hours a day for a long period.

Mr. PROXMIRE. Mr. President, the Senator from Arizona has debated this matter with me. And he knows a great deal more about planes than I do. However, he argues that it would be unrealistic to keep planes of this type in the air for 15 hours a day.

Mr. FULBRIGHT. Even for 10 days?

Mr. PROXMIRE. Even for 10 days.

Mr. GOLDWATER. Mr. President, if the Senator will allow me to explain why, a fleet does not sit idly by waiting for an emergency. It would be in constant daily use by the Military Airlift Command. So if we apply the same figures to the squadron as they do in normal transportation, about 80 or 82 percent would be kept in readiness.

The figures show that with three squadrons, 48 aircraft, we would have to assume that 10 out of the three squadrons would not be in use.

If we assume that the fleet is to be used only in times of great emergency, we could keep them in mothballs and use them as we need them. However, as I tried to explain the other day to my friend, the Senator from Wisconsin, it would cost more money. The airplane itself, as a single unit, can conceivably do it. The airlines cannot do it. And the military cannot do it as an average. We could have some fly for 20 hours 1 day. However, the next day they might not fly at all.

Mr. President, will the Senator from Georgia yield me some time?

Mr. RUSSELL. Mr. President, I am going to yield next to the Senator from North Dakota.

Mr. GOLDWATER. I wanted some time to finish my statement pertaining to the pending debate.

Mr. RUSSELL. How much time does the Senator require?

Mr. GOLDWATER. Five minutes at the most.

Mr. RUSSELL. Mr. President, I yield 5 minutes to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I was very interested in the statement of the Senator from Missouri and the reply made by the Senator from Wisconsin. I have some figures that I will have printed in the RECORD. First, however, I will use a few of the figures to show what we are up against in the airlift problem.

For three squadrons of C–5's, in 30 days 38 aircraft out of a 48-aircraft unit can carry 39,900 tons of outsized cargo. It would take 50 days to carry 66,400 tons of outsized cargo.

Regular-sized equipment can be carried in the normal aircraft carrier. This is outsized stuff that cannot fit in anything else.

If we go to four squadrons, it would take 35 days to carry 66,400 tons of outsized cargo. That is quite a drop. That is 15 days.

If we go to five squadrons of C–5's, it would require 27 days to carry the same amount of tonnage. That is not much of a drop. It is about 8 days.

If we go to six squadrons of C–5's, it would require 22 days to carry 66,400 tons of outsized cargo to Europe.

Mr. President, I ask unanimous consent that the figures I have used plus some others be printed in the RECORD at this point.

There being no objection, the figures were ordered to be printed in the RECORD, as follows:

TALKING PAPER ON C–5

If there were to be a requirement to airlift a practical combat force with support elements of Army, Navy, and Air Force units to Europe in 30 days, utilizing programmed prepositioned equipment the force would be represented as follows: Troops, 300,000; bulk cargo, 100,000 tons; and outsize cargo, 65,000 tons.[1]

It should be noted that the 30-day period referred to above is for completion of the entire movement of troops and cargo. A key factor in this deployment that we have not addressed in this study is the critical time phasing of deployment of the units during the 30-day period. It should be clearly understood that portions of the force are required almost immediately and that the 30-day period referred to is the completion date for

[1] Outsize Cargo is identified as that cargo too heavy and/or too large to be transported in the C–141 aircraft.

the time phase deployment. Likewise it should also be recognized that significant portions of this force may not be ready to start movement until many days after the beginning of the 30-day period.

Productivity factors for the CRAF, C–141 and C–5 aircraft are as follows:

CRAF: Troops, 165 per a/c; bulk cargo, 32 Tons per a/c.

C–141's: Bulk cargo, 20 Tons plus 7 Troops (1 Ton) per a/c for a total of 21 Tons.[2]

C–5's: Troops, 83 (12 Tons) plus bulk cargo, 13 Tons plus outsize cargo, 75 Tons[3] for a total of 100 Tons per C–5 sortie.

Planning factors for all airlift aircraft are 410 Knot blockspeed and a utilization rate of 10 hours per day per aircraft. A mean distance of 4,420 nm (one way) from mid-CONUS onload to offload point in Europe was used. Using these factors it turns out that all aircraft (CRAF, C–141's, and C–5's) can accomplish 14 round trips in 30 days.

103 CRAF aircraft carry only troops.

93 CRAF aircraft carry only cargo.

In 30 days 103 CRAF passenger aircraft can carry 103 x 14 x 165 troops=237,930 troops.

In 30 days 93 CRAF cargo aircraft can carry 93 x 14 x 32 tons=41,664 Tons of Bulk Cargo.

Of 224 C–141's (14 Squadrons) 56 are assumed to be reserved for other contingencies; thus 168 are available for the deployment.

In 30 days 168 C–141's can carry 168 x 14 x 7 Troops=16,464 Troops.

In 30 days 168 C–141's can carry 168 x 14 x 20 Tons=47,040 Tons of Bulk Cargo.

Of the total C–5 aircraft, ten are assumed to be reserved for other contingencies and have been withdrawn.

THREE SQUADRONS C–5'S

In 30 days three squadrons of C–5, 38 aircraft (48UE minus 10) can carry:

38 x 14 x 75 Tons=39,900 Tons Outsized Cargo.

38 x 14 x 13 Tons=6,916 Tons Bulk Cargo.

38 x 14 x 83 Troops=44,156 Troops.

The above shows that all of the Outsized Cargo (66,400 Tons) cannot be delivered in the 30 days specified. In fact, with only three squadrons of C–5's the time to close the 66,400 tons would be approximately 50 days.

FOUR SQUADRONS C–5'S

In 30 days four squadrons of C–5's consisting of 54 aircraft (64UE minus 10) can carry:

54 x 14 x 75 Tons=56,700 Tons Outsized Cargo.

54 x 14 x 13=9,826 Tons Bulk Cargo.

54 x 14 x 83 Troops=62,748 Troops.

With four squadrons of C–5's it would require 35 days to close 66,400 Tons of Outsized Cargo to Europe from mid-CONUS.

FIVE SQUADRONS C–5'S

In 30 days five squadrons of C–5's consisting of 70 aircraft (80UE minus 10) can carry:

70 x 14 x 75 Tons=73,500 Tons Outsized Cargo.

70 x 14 x 13 Tons=12,740 Tons Bulk Cargo.

70 x 14 x 83 Troops=81,340 Troops.

With five squadrons of C–5's, it would require 27 days to close 66,400 tons of Outsized Cargo to Europe from mid-CONUS.

SIX SQUADRONS C–5'S

In 30 days six squadrons of C–5's consisting of 86 aircraft (96UE minus 10) can carry:

86 x 14 x 75 Tons=90,300 Tons Outsized Cargo.

86 x 14 x 13 Tons=15,652 Tons Bulk Cargo.

86 x 14 x 83 Troops=99,932 Troops.

With six squadrons of C–5's it would require 22 days to close 66,400 tons of Outsized Cargo to Europe from mid-CONUS.

[2] C–141's carry only 7 troops per sortie as this is all that is required to close the total troop requirement within the time specified.

[3] It is estimated that, on the average, 75 tons of Outsized Cargo is carried on each C–5 sortie.

SUMMARY

With an airlift fleet of 196 CRAF aircraft, 224 C–141's and three squadrons of C–5's, the pacing factor in closing fighting units to Europe is the delivery of Outsized Cargo by the C–5. In fact, about 4½ squadrons of C–5's are required to deliver the Outsized Cargo in the same time period required to deliver the troops and Bulk Cargo being carried by the entire fleet. Further, to meet the requirement for closure to Europe of the troops and equipment in 30 days would require somewhere between 4 and 5 squadrons of C–5's. Note this is in the context of the requirement to Europe alone and does not include a consideration for rapid deployment to meet any other contingencies. Consideration of other contingencies would, of course, require more C–5s. It should also be noted that this analysis does not cover continuing logistics to support defense forces in other parts of the world during the period of deployment.

CAPABILITY OF THE AIRLIFT FLEET TO DELIVER TROOPS/CARGO TO NATO EUROPE IN 30 DAYS[1]

	Number of C–5 squadrons				
	0	3	4	5	6
Troops (number of troops)	254,394	298,550	317,142	335,734	354,326
Bulk cargo (number of tons)	88,704	95,620	98,532	[2] 101,444	104,356
Outsized cargo (number of tons)		39,900	56,700	73,500	90,300

[1] Includes 196 CRAF aircraft, 168 C–141's and various numbers of C–5's. Excludes the capability of 56 C–141's and 10 C–5's withheld for other contingencies.

[2] Even though this number is slightly below the 104,500 tons of bulk cargo required to be delivered in 30 days, the airlift fleet with 5 squadrons of C–5's can accomplish the job in 30 days. With 75 tons of outsized cargo per C–5 sortie we have more than met the requirement for delivery of the outsized cargo (73,500 tons compared to a requirement of 66,400 tons). This can be accomplished by adjusting the C–5's load to carry more bulk and less outsized cargo than calculated in these computations.

Note: Assumed airlift requirements are as follows: Troops, 297,000; bulk cargo, 104,500 tons; outsize cargo, 66,400 tons.

Mr. GOLDWATER. Mr. President, I call this to the attention of the Senator from Wisconsin because the Senator from Georgia queried him on the matter. And I know that we have engaged in debate on this also.

The letter written to the Senator from Wisconsin by Secretary Laird, in referring to Dr. Selin, who is the author of the paper, said:

> After a critical examination of this issue, he (the Assistant Secretary of Defense for Systems Analysis) firmly recommends and supports a fourth squadron.

I want to make it clear that it is true that the November findings of this body did not so find. It is also true that the findings said the same thing in June. It is true, however, that in the latest decision he decided to go along with everyone else.

Mr. PROXMIRE. Mr. President, the Senator is absolutely right. He made a decision, which might very well be wise, to reject the conclusion of the two reports and said that we need four squadrons.

Mr. GOLDWATER. I want to make that clear and have the RECORD all straight.

I thank the Senator from Georgia for yielding to me.

Mr. RUSSELL. Mr. President, I suggest the absence of a quorum and ask unanimous consent that the time for the brief quorum not be charged to either side.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. RUSSELL. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. CRANSTON in the chair). Without objection, it is so ordered.

Mr. RUSSELL. Mr. President, I yield 12 minutes to the distinguished Senator from North Dakota.

Mr. YOUNG of North Dakota. Mr. President, it is my hope that the Senate will reject the amendment offered by the senior Senator from Wisconsin (Mr. PROXMIRE). There is a valid and urgent military requirement for the C–5A aircraft, and while the increase is substantial from the original estimated cost of the program is regrettable, it does not justify the termination of the program or a break in production as proposed in the pending amendment.

Mr. President, I do not attempt to defend the contract procedures applied by Secretary of Defense McNamara in the development of the C–5A and other military hardware. Secretary McNamara undoubtedly believed that the contract procedures which he instituted at that time had certain advantages. I cannot help but feel, though, that in the case of the C–5A and other contracts it proved to be an unwise procedure. It has since been abandoned by the new Secretary of Defense, Melvin Laird.

Regardless of the contract procedures, every Air Force officer I know says that this is a superb plane. Further, Mr. President, even though there was a very sizable overrun, there is no question about a profit made by Lockheed. Rather, the question is how much they have lost thus far?

A General Accounting Office investigation into the contractual procedures in use during the McNamara years, as proposed by the pending amendment, may be advisable. We must recognize that this would be a long and costly procedure and would mean a year to a year and a half delay in the procurement of additional C–5A aircraft, and certainly additional costs for aircraft.

The central issue before us is whether or not the C–5A is a good airplane and whether or not we need it.

In the late 1950's it became apparent that the United States did not have the manpower resources to support its commitments throughout the world without a greatly improved airlift capability. Our 1960 airlift force included about 400 old C–124, C–133, C–118, and C–121 piston engine aircraft. The introduction of commercial jet aircraft had demonstrated that these aircraft were obsolete both in transportation productivity and in operating costs.

In order to obtain an immediate improvement in airlift capability, we undertook a program that called for 20 squadrons of C–141 jet transport aircraft. While the C–141 was a modern jet aircraft, it was basically a commercial aircraft modified for military applications. It had no capability for the movement of large size Army equipment. With the retirement of the old piston engine C–124's and C–133's, the percentage of Army items airliftable would drop about 65 percent.

In general, the Army items which could be carried in the older aircraft, but which could not be carried in the C–141's, were the vehicles which gave the Army units their required mobility. The requirement for the air delivery of very large equipment continued to grow during the early 1960's. The Army items which could not be airlifted include a very large portion of the Army's big guns and tanks. We had a new jet transport aircraft in the C–141, but we still had a situation in which we had to tailor Army units for air movement, rather than tailoring these units for their intended missions.

In 1964 a Department of Defense study of our airlift capability requirements reached the conclusion that we must have a new jet transport aircraft with the capability to airlift very large Army equipment such as guns and tanks. This study concluded that a force of 13 C–141 squadrons and six heavy lift (C–5A) squadrons would—

First, provide an improved replacement for the C–124 and C–133 outside capability for one-half the operating cost per ton-mile;

Second, provide significant reductions in reaction time for forces now planned for airlift, or by applying this time-savings to additional tonnages, a marked increase in the effectiveness of those forces;

Third, provide a capability to redeploy large forces rapidly from one area to another, thereby reducing risks to the general war posture in committing major forces to contingency areas; and

Fourth, be capable of airlifting up to eight Army division forces during the early deployment period, resulting in a potential for ultimate savings in casualties, dollar costs, and time required to conduct a limited war.

Based on this study, Secretary McNamara announced a decision to develop the C–5A aircraft, and shortly thereafter he announced that the number of C–141 squadrons would be reduced from the previously planned 20 to 13.

Under our various treaties, this country has military commitments to a number of nations—and there are far too many. In order to fulfill these commitments, if called upon to do so, we must have an adequate airlift capability. It is the C–5A aircraft that will give us this capability.

For example, Mr. President, I am a strong advocate of sharply reducing the size of our Army in Europe. With the capability we will have through the C–5A, we could easily withdraw two or three divisions from Germany. The C–5A aircraft, which has been requested by the Secretary of Defense and the Joint Chiefs of Staff, would make this possible.

Earlier I referred to the increase in the cost of the C–5A program. As every Member of the Senate knows, cost increases, or cost overruns, are not limited to aircraft, they are not limited to the Department of Defense, and they are not limited to the Federal Government.

The matter of increases in the cost of weapons systems has been a matter of great concern to me for a number of years in my capacity as ranking minority member of the Department of Defense Subcommittee of the Committee on Appropriations. After giving this matter considerable study, I have concluded that most increases can be attributed to one of three major causes:

First. Including improved capability in systems after they have been approved for procurement, which gives us a better weapons system and should not be considered as a cost increase in the usual sense.

Second. The result of the effect of inflation on the value of the money provided for the procurement of weapons systems.

Third. Frequent changes in production schedules.

At this time it does not look as though there will be any further substantial increases in the C–5A resulting from providing improved capability.

Mr. President, up to this time there has been no major change in the production schedule of this aircraft, and it is my hope that the Senate will not take any action which will cause any interruption in its production.

On July 29, the Secretary of the Air Force appeared before the Department of Defense Appropriation Subcommittee, at which time he discussed this problem of cost increases. He said, in part:

> While we have no precise estimate of the dollar effects on schedule changes, we think that it has cost us on the order of ten cents out of every aircraft procurement dollar since the period of 1965–66 . . .

The Proxmire amendment would cause a break in the production of the C–5A aircraft which could lead to tremendous further increases in its cost. We need this aircraft, and we need to obtain it for the least possible cost. It is for these reasons, Mr. President, that I urge the rejection of this amendment.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. I yield 5 minutes to the Senator from Maine.

Mr. MUSKIE. Mr. President, I thank the distinguished Senator from Mississippi for yielding to me these few moments to state my position on the pending amendment.

Mr. President, I have followed the debate over the military authorization bill with great concern. In the early stages of the debate I spoke out against and voted against deployment of the Safeguard antiballistic missile. I did so because I doubted its contribution to our national defense, because I had deep reservations about its impact on our efforts to slow the arms race and because I believed it represented a major and unnecessary drain on our resources.

I have examined and am examining the other controversial items in the authorization bill using the same criteria I applied to ABM. It would be tempting to vote for every amendment to the authorization as a symbolic gesture toward a reordering of our national priorities—a reordering I consider to be of utmost importance.

But symbolism can be an uncertain guide, particularly when the symbols are not at the heart of the issue. The amendments pending before us represent substantial sums of money, but taken individually or collectively they do not get at the central issue on national defense policy: that is, our national strategic commitments. For these reasons, I have concluded that each of the amendments must be judged individually on its merits, and that the weapons systems to which the amendments are addressed must be judged on their contributions to our national security interests, as we now perceive them.

My present inclination is to vote for the amendments dealing with the manned bomber and the nuclear carrier where I consider the potential costs far in excess of the potential benefits.

On the surface, the C–5A authorization for a fourth squadron is a likely target. I am concerned as are other Senators, notably the distinguished senior Senator from Wisconsin, with the increased costs associated with the plane, the criticism of the contract between the Air Force and Lockheed, and the disagreements over the meaning of Defense Department cost-effectiveness studies. These argue for delay and study before going ahead with the fourth squadron.

I hesitate, however, to vote for disrupting procurement of the plane in order to correct contractual and cost problems unless there is also convincing evidence that the C–5A is not needed, that it is inconsistent with potential changes in our strategic policies, and that it represents a major portion of our defense budget. On balance, I think the debate argues for procurement of the fourth squadron, with maximum protection of U.S. interests on costs and renegotiation of the basic contracts. I do not think the General Accounting Office is the appropriate agency to advise the Congress on the contribution of the plane to our national deployment capability.

In the final analysis, Mr. President, I believe that the C–5A, with all its contract and cost problems, offers an effective transportation system to meet present commitments and is consistent with proposals the majority leader and others of us have made for withdrawal of major U.S. troop concentrations overseas. That, I submit, suggests that the C–5A offers us the chance to actually cut our Defense costs in that 60 percent portion of our defense budget allocated to manpower.

For these reasons, Mr. President, I shall vote against the Proxmire amendment. However, I wish to add my commendation to the distinguished Senator from Wisconsin for having opened up this issue and having presented to the Senate a case which has made it very difficult for me to choose between voting yea or nay on the amendment.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. I yield 2 additional minutes to the Senator from Maine.

Mr. MUSKIE. I think the efforts of the Senator from Wisconsin will lead to a refocussing of our attention on military versus domestic priorities and, second, I hope, to improvement in our procurement policies in the national defense field.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. I yield 10 minutes to the Senator from Nevada.

Mr. CANNON. Mr. President, I am strongly opposed to the amendment offered by the distinguished Senator from Wisconsin (Mr. PROXMIRE) with reference to the C–5A. We should recognize at the outset the fact that this amendment will not merely defer the funding of the 23 additional aircraft during the period of the 3-month study by the Comptroller General. It proposes to eliminate procurement funds for the fourth C–5A squadron from the bill entirely and, if adopted, it would definitely delay the contract for the 23 additional aircraft by 1 full year.

Since we are operating in the real world of hard and practical facts, and not merely in academics and theory, we should recognize another fact. The fourth C–5A squadron which would be deleted by the Proxmire amendment is, despite the discussion on the subject, firmly recommended and supported by the Secretary of Defense, the Assistant Secretary of Defense for Systems Analysis, the Joint Chiefs of Staff, the Air Force, and by our Committee on Armed Services. In fact, I know of no person in an official position of responsibility or authority with respect to the C–5A who takes a contrary view. Certainly, this should weigh heavily with us.

Let me also say at this outset that I doubt very much that the General Accounting Office has the competence to make the military judgment which the Proxmire amendment requires. I become very much concerned when we propose to involve the General Accounting Office in the decisionmaking process in matters of military requirements and systems evaluation. I believe that decisions on the advisable course to follow in the C–5A matter and the best method to satisfy our present and further military airlift requirements transcend the ability of the General Accounting Office, conceding its competence in its own legitimate and assigned sphere of operation.

Now, let me say a few words about the C–5A itself. Our national interest clearly requires that we have the capability to support the rapid deployment of U.S. forces. The C–5A will provide a fast reaction capability which will enable us to airlift combat or support units worldwide under general and limited war as well as peacetime conditions. This capability for rapid deployment will give the Department of Defense an added flexibility in planning for peacetime deployment and basing it has never had before. It may very well permit a reduction in the U.S. forces based overseas and solve problems associated with the pre-positioning of equipment.

The design of the C–5A was optimized to accomplish the rapid deployment of effective forces. This huge aircraft will transport almost all of the types of combat weapons and equipment of an Army division concurrently with the personnel associated with the equipment. This permits unit integrity to be maintained—an important tactical consideration.

No other aircraft can perform this mission. The C–141, currently our largest operational jet transport, has established an outstanding operational record. However, it cannot carry all of the infantry division and armored division vehicle types. Such essential items as tanks, bridge launchers, armored personnel carriers, and helicopters can be carried only in the C–5A.

The Congress has already approved the procurement of 58 of these aircraft through the initial production run A. In January 1969, the Air Force exercised the option to procure not to exceed 57 additional aircraft in production run B, subject, of course, to congressional approval. The fiscal year 1970 request is for authorization to procure the first 23 aircraft in production run B. This is what is involved in the pending amendment. Under any theory, it appears to me the 23 aircraft in the fiscal year 1970 request are needed. Certainly the overwhelming weight of official and expert judgment supports this. When procured, these will take us only to four squadrons, 81 aircraft, versus the six squadrons, 120 aircraft, approved as a minimum requirement by the Department of the Air Force and Joint Chiefs of Staff.

The Senate Committee on Armed Services held extensive hearings on the C–5A program and, after careful consideration, it concluded that procurement of the 23 additional aircraft in the authorization bill is justified. At the same time, the committee has made it plain that there is no commitment to procure any aircraft over and above the 23 in this year's bill. The fate of the fifth and sixth squadrons will be decided in future years.

As we all know, the C–5A program, for a number of reasons, has experienced significant cost increases. Also, it is rather clear that the form of the contract involved is deficient in a number of respects and has posed problems both for the Government and for the contractors. Despite these facts, however, the Air Force and the Department of Defense have assured us that we will get an aircraft with fine performance characteristics and that the C–5A, when delivered, will meet most, if not all, the operational requirements which have been laid down for it. There is no evidence at this time of any significant performance shortcomings. In addition, the C–5A operating cost per ton-mile will be far lower than any other airlift aircraft. For example, the operating cost per ton-mile will be 2.9 cents for the C–5A versus 5.3 cents for the C–141. Even with the cost increases, it appears that the C–5A will be more cost effective than any available aircraft.

Since the C–5A will have fine performance characteristics and at least four squadrons of this aircraft are needed, I believe that it would be most unwise to incur the added expense which would necessarily result from a delay, deferral, or strechout of the program. This would merely increase the cost overrun and make the cost situation worse than it already is. It might also transfer more of the cost increase to the Government.

The impact of the amendment is clear. The Defense Department advises that if the funding is deferred to fiscal year 1971, the Air Force will have to negotiate a new contract with Lockheed as the sole source and with no contractual commitments or price options available. A 1-year funding delay and a renegotiation of the contract, according to the Air Force, would result in a delay of about 18 months in the production of the first run B aircraft. It is estimated that a delay would increase the cost of run B by $400 to $550 million over the present projection.

Even if the amendment only deferred the procurement of the fourth squadron for 1 year, the financial impact on the contractor might impair seriously his ability to produce the 58 run A aircraft now under contract. This might result in default on the entire contract since, without funds for the 23 run B aircraft, the available money will be exhausted well before January 1, 1970. The Air Force advises us that if the program is killed entirely by failing to fund the 23 aircraft, the added loss to the Government at a minimum will be $102 million—$72 million in fiscal year 1969 funds for long-lead items and $30.5 million in termination costs.

Therefore, unless the C–5A program is to be cut off definitely and finally at the 58 aircraft which have previously been authorized, I can see little possibility of good and great probability of harm from the adoption of the pending amendment. It appears to be self-defeating and counterproductive since, at best, it will delay the delivery of the 23 aircraft involved and drive up the cost overrun even above that which the Senator from Wisconsin has criticized so strongly. The C–5A question has been studied exhaustively by several committees on both sides of the Congress and I do not believe that any further study is necessary. It is time for it to be voted up or down.

I appreciate the sincerity and the motives of the Senator from Wisconsin. I commend him on the fine and valuable work he has done on this program. However, I cannot agree with his reasoning with respect to this amendment and I strongly urge that it be defeated.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Mississippi will state it.

Mr. STENNIS. How much time remains to those in opposition to the amendment?

The PRESIDING OFFICER. Sixty minutes remain.

Mr. STENNIS. How much time remains to the proponents?

The PRESIDING OFFICER. Sixty-seven minutes remain to the proponents.

Mr. STENNIS. I thank the Chair.

Mr. President, I suggest the absence of a quorum, and ask unanimous consent that the time for the quorum be divided equally between the two sides.

The PRESIDING OFFICER. Without objection, it is so ordered, and the clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

WHO CONTROLS MILITARY SPENDING?

Mr. FULBRIGHT. Mr. President, to appearances, this debate on military procurement is one between Senators of varying persuasion. In fact the division of forces is somewhat different. On the one side, questioning the need for a fourth squadron of the incredibly overpriced C–5A, as well as other costly new weapons and support systems, are a group of Senators aided by a handful of resourceful and dedicated staff assistants. On the other side is a coalition of conscientious Senators supported by the enormous resources of a military establishment which remains in a state of instant alert for combat duty on Capitol Hill.

In no way at all do I criticize Senators for accepting information and advice from the executive. I have welcomed them myself on numerous occasions—though none of these has been recent. I do, however, feel a good deal of indignation over the amount of public money and manpower expended by the Pentagon on political promotion and public relations.

Last fall, for example, a nationwide publicity campaign in support of the ABM was planned by the Department of the Army. Prudently canceled by the Nixon administration in March of this year, this abortive plan, as spelled out in a memorandum prepared by Lt. Gen. Aldred D. Starbird and approved by the Army Chief of Staff, outlined a program of Department of the Army-sponsored speeches, press releases, interviews, and planted magazine articles aimed at overcoming public and congressional opposition to deployment of the ABM.

According to press reports, the Pentagon has now created a special task force, headed by a Mr. William Baroody, an assistant to Secretary Laird, for purposes of assisting Congressmen and Senators who are prepared to resist cuts in the military budget. Mr. Baroody's task force is reported to have specific responsibility for providing arguments and information for Senators who wish to try to refute criticisms of such current Pentagon requests as the C–5A transport, the aircraft carrier, the advanced manned strategic aircraft bomber, and the F–15 fighter.

Mr. President, I ask unanimous consent to have printed in the RECORD, at this point an article from the September 5 Washington Post, entitled "Pentagon Assists Its Hill Allies."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PENTAGON ASSISTS ITS HILL ALLIES

(By Bernard D. Nossiter and George C. Wilson)

The Pentagon has created a special task force headed by a key aide of Defense Secretary Melvin R. Laird to assist Sen. John Stennis (D-Miss.) and other Congressional allies in their battle against military budget cutters.

The lobbying unit is led by William Baroody, special assistant to Laird. A brief description of its work and other Defense Department plans to ward off spending reductions is given in an Aug. 26 Air Force memorandum.

The paper is signed by Joseph J. F. Clark, Air Force Deputy Director for Legislation and Investigation, Legislative Liaison.

ACTIONS UNDERWAY

The memo begins by saying that "several actions are under way" in the Pentagon to meet requests from the House and Senate Armed Services Committees "for additional materials to be utilized during floor debates" on the bill authorizing procurement of weapons systems. This $20-billion measure is now on the Senate floor under the stewardship of Stennis.

The Clark memo, directed to Air Force Secretary Robert Seamans, says that Baroody "heads up one task force to provide material to Chairman Stennis to refute statements and arguments being made by various senators in their efforts to reduce or eliminate (Defense Department) programs. The C–5, AMSA, and F–15 Air Force programs are all involved in this effort."

The C–5A is the controversial cargo plane, AMSA is the newly proposed manned bomber and the F–15 is a new fighter.

The memo continues:

"In addition, we have been asked to submit a point-by-point analysis of the statements made by Sen. (William) Proxmire (D-Wis.) in support of his amendment to eliminate money in (Fiscal Year) 1970 for the fourth squadron of C–5 aircraft. This analysis will serve as a basis for response by Chairman Stennis or other Armed Services Committee members during the floor debate which will resume next week."

Baroody and an Air Force colonel visited Proxmire on Wednesday in an effort to explain two Pentagon studies suggesting that more C–5As would waste money.

The Clark report then notes that T. Edward Braswell, chief of staff of Stennis' Armed Services Committee, has asked for a "detailed breakout" of the finances involved in the A–7D program. This is an attack plane made by Ling-Temco-Vought that is costing more than expected.

The memo reports that Lt. Gen. George S. Boylan, Jr., Air Force deputy chief of staff for programs and resources, is preparing this material and it "will be utilized by the Committee in determining its future course of action on the issue."

Clark also describes requests for rebuttal material from the House Armed Services Committee. A staff member, Earl Morgan, "has asked for a detailed analysis and rebuttal" to several documents, including the report on military spending prepared by Members of Congress for Peace Through Law, a bipartisan group led by Sen. Mark Hatfield (R-Ore.), and the "Fact Book" of the Democratic Study Group, a caucus of House liberals, the memo says.

Clark concludes that this rebuttal material "is to be provided to the House Armed Services Committee for use during floor discussion of the procurement bill in that body."

FUEL FOR REBELLION

The hard evidence of such a close link between Stennis and the Pentagon, which his committee is supposed to ride herd on, is expected to freshen the Senate rebellion on military issues.

Stennis, recognizing the military money bill was in for trouble this year, tried to preempt the opposition by making cuts in the Armed Service Committee. But neither this move nor the recent cuts made by Laird knocked out the Senators trying to revamp the Pentagon Fiscal 1971 budget.

Often during the military debates this year, Stennis has been taking on the opposition alone. Seldom has the ailing Sen. Richard B. Russell (D-Ga.), former chairman of the Senate Armed Services Committee, taken the floor to help.

STENNIS' WEAKNESS

Also, Stennis this year is without the services of the long time director of the Armed Services Committee, William H. Darden, appointed as a judge in the military appeals court. His departure, according to the Senate insiders, has contributed to Stennis' weakened condition as committee chairman.

Baroody, who worked with Laird in the House on military matters, said last night he does not consider his help to Stennis as a task force operation.

Baroody said Stennis had asked Laird for his views on the questions posed by the Senate amendments. As a special assistant, Baroody said the job of supplying the information came to him.

"It's perfectly legitimate," Baroody said, for a Senator to ask the views of the defense secretary on military questions, adding that he had briefed critics like Proxmire as well as supplied information to Stennis.

To respond to the requests for military information, Baroody said he has added an Air Force colonel and a Navy commander to his original staff of one Army colonel special assistant, a civilian aide and two secretaries.

Baroody said he has not written any speeches for senators to give the Pentagon's side of the story.

Outside the Pentagon itself, military contractors are helping their allies in Congress with speeches. At least one contractor has helped answer the questions one senator posed to the Air Force on the AMSA bomber, for example.

Mr. FULBRIGHT. Mr. President, clearly we are engaged here in an unequal contest. Arrayed against the critics of extravagant military spending are not only our colleagues with whom we share constitutional responsibility for determining the military budget but the Military Establishment itself, with all its impressive resources. The Pentagon has become in effect an ex officio but highly influential participant in the current Senate debate. Contrary to the spirit and intent of our Constitution, the military has become an active participant in the political process, a self-appointed de facto jury sitting in judgment on its own case.

Over and above the merits or demerits of specific weapons systems, the root question is: Who controls military spending? The Constitution says that Congress does, not only through its exclusive power of appropriation but, in the case of the military, through its responsibility under article I, section 8, for making "Rules for the Government and Regulation of the land and naval forces." In fact, Congress is simply not exercising this critical responsibility, and I think it no exaggeration to say that it has not done so for the last generation. For practical purposes the control of military spending has been primarily in the hands of the Executive since the Second World War, with Congress acting as a compliant junior partner.

Possibly without awareness of the radical constitutional doctrine he was preaching, President Nixon has claimed for himself the authority to judge how much is spent on the Armed Forces. As he put it in his speech at the Air Force Academy on June 4:

> The question in defense spending is "How much is necessary?" The President of the United States is the man charged with making that judgment.

The issue is clearly drawn. The executive says that it has the responsibility for military spending. The Constitution says that Congress has that responsibility. What then does Congress say? Are we to be content with the role of junior partner in the discharge of our own responsibilities? Or are we prepared to reclaim our legitimate and exclusive constitutional prerogative? That, I think, is the critical underlying question in the matter of the C–5A and a great deal of other military hardware covered by the present legislation.

The appropriations power is the classic, basic power of a democratic legislature. If we cannot control the pursestrings, what can we control?

The foregoing represent my primary reason for voting against the requested fourth squadron of C–5A transports. An additional major factor, however, warranting our serious attention, is the strategic premise on which these transport aircraft are held to be needed.

Their purpose, of course, is the rapid long-distance deployment of American troops. They carry, therefore, a connotation of foreign military commitment; and that, as we seem to have agreed in recent months, is a matter requiring congressional scrutiny. On June 25 of this year the Senate, by a vote of 70 to 16, adopted a resolution asserting that no foreign military commitment should be made without the consent of Congress. The C–5A does not in itself represent a commitment to anybody, but it represents a significant new facility for the making of commitments in the hands of the executive. A few years ago the distinguished senior Senator from Georgia dealt, as chairman of the Armed Services Committee, with the executive's request for what it called a "fast deployment logistic ship." In opposing that request, the Senator expressed his apprehension—if I recall his words correctly—that "if they can intervene they will intervene."

I think that the same wise caveat is in order for the C–5A. You are not committing a teenager to an auto wreck by putting him behind the wheel of a hotrod, but you are certainly helping to create a possibility. Before voting over a half-billion dollars toward the purchase of a fourth squadron of these spectacularly expensive transport aircraft, Congress has the right and duty to demand full information on their prospective uses. Where, how, and on whose authority does the administration propose to use these aircraft? Are there in existence contingency plans for their prospective use, and—if I may broach a sensitive subject—might the Congress be permitted a glimpse of these plans before committing over a half-billion dollars to the means of their execution?

I do not think these questions have been answered. Instead of providing pertinent information about the strategy and uses contemplated for the C–5A, the Pentagon political mentors have once again thrown their potent, well-oiled lobbying machinery into high gear. Their approach does not inspire confidence. I shall, accordingly, cast my vote in the negative.

Mr. President, this, of course, says nothing about the character of the contract itself, which has been explored in depth, especially by the Senator from Wisconsin. I want to take this opportunity to compliment the Senator from Wisconsin for the hearings held by his committee, which, for the first time, made a valiant effort to inquire into the reasoning behind enormous and almost incomprehensible military expenditures.

I believe that one of the conclusions of his own statement, drawn from his hearings, was a question about how these contracts are made—contracts involving billions of dollars, which seem to have the result of rewarding the most inefficient operators, the most inefficient manufacturers. In this particular instance, it would appear from the published reports that the contract itself was bid upon by the contractor, the Lockheed Co., deliberately below what was a reasonable amount. This, of course, created the impression that it would be very cheap and also had the effect of preventing a more responsible company from obtaining the contract; and then it expects to make—and apparently it will, if this contract is proceeded with—exorbitant profits on the second stage of the contract.

This seems to me to be a sort of degenerated form of socialism. Certainly there is no private enterprise in it. There is no competition in it, and no efficiency. It is dictated and distributed by the Government agency to those who, in many cases, are the least efficient to perform the function which the Government requires. It certainly is a distortion of what we are pleased to call a private enterprise economic system.

But in any case, those are other aspects of this particular contract. I think that the overall justification for it has not been made. The request of the Senator from Wisconsin for time to consider the reports which have been made to the Pentagon, which have not been made public, but of which he is aware, I think is a most reasonable one. As he himself has pointed out, this fourth squadron will not be expected to be built, I guess—I do not know whether one would call it built or completed—at least until early in 1971; so there is plenty of time, and I cannot see that there would be any great detriment to our security if sufficient time is allowed for the committee of which he is chairman, and others, to inquire further into the justification and need for this enormous expenditure of funds in this area.

Lastly, Mr. President, I cannot view this and other contracts for military affairs aside from the condition of our country itself. Today I read in the morning newspaper that interest rates have climbed to a new high—more than 8 percent for triple-A corporate bonds. Inflation is continuing at an apparently ever-accelerating rate; at least there is no sign of any decline in it.

Crime in Washington, D.C., in August, I heard on the radio coming to the office this morning, was at the highest rate in history, with 714 armed robberies; I believe that was the classification. But in nearly any classification one might choose, whether murder, rape, or armed robbery, the situation is the same.

So we have a continuing deterioration in quality of life and internal order in this country. We have a tax bill before Congress which is a source of a great deal of controversy, but, of course, these conditions require increasing taxes.

All of this makes a not very pretty picture, and, in fact, is very discouraging. In the face of that situation, the refusal of the Military Establishment to acknowledge that they should make any substantial contribution to a reorientation of our priorities and to the reestablishment of a degree of internal tranquility in our own country is very disappointing. The continued emphasis that the highest priority must be on all of these new weapons systems, however irrelevant they may be to our needs, is discouraging indeed. Coupled with this, the inability to make any appreciable or noticeable progress toward the liquidation of our most unfortunate mistake in Vietnam, certainly presents a very dark and dismal picture.

So, Mr. President, I shall vote against this authorization and support the amendment of the Senator from Wisconsin.

The PRESIDING OFFICER. Who yields time?

Mr. PROXMIRE. Mr. President, first I wish to commend the distinguished Senator from Arkansas upon the excellent speech he has given. He has put this amendment into proper perspective, especially when he referred to the effect of our military spending on the quality of American life.

The Senator from Arkansas testified before our Joint Economic Committee in June, and made a splendid statement of the relationship between American priorities. I think today he has indicated specifically on this amendment that before we make such a commitment and vote an additional $533 million—which, it is correct, is the amount in the bill, but the cost of these 23 planes will be close to $1 billion; they will cost more than $40 million each—all the amendment provides is that we do it knowing what we are doing, that we first get the information we do not have now.

We recognize that the Defense Department itself has challenged the wisdom of going ahead with the fourth squadron. The only studies available show that they cannot justify it.

That is what the distinguished Senator from Arkansas has been saying, it seems to me, when he says we ought to pause before committing ourselves to spending enormous sums such as that involved here. As a matter of fact, there is more involved in this one amendment than the Federal Government spends in this entire country on all of our courts and all of our law enforcement. In that entire area, we spend something

like $750 million; and these 23 planes would cost almost $1 billion.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a question?

Mr. PROXMIRE. Yes.

Mr. FULBRIGHT. In addition to the planes themselves, there are additional costs, such as for airports facilities, runways, and other necessary support elements, which would cost incalculable additional sums; is that not correct?

Mr. PROXMIRE. The Senator is correct that all we have is estimated figures for the planes and spare parts that are considered necessary.

Mr. FULBRIGHT. The Senator has no cost estimates on the additional facilities for handling the plane, for its landing, servicing, and so on, does he?

Mr. PROXMIRE. There are estimates as to the operational cost of the C–5A.

Mr. FULBRIGHT. I do not mean the gasoline and the crews. I mean the ground facilities. This plane cannot be accommodated by the existing facilities at most of the airports, can it?

Mr. PROXMIRE. It is my understanding that the plane is designed to land under circumstances which would make it especially amenable.

Mr. FULBRIGHT. What is its weight?

Mr. PROXMIRE. I think, in all fairness, I should say that. It will land, for example, on a shorter runway than the big jumbo jets land on.

Mr. FULBRIGHT. How much does this plane weigh?

Mr. GOLDWATER. Loaded, about 800,000 pounds. Empty, about 300,000.

Mr. FULBRIGHT. That is considerably more than the weight of any existing plane, is it not, loaded?

Several Senators addressed the Chair.

Mr. PROXMIRE. I am happy to yield to the Senator from Arizona.

Mr. GOLDWATER. To answer the Senator's question—and I think it is a good question—this aircraft requires no special equipment to handle cargo. Built into it is the camel-effect landing gear, that can kneel down to permit trucks, tanks, or any piece of equipment to drive up a self-enclosed ramp, either from the front or the back, into the plane, and then get back into its regular position and take off. It has remarkably good takeoff characteristics over a 50-foot obstacle; and I have been in it when it has landed in less than 1,500 feet, on concrete. On grass, it will land in that distance with less trouble than on concrete.

It does not require special runways, and does not require lengthy runways. It can, in fact, be landed on any prepared dirt strip in the combat area. This is not true of the 747, the jumbo jet going into service on the airlines, which will also be in the CRAF fleet; that plane would require special loading facilities to get cargo up to the cargo door.

However, that aircraft will undoubtedly be used for personnel, and not for outsize bulk cargo.

Mr. FULBRIGHT. As I understand it, then, the present runways are strong enough to support this plane? In fact, I am told this plane can land on the dirt and does not need a runway; is that correct?

Mr. GOLDWATER. It does not need a runway. I think they prefer to have one, but if the chips were down, I think it could be field landed very easily. It has 24 wheels in its landing gear, and the weight distribution is spread over a much greater area than, say, in the 707.

The 707's, which are heavy aircraft, did need reinforcement of some runways. The 747's likewise will require some runway modification and a complete redesign of most of our major airports.

Mr. FULBRIGHT. Mr. President, the Senator will remember when we bought the B–52's, they made a great to-do about the thickness and the strength of the runways. It seems odd that this plane, weighing 800,000 pounds, would not need such a runway.

Mr. GOLDWATER. It is the size of the footprint that enables us to do it. The B–52 is in effect a tricycle gear with four wheels on the main gear and two on the nose. Many of our runways had to be reinforced because of the impact.

This airplane is being operated today at the Marietta, Ga., plant on a runway which is not an unusual runway. The runway has been there for quite awhile. It is being tested at another runway on a partially dirt and partially concrete runway.

The distribution of the weight is such that, though it has great weight and great power, it can get off in a very normal distance; and land in shorter distances than conventional jets.

Mr. FULBRIGHT. Mr. President, what is the urgency about these additional planes? Why cannot we wait 3 or 4 months for a study on the question the Senator from Wisconsin raised?

Mr. GOLDWATER. I had some figures printed in the RECORD before the Senator came to the Chamber. Those figures gave the time of deployment for a three-squadron C–5 outfit.

The figures showed, if I remember correctly, that to carry 66,400 tons, three squadrons would require 50 days and four squadrons would require 35 days.

Mr. FULBRIGHT. I heard the Senator give that information. That is not the question I raised. I would like to know what conditions in the world today create in the Senator's mind the urgency to get on with the job of building these planes? Does the Senator anticipate an outbreak in Western Europe or elsewhere that would create an urgency for this particular plane?

Mr. GOLDWATER. I think the very fact that—and the Senator is well aware of this—we have rather definite commitments abroad and we do not know whether they will come into being—we hope that they will not—is case enough for us to have the ability to move equipment and troops. If we support the argument that we should cut the NATO forces and keep our forces flexible and keep them in this country rather than in NATO—and I think the Senator is favorably inclined to that—that is justification for the fourth squadron.

We are not arguing for five or six.

Actually, the guts of the pending amendment involves approximately $53 million that would be incorporated in the permissive run if the Secretary of Defense decided by some date in January of next year to use it. If he decides not to use it, which is his prerogative not to do, then we will not start the first run of the fifth squadron.

The Senator will recall Secretary Clifford this year waited until, I am pretty sure, the last day of the option before he authorized the beginning of run B which will complete the fourth squadron.

The decision really rests with the Secretary as to whether he will use the money. Our authorizing or appropriating the money does not mean that it has to be spent. Neither does the Secretary have to come to Congress for permission to do it.

I have no idea how he is inclined with regard to a fifth or sixth squadron. However, the studies I have seen on the fifth and sixth squadrons have not convinced me that they are needed now. However, I think that four are needed.

Mr. PROXMIRE. Mr. President, as far as the fourth squadron is concerned, they will not even start on the 59th plane, which would be the first plane of the fourth squadron, until about June of 1971. They will have to let out subcontracts. They have already started that. They started last January. However, as far as the actual production, that is almost 2 years away.

That is why I think we have plenty of time to get information from the General Accounting Office as to whether this is a sensible investment before we authorize the fourth squadron. They have only produced six planes, and they are only producing them at the rate of about two a month.

Mr. FULBRIGHT. Mr. President, I referred to the urgency. I am very much for bringing the troops home, as the Senator said. I joined with the Senator from Montana and with other Senators in an effort to bring the troops home from Germany a year or so ago. However, they have not been brought home and no effort is underway to bring them home.

I see no prospect for it. I see no urgency, therefore.

If the Senator from Arizona could assure me that they are going to do this, I would feel differently. However, I doubt very seriously that we will be able to make the military bring these troops home.

This is an established pattern. It is extremely acceptable in the Military Establishment, and I do not think they want to bring the troops home.

They do not want to close the Spanish bases. We went through that. They do not want to close any bases anywhere that I know of. They are most reluctant to close bases even in this country. That is the nature of this kind of organization. I do not think they will do it.

Mr. GOLDWATER. Mr. President, the urgency is just what the Senator has been talking about—the fact that we have run tests. The National Guard on two separate occasions has been airlifted to Germany with the old 124's.

That proved rather conclusively that we could not render much assistance to the NATO countries with the airlift we have today. Whether the military in 1971 or 1972 will want to bring their forces home, I do not know. However, today they are not able to redeploy the troops rapidly.

Mr. FULBRIGHT. Mr. President, we

have a lot of troops there. I do not assume that it is our sole duty to defend Western Europe. Along with the Senator from Montana (Mr. MANSFIELD) and many other Senators, I have felt that Western Europe, consisting of 200 million people, is quite capable of defending itself, in my opinion, if they are willing to pay for it.

I am getting tired of being the sucker for these people. I think that we have been there long enough.

I do not mind a token force being there to show our good faith. However, in my opinion Germany, France, and the other countries can pay for their defense.

This has been the real theme of our argument for a long time. I think they ought to do it.

Mr. GOLDWATER. I agree with the Senator. I am not arguing against that point.

Mr. FULBRIGHT. That is the point about bringing them home.

Mr. GOLDWATER. Let us get ready to redeploy if we have to.

I urge that the Senator from Arkansas in his capacity as chairman of the Committee on Foreign Relations reopen the hearings on this matter so that the American people can know the commitments we have made.

Mr. FULBRIGHT. We had that exchange before. I agree with the Senator. And I intend to do that. We will have some hearings very soon, and further hearings are being planned. The staff has already been instructed in this direction.

Mr. GOLDWATER. Mr. President, in closing, reference has been made to another part of the amendment that would ask the Comptroller General to study certain aspects of the C–5A.

I called the Defense Division of this office and tried to get Mr. Charles Bailey, the head of the Division. I was unable to do so, and I spoke to an assistant. I asked him whether he felt they were competent to do this.

He said under (1) that he felt they could do it. Under (2) he said that they were not capable of doing this because they do not have the personnel or the background with which to do it. I gathered from that that if the GAO could have its force increased, to the point where they would include strategic and tactical people, they might be able to do it.

He said that, wherever there is a matter of cost, they thought they could answer the questions. He said that, on questions pertaining to defense policy and strategic policy, he felt they were not competent to do this.

I think we have made a mistake in trying to get the GAO into areas that they are really not competent to act in.

I think that in areas of cost they are extremely useful and we should use them more than we do.

Mr. PROXMIRE. Mr. President, before I yield to the Senator from Massachusetts, I should like to say that the main thrust of the argument is to provide that the GAO give us information on cost that we do not have.

The Senator from Arizona is correct. There are some military implications, it seems to me, on a couple of these points. But we are asking for a judgment on deployment capability and that sort of thing. I would agree that that sort of answer from the GAO has to be handled much differently and with far greater caution than the answer on costs. But the main thrust is on costs, and this is the type of information the GAO is designed to give.

Mr. President, I yield whatever time the Senator from Massachusetts may require.

Mr. KENNEDY. Six minutes.

Mr. PROXMIRE. I yield 6 minutes to the Senator from Massachusetts.

Mr. KENNEDY. Mr. President, in many ways, the debate over the C–5A is as much of a symbol of the concern over the size and shape of our defense budget as was the debate over the ABM. But while the ABM debate centered on whether we needed that particular missile defense system, whether it would work, and whether it was an escalation in the arms race, the C–5A debate has centered on an apparent lack of hard-eyed Pentagon supervision over the contracting procedures and costs relevant to it.

Senator WILLIAM PROXMIRE deserves the praise of all of us for untiringly ferreting out the details of the contracting procedures which permitted a cost overrun on the C–5A of about $2 billion. This one cost overrun has drawn censure from nearly every quarter of the country—from businessmen, economists, taxpayers, and expert commentators. And well it should, for it is a shocking amount of money in this time of great fiscal stringency.

But we should take care to be clear that this C–5A debate does not imply criticism of the aircraft itself. It ranks as a great technological achievement, incorporating a number of significant advances in a single weapons project. And on its early flight tests, its performance exceeded specifications—considerably better than the 85-percent performance typical of past Air Force projects. In fact, as a recent article pointed out, Lockheed "might reasonably have expected praise for the engineering triumph that the C–5A turned out to be, instead of censure for its cost," had not Senator PROXMIRE been diligent in bringing out all the procurement facts.

As a result of his investigation, Senator PROXMIRE has now pending before the Senate an amendment designed to correct what he views as the most serious problems in the C–5A program. I believe his amendment deserves the support of the Senate, and I intend to support it.

Let me set out, first, what the amendment will not do.

First. It will not affect the planned production rate of the C–5A. We have already authorized and appropriated the funds for, and the Pentagon has contracted for, 58 C–5A's—eight test aircraft, and 50 operational aircraft, to comprise three squadrons. That point was amply enlarged in the dialog just a few minutes ago. The last of these 58 planes is scheduled to come off the lines in June 1971—assuming no further slippage beyond the present 6 months' slippage.

Second. It carries no criticism of the plane itself. The amendment would not cause cancellation of any existing contracts nor require any unplanned modifications in it.

Third. It will not in any way affect our military capabilities. The amendment will not postpone the initial operating date of any C–5A squadrons.

Fourth. It does not prejudge the merits of the fourth squadron—23 planes—of C–5A's.

There has been considerable confusion about these points, and I believe they should be clearly presented and understood. I think the dialog this afternoon and the speech of the distinguished Senator from Wisconsin will clearly eliminate any of the confusion or misunderstanding on these and other points.

Let me turn now to what the amendment will do and why I support it.

First. The amendment requires a 90-day study by the General Accounting Office of the costs—past and projected—of the C–5A. In the light of the gross underestimate of C–5A costs, of the great expertise of the GAO in these matters, and of the role of the GAO as a watchdog of Government expenditures, this study would be a vastly useful document. This is particularly so because of the complexity of the issue, and because the study would not postpone the planned production.

Second. The study would also determine whether the fourth C–5A squadron—the 23 planes of production run B, for which the downpayment cost in this bill is $533 million—was essential to our security. Two separate Pentagon studies indicate that the fourth squadron may not be essential, and if it is not, then eliminating it would save nearly $1 billion. But if the fourth squadron is found necessary, then we have ample opportunity next year to authorize and appropriate the funds without jeopardizing the production schedule.

In short, Senator PROXMIRE's amendment is a reasonable attempt to answer—without undue delay—some of the nettling questions his investigation has uncovered.

I share the intense concern over the runaway costs of the C–5A. I share the concern over the wisdom of many of the details of the contract. And I share the concern over authorizing what may be a superfluous fourth squadron. These are the reasons I support Senator Proxmire's amendment.

But let me make it clear that I also share the view—so well articulated by Senator SYMINGTON—that the astounding airlift capability of the C–5A squadrons can help us reduce our overseas military commitments. These commitments, as Senator SYMINGTON has pointed out, are both debilitating to our role in seeking world peace and damaging to the stability of the dollar. They must be reduced, and brought into balance with the world situation, not of the 1950's, but the 1970's. I do not believe that supporting the amendment of the distinguished Senator from Wisconsin in any way conflicts with the splendid expressions that have been made by the distinguished Senator from Missouri (Mr. SYMINGTON) this

afternoon in manifesting a great concern about the reduction in our troop commitments around the world.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. KENNEDY. May I have 1 additional minute?

Mr. PROXMIRE. I yield 1 additional minute to the Senator from Massachusetts.

Mr. KENNEDY. In their August issue, the editors of Fortune magazine had this to say about the debate over the military budget:

> In redefining the goals of the military and its place in the governmental structure and in society, Congress and the Administration have a chance to exert a profoundly constructive influence on the character of American life in the 1970's. They should seize the opportunity.

I believe that Senator PROXMIRE's amendment is a symbol of that opportunity. We should not fail to take it.

I thank the Senator from Wisconsin for yielding.

Mr. PROXMIRE. I thank the Senator from Massachusetts for an excellent speech.

The PRESIDING OFFICER. Who yields time?

Mr. PROXMIRE. Mr. President, I yield 6 minutes to the Senator from Louisiana.

Mr. ELLENDER. Mr. President, I rise in support of the amendment of the Senator from Wisconsin (Mr. PROXMIRE). Few outside of the Pentagon know what the C–5A will eventually cost and whether or not it will serve the purposes intended.

For the past 15 years, as a member of the Committee on Appropriations, I have been trying my best to get assistance from our friends in Western Europe, with little or no avail. It was my feeling that we should take steps to withdraw our troops from that area unless we obtained substantial assistance from our European allies.

In the late fifties and early sixties, the concept of mass transportation by air was conceived to make it possible to move troops from our shores quickly to any part of the world. The Department of Defense began to realize that the policy of maintaining large contingents of U.S. military troops abroad was not satisfactory for many reasons, including our balance-of-payments problem and the fact that many Members of Congress were insisting on substantial reductions in the number of troops deployed abroad. Many of us felt that our allies were well able to carry a large share of the burden that was almost entirely shouldered by the United States.

At the time, we were spending annually approximately $2 to $2½ billion in order to sustain our troops in Western Europe. At one time, we had over 300,000 soldiers there; and if we added to that the number of civilians necessary to sustain our troops, and also the families of the civilians and of the soldiers, we had in Europe in excess of 600,000 Americans.

Mr. President, I would not hesitate to vote for billions of dollars for this project if I thought it necessary and wise. But it is my belief that we are being persuaded by the Pentagon to place our country in a position to give more help to our erstwhile friends all over the globe. Instead of these planes being used for the purposes originally intended, that is, to carry troops and military hardware from our shores, when needed, I am informed that even if we had a thousand C–5A's ready to go, no effort would be made by the Defense Department to remove our troops we now have in Western Europe. It is still the view of our military spokesmen that we must give assistance to all the countries of the free world to save us from the Russians. I do not subscribe to that view.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a question?

Mr. ELLENDER. I yield.

Mr. FULBRIGHT. It is my understanding that these planes are not designed as troop carriers, but that they are to carry enormous vehicles, big tanks, and so forth. Troops are carried in C–141's, but these are not for that purpose.

Mr. ELLENDER. They can carry troops also. What I have in mind—and I am sure it is the purpose of these planes—would be to carry divisions fully equipped, so that hardware as well as personnel would be aboard the planes.

Mr. FULBRIGHT. They are especially designed for big hardware.

Mr. ELLENDER. As I recall, the idea was to build planes that could carry an entire division, if necessary, at one time, which would include not only hardware, but also the soldiers to use the hardware. As I said, even though we had the planes available, no effort would now be made to remove many of the soldiers we now have in Western Europe. That is the important point that I am making. It is a point which has been at issue between some of us on the Appropriations Committee and the Pentagon for many years now.

I had had a little research made into the subject. I regret that much of the testimony I intended to present was deleted from the record of the hearings because it was classified.

As I previously stated, I have tried for the past 15 years, at least, to have our Defense Department obtain assistance from our allies in this field, all to no avail. The only response I received from the Defense Department, beginning with Mr. Wilson, I believe, was that "we will try to get assistance." Then nothing happens. Last year when Mr. Clifford was appointed, I interrogated him.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PROXMIRE. How much additional time does the Senator request?

Mr. ELLENDER. Four minutes.

Mr. PROXMIRE. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 21 minutes remaining.

Mr. STENNIS. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Mississippi has 58 minutes remaining.

Mr. STENNIS. I yield 4 minutes to the Senator from Louisiana.

Mr. PROXMIRE. I thank the Senator.

The PRESIDING OFFICER. The Senator from Louisiana is recognized.

Mr. ELLENDER. Mr. President, the following is an excerpt from the Senate Appropriations Committee hearings on the Department of Defense appropriations bill for fiscal year 1969, page 2476:

> Senator ELLENDER. Just try to withdraw them. They [our allies] don't trust you if you just tell them that you will. Let us make the move, and get our troops out of Europe.
>
> Secretary CLIFFORD. (Deleted).
>
> If we begin to start a dialog with the Soviets, and agree to cut down our forces in Europe, and the Warsaw Pact countries then we would have something. I hope that might come. I think we ought to continue to work in that direction.
>
> Senator ELLENDER. As I have said, if we had done this when De Gaulle kicked us out of France, it is my considered judgment that the Russians would have removed their troops. So long as we remain there, so long as we have these huge forces around the periphery of Russia, we can't expect them to believe that we have no offensive purposes. That is the opinion I have found among the people when I was there.
>
> Many asked me the same question, "Why do you have all these forces around us? To take us over?"
>
> Of course, that was not the reason we had them there.
>
> Mr. Chairman, I don't want to argue any more. There are more questions I would like to have answered but I shall desist.
>
> Secretary CLIFFORD. I will be available any time.
>
> Senator RUSSELL. There has been a strong feeling on this committee among a number of us here. Senator Symington and I have been working on possible withdrawal for a number of years. How long has it been, 8 years?
>
> Senator SYMINGTON. Eight to 10.

Mr. President, many of us on the Appropriations Committee have been trying to persuade the Defense Department to withdraw these troops and get them back home, as I said earlier. I have no doubt that as long as those troops remain in Western Europe and we sustain them there we cannot expect much help from our erstwhile allies. In addition, their presence will act as a deterrent in our efforts to come to a workable and realistic international agreement with the U.S.S.R. As I have said on many occasions, I am of the sincere belief that unless and until our company can get together in some way with Russia to prevent this race in armaments and attain satisfactory understandings, the world will remain in turmoil and no permanent peace can be achieved.

I am very hopeful that some ways and means can be found whereby the U.S.S.R. and the United States can work together. As I have said, as long as we talk peace from one side of our mouths and war from the other, I can see no chance for the international atmosphere to improve.

Mr. President, I now read from the printed record of the Senate Appropriations Committee hearings on the Department of Defense appropriations bill for fiscal 1969, page 2471.

> Senator ELLENDER. That is what I suspected, to be frank with you.
>
> Secretary CLIFFORD. That is right. I want to tell you it is a sincere conviction on my part, and I did not accept it easily. I could not understand why, after 23 years, we still had to be there. I will leave this subject by saying that I now think it is right that we have troops there.
>
> I said the week before last, in a meeting

of the Defense Ministers, that they had better prepare themselves, however, to begin to take a larger share of the burden, because we could not keep our troops there forever at the present level. My language was quite direct. I said they must face up to the fact that we were starting now to redeploy some of our troops. As you may know, we are bringing 34,000 of our troops back.

Senator ELLENDER. I have been saying that for 10 years.

Secretary CLIFFORD. Well, you are finally proven right.

Senator ELLENDER. Proven right? Ten years to remove about 30,000?

Secretary CLIFFORD. No; but I mean we are finally bringing some of them back.

The following is from the same set of hearings, page 2557.

Senator ELLENDER. I regret that I wasn't here to listen to all the testimony. I was in a military construction conference.

Mr. Clifford, for the past 15 years I have urged your predecessors to force our allies to help us more. As I understood General Wheeler, they are kind of excited and they are wondering what we are going to do. We have done all we could in my opinion, and we have done more than we should, and you say that you want the (deleted) NATO allies, to do more.

Now, what is your plan for forcing them to do more?

Secretary CLIFFORD. Our plan is to advise them that it is up to them to make the decision as to what they are going to do and if they don't make the right decision then they must realize that this could affect the support by the American people and the American Congress of our presence in NATO.

Senator ELLENDER. Don't you think a threat of withdrawal might wake them up a little bit? I have been advocating that for the past 15 years. As long as we stay there and as long as we support them they are going to lean on our shoulders. I was in hopes that you had some kind of plan whereby you could force them to come forth with their just proportion of assistance.

FISCAL YEAR 1968 HEARINGS

From the Senate hearings on the Department of Defense appropriations bill for fiscal year 1968, page 309.

Secretary MCNAMARA. As I stated earlier, we are negotiating with our NATO allies to try to arrange a basis under which they will share in the payment.

Senator ELLENDER. Share how? Can't you make them do it? We have been trying it for the past 15 years with no success. Isn't there a way by which we can make them share the burden?

Secretary MCNAMARA. No, sir; I don't believe there is any way by which one sovereign state can impose its will on another. I do think there are ways by which we can persuade them, and it is in our joint interest for them to bear a share of it.

Senator ELLENDER. If it is in our joint interest, I don't think you should have much trouble to persuade them, but the trouble is I don't believe that they see the threat from Russia as you do, not by any means, and that is why in my opinion they are not so anxious to assist.

You also stated you expected a major portion of this relocation to be completed by April 1, 1967. What is the target date now?

Secretary MCNAMARA. April 1, 1967.

Chairman RUSSELL. Senator Stennis?

FISCAL 1967 HEARINGS

From the Senate hearings on the Department of Defense appropriations bill for fiscal year 1967, page 266.

Senator ELLENDER. Several years ago I pointed out that Mr. DeGaulle desired to make France the leading nation in Western Europe. I wonder why we don't permit him to take over the military aspects of protecting Western Europe. As you know, we have been there now for almost three decades. Last year we spent $2.4 billion to support the troops we have there. As I pointed out at the hearings on the Supplemental Bill, we have 330,000 soldiers there now. In addition there are more than 11,000 civilians that take care of the military, and we also have the wives and dependents of our servicemen there. I wonder if it wouldn't be a good thing to have De Gaulle take care of Western Europe.

Secretary MCNAMARA. Senator Ellender, I don't believe this would modify De Gaulle's conduct, and I think it would (deleted) contrary to our interest.

Chairman RUSSELL. Will the Senator yield?

He is in a very fortunate position due to the geography of Europe of being able to talk big and act big and yet have a free shield, as long as we retain the NATO structure and protect Germany; isn't that correct, Mr. Secretary?

Secretary MCNAMARA. (Deleted.) Of course, he hasn't suggested that he believes the danger from the Soviet Union has diminished to the extent that the defense of Western Europe can be dismantled. (Deleted.) He doesn't wish to see the defense of NATO destroyed.

FISCAL 1966 HEARINGS

I read now from the Senate hearings on the Department of Defense appropriations bill for fiscal year 1966, page 573.

Senator ELLENDER. I realize that that has been the main basis for our assistance. I understand that.

But the thing that I can't understand is that little or no effort is being made to get other people, for instance, the French, the British, the Germans, with us who are just as vitally interested in this matter as we are. They ought to be as much interested in keeping this world free as anybody else. But yet we are carrying the load everywhere, without too much assistance from them, and I am surprised that more effort isn't put in that direction, General. If we keep on at the rate we are going now, it is just a question of time when we will lose the battle without firing a shot, that is as far as our way of life is concerned.

Senator STENNIS. I am sorry, gentlemen, your time is up.

General JOHNSON. May I respond to the question, please, sir, at the risk of being impertinent?

Senator ELLENDER. I wish you would. Let him do it.

General JOHNSON. I don't think getting additional countries in there falls within our province: I mean the province of the Department of Defense or certainly the province of the Department of the Army. This is why we have other agencies within the executive department.

The general is referring here to the Department of State, but needless to say, nothing was done.

FISCAL 1964 HEARINGS

From the Senate hearings on the Department of Defense appropriations bill for 1964, page 558.

Senator ELLENDER. My dear Admiral, we have been trying for the past 7 or 8 years to get assistance from our allies commensurate with what we are putting up.

In my opinion, in this regard we have made a dismal failure. Our allies are better off now than they have ever been.

Admiral ANDERSON. I would not say we have made a dismal failure, Senator. I think the very fact that we have prevented the Communists from taking over Western Europe, that we have held the line in various parts around the world.

FISCAL 1961 HEARINGS

And finally, from the Senate hearings on the Department of Defense appropriations bill for fiscal year 1961, page 19:

Senator ELLENDER. Mr. Gates, for the past 4 or 5 years I have been trying to find out the extent to which our Secretaries of Defense, as well as the President, attempt to get assistance from our so-called friends across the seas. Now to what extent, if any, have you or your immediate predecessor taken into consideration the amounts furnished by our allies to help us carry this defense burden?

Secretary GATES. I have been relatively new in this field, myself, Senator Ellender, but I have been in a good many discussions since last summer, and I attended the NATO Conference in Paris in December.

Senator ELLENDER. Is that the one General Twining attended?

Secretary GATES. Yes, it was.

Senator ELLENDER. In which I believe he criticized the conditions there?

Secretary GATES. That is right, sir—some of the deficiencies that had not been met in the arrangements.

We have taken the position that we will carry out our commitments to our important allies who are now stronger and financially and economically able to carry their share of the load, but we are not going to make any new commitments for straight grant aid with countries that can pay their share.

We are continuing aid programs with the less fortunate countries.

There are several countries, particularly in Europe, that have greatly improved their economic conditions in the last few years. In those countries we are getting out of the aid business and into the sharing business or outright purchase business.

It will be noted that all I was able to obtain were promises that efforts to get more assistance, in meaningful terms, would be made. To my knowledge, no real efforts were made, and we have met with little success during all those years. As long as we keep on supporting the countries of Western Europe with our military umbrella, it will continue to be expected that we shall carry the entire economic burden.

As I have said before, our allies apparently do not see the same threat of being taken over by Russia that we do. I think it is past time that we reexamine our own policy. The pros and cons of the C–5A should be looked at in that light.

Mr. STENNIS. Mr. President, I yield 15 minutes to the Senator from Maine.

The PRESIDING OFFICER. The Senator from Maine is recognized for 15 minutes.

Mrs. SMITH. Mr. President, I commend the distinguished Senator from Wisconsin for his diligence and determination on the C–5A procurement program. But I must rise to oppose his amendment because it is too far reaching and does much more than defer funding for a 3-month period.

We all abhor huge cost overruns whether it be the 40-percent overrun on the C–5A or the even greater 43-percent overrun on the John F. Kennedy Center for the Performing Arts.

We are displeased with the total package procurement concept. We do not condone the practice of "buy in and get well later" by any contractor on any kind

of procurement military or nonmilitary. The repricing formula for run B of the C–5A aircraft is offensive to us.

But regardless of our displeasures with all that has unfolded before us in the development and procurement of the C–5 aircraft, there are cold, inescapable facts confronting us that simply cannot be ignored.

Many of these facts were placed in the RECORD on August 13, 1969, by the distinguished chairman of the Armed Services Committee. The investment is tremendous—more than $870 million for research and development—more than a billion dollars for procurement.

The program has been studied and restudied by congressional committees and the Department of Defense. It makes little sense to defer this program only to rehash much of what we already know. If we are to make the best of a bad situation, it is better to recoup as much as possible from the C–5 investment rather than to kill the program through the adoption of amendment 108.

For the adoption of the amendment could result in a defaulted contract. The projected losses on the first 58 aircraft will be such that the contractor will not be able to absorb them even though contractually required to provide such aircraft which were funded from prior year appropriations.

This program has been examined most carefully by the Armed Services Committee in weeks of searching examination in open and closed hearings. The committee did strike $50 million from the budget request.

The amendment seeks to have the Comptroller General make a special study and investigate past and projected costs of the C–5A aircraft. Without hesitation, I agree that cost inquiry by the Comptroller General is appropriate.

But the amendment also requires the Comptroller General to determine whether the C–5A is an economic replacement for the C–141 aircraft. This disturbs me in two respects.

First is the fact that at no time since the C–5A was first discussed has it ever been intended as a replacement for the C–141. Instead, the intent has always been, and continues to be, that the C–5A supplement the C–141 rather than replace it. For it is the only aircraft that can carry the weapons and heavy equipment of an Army division concurrently with troops.

The second concern about this amendment requirement on the Comptroller General is that it proposes to involve him in matters of military requirements and systems evaluations.

While I have full respect for the Comptroller General and the General Accounting Office staff, I seriously question whether they have the background and experience to render military requirements and systems evaluations decisions as contrasted to cost determinations.

And I seriously doubt that the Comptroller General really feels such decisions are within the mission and authority of his office or that he would welcome such an assignment or have full confidence in the capability of his office to render authoritative decisions on military requirements and systems.

Do not overlook the important fact that the contract permits the contractor to request termination if the 23 aircraft in the bill are not funded by October 1, 1969, for if this amendment is adopted such funding will not occur. In all likelihood we will be in the fiscal year 1971 budget cycle before the General Accounting Office studies would be completed and evaluated.

I shall vote against this amendment because in my judgment it is in the national interest that the 23 aircraft in the bill be funded now. I believe that it would be a real tragedy if the contract were terminated.

What has happened to the C–5 program cannot be undone. Even though the tragic results are the responsibility of the McNamara regime, Secretary of Defense Laird cannot abandon the program in despair—nor can the Congress in the national security interest.

This is an amendment of despair which will only compound the C–5 problems.

Mr. PASTORE. Mr. President, will the distinguished Senator from Maine yield?

Mrs. SMITH. I am happy to yield to the Senator from Rhode Island.

Mr. PASTORE. First of all, I congratulate the distinguished senior Senator from Maine. I have a question or two that I should like to ask her. She has been on the Armed Services Committee for a long time and is now the ranking Republican member of that committee. I quite understand what she said and I agree with her that much of the past is regrettable. No one condones it. No one sympathizes with it. No one wants to repeat it. There is no question about that.

The question I should like to ask her now is: Is she convinced that this is an effective aircraft?

Mrs. SMITH. Yes, absolutely, I would say to the Senator from Rhode Island. Of course, I can only take the word of those who know much more about it than I do. The Joint Chiefs of Staff have said repeatedly that they have been trained and schooled in, and have studied, this program and have come up with the absolute necessity for some kind of aircraft, and this proves to be what they want.

Mr. PASTORE. Is the Senator convinced that the need is imminent and should be met?

Mrs. SMITH. Yes; that is correct. I am very much convinced that we must have it. I think that it is important for a continued study of how many we need and for how long we must proceed. I am convinced that we must not stop, that we must not hamper them in any way from going forward and keeping the production line going.

Mr. PASTORE. It seems to me, the way the amendment is drawn, that it leaves the question of military strategy to the General Accounting Office. I quite agree with the distinguished Senator from Maine that there is doubt as to whether the GAO has developed competence within its department to do that.

Mrs. SMITH. The distinguished and able Senator from Rhode Island is so correct in that. The GAO is very, very important, and it is a very valuable agency of our Government, but when it comes to evaluating weapons systems, they are not competent to do that.

Mr. PASTORE. I am one of those who feel that we should not give a blank check to the military, there is no question about that; and I feel that the people of this country cannot, for too long, sustain a military or a defense budget of $80 billion a year. Too often we have involved ourselves unilaterally in many parts of the world without the assistance of those whom we lifted from defeat and despair, who should have assumed a greater share in order to maintain peace and tranquillity in the world. There is no question about that, either. But the trend seems to be, in these amendments, "Let us pass the buck over to the GAO."

The thing that disturbs me is that if we are going to make the General Accounting Office assume the function of the Joint Chiefs of Staff and become the military deciding agency of this great Nation of ours, then I think we should consider removing from the budget all of our appropriations for the military academies, because then we would not really need West Point or the Air Force Academy or Annapolis, if we are going to let the GAO decide what our military strategy is going to be, and how we are going to meet the need to develop the military global strategy of this country.

Mrs. SMITH. I could not agree more with the distinguished Senator from Rhode Island than I do on the statement he has just made. Of course, no price tag can be placed on national security. The Senator from Wisconsin (Mr. PROXMIRE) has made a real contribution in calling this to our attention, but I think we must be very, very careful not to rewrite a bill on the floor. That should be done by the committee, with the advice and by the advice of the military strategists whom we have educated and trained.

Mr. PASTORE. If the distinguished Senator from Maine will permit me to go one step further——

Mrs. SMITH. Yes, indeed.

Mr. PASTORE. I am as much concerned about this as is the Senator from Maine. I know her devotion and dedication to military matters over the years. I quite agree that we have gone a little bit too far. There is no question about that. Our entire military global strategy should be reviewed. The foreign policy of this Nation should also be reviewed. I do not think that we can afford to be the policeman of the world. We say that we are not going to be, but looking around the world, that is exactly what we are doing. We have been in Korea for 20 years now and we are heavily committed there.

We cannot yet even see the other end of the tunnel. We are in Vietnam practically alone. We are committed there in money and men. We are committed in Europe in money and men to defend people against an enemy with whom they are doing business as usual every day, and we piously disclaim East-West trade. We are the only nation in the Atlantic Alliance which has met its commitments. There is no question about that.

We should look into our military strategy—and it ought to take place in the Pentagon and ought to be investigated by the White House and ought to be reviewed by the committees of the Senate and the House; there is no question about that—and if we do the right thing in the right fashion, I think we can cut the military budget by $10 billion, without any question. But the idea that we are going to make the floor of the Senate a war room of the United States of America strikes me as flirting with disaster.

Mrs. SMITH. I thank the Senator.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mrs. SMITH. I yield.

Mr. GOLDWATER. The Senator from Rhode Island brought up a very interesting point. It will be recalled that on at least two other occasions during this debate, we considered amendments that would refer this matter to the General Accounting Office. I called the Defense Division of GAO. Although I did not talk with the Director, Mr. Bailey, I did get the Assistant. I asked specifically, with respect to the provisions that would turn this matter over to study and recommendation by the Comptroller General, whether they would be able to comply with it. In essence, he said where it concerned itself with money and particular transactions, yes; but when it got into the question of whether the purchase of four C–5A's would add significantly to the defense capacity of the military forces of the United States, they were not equipped to do that.

The Senator from Rhode Island made a very cogent observation. In effect, the proponents are attempting, by this procedure, to rewrite the global strategy of the United States, to rewrite the deployment tactics and plans of the United States. I would suggest it would be wiser if we allowed the committees to do that.

Mrs. SMITH. I thank the Senator.

The PRESIDING OFFICER (Mr. ELLENDER in the chair). The time of the Senator has expired.

Mr. STENNIS. Mr. President, I yield the Senator from Maine 2 additional minutes, if I may. Will the Senator yield to me?

Mrs. SMITH. I yield.

Mr. STENNIS. First, I not only want to commend the Senator from Maine for the substance of the remarks she has made, but also to say that no one has been more concerned over the C–5A and no one has gone into it with more patience and endurance, if I may use that term, than has the senior Senator from Maine. As always, she comes here with her own opinion about these matters, and she has a very capable judgment, too, with reference to the need for this air capability. I not only commend her, but I thank her, too.

If I may ask the Senator a question, it is true that the Senator from Maine and I both have a very high regard for the General Accounting Office. We seek the counsel and advice of that office. But is it not true that just today we had before us an item that is in the bill, the main battle tank, and that, even though the General Accounting Office has done some good work on that matter, the full committee nevertheless voted that we continue with that item in the bill as it is? The Senator took part in that hearing this morning. Would she respond to that, briefly?

Mrs. SMITH. Yes. I appreciate all the Senator has said. He works very closely on these matters, and he has done so particularly on this bill, and I commend him for his diligence in going into all these details. That was the very point I was trying to make on the GAO, as the Senator from Rhode Island pointed out. The GAO is not equipped to make an evaluation of weapons systems, and they are the first to admit it. What they would have to do would be to set up an additional bureau, which would be costly, with personnel and machinery, if they had to go into military evaluations. Even more important many of these personnel will have to be military personnel or individuals with professional military backgrounds. This is particularly so if they are expected to make military judgments and decisions.

I thank the distinguished chairman very much.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. How much time do I have remaining?

The PRESIDING OFFICER. The Senator has 35 minutes remaining.

Mr. CRANSTON. Mr. President, will the Senator yield?

Mr. STENNIS. Yes.

Mr. President, I yield myself 15 minutes.

I yield to the Senator from California for a question.

Mr. CRANSTON. Mr. President, I would like to ask the chairman of the committee to comment on the burden of the statement made today by the senior Senator from Missouri (Mr. SYMINGTON) in regard to the theory that the C–5A, if available in adequate numbers, would lead to a situation where, by what he termed a "remote presence," it would become possible to reduce our overseas troop strength in ways that would possibly save substantial sums in the defense budget and get men out of places where their presence might lead to our involvement in military conflict against the will, perhaps, of this Nation?

Mr. STENNIS. I appreciate the Senator's question. I did not have a chance to hear all of the Senator from Missouri's speech as he delivered it, but I did read all of it very carefully. As I understand his points and also the world situation, there is no doubt that the point the Senator from California refers to is a valid point, and it could prove to be a highly important situation in many respects with the idea of prepositioning of military hardware, weapons, and materiel that go with battle formations in various areas that may be trouble spots, and at the same time keep our men, or a larger number of them, back here in the United States, with the ability to get there quickly, with a very definite capability, instantly ready to go.

I think that point is demonstrated in the war in Vietnam. Our great bottleneck in the beginning there was that the harbors were not sufficient; we could not get the supplies and troops in there soon enough. If we had had C–5A's then, and assuming proper landing conditions—and I think they could have been provided—we would have been far better off in an emergency of that kind.

I do not favor keeping troops in too many different places, but I know, in the world we live in, they are going to be required from time to time, on a varying scale, and the immediate capability of the C–5A will be a splendid contribution to our capability to getting them there, rather than keeping so many there.

Mr. CRANSTON. Mr. President, will the Senator yield further?

Mr. STENNIS. I yield.

Mr. CRANSTON. The matter of prepositioning equipment apparently is another aspect that I would rather not get into at this point, because I gather that might lead to double expenditures, where we might have to have equipment back home so that our troops here could maneuver with it, and familiarize themselves with it.

The Senator now presiding (Mr. ELLENDER in the chair) mentioned in his remarks the long efforts, without great success, to get numbers of troops stationed overseas reduced as we developed our transportation capabilities. He was speaking only of Europe. I am speaking of all parts of the world where we have troops except Vietnam, which is, of course, a special problem.

The Senator from Mississippi has displayed his great capabilities as a leader in handling this bill in the committee and now on the floor. I simply ask him if, in concert with the Committee on Foreign Relations, which has indicated that it will be examining our present commitments very closely, as to whether we should keep them, whether we should modify them, and so forth, we can depend upon the Senator from Mississippi, with his committee, to explore the possibilities, as we develop this transportation capacity, of beginning the process of reducing our overseas troop strength.

Mr. STENNIS. I can answer the Senator's question very quickly. I would like to see them reduced. I think, though, that there is a much broader question involved here, and that is the question of policy. A great deal of this debate has got the cart before the horse, I think, in talking about changing policy, here on the Senate floor, through these authorization bills.

I should like to see our present foreign policy reviewed and modified; but I think until that is done, in a systematic way, through a coordinated effort by the President of the United States, whoever he may be, the Committee on Foreign Relations, and other committees, we shall not get very far.

I could not commit anyone except myself as to these new moves, but I generally favor a reduction of our forces overseas. However, I know that in Asia we have got to build up a new policy for Japan, and as to NATO I am not quick on the trigger, because frankly I

think it is the main hope of the free world for us to have strong support there.

Mr. CRANSTON. I thank the Senator.

Mr. STENNIS. I thank the Senator from California very much for his inquiry. I know of his concern and his very constructive thoughts on this subject.

Mr. President, for the information of the Senate, as far as I know we shall vote on the pending amendment sometime around 4 o'clock. I shall not take a great deal of time. As far as I know, there is no one else to speak in opposition to the amendment, and I presume the Senator from Wisconsin, as the author of the amendment, will close for the prosecution.

Mr. President, let me point out, as I did at the beginning, that this contract is not a good contract for either the Government or the contractor. It has proved to have so many unknown, uncertain, and untried qualities about it that it is very clear, now, that this type of contracting should have been tried out more fully on smaller contracts, and the defects found and perfected.

But we are up against the practical situation, here, that we are already into the matter and the Government will have to carry its part of the load.

But the bright part of the picture is that this plane is sound. There is no apparent major defect of any kind; and it is certainly far enough along for such defects, if they existed, to have been discovered. It has all the qualities, and more, that were planned and desired; and, for the purposes for which it was created, I think it is a breakthrough, and time will demonstrate its great abilities.

I have stated heretofore that I was greatly concerned about it. I foresaw a difficult situation, and asked the Senator from Nevada and the Senator from Arizona to go and look the plane over. Something occurred that prevented the Senator from Nevada getting away at that time. The Senator from Arizona went down and, with his usual thoroughness, not only examined it, but flew it and found out all about it. The Senator from Nevada was later fully convinced of its sound structure and its capabilities.

So now we have before the Senate largely just the question of this fourth squadron. The money is in the bill. There will be some other money required, but the big question is on the fourth squadron.

This is an old subject with me. I am not an expert on it, nor on anything else, but I have followed this matter all along, and am certain in my mind that we need a minimum of four squadrons if we are really going to get our money's worth out of this plane.

Mr. President, with all deference to everyone else, there is no doubt about the minimum of four squadrons being recognized and recommended by the Office of Systems Analysis. The innermost secrets of their thinking sustain this position of the so-called experts—and they are not men connected with the military.

The uniformed men, over and over again, have examined and gone through the matter. Many of the civilian authorities in the Department of Defense have passed on it. Three Secretaries of Defense have considered the matter.

The original proposition was examined first by Mr. McNamara, a second phase of it by Mr. Clifford, and the present phase by Mr. Clifford and Mr. Laird. I say that they have been acting and moving forward upon the recommendations of the very highest and best advice that can be obtained in this field.

Our Committee on Armed Services took no casual view of this matter. There is a great deal of money involved here. There is also a very serious policy question involved. We went into all angles, and in fact have continued to study many angles of the problem.

I wish to thank and also to compliment the Senator from Wisconsin as I have done before on this floor. I do not have to remind him or the public again of my esteem for him and the fine work that he does. He has made a splendid contribution here. I do totally disagree with him, though, about the proposition of cutting off this plane and denying these funds.

I speak with all deference of the General Accounting Office. I have dealt with them for many years. I knew Mr. Staats before he went there. I knew him when he was at the Bureau of the Budget. The General Accounting Office is a fine, high-principled organization. But men who are capable of making a final judgment in a field such as this do not belong with the General Accounting Office. That is a different profession. They work hard, and they could make reports of some kind such as this amendment calls for, but, being out of their field, they would not have the weight and value—and that is not a personal assessment of them—that we could feel safe in using as a basis for voting.

I can understand the desire of Senators who get into this subject matter to want the counsel of someone beyond the Defense Department; they turn to the General Accounting Office as a kind of natural thing.

But matters just do not work out that way. Again I speak with deference to the staff of the General Accounting Office. They worked on a highly important matter concerning a tank. There is not a great deal of money involved in it yet; it is still in the research and development stage. They made us a report, and we sent it to the author of the amendment involved, striking out the funds for the tank. That was all considered. It was considered in the Defense Department, and the committee met and considered that report as well as the testimony of the Deputy Secretary of Defense, and we found that we were back where we had started with reference to the facts, and had a very firm understanding with the Deputy Secretary of Defense that he would give this matter his personal attention, as he had already assured us he would.

We voted unanimously and with the greatest of confidence to sustain the research and development funds that were already in the bill.

There was one item about pilot tanks that a member thought should be reduced a little. However, on the main thrust of the matter, there was a unanimous vote.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a question?

Mr. STENNIS. I yield for a question.

Mr. FULBRIGHT. Mr. President, the Senator from Mississippi has said that the GAO is not competent to make a judgment on these matters in the Military Establishment. I believe I quote him correctly.

The PRESIDING OFFICER. The time of the Senator from Mississippi has expired.

Mr. STENNIS. Mr. President, I yield myself 10 additional minutes.

The PRESIDING OFFICER. The Senator from Mississippi is recognized for 10 additional minutes.

Mr. FULBRIGHT. Mr. President, could the Senator tell us if, in his judgment, anyone outside of the Military Establishment itself is competent to make a judgment on these matters?

Mr. STENNIS. There are a great many men of unusual competence in the systems analysis. They are very prominent in their particular fields to make some very exacting and demanding analyses of these problems.

Mr. FULBRIGHT. That was not my question. I asked if there really is anyone in the Senator's opinion outside officials of the Defense Department who is competent to make a judgment as to the reliability, or the need, or necessity of these weapons systems.

Mr. STENNIS. We have to have someone, of course, that has some idea about their purposes and their use. Some men have that knowledge by experience. However, we can find engineers to pass on some points.

Questions of physics and electronics are involved.

I think it is well known that most Presidents seek to find men of great capability in a particular field.

I do not think that I could add anything more to the answer.

I have no argument with the motives and sincerity of the Senator from Wisconsin in offering this amendment. I am fearful, however, that the Senator himself does not recognize its adverse impact, and the fact that, if adopted, it would inevitably augment and compound the very problem which the Senator very commendably wants to correct.

There have, of course, been significant cost increases in this program although there is some argument about the amount and extent of the overruns. From a percentage standpoint the overrun is less than on many weapons systems which have not received such critical publicity. However, I do not minimize the C–5A overrun. It is substantial and a matter for genuine concern.

We all regret these overruns, and it is not my purpose to defend them. However, let us put this matter and the Senator's amendment in proper perspective. The overrun has already occurred. It is a fact and the Senator's proposal will not eliminate it. In fact, there is every reason to believe that the amendment will have exactly the opposite effect. Deferrals, stretchouts, and delays in a weapons program—and this would certainly result from the Senator's amendment—inevitably substantially increase the overall cost

of the program and the cost to the Government. This is a fact of life. Thus, the Senator's amendment would magnify the cost problem which he has so vigorously criticized on so many occasions in recent weeks and months. The adoption of this amendment would be like throwing the baby out with the bath water.

It would be completely false economy and the height of folly to develop a greatly needed and very effective aircraft and proceed as far as we have with it and then disrupt the program for a GAO study and investigation just when the planes are about to roll off the production line and we begin to reap the benefit of our investment in time, effort, and money. From a cost effective standpoint, this would be the very worst step we could take.

Let me state the case bluntly. We need the 23 aircraft involved. No one questions this seriously. The Senator's amendment will both delay their delivery and drive up the cost. Upon what basis then can the amendment be approved?

Now for the C–5A aircraft itself. We are assured by the Air Force that it will meet most, if not all, of its performance requirements. Its capability for rapid deployment will give the Department of Defense a flexibility in planning for peacetime deployment and basing which it has never had before. Our national interest requires that the United States have the capability to deploy forces rapidly and the design of the C–5A was optimized to accomplish this.

Airlift is a basic element of our rapid deployment strategy and is the element which is most capable of providing a quick response to an unexpected contingency. When deployment is required, airlift is of the greatest importance in delivering troops and equipment within the first 20 days. Subsequently, the value of long-range airlift in resupply and delivery of critical items to less accessible areas is incalculable. The capability to provide a rapid response by airlift of limited but effective U.S. forces followed, if necessary, by a more massive buildup, greatly reduces the risk of small incidents developing into major conflicts.

The C–5A is the only aircraft which can carry almost all types of the combat weapons and equipment of an Army division concurrently with the personnel associated with the equipment transported. Such essential items as tanks, bridge launchers, armored personnel carriers, and helicopters can be airlifted only by the C–5A. Given enough time and sufficient aircraft, almost all of the equipment of an Army division can be transported overseas by C–5A's.

How many C–5A's are needed? Studies by the Air Force and the Joint Chiefs of Staff indicate a requirement for a minimum of six squadrons or 120 planes to meet the total airlift requirement in conjunction with other airlift resources such as the C–141. Studies also show that with the C–5A aircraft the total number of airlift aircraft in the force can be reduced by approximately one-half while providing more than three times the transport capacity. Such ancient aircraft as the C–124 and the C–133 will be phased out.

I do not join in any judgment about six squadrons of these planes. I limit my opinion and conclusion now to this fourth squadron.

I have a letter from Secretary Laird that I have already read to the Senate earlier in the debate. He says he has reserved judgment and is actively considering for the 1971 budget whether he will add any more actual C–5A's beyond this fourth squadron.

I heartily join with Secretary Laird on that point. I do not intend to say anything now with respect to having any final judgment upon the fourth squadron.

In the last paragraph of his letter of June 5, Secretary Laird says:

> I fully support the authorizations of funds for the above 23 aircraft.

They are the ones contained in the bill.

He says further:

> Any quantity beyond this is a matter for decision in the formulation of future budgets.

He is referring primarily there to the budget for 1971.

I assure the Senate that this matter has been gone over with the greatest of care and with most painstaking effort by highly competent men, outside advisers, and men on our committee. However, I come to that point last.

I am satisfied of the need, the quality, and the capability of this aircraft. And I am satisfied further that it is a contribution to a long-range policy that will make it possible, I think, to have our military dollar go further. I think that it will save on transportation costs. And this is a major item in the military program.

It eliminates just as many of the old planes as can possibly be eliminated. My philosophy as to weapons is not to try to have so much of everything or so many of different types, but to have the highest quality fighting planes and transport planes of whatever type it may be, or tanks, rifles, or other weapons, and try to have quality always foremost and always in the hands of the right kind of men.

They are expensive. There is no doubt that they will become more expensive. However, we cannot close our eyes to the fact that we are living in that kind of a world.

We are drafting men, not just those than go into the service professionally, but those who are drafted under the Selective Service Act. We say to them, "It is your responsibility as a citizen to go forth and render military service, even on foreign soil."

I am glad of the chance to try to save money. I think that a great deal more money can be saved. At the same time, I am not going to yield anything in quality or effectiveness or refuse to give every advantage to our men that can come from the best, most modern, and most responsive weapons that money can buy and science can build.

This is one of the items that goes to make up the modern weaponry that we need. Much of it has been long delayed.

We already approved the procurement of 58 of these aircraft in production run A. In January 1969 the Air Force, subject to congressional approval, exercised the option provided to procure 57 additional aircraft under production run B. The fiscal year 1970 budget contains authorization for $533 million to procure the first 23 run B aircraft. These 23 aircraft will complete a four-squadron force structure and there will be no commitment to procure any additional aircraft. The Congress will have complete freedom to reexamine this question next year.

We already have a sizable investment since we have obligated funds for 58 aircraft. The follow-on benefits of this investment resulting from the procurement of additional aircraft are yet to be realized.

Through fiscal year 1969 about $2.5 billion has been approved for the C–5A program, including $72 million in fiscal year 1969 for the procurement of long lead items for the 23 aircraft in this bill. In the event of contract cancellation, there is a contingent liability of $30.5 million for termination costs. Thus, if, as I think it will if adopted, this amendment kills all further C–5A procurement, the added loss to the Government, at a minimum, will be $102 million—$72 million in fiscal year 1969 funds for long lead items and $30.5 million in termination costs.

The incremental value of the 23 aircraft involved in terms of cost to the Government for the added airlift capability is self-evident. Any additional aircraft to be procured under the run B option will have to come before the Congress for consideration, and I can assure you that requests for additional aircraft will be subjected to extensive budgetary and cost studies to determine whether or not we are getting airlift value received for the dollars spent.

Regardless of the author's intent, I am of the opinion that the adoption of the Proxmire amendment will kill this program. At best, it will deny funds for one year. Let me outline the implications of that.

The amended Lockheed contract required that the fiscal year 1970 funds be on contract by September 1, 1969. By consent this has now been extended to October 1. The contract stipulates that if such funds are not allotted as required, an equitable adjustment may be made in the price of the 23 aircraft, in the delivery schedule, or in both, if the contractor has incurred additional costs or has been delayed in the work solely because of late funding by the Government. In addition, Lockheed can request termination in the event funds are not allotted as required.

The Air Force has furnished an estimate of the adjustment in price and schedule that will probably be requested by Lockheed if the funding of the 23 aircraft is delayed by 1 year. The cost increase to the Government, the Air Force asserts, would be $400 to $550 million, and there would be a 1½-year slippage in delivery of the first run B aircraft—from March 1971 to November 1972. These added costs do not include the engine contract, for which the Air Force estimates a cost increase for a 1-year delay of about $50 to $70 million.

The contractor and its subcontractors

and suppliers have about 40,000 experienced employees working on this program. It is not realistic to lay them off and then expect to have them available at the end of 1 year. Many new people would have to be hired and trained.

Finally, negotiation of the prices of run B aircraft after this delay would have to be with the current contractor as the sole source with no contractual commitments or price options available.

Another question is whether the C–5A, at the currently estimated increased cost, is still a good buy. The Air Force says the answer is clearly yes, considering both the need for airlifting "outsize" cargo—a basic C–5A requirement—and normal cargo as evaluated in ton-mile costs.

The "outsize" cargo requirement can be met only with the C–5A. The C–141 can carry only about 65 percent—by type—of the required Army deployment equipment. The loss of mobility which would result if there were no outsize aircraft in the military airlift force cannot be expressed in simple dollar figures.

However, the information furnished by the Air Force shows, even on a pure cost per ton-mile basis, the C–5A is substantially less expensive than the C–141 which is the lowest cost airlift system now operational, and that the C–5A, even with the recent cost increases, is the most economical of any airlift aircraft. There are three ways of showing the distinct economy of operation of the C–5A over other aircraft.

The 10-year cost per ton-mile for the C–5A will be 12 cents; that of the C–141 will be 16 cents. This cost includes procurement plus 10-year operating cost divided by the ton-mile capability.

The direct operating cost per ton-mile of the C–5A will be 2.9 cents; that of the C–141 will be 5.3 cents; and that of the C–124, which is the aircraft that the C–5A replaces in terms of outside capability, is 19.7 cents.

It takes 3.6 squadrons of C–141's to equal the airlift capability of one squadron of C–5A's. The annual operating cost for one squadron of C–5A's is $78 million, while the annual operating cost for 3.6 squadrons of C–141's is $135 million.

Thus, when the added requirement and value of the outsize cargo capability of the C–5A is considered in connection with its economy of operation, the C–5 clearly remains a good buy.

The Proxmire amendment also provides that the GAO should consider whether the purchase of a fourth squadron of C–5A's would make the United States liable for the cost of repairs and modifications necessary to correct "the structural defect revealed in the recent failure of the C–5A wing." Some explanation of this matter is necessary because the quoted language might leave an erroneous impression.

Lockheed is contractually bound to demonstrate in ground static tests that the airplane will withstand forces of 150 percent of the maximum that it is designed to experience in actual flight. Testing to 150 percent of design load limit is done to provide a 50-percent safety margin.

During one of these tests on July 13, 1969, a failure occurred in the form of a large crack in the right wing. The failure occurred at a load of about 125 percent of that for which the airplane was designed.

The Air Force puts this failure in the category of a normal development problem. Engineers generally believe that if no failures occur in stress testing the airplane is probably overdesigned and overweight and thus inefficient in terms of payload and range. The current estimate is that the failure will not delay the completion of the development schedule or production delivery schedule. Corrective action is planned for the first operational aircraft which is to be delivered in December 1969.

I should point out that almost all aircraft have experienced failures of some component during static testing. Wing failure occurred on the B–52A at 139 percent of design load limit; the C–130A between 127 and 135 percent; the C–130B at 139 percent; and the F–104G at 135 percent. The C–141 had a main landing gear frame failure at 129 percent; a vertical tail failure at 135 percent; an aft fuselage failure at 120 percent; and a main landing gear failure at 145 percent. Many additional examples could be cited.

Failures of this nature are not unexpected and, in fact, are a part of the development process. They reveal possible weaknesses in the structures at an early stage in the development and thereby permit design modifications to be incorporated in the production aircraft.

In addition, there is no reason for GAO to study who is responsible for the cost of the repair and modification. Under the terms of the contract, if Congress does authorize further funding of run B aircraft, the cost of modifications made necessary by the cracked wing will be borne by the contractor, subject to the contractual sharing arrangement. The contract makes it clear that all costs associated with correction of this condition above the contract ceiling are Lockheed's contractual responsibility.

Let me summarize briefly. The Defense Department advises that the current program will produce a good aircraft with exceptional performance characteristics which are badly needed in our airlift force structure. I believe that the adoption of the Proxmire amendment will kill the program. Even if it does not, there can only be two results, both bad. In the first place, there will be a delay in delivery of 23 operational aircraft to the Air Force; in the second place, the cost of these aircraft will be driven up even below the levels which exist today and which have been so vigorously criticized by the distinguished Senator from Wisconsin. For all of these reasons, I think the adoption of this amendment would be a serious mistake. I hope it is defeated.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. FULBRIGHT. The Senator mentioned the quality. I agree with him about quality. However, I read in last Sunday's newspaper a very disturbing item about the M–16. I wonder if the Senator could reassure me about its quality.

This article said that the M–16 has proved in actual combat to be subject to corrosion and to malfunction because of being dirty, and so forth, and was not nearly as sturdy as what they call the AK–47; that any time a GI in Vietnam could throw down his M–16 and pick up an AK–47, he would do it.

Has the Senator ever read any such article?

Mr. STENNIS. I did not read that article.

I can say to the Senator that nothing is more important than the rifle, but I do not suppose there ever before has there been a war that gave us as much trouble as the climate, the mud, and the corrosion in Vietnam. It has been a super test for all. Finally, however, the news I get—there may be some dissent—is that it is almost a heaven-sent weapon with a certain kind of fighting over there and was long needed. We pushed the Defense Department over the line in getting a new source of supply.

Mr. FULBRIGHT. Do I correctly understand the Senator to say that he does not believe the M–16 is an inferior weapon or that the AK–47 is any better?

Mr. STENNIS. Some defects have shown up in it, as I understand; but we were highly pleased when we could get it into the hands of our men for this kind of fighting, and we are trying now to get it into the hands of the South Vietnamese troops.

Mr. FULBRIGHT. I am glad the Senator reassures us that it is the best in the business, because this article plainly said the opposite. I was very disturbed about it.

I agree with the Senator that they should have the best, but the best is not always necessarily the most expensive.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. STENNIS. I yield 3 additional minutes.

Mr. FULBRIGHT. I recently read an article about the new Swedish fighter plane which was exhibited at the Paris air show. I think it indicated that the plane cost approximately $2 million, compared with the considerably greater cost of ours. It indicated that the Swedes have made a better plane than ours, at less cost.

Mr. STENNIS. That is beyond my knowledge.

Mr. FULBRIGHT. It is an article in the newspaper. I did not write it.

Mr. STENNIS. I do not read all the newspapers.

I will be glad to look into it. I do not think there are many planes better than ours—our better ones.

Mr. FULBRIGHT. It is the cost. That is what is partly involved in this contract—that is, that this is an improvident and excessively extravagant plane and that the contract was very improvidently drawn. This is part of the picture. It is not that anybody wishes to deny the Armed Forces a good weapon. But there should be some choice between what we get for our money—whether we have no regard whatever for the taxpayer or whether the sky is the limit when we buy an airplane.

Mr. STENNIS. We can buy some weap-

ons elsewhere, but we are not going to be dependent upon some other country for spare parts of an essential weapon.

Mr. FULBRIGHT. That is not my point. I am not advising that we buy anywhere else. But it seems to me that unless Congress exercises some supervision and questions the Pentagon, all we are going to do is to spend twice as much as we need to spend. That is the point.

I am a member of the Committee on Finance. We are dealing now with taxes. I have to be responsible and take the heat for raising the taxes, I suppose, from time to time. And this is the committee that provides the money from the taxpayers. But it seems to me that Congress should have some regard for careful spending of money. That is the only point I am making. I do not advise that we buy Swedish planes, but surely we should be able to make planes as good as those made by the Swedes, for approximately the same cost.

Mr. GOLDWATER. Mr. President, will the Senator yield, so that I may try to answer the distinguished Senator from Arkansas?

Mr. STENNIS. I yield 2 minutes.

Mr. GOLDWATER. We are talking about apples and oranges. The Swedish airplane is an air superiority fighter for use over the Swedish homeland. It is not a long-range fighter or an all-weather fighter. It has a single jet capability. We manufacture a fighter plane in this country that is as good as that airplane, but we have not found any use for it. We have been providing the F–5 for South Vietnam. It is a very worthwhile weapon.

As to the apples and oranges reference I used, the Swedish fighter plane can be considered the apples and the C–5A the oranges. We have to have all-weather capability, and we have to have long-range capability. The aircraft we have designed will serve tactical purposes, also. We hope, with the new Air Force fighter, to come up with a good interceptor aircraft, which we have not built in 15 years.

When one picks an isolated item such as the French Mystere, that is a very fine aircraft. I do not think it would fit into the U.S. Air Force's plans, any more than our F–4 would particularly fit into the French Air Force's plans. They, by the way, are becoming competitive with us in the world markets, but I do not think the world would buy their planes if they could get ours.

Mr. FULBRIGHT. Since the Senator brought it up, I wish he would straighten me out about two items. One is the fighter aircraft we sold to Germany, or at least our design was sold, and the other is the F–111. They raise questions of prudence in spending of money. I did not mean to say we had no adequate planes, but do we produce comparable planes at similar cost?

Mr. GOLDWATER. If we did not build planes for the purposes for which we need them, we could eliminate a great deal of avionics and become more cost comparable with foreign countries. The F–104 is no longer in our inventory. It was not in our inventory for a great length of time. It was made both in Japan and Germany. The German Air Force, I must say had quite a few accidents which were not caused by the aircraft. They finally overcame the problem, and they have a fine interceptor for short range, but of great capability. If we were in danger of being attacked on our own soil, this is the type of interceptor we would have.

The F–111 all along has been named incorrectly. It should not have the designation "fighter." It should be a B–111. This, I must say, was an expensive airplane. The contract was let by Secretary McNamara, over the advice of every person connected with it, to a company that the experts felt would not make as good an aircraft as the lowest bidder.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. GOLDWATER. I ask for 2 additional minutes.

Mr. STENNIS. Mr. President, I am sorry. I yield 1 additional minute.

Mr. GOLDWATER. The aircraft now, for its purposes as a bomber, a carry-on strategic bomber, is working very well. I do not mean to say that we have to eliminate the advanced manned strategic system, because the B–111 will not replace the B–52. We have to go past it.

So the answer, I hope, has been contained in these words to the Senator from Arkansas.

Mr. STENNIS. Mr. President, I am sorry, but I do not have additional time to spare.

Mr. FULBRIGHT. Has the Senator from Wisconsin any time?

Mr. PROXMIRE. I have very little time. I would be happy to yield when I finish. How much time does the Senator wish?

Mr. FULBRIGHT. Two minutes.

Mr. PROXMIRE. I yield 2 minutes to the Senator.

Mr. FULBRIGHT. Mr. President, I think that what has taken place in the Senate, largely due to the efforts of the Senator from Wisconsin in raising questions, is that for the first time in my memory we have really seriously raised questions about these weapons systems.

A serious question was raised about the F–111 in the committee—not on the Senate floor, as I recall, but in the committee. Now we are raising questions here. I think it is entirely proper.

It seems to me that with respect to these contracts, such as the C–5A, which has been widely publicized, something should be done. All the Senator from Wisconsin is doing is saying, "Let us take a little further look at it."

If we reject the amendment, it will simply open the floodgates to the Pentagon, and they will have no restraint whatever in anything they wish to do. There will be no limit on what they can spend or what kind of contract they make. The point is to try to bring some balance between the cost and the quality, as the Senator from Mississippi (Mr. STENNIS) has remarked. We all want quality. We do not have it, by any means. In a number of cases the Pentagon has not been successful. We would like to have quality every time. But I do not think quality or prudence are promoted by not looking into these matters, and, on occasion, at least holding up authorizations pending a survey or reconsideration as in the C–5A amendment proposed by the Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, before summarizing the major arguments in support of the C–5A amendment, I shall explain once again what the amendment does.

PURPOSE OF THE AMENDMENT

The amendment removes from S. 2546 the funds earmarked for the purchase of 23 additional aircraft, $533 million. The first 58 C–5A's authorized, funded, and under construction are not affected by my amendment. No matter how the Senate votes today, the Air Force will have at least 58 C–5A's, assuming the Lockheed Corp. does not default on its contract.

The funds for the 23 additional aircraft are deleted by the amendment for a specific purpose. That purpose is to give the Comptroller General of the United States time to conduct and submit to the Congress a comprehensive study and investigation of the past and projected costs of the 23 additional aircraft. The study by the Comptroller General would include the following matters:

First, whether the additional 23 C–5A's are an economic replacement for the C–141 and other aircraft in view of the great increase in both the procurement and operating costs of the C–5A.

Second, whether the purchase of the fourth squadron—the 23 additional aircraft—would add significantly to our deployment capability.

Third, whether purchase of the fourth squadron would make the United States liable for all contractor losses and termination costs if the fifth and sixth squadrons were not procured. I might add at this point that Lockheed has already expressed its opinion that the Government has obligated itself to purchase six squadrons of C–5A's, or a total of 120 planes. The Air Force denies this. It seems to me essential that Congress know exactly what the Government's legal obligations are in this case before funds for new purchases are authorized.

Fourth, whether purchase of the fourth squadron would make the Government liable for the cost of repairs and modifications necessary to correct the structural defect revealed in the recent failure of the C–5A wing. By the way, I put this question directly to the Air Force some time ago. I have gotten a lot of gobbledygook back, but no satisfactory response.

Fifth, the current cost estimates necessary to complete construction of the first three squadrons—58 aircraft—the fourth squadron, and the fifth and sixth squadrons, including the cost of spares and operating expenses over the next 10 years. It is simply amazing to me that the Air Force has consistently refused to bring its cost estimates up to date during the past year. The most recent Air Force report, the Whitaker report, admits that it used cost estimates made last October. In fact, those estimates were based on data gathered in August of 1968. In other words, the most recent data allowed to emerge from the Pentagon on the costs of the C–5A is over a year old. Why has the Air Force hidden the most current cost estimates? Have costs escalated again so that there will be fur-

ther overruns? Are the cost overruns now substantially higher than $2 billion?

Sixth, the cost implications of triggering off the repricing formula on the fourth squadron and the fifth and sixth squadrons of C–5A aircraft. It will be recalled that the C–5A contract negotiated by the Air Force contains a blatant reverse incentive in that the higher the costs to produce the first three squadrons, the higher the price of additional squadrons. This, of course, creates a possibility of reversing the usual industrial production cost trends whereby the costs of production decrease as the number of units produced increase.

The Comptroller General would transmit the results of his study to the Congress no more than 90 days after the enactment of the act. His report would also contain such recommendations as he might deem appropriate. However, let me make clear that the function of the investigation would be to provide the Congress with an independent source of analysis and facts about the C–5A. The ultimate decision to go ahead with further C–5A purchases or to suspend purchases is for Congress to make. The General Accounting Office would be merely serving its traditional role as an investigative and factfinding arm of the Congress.

The overall purpose of the C–5A amendment is clear. It is to suspend the authorization of funds for purchase of the fourth squadron until Congress has a comprehensive and reliable set of facts on which it can base a decision. For it is also clear that Congress cannot at the present time make an intelligent judgment about the facts in this case.

REASONS FOR SUPPORTING THE AMENDMENT

The Air Force has systematically hidden the facts about the C–5A. In effect, Congress was deceived about the nature of the contract and the cost status of the program. The repricing formula was not made known until the Subcommittee on Economy in Government discovered it in November 1968.

The Air Force failed to disclose the huge cost overruns. In the spring of 1968 Air Force spokesmen testified before House and Senate congressional committees that there were no overrun problems. A few months later my committee learned that the C–5A would cost $2 billion more than Congress had been told it would cost. By the way, Congress was also told as recently as last January that the aircraft would be delivered on time and would exceed its performance specifications. We now know that the first deliveries will be at least 6 months late. We also have reason to believe that performance standards have been degraded, that the Air Force has waived its right to have the FAA certify the airworthiness of the plane, and that actual performance may very well be less than the original contract performance specifications.

WHAT WILL THE C–5A COST?

No one in Congress can say with any degree of accuracy what the C–5A will actually cost. The C–5A is a flying pig in the poke. In view of the already huge overruns, the likelihood that costs will continue to escalate, and the failure of the Air Force to satisfactorily explain the cost increases, Congress would be remiss in its duties to the taxpayer to rush into the purchase of 23 additional C–5A's.

There is mounting evidence that the 23 C–5A's in question will not be an economic replacement for the C–141 and other aircraft.

WHY 81 RATHER THAN 58 PLANES?

The Air Force has not shown why the military justification for the rapid deployment concept requires 81 C–5A's, in addition to the remainder of our airlift capability, rather than 58 C–5A's. Again, it should be kept in mind that no challenge has been made to the 58 aircraft now under construction. Only the fourth squadron of 23 planes is being questioned.

The 90-day delay in the authorization of funds called for by the amendment cannot possibly have an adverse effect on national security. The argument that time is of the essence in this case is a spurious one. The C–5A has little if anything to do with the real defense of this nation. Rapid deployment has been defended as a part of a long-range policy which contemplates American withdrawal from some foreign bases and the return of some troops from overseas. But this policy has not yet been adopted. Even if the policy were to be adopted, there has been no showing that rapid deployment objectives could not be attained with the 58 C–5A's now under construction. Furthermore, in light of our enormous stockpile of nuclear weapons and our tremendous arsenal of conventional arms, the argument that a 90-day delay in the authorization of a fourth squadron of C–5A's in any way endangers the defense program is plainly ridiculous.

DEFECTIVE CONTRACT

The Air Force entered into a bad contract, filled with defects, deficiencies and ambiguities, detrimental to the interests of the Government and the public in addition to the repricing formula, the Air Force now concedes that the economic escalation clause and others are fuzzy and confusing. The Air Force, after much prodding from Congress is now attempting to renegotiate portions of the contract. The question is, however, how much will the Air Force give away to Lockheed this time? Surely, the contractor is not about to relinquish its advantages under the contract without consideration. My amendment will enable the government to negotiate from strength.

WITNESSES GAGGED

In addition to the serious disclosure problems, the Air Force has attempted to distort and manipulate the public record. It tried to gag at least one witness invited to testify before the Subcommittee on Economy in Government and later attempted to doctor written testimony submitted subsequent to the taking of oral testimony. Air Force officials have also been guilty of tampering with Air Force internal reports so as to conceal the existence of the cost overruns. Investigations by the SEC and the Justice Department into this aspect of the C–5A case are currently underway. Only last Friday, the latest evidence of possible SEC violations was made public. In light of the shocking record of bad faith on the part of the Air Force, it simply cannot be relied upon by the Congress for the true facts about this program.

It is time to call a halt to Air Force mistakes, Air Force giveaways, and Air Force bad faith in connection with the C–5A program. A monumental record of inept management, waste, and inefficiency has already been established in this program. After the billions of taxpayers' dollars that have been expended on the C–5A the public is entitled to some assurance that future expenditures are absolutely essential to national security.

WHY IS THE FOURTH SQUADRON NECESSARY?

And that is the main point of the amendment. At present, no Member of the Senate can assure his constituency of the need for pouring yet more billions of dollars into the C–5A program. No Senator can in good faith tell the people of his State what the C–5A will cost. No Senator can truthfully say that the fourth squadron of C–5A's is economically or militarily justified. The purpose of the amendment is not to terminate the C–5A program, but rather to answer the questions about it. I say to those of my colleagues who have accepted the Air Force arguments in favor of further purchases, the Air Force has demonstrated its inability to be either candid or objective with the Congress when it comes to the C–5A. The Air Force has deceived and misled the Congress in this matter again and again.

Now is the time to obtain the facts about the C–5A from a new source independent of the Air Force.

FUTURE BURDEN MAY BE SCANDALOUS

Mr. President, sometimes it is necessary to pull back the facade and curtain to get behind the facts. I have come across something which to me is alarming. It grows out of a statement made by the Senator from Mississippi on the floor of the Senate in connection with the C–5A last Wednesday and also what he said last August.

In August, the Senator from Mississippi inserted into the RECORD questions prepared by the Armed Services Committee and the answers supplied by the Department of Defense. Question No. 3 inquired about the effect on the present program if fiscal year 1970 procurement funding is delayed. The Pentagon's response was to the effect that Lockheed would soon run out of Government funds and "It is doubtful that Lockheed would be able to finance on its own the costs of continuing the run A production during this time period. As a result, there is a substantial likelihood that the contractor would be forced to default the contract for the run A aircraft."

On September 3, the Senator from Mississippi (Mr. STENNIS) made the same argument. He said:

> First, government funds will be exhausted before the first of the year, and the contractor will then be confronted with whether he will continue the program under his own financing even though he is legally liable to deliver the 58 aircraft under run A. If the contractor should default on run A, the Air Force indicates it is possible that the number of planes to be received will be somewhere between 10 and 20 rather than 58. In the meantime, well over $2 billion in government funds will have been expended on this program for which we will have little to show.

This argument is disturbing because it completely ignores the merits of the case. The Senate is being asked not to consider either the economic justification or the military justification for the fourth squadron. Instead, the Senate is being faced with the threat that if funds are not authorized for the fourth squadron the contractor will default on his contract and fail to deliver the first three squadrons. Since Congress has already appropriated over $2 billion for this contract, for the first three squadrons, it would indeed be an enormous waste of money if the Government were not to obtain the first three squadrons.

This kind of argument, advanced by the Department of Defense, seems to me to come close, at least, to placing the Senate in the position of one who is being blackmailed. It sounds like someone is delivering an ultimatum: pay up a half billion dollars as an installment on the fourth squadron, or the Government does not get the first three squadrons.

There is another equally disturbing inference to be drawn from this argument. Let us assume, as the Pentagon assures us, that the contractor will run out of Government funds before the first of the year. The Air Force has also stated that if the contract is terminated, after 58 planes have been produced, the Lockheed Corp. will lose over $600 million. Since this corporation, according to my information, has a net worth of under $400 million, a prospect of such a loss could induce it to refuse to continue to perform. Let me say parenthetically at this point that no one in Congress really knows how much Lockheed stands to lose because no one knows how much this contract is costing. As I have stated before, our most recent cost data is over a year old. It has been provided to us by the Air Force and has not been verified to my satisfaction.

But let us assume that Lockheed would lose over $600 million at the end of the first 58 planes. How would the funds authorized in the bill before us today improve the contractor's position? The bill provides for $225 million to cover the overrun on the first 58 airplanes. My amendment does not touch these funds. Of that $225 million. I am informed $100 million has already been spent, under the continuing authorization which followed the end of the fiscal year. The remainder of this money will be exhausted by the end of the year. The bill also contains $210 million for spare parts. This money would not be available to the contractor to cover the costs of production of the first 58 aircraft.

Most of the remaining funds in the bill are earmarked for the fourth squadron. The contractor is expected to make a profit on the 23 planes so that the huge loss of $671 million is reduced to $507 million, which means that next year we will be faced with bailing out Lockheed again on this same C–5A.

One possibility, I suppose, is that other funds in the bill before us today would be diverted from their intended purpose and applied to the cost of production of the first 58 aircraft. For example, it would violate the intent of Congress to use the funds earmarked in the bill for the fourth squadron in order to pay the remaining costs of the first three squadrons.

As I said, diverting funds from this bill to pay the remaining costs of the first three squadrons of C–5A's would violate the intent of Congress. If this is what is expected to occur, I believe the Members of the Senate are entitled to know these facts before voting on this bill. If it is expected that the contractor will be permitted to apply part of the money from the fourth squadron to pay for the cost of the first three squadrons, then I think we ought to know that. We ought to vote with our eyes open.

If those are the facts, I do not criticize the Senator from Mississippi for passing them on to his colleagues. At the same time, one may wonder about the Pentagon's role in managing the taxpayers' dollars and one may wonder whether the Senate has been reduced to the status of silent counsel to the Department of Defense. For money authorized by this Congress for a specific purpose is not supposed to be used for any other purpose.

In addition, the pay-up-or-else kind of choice that is being presented to us, that is, pay-up for the fourth squadron or we do not get the first three squadrons, denies the Senate the authority to make any decision. Rather, we become merely subject to the ability of Government contractors to perform efficiently, and to the financial arrangements made between the Pentagon and its contractors.

Is the Federal Government so intimidated by its contractors that it must continue to dole out public money for new contracts, regardless of whether or not they are needed, so that the contractors will not default on the old contracts?

Do Defense contractors have such a stranglehold on the Government that it is really they, not us, who control the public purse strings?

Is the Congress deliberating over a public issue, with the authority to make a public decision, or are we merely weighing the amount of tribute to be paid to the Defense industry?

I say to the Senate today that if we go along with the Pentagon's arguments, we will be in no better position next year than we are in today. In no better position, just a question of whether we drown in 50 feet of water or 40 feet of water.

If the contractor is faced with a staggering loss today, he will be faced with an almost equally staggering loss a year from today even if the funds for the fourth squadron are authorized. If the funds for the fourth squadron are used to pay the remaining costs of the first three squadrons, next year we will be confronted with a similar argument. Next year, we will be told that a fifth squadron is necessary, and the reason will be because the contractor is unable to cover the costs of the fourth squadron, or even of the first three squadrons.

We have been assured during these debates on several occasions that the fifth and sixth squadrons are not in this bill. We have been told that the decision to go ahead with the fifth and sixth squadrons will be made a year from now. But I have learned only yesterday that there is money in this bill for the fifth squadron. $52 million in the bill before us is set aside for long-leadtime items for procurement of 20 aircraft in fiscal year 1971. That is what the committee report states.

Frankly, I had assumed that this money was intended to be used in connection with the fourth squadron. However, I am now informed that the long-leadtime items are for the fifth squadron. So we are dealing to some extent with the fifth squadron in this bill.

This fact reinforces my conviction that the Congress is being entrapped into spending more billions of dollars for C–5A's which we may not need. It reenforces my conviction that the Senate must delay the decision to go ahead with the authorization of funds for the fourth or fifth squadrons.

Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the September 6 Milwaukee Journal entitled "A Place To Save Money."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PLACE TO SAVE MONEY

Of all the outrageous skeletons in the Pentagon's abundant closets, one of the worst is the cost escalation of almost $2 billion in the contract for the huge C–5A jet transport planes. Thus, Senator Proxmire's efforts to bar expenditures for more of the planes, pending a thorough investigation by the General Accounting Office, makes eminently good sense. His amendment does not affect the 58 planes already authorized by Congress.

According to Congressional testimony, the estimated costs of 120 planes, including spare parts, under the contract with Lockheed has shot up more than $1.9 billion—from $3.4 billion to $5.3 billon—since 1965. That cost increase, by the way, is six times the total 1969 City of Milwaukee expenditures controlled by the common council.

Proxmire presents persuasive evidence that Lockheed realized it could not fulfill the terms of its original bid, but offered an unrealistically low figure undercutting Boeing and Douglas to get the contract.

The Senator also is trying to get the Pentagon to release two reports that indicate that the Government would be wasting money if it bought more than 58 of the transports—the world's largest planes. Proxmire points out that ferrying capacity of private contract fliers more than meets military needs.

One central conclusion is that, in the event of war anywhere in the world, the Army would not be able to mobilize troops fast enough to make use of more than 58 of the gigantic planes. However, the Department of Defense has refused to release the reports, falling back on the old excuse of national security.

Air Force officials acted disgracefully in trying to cover up the cost escalation until Proxmire and other Congressional investigators caught up with them late in 1968. When one courageous employee testified, the Air Force tried to get rid of him, then relegated him to a minor post where, as Proxmire put it, he was told to check "cost overruns on a bowling alley in Thailand."

Defense Secretary Laird has promised more efficient management over multi-million dollar defense contracts. A good start would be the suspension of any more C–5A purchases pending a complete investigation.

Mr. PROXMIRE. Mr. President, I yield the floor.

Mr. HARRIS. Mr. President, I will vote against the amendment of Senator PROXMIRE to hold up continued funding of the C–5A plane because I believe the amendment is not in the national interest. We

need the ability to move large numbers of troops and heavy materiel with the rapidity and economy which this plane provides. I am hopeful that with continued funding of the C–5A we may be able to bring home soon a substantial number of American troops presently stationed in Europe. To be able to bring home a substantial number of American troops would help us in several important ways, including the reduction of our balance-of-payments deficit.

While I am strongly in favor of the greatest possible efficiency and the lowest possible cost in the production of this plane, I believe at the present time that the plan for production and delivery of these planes should be carried out.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. How much time remains for each side?

The PRESIDING OFFICER. The Senator from Mississippi has 3 minutes remaining.

Mr. PROXMIRE. Mr. President, I yield back the remainder of my time.

Mr. STENNIS. Mr. President, I yield back the remainder of my time.

Mr. President, another parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Mississippi will state it.

Mr. STENNIS. What is the pending question now before the Senate?

The PRESIDING OFFICER. The question is on adoption of the amendment of the Senator from Wisconsin.

Mr. STENNIS. This is, then, a straight yea and nay vote?

The PRESIDING OFFICER. The Senator is corect, but the yeas and nays have not yet been ordered.

Mr. PROXMIRE. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, this is the Proxmire amendment as originally offered, is it not? There are no amendments to the amendment?

The PRESIDING OFFICER. The Senator from Mississippi is correct.

Mr. STENNIS. Those, of course, in favor, will vote yea, and those opposed will vote nay; is that not correct?

The PRESIDING OFFICER. The Senator is correct.

All time on the amendment has now been yielded back. The question is on agreeing to the amendment of the Senator from Wisconsin.

On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. COOK (after having voted in the affirmative). Mr. President, on this vote, I have a live pair with the Senator from Colorado (Mr. DOMINICK). If he were present and voting, he would vote "nay." If I were permitted to vote, I would vote "yea." Therefore, I withdraw my vote.

Mr. BYRD of West Virginia (after having voted in the affirmative). Mr. President, on this vote, I have a live pair with the senior Senator from Missouri (Mr. SYMINGTON). If he were present and voting, he would vote "nay." If I were permitted to vote, I would vote "yea." Therefore, I withdraw my vote.

Mr. MANSFIELD (after having voted in the affirmative). Mr. President, on this vote, I have a pair with the distinguished junior Senator from Alabama (Mr. ALLEN). If he were present and voting, he would vote "nay." If I were permitted to vote, I would vote "yea." Therefore, I withdraw my vote.

Mr. KENNEDY. I announce that the Senator from Idaho (Mr. CHURCH), the Senator from Washington (Mr. MAGNUSON), and the Senator from Connecticut (Mr. RIBICOFF) are absent on official business.

I further announce that the Senator from Hawaii (Mr. INOUYE), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Missouri (Mr. SYMINGTON), and the Senator from Alabama (Mr. ALLEN) are necessarily absent.

I further announce that, if present and voting, the Senator from Idaho (Mr. CHURCH) would vote "yea."

On this vote, the Senator from Connecticut (Mr. RIBICOFF) is paired with the Senator from Tennessee (Mr. BAKER). If present and voting, the Senator from Connecticut would vote "yea," and the Senator from Tennessee would vote "nay."

Mr. SCOTT. I announce that the Senator from Colorado (Mr. DOMINICK) is necessarily absent, and his pair has been previously announced.

The Senator from Tennessee (Mr. BAKER) is absent because of death in his family, and is paired with the Senator from Connecticut (Mr. RIBICOFF). If present and voting, the Senator from Tennessee would vote "nay" and the Senator from Connecticut would vote "yea."

The result was announced—yeas 23, nays 64, as follows:

[No. 82 Leg.]

YEAS—23

Case	Hughes	Proxmire
Eagleton	Kennedy	Saxbe
Ellender	Mathias	Schweiker
Fulbright	McGovern	Tydings
Goodell	Metcalf	Williams, N.J.
Hart	Mondale	Yarborough
Hartke	Nelson	Young, Ohio
Hatfield	Pell

NOT VOTING—9

Allen	Dominick	McCarthy
Baker	Inouye	Ribicoff
Church	Magnuson	Symington

So the amendment was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. BYRD of West Virginia. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AMENDMENT NO. 107

Mr. PROXMIRE. Mr. President, on behalf of myself, Mr. CASE, Mr. GORE, Mr. YARBOROUGH, Mr. YOUNG of Ohio, Mr. METCALF, Mr. MONDALE, Mr. TYDINGS, Mr. COOK, Mr. EAGLETON, and Mr. PACKWOOD, I call up my disclosure amendment (No. 107) and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk proceeded to read the amendment.

Mr. STENNIS. Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE's amendment (No. 107) is as follows:

At the end of the bill add a new section as follows:

"SEC. 402. (a) As used in this section—

"(1) The term 'former military officer' means a former commissioned officer of the Armed Forces of the United States who—

"(A) served on active duty for any period of time as a member of a regular component of the Armed Forces in the grade of colonel (or equivalent) or above,

"(B) serve on active duty for a period of ten years or more and, at any time during the five-year period immediately preceding his last discharge or release from active duty, was directly engaged in the procurement of any weapon system or directly engaged in the negotiation, renegotiation, approval, or disapproval of any contract for the procurement of services or materials for or in connection with any weapon system, or

"(C) served, for any period of time during the five-year period immediately preceding his last discharge or release from active duty, as a representative of the Department of Defense at the factory or plant of a defense contractor in connection with work being performed by such contractor on any weapon system.

"(2) The term 'former civilian employee' means any former civilian officer or employee of the Department of Defense—

"(A) whose annual salary at any time during the five-year period immediately preceding the termination of his last employment with the Department of Defense was equal to or greater than the minimum annual salary rate at such time for positions in GS–15,

"(B) who was directly engaged, at any time during the five-year period immediately preceding the termination of his last employment with the Department of Defense, in the procurement of any weapon system or directly engaged in the negotiation, renegotiation, approval, or disapproval of any contract for the procurement of services of materials for or in connection with any weapon system, or

"(C) who served, for any period of time

during the five-year period immediately preceding the termination of his last employment with the Department of Defense as a representative of the Department of Defense at the factory or plant of a defense contractor in connection with work being performed by such contractor or any weapon system.

"(3) The term 'defense contractor' means any individual, firm, corporation, partnership, association, or other legal entity, which provides services and materials to or for the Department of Defense in connection with any weapon system.

"(4) The term 'services and materials' means either services or materials or services and materials which are provided as a part of or in connection with any weapon system.

"(5) The term 'weapon system' means any aircraft, vessel, tracked combat vehicle, or missile, or any part or component thereof.

"(6) The term 'Department of Defense' includes any military department thereof.

"(b) Any former military officer or former civilian employee who—

"(1) was employed for any period of time during any calendar year by a defense contractor,

"(2) represented any defense contractor during any calendar year at any hearing, trial, appeal, or other action in which the United States was a party and which involved services and materials provided or to be provided to the United States by such contractor, or

"(3) represented any such contractor in any transaction with the Department of Defense involving services or materials provided or to be provided by such contractor to the Department of Defense,

shall file with the Secretary of Defense, in such form and manner as the Secretary may prescribe, not later than March 1 of the next succeeding calendar year, a report containing the following information:

"(1) His name and address.

"(2) The name and address of the defense contractor by whom he was employed or whom he represented.

"(3) The title of the position held by him with the defense contractor.

"(4) A brief description of his duties with the defense contractor.

"(5) His military grade while on active duty or his gross annual salary while employed by the Department of Defense, as the case may be.

"(6) A brief description of his military duties while on active duty or while employed by the Department of Defense during the three-year period immediately preceding his release from active duty or the termination of his civilian employment, as the case may be.

"(7) A description of any work performed by him in connection with any weapon system while serving on active duty or while employed by the Department of Defense, as the case may be, if the defense contractor by whom he is employed is providing substantial services or materials for such weapon system, or is negotiating or bidding to provide substantial services or materials for such weapon system.

"(8) The date on which he was released from active duty or the termination of his civilian employment with the Department of Defense, as the case may be, and the date on which his employment with the defense contractor began and, if no longer employed by such defense contractor, the date on which his employment with such defense contractor terminated.

"(9) Such other pertinent information as the Secretary of Defense may require.

"(c) Any employee of the Department of Defense who was previously employed by a defense contractor in any calendar year and—

"(1) whose annual salary in the Department of Defense is equal to or greater than the minimum annual salary rate for positions in GS–15,

"(2) who is directly engaged in the procurement of any weapon system or is directly engaged in the negotiation, renegotiation, approval, or disapproval of any contract for the procurement of services or materials for or in connection with any weapon system, or

"(3) who is serving or has served as a representative of the Department of Defense at the factory or plant of a defense contractor in connection with work being performed by such contractor on any weapon system,

shall file with the Secretary of Defense, in such form and manner as the Secretary may prescribe, not later than March 1 of the next succeeding calendar year, a report containing the following information:

"(1) His name and address.

"(2) The title of his position with the Department of Defense.

"(3) A brief description of his duties with the Department of Defense.

"(4) The name and address of the defense contractor by whom he was employed.

"(5) The title of his position with such defense contractor.

"(6) A brief description of his duties at the time he was employed by such defense contractor.

"(7) A description of any work performed by him in connection with any weapon system while he was employed by the defense contractor or while performing any legal services for such contractor, if such contractor is providing substantial sevices or materials for such weapon system or is negotiating or bidding to provide substantial services or materials for such weapon system.

"(8) The date on which his employment with such contractor terminated and the date on which his employment with the Department of Defense began thereafter.

"(9) Such other pertinent information as the Secretary of Defense may require.

"(d)(1) No former military officer or former civilian employee shall be required to file a report under this section for any year in which he was employed by a defense contractor if the total cost to the United States of services and materials provided the United States by such contractor during such year was less than $10,000,000; and no employee of the Department of Defense shall be required to file a report under this section if the total cost to the United States of services and materials provided the United States by the defense contractor by whom such employee was employed was less than $10,000,000 in each of the applicable calendar years that he was employed by such contractor.

"(2) No employee of the Department of Defense shall be required to file a report under this section for any calendar year on account of employment with or services performed for a defense contractor if such employment was terminated or such services were performed five years or more prior to the beginning of such calendar year.

"(e) The Secretary of Defense shall, not later than May 1 of each year, file with the President of the Senate and the Speaker of the House of Representatives a report containing a list of the names of persons who have filed reports with him for the preceeding calendar year pursuant to subsections (b) and (c) of this section. The Secretary shall include after each name so much information as he deems appropriate, and shall list the names of such persons under the defense contractor for whom they worked or for whom thy performed services.

"(f) Any former military officer or former civilian employee whose employment with a defense contractor terminated during any calendar year shall be required to file a report pursuant to subsection (b) of this section for such year if he would otherwise be required to file under such subsection; and any person whose employment with the Department of Defense terminated during any calendar year shall be required to file a report pursuant to subsection (c) of this section for such year if he would otherwise be required to file under such subsection.

"(g) The Secretary shall maintain a file containing the information filed with him pursuant to subsections (b) and (c) of this section and such file shall be open for public inspection at all times during the regular workday.

"(h) Any person who fails to comply with the filing requirements of this section shall be guilty of a misdemeanor and shall, upon conviction thereof, be punished by not more than six months in prison or a fine of not more than $1,000, or both.

"(i) No person shall be required to file a report pursuant to this section for any year prior to the calendar year 1970."

Mr. PROXMIRE. Mr. President, I ask for the yeas and nays on this amendment.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, will the Senator yield to me for a moment?

Mr PROXMIRE. I yield to the Senator from Mississippi.

Mr. STENNIS. Mr. President, we do not have controlled time on this amendment. The yeas and nays have been ordered. I know that the Senator from Wisconsin wishes to give an explanation of the amendment, and I shall respond briefly. There may be a vote upon it fairly soon.

The next amendment after this one, I hope, will be the amendment regarding the aircraft carrier, which is offered by the Senator from Minnesota and the Senator from New Jersey. They have been very cooperative about the matter, and will perhaps call up their amendment later today, as I understand.

I mention this simply for the information of the Senate. We do not have a proposal for controlled time now, but I think the two authors of that amendment and I will be able to make a recommendation to the Senate on the matter sometime soon after the debate begins. Of course, the majority leader will speak for the program for tomorrow otherwise, but I do wish to get that amendment before the Senate.

Mr. PROXMIRE. Mr. President, may I say to the Senator from Mississippi that I do not expect to take much time on my pending amendment. I hope we can have a vote on it by 5:30, or perhaps earlier. If the Senator wishes to enter into a unanimous-consent agreement on time, I shall be happy to do so, but I think we can get to a vote promptly without it.

Mr. STENNIS. Perhaps we should. Mr. President, if we can have order and these visitors will sit down and be quiet, I think the Senator is certainly entitled to be heard, and it will expedite matters greatly.

The PRESIDING OFFICER. The Senate will be in order.

Mr. PROXMIRE. Mr. President, I wish to modify the amendment I have sent to the desk as follows:

On page 1, line 2, after the word "former" at the end of line 2, add the words "or retired."

The purpose of the addition is to make clear that the amendment applies to "retired" as well as "former" military officers.

The PRESIDING OFFICER. The yeas and nays having been ordered, unanimous consent is required to modify the amendment.

Mr. PROXMIRE. I ask unanimous consent that I be permitted to make that modification.

The PRESIDING OFFICER. Without objection, the amendment will be so modified.

Mr. PROXMIRE. I have an additional modification, as follows:

On page 8, line 13, strike out "No" and insert in lieu thereof, the following:

"No former or retired military officer or former civilian employee shall be required to file a report under this section for any calendar year on account of active duty performed or employment with the Department of Defense if such active duty or employment was terminated five years or more prior to the beginning of such calendar year; and no".

The purpose of the modification is self-explanatory. It limits the period of reporting to 5 years after officers or civilian employees leave the Pentagon and go to work for defense contractors.

I ask unanimous consent that this further modification be permitted.

The PRESIDING OFFICER. Without objection, the amendment will be so modified.

Mr. PROXMIRE. The fundamental principle behind the amendment is that "sunlight is a great disinfectant." The amendment would affect three classes of persons. Annual disclosure statements would be required from former or retired high ranking military officers, and all former or retired military procurement officers who go to work for major defense contractors.

The amendment would also apply to former high ranking civilian officers and all former civilian procurement officers who work for the major contractors.

Finally, it would apply to former employees of defense contractors who come to work for the Pentagon.

Let me outline the major provisions.

RETIRED MILITARY OFFICERS

The amendment would require retired officers of the rank of colonel or Navy captain and above, and procurement officers and former military plant representatives of lesser rank who work for companies doing more than $10 million a year business with the Pentagon, to disclose certain facts to the Secretary of Defense, by March 1 of each year.

This would include their names, the title and description of their work during the 3 years prior to retirement, the date of their retirement, the date of employment with the contractor, and the title and description of their work with the contractor. In addition the amendment would require a declaration of any work on planning, research, or decision-making on any product, contract, weapon system or component in which the officer was involved while at the Pentagon and in which his employer has a substantial interest.

Mr. President, much of the information this amendment seeks from former officers is now submitted by retired officers under a statement of employment (Department of Defense Form 1357). What this amendment does is to require additional information about the nature of their work while they were at the Pentagon with special reference to the details of any procurement work they were involved in in which their civilian employer has a substantial interest.

Of course this requirement would apply only to those high ranking officers and procurement officers of lower ranks who go to work for defense contractors.

No one can claim, therefore, that the amendment would call for excessive paperwork. Much of the information is now provided but not generally made public.

FORMER CIVILIAN OFFICIALS

The amendment calls for disclosure of the same information from former civilian employees of the Pentagon of grade 15 or above. It also calls for disclosure by former civilian officials of whatever rank who were involved in procurement and who work for or represent companies doing more than $10 million a year business with the Pentagon. The amendment would apply not only to former high-ranking civilians who work directly for the contractors, but also to those who "represent" them in any transaction for services or materials. Its intention is to require disclosure by lawyers and others who are involved in procurement.

If a former Assistant Secretary of the Air Force, Army, or Navy left the Pentagon and went into private law practice he could be required to report under this amendment.

If he represented the contractor on an income tax or a bond issue matter, he would not have to report. But if he was retained to represent, or did represent the contractor on a matter involving a weapons system or services or materials to the Pentagon, he would be required to report.

The test is whether he is retained by and represents the contractor in a transaction.

If a contractor retains him and he makes a phone call to the Pentagon or takes an admiral to lunch or plays golf at Burning Tree Country Club on behalf of his client contractor, the former high ranking officia. would have to file an annual disclosure statement so long as his services were retained.

I think such a requirement is long overdue. And in fairness to former high ranking military officers, it is just as important if not more so to require disclosure from former high ranking civilians.

FORMER CONTRACTOR'S EMPLOYEES

The amendment calls for similar disclosure by present Pentagon civilian employees who previously worked for a contractor doing more than $10 million in business with the Pentagon. It requires disclosure by them of any work by them on specific products, research, weapon systems or components in which his previous employer had a substantial interest, in order that conflicts may not develop.

FREEDOM OF INFORMATION

The amendment requires that the information be open to inspection by the press and public at the Pentagon.

The amendment also calls for the Secretary to make an annual report to Congress by May 1 of each year giving the information in an organized and tabulated form. While the reporting requirement in the bill has been written in general terms, in order to avoid requiring an excessive amount of data, it is nonetheless the intent of this provision that the pertinent information be provided or summarized.

SUNLIGHT IS A GREAT DISINFECTANT

Mr. President, while I believe that it is extremely important that the very weak conflict-of-interest laws now on the books should be strengthened, I also believe that disclosure can be of great help. There is an old saying that sunlight is a great disinfectant.

Furthermore, this amendment is appropriate to this bill while the proposal I made earlier for tightening the conflict-of-interest laws would apply to the Government as a whole and should properly have hearings to consider them before they are passed.

Basically what my amendment does is to require more detailed information from high-ranking officers and all former procurement officers and plant representatives who go to work for the big companies than is now required. As I have said, much but not all of the information is now in the hands of the Pentagon.

But the major change is to require the same detailed data from the former civilian employees. This, I think, is a very proper requirement and is long overdue.

But more important is the fact that the amendment requires the Pentagon to make the data open to inspection by the press and the public, which they formerly refused to do. In addition, it requires that an annual report be made to the Congress. This, I believe, will make it possible for Congress and the public to gain an overall view of the situation.

REGULAR FLOW OF INFORMATION

Mr. President, what my amendment would do is to make information available on an annual basis which, in the past has been available only when insisted upon by Members of Congress.

In 1969 I asked for and received from the Pentagon a list of high ranking former military officers now employed by the 100 largest defense contractors. The list given to me totaled 2,124 former officers in the employ of the 100 largest contractors. Ten companies alone employed 1,065, or over half of them. They are given in tables 1 and 2, which I ask unanimous consent to have printed in the RECORD at this point.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

TABLE 1.—*A list of the 100 largest companies ranked by 1968 value of prime military contracts and number of retired colonels or Navy captains and above employed by them, February 1969*

1. General Dynamics Corp	113
2. Lockheed Aircraft Corp	210
3. General Electric Co	89

100. Smith Investment Co	0
Total	2,124

[1] Raymond Int'l. Inc.; Morrison-Knudsen Co., Inc.; Brown & Root, Inc.; and J. A. Jones Construction Co.

TABLE 2.—10 MILITARY PRIME CONTRACTORS EMPLOYING LARGEST NUMBER OF HIGH-RANKING RETIRED MILITARY OFFICERS, AND VALUE OF THEIR FISCAL YEAR 1968 CONTRACTS

Company and rank by number of high-ranking retired officers employed	Number employed, Feb. 1, 1969	Net dollar value of defense contracts, fiscal year 1968 (millions)
1. Lockheed Aircraft Corp	210	$1,870
2. Boeing Co	169	762
3. McDonnell Douglas Corp	141	1 101
4. General Dynamics	113	2,239
5. North American Rockwell Corp	104	669
6. General Electric Co	89	1,489
7. Ling Temco Vought, Inc	69	758
8. Westinghouse Electric Corp	59	251
9. TRW, Inc	56	127
10. Hughes Aircraft Co	55	286
	1,065	9,552

Mr. PROXMIRE. Mr. President, it has been 10 years since similar information has been made public. In 1959, during the hearings on the Renegotiation Act, former Senator Paul H. Douglas asked for and received similar details. In that year there were 721 former high ranking officers employed by the top 100 companies—88 out of 100 reporting. I ask unanimous consent that table 3, listing those 100 companies alphabetically and giving the number of high ranking ex-officers each employed be printed in the RECORD at this point.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

TABLE 3.—*Alphabetical list of the 100 largest companies by 1958 value of prime military contracts and number of retired colonels or Navy captains and above employed by them, June 1959*

[1] None.
[2] Not available.
[3] Survey being taken.

Source: CONGRESSIONAL RECORD, June 17, 1959, pp. 11044–45. Statement by former Senator Paul H. Douglas.

Mr. PROXMIRE. Mr. President, in the meantime, efforts by the press and public to get such information from the Pentagon failed even though the Pentagon had such information available from the data from the statement of employment it requires each retired officer to make and to keep up to date.

My amendment will regularize what I think is a proper disclosure practice. In addition, it will extend disclosure requirements to civilian as well as former military officers.

Mr. President, I ask unanimous consent that an article in the August 26 issue of Look magazine entitled, "Generals for Hire," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENERALS FOR HIRE

(By Berkeley Rice)

For those who have trouble understanding the complexities of the military-industrial complex, one graphic illustration is the traffic in retired military officers who join the defense industry. More than 2,000 retired generals, colonels, Navy admirals and captains now work for the 100 largest defense contractors. Their numbers have tripled in the last ten years. The top ten firms employ more than half of the 2,000. Many of these had been involved in the contracting process on major weapons systems. Their decisions often meant millions of dollars to companies for whom they now work.

Sen. William Proxmire (D., Wis.) calls this a "dangerous and shocking situation." While not charging anyone with corruption, he claims the trend represents "a distinct threat to the public interest." The threat, he says, is twofold: high-ranking retired officers may be using their influence at the Pentagon to affect decisions on contracts with their companies; active officers involved in procurement may be influenced by the prospect of jobs with companies they are buying from. Defense contractors, of course, deny the charges of influence-peddling, and insist they hire ex-military men because of their expertise, and not in reward for past favors.

Despite these denials, research on the employment of retired officers reveals some intriguing patterns. Take the Minuteman II missile program, which has climbed from an original price of $3.2 billion to $7 billion. One of the major subcontractors is North American Aviation ($669 million in 1968 defense contracts). Its autonetics division produces the missile's guidance system for the Air Force. Two Air Force plant representatives and a project officer for the contract recently retired and joined North American autonetics, one as division manager. Lt. Gen. W. Austin Davis, ex-chief of USAF's Ballistic Systems Divisions, which handled the contract, is now a vice president of North American. His chief procurement officer also joined the company, which employs a total of 104 high-ranking retired officers, including several other Air Force generals.

Asked if this employment pattern is unusual, a senior Pentagon official remarked, "It happens all the time. Almost all the officers who have anything to do with procurement go into the business. Naturally, they go to the companies they've had the most contact with. If you check the history of any missile or weapon program you'll find the same story."

The story usually ends with the Defense Department paying far more than the original estimate. When the Navy contracted with Pratt & Whitney for 2,000 engines for the controversial TFX, or F–111, the original bid was $270,000 per engine. By 1967, when production began, the price had risen to more than $700,000 apiece. The man who signed the production contract was Capt. Patrick Keegan, the Navy's plant representative at Pratt & Whitney. Soon afterward, he retired from the Navy and joined P & W as special assistant to the executive vice president. Sharing his office was another special assistant, a former colonel who until his retirement had been in charge of engine purchases for the Air Force.

The problem of plant representatives is crucial, for they are the watchdogs who supposedly guard against delays, failures and cost overruns on a contract. At Marietta, Ga., where Lockheed Aircraft Corporation ($1.8 billion in 1968 defense contracts) is turning out the giant C–5A jet transport, 230 Air Force officers watch over production. Despite all this supervision, however, the C–5A is well behind schedule, and the final price on 115 planes has climbed from the original bid of $1.9 billion to $3.2 billion. The fact that some of these Air Force production supervisors will probably join the 210 other retired generals and colonels at Lockheed makes one wonder about their objectivity.

There are some limits on what kind of work these men may do when they retire. Federal laws prohibit retired officers from selling to the Department of Defense for three years after retirement and to their own service for life. However, the laws are vague about what constitutes "selling." Since 1962, the Department has taken action in only one case involving a major contractor. Asked why, a Defense Department legal officer comments, "I doubt if anybody here is vigorously beating the bushes trying to discover violations of the selling laws."

Since the purpose of defense companies is to sell to the Defense Department, some observers feel the question as to which employees are engaged in sales is ridiculous. Anyway, most large firms now call their salesmen "marketing men." At defense companies, many of the marketing men are retired officers, but they do not sign the contracts.

W. T. "Pete" Higgins, a former Navy officer, is "marketing manager for naval programs" for an electronics company. "I come with the team that makes the presentation," he admits, "but only as an adviser. With my background in naval electronics, I know damn well I'm helping the company get contracts." Does this mean using his influence? "That's nonsense," says Higgins. "Anything of significance goes through ten to fifteen levels in the chain of command before a final decision. Only peanuts are settled on a single level that could be influenced by personal interest."

Helping the company get defense contracts is a popular non-selling job for high-ranking retired officers. They usually have titles like "assistant to the president" or "director of advanced planning," but they are known in the trade as "rainmakers." Regardless of how much clout they have at the Pentagon, they bring to their companies valuable inside knowledge of service plans for future weapons systems. When a general or admiral who has been involved in planning or research on a big project retires, defense contractors bid for his services as eagerly as any professional football team after a top college quarterback. When Maj. Gen. Harry Evans reired in 1967 as vice director of the Air Force's $3 billion Manned Orbiting Laboratory program, he was immediately hired as vice president and general manager of Raytheon's Space and Information Systems Division. In 1966, Bell Aerospace Corporation, the Army's largest supplier of helicopters, hired Gen. Hamilton Howze, former chief of Army Aviation, as vice president for product planning.

Most of the large defense companies have highranking ex-officers in their Washington offices. Everyone denies that they have any influence on defense contracts, but they are obviously there because they know their way around the Pentagon. One of them is Lt. Gen. William Quinn, former Army Chief of Public Information, and now in charge of "Washington operations" for Martin Marietta, which produces many of the Army's missiles. "We maintain liaison with Defense," says General Quinn, "but I don't go over to the Pentagon on any sales matters." Asked about using his influence, he admits he knows "half the people in the hierarchy over there," but claims he never uses his contacts for business. "Believe me," says Quinn, "this operation is as clean as a hound's tooth. Our real contribution is in maintaining a dialogue between our companies and the military people."

Just how retired officers can help to "maintain a dialogue" can be seen in the work of an ex-Navy officer who prefers to remain anonymous. He retired in 1968 from the Bureau of Naval Weapons, where he had been involved in the selection of contractors. He now works for one of them as a $200-a-day consultant in Washington. "I know a lot of Navy people here," he says, "and I sort of help the company's men find their way around. The salesmen take care of selling, but if you don't have an intro like me, you waste your time with underlings who don't have any power. If I want a contract, I know exactly who to go to. Some other guys may know the technical stuff, but I know the people. That's my expertise."

Such expertise may raise questions about conflict of interest, but not to most retired officers who have joined the defense industry. Says Pete Higgins, "You take a man who retires around 45 to 50, with his kids ready for college, and he's got a problem. He can't do it on his retired pay. He's got to have a second career. Many of these men have no other marketable experience. Where the hell else do you want them to go!"

No one seems to know, but as they continue to go into the defense industry the contracting process may suffer. One Defense official claims, "the fact that these lucrative job opportunities exist cannot help but influence those who deal with defense contractors. I remember trying to hold down costs on a large contract once, and a general working with me said, 'I must be out of my mind, trying to cut the overhead on this company. I'll be part of that overhead in a few years.' "

When military men spend much of their careers dealing with companies they may eventually work for, they naturally develop some concern for the company's point of view. When 90 percent of the major defense contracts are negotiated in such a congenial atmosphere, price and the public interest can easily become secondary considerations. A normal buyer-seller relationship has a built-in check against this sort of thing, because the buyer must spend his own money. The services do not, a fact which Pentagon officials and procurement officers often seem to forget.

Despite all the criticism of defense spending, most military men look on the growing traffic between the services and the de-

fense industry as natural and proper. An admiral who has made the transition himself claims, "It's good for the military, it's good for the company, and it's good for the country."

It's certainly good for the companies thriving on defense contracts. It may be good, or at least comforting, for the military to deal with former comrades who understand their problems and look forward to jobs in industry. But as defense costs continue to drain funds desperately needed for domestic programs, some Americans are beginning to wonder if "it" is really good for the country.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the list of the 100 largest contractors and the amount of Defense Department prime contracts they received in fiscal year 1968 be printed at the end of my remarks.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

100 COMPANIES AND THEIR SUBSIDIARIES LISTED ACCORDING TO NET VALUE OF MILITARY PRIME CONTRACT AWARDS

[Fiscal year 1968 (July 1, 1967 to June 30, 1968)]

[1] Net value of new procurement actions minus cancellations, terminations, and other credit transactions. The data include debit and credit procurement actions of $10,000 or more, under military supply, service and construction contracts for work in the United States plus awards to listed companies and other U.S. companies for work overseas. Procurement actions include definitive contracts, the obligated portions of letter contracts, purchase orders, job orders, task orders, delivery orders, and any other orders against existing contracts. The data do not include that part of indefinite quantity contracts that have not been translated into specific orders on business firms, nor do they include purchase commitments or pending cancellations that have not yet become mutually binding agreements between the Government and the company.

[2] The assignment of subsidiaries to parent companies is based on stock ownership of 50 percent or more by the parent company, as indicated by data published in standard industrial reference sources. The company totals do not include contracts made by other U.S. Government agencies and financed with Department of Defense funds, or contracts awarded in foreign nations through their respective governments. The company names and corporate structures are those in effect as of June 30, 1968, and for purposes of this report company names have been retained unless specific knowledge was available that a company had been merged into the parent or absorbed as a division with loss of company identity. Only those subsidiaries are shown for which procurement actions have been reported.

[3] Stock ownership is equally divided between Standard Oil Co. of California and Texaco, Inc.; half of the total of military awards is shown under each of the parent companies.

[4] Does not agree with percentage shown on 2d line at beginning of table due to rounding.

Mr. PROXMIRE. Mr. President, there are a number of examples why this disclosure legislation is needed. I ask unanimous consent that excerpts from the speech I gave in the Senate on June 25, 1969, giving the details of testimony received by my subcommittee on this matter, as well as the letter I sent to the Attorney General about it, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Congressional Record, June 25, 1969]

Mr. PROXMIRE. Mr. President, yesterday, I sent a letter to the Attorney General calling on him to act on testimony before the Subcommittee on Economy in Government, of the Joint Economic Committee. The testimony appeared to bring out what was a clear violation of the conflict-of-interest laws and regulations.

I enclosed pages 631 to 634 of the transcript of our hearings for June 10, 1969, when Mr. Merton Tyrrell testified, and I also referenced excerpts from a memorandum from Mr. A. E. Fitzgerald to Air Force Gen. J. W. O'Neill, which appeared on page 1044 of the transcript for Friday, June 13, 1969.

The testimony related to five Air Force officers who dealt with the Minuteman missile contracts. They retired and went to work for the company, the Autonetics Division of North American Rockwell or the parent company, where they had represented the Government on contracts the company held.

Two of the men were Air Force plant representatives at the company. A third was the guidance and control project officer in charge of the guidance systems the company was making. A fourth was in charge of the Ballistic Systems Division pricing for the Air Force before he retired and went to work for the company. A fifth was the general in command of the Ballistics Systems Division who dealt with the company on these contracts.

The problem is presented most forcefully in an excerpt from Mr. Fitzgerald's memorandum to Gen. J. W. O'Neill. In it he stated:

"In formulating a broad management improvement plan for Minuteman I believe you should consider the problem posed by the mass migration of Air Force officers into the management ranks of contractors with whom they have dealt."

Mr. Fitzgerald continues:

"The Air Force Plant Representative (AFPR) . . . who revoked our clearance at Autonetics is now a division manager at Autonetics. His predecessor, equally protective of the contractor's interest, is also now employed by North American Aviation. The procurement officer who blocked access by the Minuteman Program Control Office to Autonetics contract negotiation records is now employed by North American Aviation. The immediate superior of the project office who was excluded from Autonetics' plant is now employed by Autonetics. The officer cited to me as responsible for killing the cost reduction project I contracted to perform at Autonetics is now employed by North American Aviation."

It is quite clear that these officers represented the Government in connection with the Minuteman missile system and the guidance and control systems of the Minuteman missile with the North American Rockwell Co. and its Autonetics Division subsidiary. It is also clear that they went to work for the company following their retirement from the service.

Title 18, section 207 of the United States Code certainly appears to make such action illegal. It provides that anyone who has been an officer or employee of the Government and then "knowingly acts as agent or attorney for anyone other than the United States in connection with a judicial or other proceeding, application, request for a ruling or other" and I emphasize "other proceeding, determination, contract, claim, controversy, charge, accusation or other particular matter involving a specific party or parties in which the United States is a party or has a direct and substantial interest and in which he participated personally and substantially as an officer or employee, through decision, approval, disapproval, recommendation, the rendering of advice, investigation, or otherwise, while so employed, shall be fined, etc."

It is clear that these men participated personally and substantially as officers of the Government in a wide variety of decisions affecting North American Rockwell.

As high-placed employees of the Autonetics Division of North American Rockwell and of the parent company which did some $668 million in defense work in 1968 there appears to be every reason to believe that they acted as agents for the company in connection with proceedings and contracts or other particular matters in which they were involved as specific parties when they were agents and officers of the U.S. Government.

It is one thing for a military or civilian officer of the Government to retire and go to work generally for a company doing business with the Government. It is another thing for those who represented the Government in the plant and in direct negotiation and supervision of contracts with a particular company to then go to work for that company.

As I wrote to the Attorney General:

"If this is not a conflict of interest, then the laws and the DOD directives are not worth the paper they are written on."

Mr. President, I ask unanimous consent that the letter I sent to the Attorney General and the excerpts from the transcript of the hearings which I mentioned be printed in the RECORD.

CONGRESS OF THE UNITED STATES,
JOINT ECONOMIC COMMITTEE,
Washington, D.C., June 23, 1969.

HON. JOHN N. MITCHELL,
Attorney General of the United States, Department of Justice, Washington, D.C.

MY DEAR ATTORNEY GENERAL: On Tuesday, June 10, 1969, the Subcommittee on Economy in Government of the Joint Economic Committee heard testimony from Mr. Merton Tyrrell, Executive Vice President of the Performance and Technology Corporation. Mr. Tyrrell had performed work for the Defense Department and the Air Force in connection with the cost efficiency of the production of the guidance and control systems for the Minuteman Missile. In the course of his work he had visited the plants of the contractor and conferred extensively with representatives of the Air Force and the company.

During his testimony, Mr. Tyrrell mentioned what he believed were the harmful effects on efficiency and costs when military or civilian Defense Department contracting, procurement, and plant representative officials go to work for the very firms where they have previously represented the Government on contracts held by these companies.

Under questioning by me Mr. Tyrrell gave a number of specific examples where the plant representatives of the Air Force retired and went to work directly for the company (Autonetics Division of North American Rockwell) where they had just been representing the Government on contract work for the Air Force. In this case, the four men mentioned by Mr. Tyrrell worked on the Minuteman contract for the Air Force and then went to work for the Minuteman contractor. Two of them had been plant representatives for the Air Force. A third was the guidance and control project officer for the Air Force. A fourth was in charge of BSD pricing for the Air Force before he retired and went to work for the company.

In addition to these four, a memorandum provided by the Air Force indicates that the General in Command of the Ballistics Systems Division who dealt with the company on these contracts, also went to work for the company. (See p. 1044, Friday, June 13, 1969 transcript of hearings).

In 1968, North American Rockwell, the parent company, was the 9th largest defense contractor and had contracts worth some $668 million in that year. As of February 1969, they employed over 100 retired military personnel of the rank of Colonel or Navy Captain and above.

I am enclosing copies of pages 631–634 of the transcript of the hearing where the testimony is given.

I am forwarding this testimony to you for action. If true, and I have no reason to doubt the testimony, these acts appear to be a clear violation of the conflict of interest laws, regulations, Executive Orders, and codes of ethics laid down by the Defense Department, the Civil Service Commission, and by the Congress. If these acts are not a violation then, contrary to the repeated representations and statements by the Defense Department, either the laws are toothless or their enforcement is feeble. If this is not a conflict of interest, then the laws and the DOD directives are not worth the paper they are written on.

I say this because when I made public the list of almost 2100 former retired officers of the rank of Colonel or Navy Captain and above who in February of this year were working for the 100 largest defense contractors, I received reassurances that the laws and regulations against conflict of interest were effective from no less a person than the Assistant Secretary of Defense for Installations and Logistics, the Honorable Barry J. Shillito.

Concerning these former officers, Secretary Shillito wrote:

"Their employment, as is the case of all of our approximately 700,000 retired military personnel, is covered by regulation and laws which are designed to prevent conflict of interest."

In reference to the conflict of interest statutes (P.L. 87–649, 87–778, and 87–849 plus the policies and procedures implementing them in DOD Directive 5500.7), Secretary Shillito said:

"We feel these controls are sound and are working."

I therefore urge you to take immediate action in this case as well as any others brought to light by our hearings.

When government contracting officers and representatives—whether civilian or military—leave the government and go to work directly for a company where they have just been representing the government on contracts with that company, there certainly appears to be a prima facie case of a serious conflict of interest.

With best wishes.

Sincerely,

WILLIAM PROXMIRE,
U.S. Senator.

EXCERPTS FROM JUNE 10, 1969, HEARINGS OF THE SUBCOMMITTEE ON ECONOMY IN GOVERNMENT OF THE JOINT ECONOMIC COMMITTEE, PAGES 631–634

Senator PROXMIRE. Thank you gentlemen, very much.

Mr. Tyrrell, this is one of the most shocking examples of waste and extravagance that I have seen in the years I have been in Washington.

As I understand it, on Minuteman overall, we have been told by a witness before our committee last November, there was a profit of 42 percent on invested capital. Now, in your statement you refer to the harmful

effects as you put it "of the switchover of personnel between Government and industry," the very thing Senator Goldwater and I were discussing, that is, procurement officials who go to work for the industry, and sometimes industry officials who come in and go to work in procurement. Can you explain what you mean specifically, how much of a problem was it on Minuteman—let me put it this way—first, how many Defense Department officials, civilian or military, made the switch over to the contractor?

Mr. TYRRELL. Well, in the area of the guidance and control area alone, there were a number of them. For example, the Air Force Plant Representative when we first arrived there, Colonel Roland, retired and went to work for Autonetics. Another Air Force Plant Representative while we were there, Colonel Yockey, retired and went to work for Autonetics.

Senator PROXMIRE. What jobs did these men hold in the Defense Department before they went to work?

Mr. TYRRELL. They were the Air Force Plant Representative who was locally stationed at the contractor's plant and who in effect headed up the administrative administration of the guidance and control contracts.

Senator PROXMIRE. Isn't there a law that prohibits a procurement official from going to work for the contractor with whom he is dealing within a period of two years?

Mr. TYRRELL. I am not a lawyer, sir, and I could not tell you if there is a law to that effect.

Senator PROXMIRE. At any rate, you know as a matter of fact that these men did work on the Minuteman contract for the Air Force?

Mr. TYRRELL. That is correct.

Senator PROXMIRE. And then went directly to work for the Minuteman contractor?

Mr. TYRRELL. That is correct.

Senator PROXMIRE. What were their jobs with the contractor when they went to work for them?

Mr. TYRRELL. Yockey I believe is a director of the business operations there.

Major Klecker, who was the guidance and control project officer, is assistant program manager at Autonetics.

I am not familiar with Colonel Roland's title.

Senator PROXMIRE. Are there other people whose names you could give us?

Mr. TYRRELL. Well, as I mentioned, Major Klecker, who was the project officer, went to work for Autonetics.

Additionally, when we first arrived there there was a Colonel Richard Cathcart who subsequently retired and went to work for Autonetics. And he was the head of the PSD pricing before his retirement.

Senator PROXMIRE. In your judgment, is this prevalent in defense industry in its relationship with the Defense Department?

Mr. TYRRELL. I think it is relatively prevalent. We see it quite frequently. And a number of personnel or military people do retire at a relatively early age, and they quite frequently go to work for the defense contractors.

Senator PROXMIRE. Is it your conviction that this is one of the reasons why there is a soft attitude toward cost overrun and why there isn't the kind of strict surveillance and discipline which you recommend?

Mr. TYRRELL. I think it probably relates to that. I am not sure whether it is the sole cause. I think one of the things that tend to create the softness as you phrase it is this team concept that I brought out in my statement, wherein they consider themselves all members of the same team. And it becomes rather difficult, then, for them to disassociate themselves. And I don't think it is conscious collusion as was pointed out by the Senator, it is something that has just evolved.

They are all part of the same group.

Senator PROXMIRE. Autonetics is a division of North American; is that correct?

Mr. TYRRELL. Yes, it is.

Senator PROXMIRE. And what companies made up the contract or team to which you refer on page 3?

Mr. TYRRELL. There were eight major associate contractors in the Minuteman program.

The Autonetics divisions of North American Rockwell is the guidance and control contractor.

The Boeing company is the integrating contractor, and produces some of the aerospace vehicle equipment.

The Thiokol Wasatch Division produces the first stage motor.

Aerojet General, Sacramento the second stage motor.

Hercules Bokas Works did produce the third stage motor.

Sylvania Electronics the electronics system.

The General Electric Systems Department the Mark XII re-entry system.

Avco Lycoming missile systems division the Mark XI re-entry.

Senator PROXMIRE. You say 490.4 million dollars was the original cost of the research and development for the Minuteman II as of 1962?

Mr. TYRRELL. That is correct.

Senator PROXMIRE. What were the total original estimates including R&D and production as of 1962?

EXCERPTS FROM DECEMBER 15, 1967, MEMORANDUM FROM A. E. FITZGERALD TO AIR FORCE GEN. J. W. O'NEILL INCLUDED IN HEARINGS FROM FRIDAY, JUNE 13, 1969

In formulating a broad management improvement plan for Minuteman, I believe you should consider the problem posed by the mass migration of Air Force officers into the management ranks of contractors with whom they have dealt. The AFPR who revoked our clearances at Autonetics is now a division manager at Autonetics. His predecessor, equally protective of the contractor's interest, is also now employed by North American Aviation. The procurement officer who blocked access by the Minuteman Program Control office to Autonetics contract negotiation records is now employed by North American Aviation. The immediate superior of the project officer who was excluded from Autonetics' plant is now employed by Autonetics. The officer cited to me as responsible for killing the cost reduction project I contracted to perform at Autonetics is now employed by North American Aviation.

It is of course impossible to assess the effect of impending employment by contractors on the actions of officers still on active duty. I am sure that many of the individuals I have cited had no idea of going to work for North American at the time they were so vigorously protecting the interests of that company vis-a-vis the Government. On the other hand, it is perfectly clear to me that these same officers studiously avoided any action which might offend their ultimate employer.

Lest you accuse me of being unfair to North American and the officers they have employed, I concede that the condition I have described is not unique. Indeed, it is common enough to be our next national scandal. However, the fact that it is so widespread makes it imperative that the practice and its corrosive effect on our stewardship be controlled.

I believe publicity is the solution to the problem just cited. However, I do not have strong convictions on this point. I should like to discuss it with you further.

Mr. PROXMIRE. Mr. President, shortly afterward, on July 17, I received a reply from the Attorney General, in which he wrote that the law did not cover the situation I sent to him.

Because of that fact and the large number of both former civil and military employees and officers who leave the Pentagon, I believe this amendment is urgently needed.

Disclosure itself will help cure the problem.

I ask unanimous consent that the Attorney General's letter be printed in the RECORD at this point.

The PRESIDING OFFICER (Mr. ALLEN in the chair). Without objection, it is so ordered.

DEPARTMENT OF JUSTICE,
Washington, D.C., July 17, 1969.

Hon. WILLIAM PROXMIRE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: This is in reply to your letter dated June 23, 1969, wherein you forwarded to the Department information obtained during the hearings before the Subcommittee on Economy in Government of the Joint Economic Committee concerning alleged violations of the conflict of interest statutes by five former Air Force officers who went to work for the Autonetics Division of North American Rockwell Corporation after they retired from military service. The information furnished has been carefully examined and reviewed by the Criminal Division in regard to possible violations of criminal statutes. Our review did not encompass possible infractions of the Code of Ethics or the Standards of Conduct for Government employees because the enforcement of these provisions are within the jurisdiction and responsibility of the Department of Defense and the Civil Service Commission.

There are generally four criminal statutes which concern the area of your inquiry. These statutes are Title 18, United States Code, Sections 207, 208, 281 and 283.

Section 207 is a twofold statute. Subsection (a) prohibits any former employee from *acting as agent or attorney* for anyone other than the United States in connection with any "particular matter" in which the United States is a party and in which matter he personally and substantially participated while he was a Government employee. This is a lifetime bar. It is to be noted that the former employee must act as an agent or attorney. The office of the Attorney General stated in a January 28, 1963, *Memorandum Regarding Conflict of Interest Provisions of Public Law 87–849* (which can be found in the supplement to Section 201 of Title 18, U.S.C.A., and also at 28 F.R. 985) that—

An individual who has left an agency to accept private employment may, for example, immediately perform technical work in his company's plant in relation to a contract for which he had official responsibility—or, for that matter, in relation to one he helped the agency negotiate.

Subsection 207(b) basically prohibits a former Government employee for one year from *personally appearing* before any court or Federal department or agency *as an agent or attorney* for any party other than the United States in connection with any particular matter involving a specific party in which the United States is a party and which particular matter was under his official responsibility while he was a Government employee. Official responsibility is defined in 18 U.S.C. 202(b).

It can, therefore, be readily seen that both of these subsections require some act of a representational nature on the part of the former Government employee before they are violated.

With regard to retired officers of the Armed Forces of the United States, there are two additional statutes. Section 281 of Title 18, United States Code, forbids any retired officer to "*represent* any person in the sale of anything to the Government through the department in whose service he holds a retired status." (Emphasis supplied.)

Section 283 of Title 18, U.S.C. forbids a

retired officer for a period of two years after his retirement to—

. . . act as agent or attorney for prosecuting or assisting in the prosecution of any claim against the United States involving the Department in whose service he holds a retired status, or to allow any such retired officer to *act as agent or attorney for prosecuting or assisting in the prosecution of any claim* against the United States involving any subject matter with which he was directly connected while he was in an active-duty status. (Emphasis supplied.)

It can readily be observed that once again both of these statutes require some act of a representational nature by the retired officer. It is to be noted that these statutes are a prohibition against the retired officer selling to his former service (Section 281) and acting as agent for prosecuting or assisting in the prosecution of any claim. It is to be further noted that the term "claim" is not as broad as those particular matters set forth in Section 207 of Title 18, U.S.C.

There also exists a provision of Section 208 of Title 18, U.S.C., which requires a Government employee to notify his superiors if he is negotiating employment with any firm with which he is officially dealing as a Government employee. There are no criminal statutes which prohibit a retired military officer from being employed by a corporation or company solely because he had been dealing with that corporation or company in his official capacity as a Government employee. There is a non-criminal statute (37 U.S.C. 801(c)) which provides, in essence, that a regular retired officer shall not receive his retirement benefits if, within three years after his retirement, he engages for himself or for others in the selling or contracting for the sale or negotiating for the sale of any supplies or war materials to any agency of the Department of Defense. It can be observed that this statute also requires a representational act.

The information supplied in your letter and its enclosure is insufficient to indicate a violation of any of the aforementioned statutes. While there exists an opportunity for possible conflict of interest violations to occur when a former Government employee takes a position such as described in your letter, the employment is not, in and of itself, a violation. In view of the fact that thousands of Government employees leave Federal service for private employment each year, evidence that there is a specific allegation of a violation, and not a mere opportunity for the violation to have been committed, is needed to justify the initiation of a criminal investigation. If, however, you have additional facts sufficient to indicate the existence of a violation, I assure you that the matter will be thoroughly investigated and evaluated for possible criminal prosecution.

I hope this letter has helped clarify the existing law in this difficult area.

Sincerely,

WILL WILSON,
Assistant Attorney General.

VIETNAM REASSESSMENT

Mr. GORE. Mr. President, according to published reports, President Nixon has called a general conference for an assessment, or peradventure a reassessment, of the Vietnam war and the policy of the U.S. Government with respect thereto. I take the floor in a genuine effort to make a small contribution to this reassessment and to the solution of this intolerable problem. I hope I can do so without the slightest measure of partisanship. At least, this will be my endeavor.

Nevertheless, it will be necessary to speak frankly. It may be that some will interpret a statement of the hard facts as I interpret them as being partisan. Let the record show it is not so intended.

Beginning last fall, the press began to carry unconfirmed reports about consideration being given to phased withdrawal of U.S. troops from Vietnam. These reports indicated that the plans under consideration involved the withdrawal of increments of U.S. troops as South Vietnamese troops improved their capabilities. On February 28, President Thieu of South Vietnam indicated that some such plan had been discussed with his government. He was quoted in the Washington Post as saying:

> One and possibly two United States divisions can leave South Vietnam during the last 6 months of 1969.

Added credence was given to reports about phased withdrawal by Secretary of Defense Laird. Upon his return from an inspection trip to Vietnam in March, he spoke of implementing what he called phase II of the program to train and equip the South Vietnamese Army to take over a major share of the fighting.

Mr. President, announcements of the withdrawal of U.S. troops have a most pleasant sound, particularly to those whose sons, husbands, and fathers are in Vietnam. But I am convinced that a phased withdrawal of increments of U.S. troops is not a formula for ending the war. Rather, it is a formula for prolonging the war, perhaps under conditions somewhat more palatable to the electorate, for a time, but which would condemn this country to indefinite involvement in the morass in which we now unfortunately find ourselves.

When Secretary Rogers appeared before the Foreign Relations Committee on March 27 to brief the committee on U.S. foreign policy generally, I asked him about a statement that had been attributed to a State Department briefing officer about a gradual phased withdrawal that would extend over a period of 2 or 3 years. I suggested to the Secretary—

> A long drawn out phased withdrawal seems to me to overlook the one and only formula for America to extricate herself from this morass. What it should be is a political settlement brought about all at once in one agreement.

The Secretary responded, in part, as follows:

> I agree with you that I would be unrealistic and unwise to be talking about a phased withdrawal over any such period of time as that. I would think, and if the other side is willing that we ought to have a withdrawal as quickly as possible. We are prepared, if the other side is prepared, to have a withdrawal over a very short period of time.

In his prepared statement, Secretary Rogers had said:

> We are prepared to begin withdrawal of our forces simultaneously with those of North Vietnam.

The Secretary made it clear that he was talking about the mutual withdrawal of both our own and allied troops on the one hand, and North Vietnamese troops on the other. He made no reference to unilateral U.S. withdrawal.

On May 8 of this year, in a statement on the floor of the Senate, I expressed my concern about phased withdrawal of U.S. troops. At that time, I said:

> If troop withdrawal is to herald the actual termination of this American land war in Asia, it must be a step that is taken in consequence of a negotiated political settlement that is plain for all, including the American people, to see, to read, and to understand. Our experience with secrecy and credibility has been an unhappy experience. So much so that "open covenants openly arrived at" is deeply imbedded in American ideals. If the Pentagon-Saigon axis has in mind the withdrawal of increments of U.S. troops over a period of years, leaving behind U.S. troops to back up the South Vietnamese Army, and to prop up a corrupt military dictatorship in Saigon, such withdrawals will but signify a prolonged war there and a long-term U.S. involvement. It is utterly unrealistic to think that the United States will be permitted, without a very long war, to establish in South Vietnam another South Korea-type client state.

On May 14, President Nixon made a major policy statement on Vietnam—the only one on this subject he has made to the American people since his inauguration.

I found some encouragement in what he said. After repeating the cliches about self-determination for the people of Vietnam in almost the same words previously used by the Johnson administration, President Nixon proposed—

> An international supervisory body, acceptable to both sides, would be created for the purpose of verifying withdrawals, and for any other purposes agreed upon between the two sides.

The President added:

> As soon as possible after the international body was functioning, elections would be held under agreed procedures and under the supervision of the international body.

It seemed to me that in his May 14 speech, President Nixon was suggesting the creation of an international body, with elections to be held under the supervision of that international body. Such an approach might make possible genuine self-determination for the people of South Vietnam—a far cry from the Saigon regime's concept of self-determination.

After a careful reading of the President's speech, I concluded not only from what he said, but also from what he did not say, that he had recognized that this war can be ended only by a political settlement, and that he had recognized further that a political settlement having as its cornerstone the maintenance in power of the Thieu-Ky regime was not attainable. Thus it seemed to me that the President might have realized that if we are to extricate ourselves from Vietnam, we must first extricate ourselves from the embrace of the Thieu-Ky regime—the albatross which destroyed the Johnson administration.

But on June 8, President Nixon met with President Thieu on Midway Island. It will be recalled that President Thieu prepared for this meeting by going first to South Korea and Taiwan, at each place issuing militant statements in which he was joined by Presidents Park

and Chiang Kai-shek, about the necessity for carrying on the war.

At Midway, on June 8, President Nixon announced the "withdrawal" of 25,000 U.S. troops from Vietnam.

The President indicated that a decision would be reached on further "withdrawals"—the term "withdrawal" later being changed to "replacement"—by the end of August. On one occasion, he stated that he hoped to "beat" a withdrawal timetable suggested by former Secretary of Defense Clark Clifford, who had proposed the withdrawal of 100,000 U.S. troops this year and the withdrawal of all remaining ground combat troops by the end of 1970.

Mr. MURPHY. Mr. President, will the Senator yield for a question?

Mr. GORE. I yield.

Mr. MURPHY. I should like to ask when the former Secretary made the proposal. Was that while he was Secretary or after the new administration came into office? I have forgotten the exact date.

Mr. GORE. This was made later, this year.

Mr. MURPHY. Did the former Secretary propose withdrawal of any troops while he was Secretary?

Mr. GORE. If so, I do not have the record.

Mr. MURPHY. I just wanted to keep those dates straight.

I thank the distinguished Senator.

Mr. GORE. I thank the able Senator for his contribution and his clarification.

Recently, however, the President deferred to an indefinite date a decision on any further unilateral withdrawal of U.S. troops.

Whether the President has, in fact, deferred a decision on withdrawal of additional U.S. troops or merely postponed the announcement of it, is not clear. There are rumors that a firm decision had been made to withdraw another increment of troops and that the announcement was canceled at the last minute. I do not know.

Be that as it may, the crucial issue is whether this administration has determined to go down the rocky, endless road of piecemeal withdrawal of only a portion of U.S. troops with a commitment that sufficient troop strength will remain to maintain in power the Saigon regime.

Surely, the return of even a single soldier is welcomed. But I do not believe that the return of 25,000 or 100,000 American men is a formula for ending the war.

According to reports, 25,000 troops, or thereabouts, have now been withdrawn. What contribution to peace has this made?

It has been suggested that phased withdrawal, coupled with an unspoken but obvious pledge that we will keep enough troops there indefinitely to prevent collapse of the current Saigon regime, would convince North Vietnam that its cause is hopeless and therefore encourage Hanoi to negotiate. In my view, the history of the Vietnamese people does not support such a conclusion. They are accustomed to long struggles, spanning generations or even centuries. Neither does our experience in this war indicate that such a policy would be successful. A policy of phased withdrawal holds no more promise of success than did the policy of bombing North Vietnam to the conference table.

It may well be true that the phased withdrawal of increments of U.S. troops from Vietnam will buy time for the administration with the American people. But the question is, how will this time be used?

If it is used to tighten our embrace of the Saigon regime, the prospects for peace will be dim indeed.

When President Nixon went to Vietnam a few weeks ago, he stood side by side with President Thieu on the steps of the Presidential Palace, a symbolic act which proclaimed both to President Thieu and to the world that our Government stands with President Thieu's government. While there, the President described the Vietnam war as possibly "one of America's finest hours." After departing Vietnam, President Nixon praised President Thieu, according to the Washington Evening Star, as "a very capable guy, an excellent politician—probably one of the four or five best in the world."

Perhaps the President's appraisal of Mr. Thieu as a politician is accurate, in a sense, depending upon definition. After being elected by about one-third of the vote in an election run by a military junta which he controlled, Mr. Thieu has managed to keep the United States firmly tied to his government. This is quite a political feat.

President Thieu insists that any election to be held in South Vietnam would have to be organized and run by his regime. This seems to me in contravention of President Nixon's speech on May 14. Moreover, President Thieu insists that—

> It will take 2 years to set up the machinery so that elections can actually take place.

Two years from when? How long must American boys fight and die in Vietnam? We have suffered more than 60,000 casualties since the inauguration of President Nixon on January 20.

Although President Nixon came back to Washington saying the door to peace was open, President Thieu went back to Saigon and said:

> There will be no coalition government, no peace cabinet, no transitional government, not even a reconciliatory government.

Meanwhile he continues to close down newspapers that voice dissent and to jail those who disagree with him.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. YARBOROUGH. I wish to ask the Senator if it is not a fact that we have now suffered more casualties in the Vietnam war than we suffered during the entire Korean conflict?

Mr. GORE. I believe that is correct.

Mr. YARBOROUGH. Is it not a fact that, at the casualty rate for the past month, in about 8 more weeks, if the war progresses at the same rate, we will have suffered more casualties than we suffered in World War I?

Mr. GORE. I do not know.

Mr. YARBOROUGH. I think the Senator will find that is correct. If the casualties continue at the past month's rate, in 8 weeks we will have suffered more casualties in this war than we did in World War I.

Mr. GORE. This is a bloody, costly war. We have gained nothing from it and we will gain nothing from it. This war must be ended.

Even so, President Thieu, according to reports, was even reluctant to engage in a cease-fire during the funeral of the leader of North Vietnam, although urged to do so, according to reports, by the United States.

The current widely heralded "reshuffling" of President Thieu's cabinet makes it clear that he has no intention of broadening the base of his government or making it more responsive to the needs of the South Vietnamese people. On the contrary, press reports concerning changes in the cabinet reflect a step in the opposite direction, a revival of the influence of followers of former President Diem.

Two weeks after Midway, President Nixon was asked at a press conference if we were "wedded" to the Thieu government. After saying, quite naturally, that the United States is not wedded to any government in the sense that it has to get that government's approval before we act, he went on to say that "there is no question about our standing with President Thieu" and that "we are not going to accede to the demands of the enemy that we have to dispose of President Thieu before they will talk." Sadly, President Nixon's visit to Vietnam confirmed his earlier statement.

If this Nation continues to equate its own interests with those of President Thieu, we will not achieve a political settlement anytime in the foreseeable future that will end the Vietnam war. Mr. Thieu may well be an able politician, but he ought not have any license to make U.S. policy.

It is my earnest hope that President Nixon is, in fact, reconsidering the efficacy of what appears to me to be a policy of piecemeal withdrawal of only a portion of U.S. troops, rather than merely considering the announcement or postponing the announcement of the second step along that road. It is my hope that the President does not feel obliged to stand indefinitely with President Thieu, sacrificing our own national interests in favor of those of the Saigon regime, for sacrificing our own interests means not only our interests in the international context but it means sacrificing every day the lives, health, and limbs of many, many more American boys.

Rather, I hope that President Nixon will expand and develop what I interpreted as the subtle message of his May 14 speech, which I promptly applauded on the floor of the Senate, and seek a political settlement based upon genuine self-determination for all of the people of South Vietnam. A little tarnish on Mr. Thieu's political image will not be too high a price to pay for such a settlement.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. FULBRIGHT. Mr. President, I think the Senator has presented in a very

concise and persuasive manner the very crux of the situation facing us in Vietnam. He did so also in his speech on May 8, which he quotes on page 3 of the copy of the speech I have. There he made clear, as he has done today, that there is no possibility of political settlement so long as we are completely committed to the support of the existing Government of South Vietnam. That does not necessarily mean we wish to insure that they have no future at all, but that we are not committed to them.

The principle the Senator reads into the President's speech of May 14 is correct, I believe. He was right in applauding it, if the President meant it; but I do not think the President has acted in the way the Senator interpreted the speech. If he had, I think we would all be better off.

I congratulate the Senator on the way he has stated the issue. I have tried to state it in a similar way.

It does not matter how much we talk about settlement, the war cannot be settled as long as we insist on maintaining the puppet government in South Vietnam. I think that is clear.

Mr. GORE. I thank the Senator. Would he not agree that unless the people who live in South Vietnam have the will to live together in peace, there is no way that the United States can force peace?

Mr. FULBRIGHT. I agree. There is no way. We cannot force peace. We have the alternative, of course, of all-out war, or using nuclear weapons. The previous administration has rejected that alternative. I certainly reject it. I take it that the present administration has rejected it. I hope we can prevail upon the administration not to return to any such idea.

Now the question is how to settle the war by negotiation. A free election is an indispensable element, it seems to me. This requires a return to what the Senator from Tennessee is saying; namely, the principles of the Geneva Accords. North Vietnam did accept those principles as did others.

I think that means an open election, not under the control of any existing government—certainly not the present government in South Vietnam.

May I briefly remind the Senator from Tennessee that we are engaged now in an examination of the tax bill and he has been playing a prominent part in it. I only wish to remind the Senate, and the country, that the war is damaging this Nation not just by the tragic loss of lives in Vietnam, which is serious enough, but by its dramatic cost—almost as much as World War I. And now there is the dislocation of our economy and the lives of our people which is brought out every day in hearings in the Finance Committee. We see what is happening as a result of inflation and the effort to control it. There is the heavy taxation, and all the other disruptions flowing, I believe, from the Vietnam war either directly or indirectly. Consider the debate here today on a matter like the C–5A program. In normal times, I do not believe the country would stand for the extraordinary extravagance and improvidence exhibited in that contract. What has happened in that contract is absolutely unprecedented. Yet, because of the Vietnam war, which has so distorted our judgment, we are willing to take anything.

That is what I mean by the Vietnam war being the background against which our judgments are distorted in things like contracts, inflation, the great need for educational improvements, and pollution control. Our approach to all these things is distorted by the Vietnam war. It is destroying the United States if it is not stopped. If this war goes on year after year, this country will be, I think, on the decline, a decline from which I believe we will not recover. This is very serious, much more serious than many people in this country realize. This war must be concluded.

Mr. GORE. Not only are taxes and the budget affected by the war, but the high cost of living——

Mr. FULBRIGHT. And inflation.

Mr. GORE. Yes. The high interest rates. Indeed, this poses a serious threat to this country, and to the well-being of its citizens.

Mr. FULBRIGHT. This morning's newspaper reported that the interest rates on AAA corporate bonds are the highest in history, over 8 percent.

Mr. GORE. I should like to advert to one statement the Senator from Arkansas made; namely, relating that the previous administration had ruled out nuclear war. He expressed the opinion that the present administration had done that, too. I believe that to be the case. Indeed, one of President Nixon's statements made on May 14 was that—and I use his words right now, we have "ruled out"—I remember those words because they impressed me—we have "ruled out" a victory on the battlefield.

I think perhaps that former President Johnson had finally ruled that out, too; but so far as I recall, he never quite said so.

A few days ago, at the Governors' conference at Colorado Springs, the distinguished and able Governor of Tennessee, the Honorable Buford Ellington, chairman of the Governors' conference, was quoted in the press saying that he thought it was high time the United States either win the Vietnam war or settle the Vietnam war. I may not be quoting his exact words, but that is how I remember them. At any rate, that was the sentiment that he expressed, according to press reports.

In my opinion, he bespoke the single largest segment of sentiment held by the people of Tennessee.

During the course of this year, I have made more than 100 visits to Tennessee and to various communities in Tennessee, talking to thousands of people, and listening to many opinions. I believe that the one single largest segment I heard expressed was that which was voiced by Governor Ellington last week.

Well, since President Nixon, Commander in Chief, has "ruled out" a military victory, the only alternative is to find a settlement.

I do not believe that we will find a settlement by equating the interests of the United States with the interests of a corrupt, military dictatorship in Saigon.

Mr. FULBRIGHT. I agree with the Senator from Tennessee. Whether corrupt or not, it is simply not in our interests.

Mr. GORE. Whatever it is, it still is not, I agree, in our interest.

Mr. FULBRIGHT. It is not in the interests of the United States to distort our whole national life and economy for the benefit of a small segment in Vietnam, regardless of whether they are corrupt or not. It is against our interests. It never has been in our interest. This is not a war in a true sense. It was a horrible mistake in judgment. This is a conflict of inequality and disproportion. The strength and size of little North Vietnam and the powerful United States, make it inconceivable to think of it in terms of a war such as World War I and World War II.

People get killed, of course, but it is not that kind of contest. That is why, I think both the previous and the present administrations have ruled out nuclear war.

If there were to be war with Russia or with China—a desperate war—I have no doubt that we would use whatever weapons we had. I believe we probably would, if we ever got into war with Russia or with China. But I think it is inconceivable that the President would continue to hold up a settlement for the reasons the Senator from Tennessee has stated. I believe those are the reasons, and I congratulate the Senator from Tennessee on a very fine statement.

Mr. GORE. I thank the Senator.

Mr. YARBOROUGH. Mr. President, will the Senator from Tennessee yield?

Mr. GORE. I am happy to yield to the Senator from Texas.

Mr. YARBOROUGH. I congratulate the distinguished Senator from Tennessee, a distinguished member of the Committee on Foreign Relations, for his review of the situation.

I associate myself with his remarks on the withdrawl of troops being dependent upon the statements of the present Saigon regime.

As an American citizen, I have been galled and humiliated time after time by the statements of those men in Saigon who say that we cannot withdraw any of our troops.

Under the Constitution of the United States, the President of the United States is the Commander in Chief of our Armed Forces and Congress is given the authority to declare war. The President sent those Armed Forces into South Vietnam. Congress did not send those Armed Forces into South Vietnam. He sent them. He was the sole Commander. Statements have been made, not by the present President but by the former President, that no American troops would be withdrawn at this time, because the South Vietnamese could not afford to let them go. No American President has said anything about it.

I think it is time that the President of the United States say that our troops be withdrawn—it is long overdue—he should have said that 3 years ago, 2 years ago, 6 months ago.

Any time is a proper time for the President of the United States to remind Thieu and Ky that he, not they, commands the Armed Forces of the United States. I long to see an American President remind those fellows of that.

Now, I wish to ask the Senator whether he has any information on this point: I

have had a number of Americans who have served in Vietnam in different capacities come back and tell me that the wife of Marshal Ky is rapidly picking up rich rice plantations in South Vietnam.

Does the Committee on Foreign Relations have any information on that point? Does the Senator from Tennessee have any? If we do not, I wish that the chairman of the committee with jurisdiction would investigate that.

I think the American people who are sending their sons to have their blood shed are entitled to know whether Ky or Thieu—Ky is the one I have heard—is using this means to grab off this personal property in his wife's name—the personal hegemony of the rice estates in South Vietnam. I think we ought to know it. Enough Americans coming back say it to warrant a Senate investigation to find out. If it is not true, it should be laid at rest. If it is true, the American people ought to know it.

Mr. GORE. I do not know whether or not that is true. I did read a report a few days ago that an estimated 2,000 Vietnamese who have grown rich are leaving Vietnam each month, to live in Paris, Geneva, Bern, and other nice and safe places in Western Europe.

There is no question that there is enormous profiteering in Vietnam from the war. A lowly soldier from Tennessee, who had just returned from Vietnam, drove more than 200 miles yesterday to see me in Memphis, Tenn., and related to me one incident after another of thievery, pilfering, and profiteering of American goods, their being misused and their being on the black market. He said he had served his year's time over there for nothing; that we would gain nothing.

Another man told me that the helmet of a boy had been brought home by a friend and that, as this boy lay dying in the jungle, he had scrawled on the helmet, "I have given my life for a useless war."

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. GORE. I yield.

Mr. STENNIS. I know the Senator has had a fine prepared statement here. I hurriedly read part of it. If I may say so, we are down to a situation in which we may be able to vote in a few minutes on an amendment on which the yeas and nays have been ordered; and the Senator knows the situation tomorrow. If it is his plan to conclude soon, and if he could indicate that, we could let Senators know. Otherwise——

Mr. GORE. Mr. President, it has been with reluctance that I have intruded these remarks upon the Senate——

Mr. STENNIS. I do not blame the Senator at all.

Mr. GORE. But when I read the announcement that President Nixon had called a major conference of his advisers to assess, and perhaps reassess, the Vietnam war and our policy, I felt an urge to try to exercise the responsibility of advice from the Senate. I feel there is nothing before the Senate, nothing before this country, including the pending bill, that even approaches the importance of peace in Vietnam.

But, Mr. President, I have now expressed my views, and I do not wish to detain the Senate further.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each reserve component of the Armed Forces, and for other purposes.

Mr. STENNIS. Mr. President, the Senator from Wisconsin has an amendment with the most laudable purposes. It goes to the following situation: Of course, there are a great many people in the Department of Defense, some in uniform, some in civilian clothes, and a great number of contracts and subcontracts must be handled, and many of them are very involved, as the Senator knows. Many officers are retiring every day. Civilians leave the Department. Some of them show up rather quickly as employees of the very contractors whose work they had been passing on and who still have contracts pending in the Department of Defense. It has caused embarrassing situations before, and, it seems to me, that is true more and more now. There is nothing wrong with the employment.

As I understand the amendment, it merely requires a disclosure of those relationships. The Senator from Maine and I have discussed this subject and studied it together quite a bit. I have talked with other members of the committee, even though it has not been before our committee. Some regulation in this field would perhaps serve a good purpose.

I have the floor, I believe, and I wonder if the Senator will make some response. As I understand the amendment of the Senator from Wisconsin, it would apply to civilians and military officers alike, with no discrimination between the two groups. Is that correct?

Mr. PROXMIRE. The Senator is correct.

Mr. STENNIS. It applies to those with a rating of GS–15 and above, and also those with a military rank of——

Mr. PROXMIRE. Naval captain or colonel in the Army or Air Force and above.

Mr. STENNIS. And above.

Mr. PROXMIRE. And, in addition, it applies to all procurement officials. It applies to all plant representatives, regardless of their rank.

Mr. STENNIS. The Senator's amendment also applies to people who are coming into the Department of Defense from civilian life for a certain capacity?

Mr. PROXMIRE. Yes.

Mr. STENNIS. Will the Senator explain that for us somewhat?

Mr. PROXMIRE. For instance, if a man from civilian life is hired and if he has worked for a defense contractor, or several defense contractors, he would be required to disclose that fact at the time he went to work at the Pentagon. He would disclose his former employment, and he would disclose the weapons systems he and his company were working on when he was with the defense company. We know this goes both ways. We do not have that information with respect to some of the civilians who worked in the Pentagon and went out. We do have some of it as to officers, but that is not disclosed publicly.

Mr. STENNIS. All civilians who are nominated by the President of the United States to fill roles as assistant secretaries, for example, must come before our committee and disclose information about their former connections and make a full disclosure of their records. The amendment would require a disclosure by those, I will not say on a lower level, but on a different level of employment who are in similar categories. Is that correct?

Mr. PROXMIRE. The Senator is correct. As the Senator well knows, important decisions are made by people who are not at the assistant secretary level, but who may have relatively important and precise responsibility for procurement.

Mr. STENNIS. What does the Senator require? Merely disclosure, or is there something else?

Mr. PROXMIRE. Disclosure. There is no prohibition in this amendment. Persons may work anywhere they wish to, but they merely have to disclose, and make publicly available, for whom they work or for whom they have worked, and must do so for a period of 5 years.

Mr. STENNIS. There are no limitations or restrictions of any kind?

Mr. PROXMIRE. No; none whatever.

Mr. STENNIS. The amendment applies to officers and civilians alike?

Mr. PROXMIRE. That is correct.

Mr. STENNIS. They would merely have to disclose their previous connections?

Mr. PROXMIRE. They would have to disclose their names, former employers, former positions and also, of course, what their work was before—what their duties were, what their duties are, and whether their duties had changed at the time they made their reports. Duties would include a listing of specific weapons systems they worked on.

Mr. STENNIS. That would continue, under the present language of the amendment, for a period of 5 years?

Mr. PROXMIRE. Five years.

Mr. STENNIS. Would the Senator reconsider that point? After all, 5 years is a good, long time. If the Senator would modify his amendment, I believe it would be more acceptable. Would he be willing to make the period 3 years? Is it not true that the main point to which the Senator's amendment is directed is transitions from the Department to a contractor, or from a contractor to the Department, and the closeness of time and the affinity that might exist? Is not that the main

condition which the Senator is trying to correct?

Mr. PROXMIRE. There was no magic in the choice of a period of 5 years. That seemed like a reasonable period of time. Perhaps it may be too much. I would be willing to modify my amendment to provide, instead of a 5-year requirement, a requirement for 3 years, so that if an employee left the Pentagon and worked for a contractor, for 3 years he would have to make reports of this kind; and vice versa: If an employee of a defense contractor left to work for the Pentagon, he would have to report for 3 years.

Mr. President, I ask unanimous consent that in my modification on page 8 the word "five" be changed to "three".

The PRESIDING OFFICER (Mr. ALLEN in the chair). Is there objection? The Chair hears none, and the amendment is so modified.

Mr. STENNIS. Mr. President, I have read the amendment carefully. I know something about the problem. I have observed some of the matters to which it relates. I know the amendment has a wholesome purpose, and I believe it will have a wholesome effect.

Like anything else of this kind, a regulation has to be developed by trial and error. But I believe this is a good start. I expect to support the amendment because of its evenness in application, its lack of restriction, and its impartiality.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. HOLLAND. Does the amendment apply only to the expenditure of funds to be covered by this authorization, or for the period covered by this authorization, or for what period?

Mr. STENNIS. This is general law. This would be a general regulation. It will be written into the bill, and, if it survives conference, it will become permanent law.

Mr. HOLLAND. Another question: Does this amendment provide that the rate of compensation paid by private contractors and employers in the defense field to officers of the types mentioned and to civilian employees of the types mentioned must be disclosed?

Mr. STENNIS. No.

Mr. PROXMIRE. No, no salary disclosure is involved.

Mr. HOLLAND. Does this bill apply to Members of Congress, either generally or those who have been on the defense committees or the appropriations committees?

Mr. STENNIS. No, it does not undertake to regulate that group. I frankly think that if this does become law, it will lead to a general law on this subject matter.

Mr. HOLLAND. Mr. President, as I understand, the distinguished Senator thinks this is a good effort in the right direction, not necessarily perfect, and that probably if adopted here, it will bring about general legislation of greater clarity and importance?

Mr. STENNIS. Yes, that is my opinion of the situation.

Mr. HOLLAND. I thank the Senator, and I thank the Senator from Wisconsin.

Mrs. SMITH. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator from Maine.

Mrs. SMITH. Mr. President, I think the amendment of the Senator from Wisconsin has much merit.

I hope he will offer similar amendments to all other procurement authorization bills whether they be for HEW, Labor, Commerce, Public Works, or any other legislation dealing with this subject.

Several Senators addressed the Chair.

Mr. STENNIS. Mr. President, I am not trying to keep the floor, but I believe I have the floor.

May I say to the Senator from Maine that I certainly endorse the suggestion she has just made. We did not make any effort to apply it to other departments and agencies, because on this bill we thought it would be better not to.

Mr. PROXMIRE. Mr. President, I thank the Senator from Maine very much. I agree wholeheartedly with her suggestion; I think it is excellent, and if no other Senator offers such amendments, I shall be happy to offer them on other authorization bills.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator from California.

Mr. MURPHY. I ask the Senator from Mississippi if it is his clear understanding that the amendment proposed in no way militates against employment of military officers, but is simply a requirement of disclosure.

Mr. STENNIS. The Senator is absolutely correct. Nothing but disclosure.

Mr. MURPHY. I should like, just for the sake of the record, to point out from personal experience that there are sometimes methods involved in bidding on Government contracts, and the only people that you can find who can help you and explain to you how to make out your bid are people who have been with the Government. I do not think this is the best way to do it, but it is the case that it is very often necessary to get exactly such a person, who is experienced; otherwise, you cannot bid properly and in fair competition.

I wanted to make certain that the mere disclosure requirement in no way would impede such persons from employment, but that this is purely and simply for a matter of record so that, I guess remotely, if in any event there is a chance of conflict of interest, we would be able to find it out and stop that which would be illegal.

Mr. PROXMIRE. The Senator is absolutely correct. It is purely and simply a disclosure amendment, and that is all.

Mr. GOLDWATER. Mr. President, will the Senator yield, so that I may ask the author of the amendment a question?

Mr. STENNIS. I yield.

Mr. GOLDWATER. The Senator may have answered it when I was not present.

On page 1 of the amendment, under (A), the amendment designates officers who "served on active duty for any period of time as a member of a regular component of the Armed Forces in the grade of colonel (or equivalent) or above".

That language is used in defining the term "former military officer."

Would this language be so broad as to apply to the Reserve officer who has never served during a period of emergency, but has merely served his annual 2 weeks' tour of duty to maintain his commission and obtain promotions?

Mr. PROXMIRE. As I understand it, it would apply only to Regular officers. It would not apply to Reserves who served only from time to time. The minimum specified is 10 years, and that would be an unlikely situation.

Mr. GOLDWATER. I should like to hear the Senator's opinion on this, because it would probaly apply to tens of thousands of Reservists who probably never served for a long period, but would retain their proficiency by a 2 weeks' tour of duty every year.

Mr. PROXMIRE. It was not my intention that the amendment should cover that type of situation, because it would mean, as the Senator implies, that those people would be covered when this would not be their major occupation, and they would not have had any significant authority as far as procurement is concerned.

Mrs. SMITH. Mr. President, will the Senator yield to me for a question?

Mr. PROXMIRE. I am happy to yield to the Senator from Maine.

Mrs. SMITH. Will the Senator from Wisconsin advise the Senate whether his amendment covers $100-a-day consultants, for example?

Mr. PROXMIRE. As I understand it, it would not cover the consultants unless they came to work for the Pentagon.

Mrs. SMITH. Even though a consultant serves to the extent of $13,000 a year, with expenses? Would the Senator accept an amendment to include such consultants?

Mr. PROXMIRE. I am advised that if his company did $10 million a year business with the Pentagon, he would be covered. The amendment covers all firms that do $10 million a year business or more with the Pentagon, and the consultant would be covered in his own capacity, just as any other individual.

Mrs. SMITH. Would the Senator accept an amendment to include consultants up to a certain amount?

Mr. PROXMIRE. Absolutely.

Mrs. SMITH. Mr. President, I ask unanimous consent that the Senator from Wisconsin be permitted to accept my amendment, to include consultants earning up to $5,000 a year.

I am willing to make that $13,000.

Mr. PROXMIRE. May I say to the Senator from Maine that I have just been discussing this matter with staff members, and although they will go over the amendment to determine whether we have to write in the specific language, it may be that if we make our intentions clear here, consultants would be included without additional language.

Mrs. SMITH. Consultants would be included up to a certain amount?

Mr. PROXMIRE. Yes.

The PRESIDING OFFICER. Does the

Senator from Maine ask unanimous consent to withdraw her request in light of the explanation of the Senator from Wisconsin?

Mrs. SMITH. Mr. President, I ask unanimous consent to withdraw my request.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, I should like to make one other modification to make my amendment consistent.

The Senator from Mississippi has suggested that we reduce the number of years from 5 to 3. I only corrected the previous modification I submitted to make that consistent. I ask unanimous consent to modify the amendment on page 8, line 17, where the term "five years" occurs to make it read "three years."

The PRESIDING OFFICER. Is there objection to the requested modification? If not, the amendment is so modified.

The question is on agreeing to the amendment as modified of the Senator from Wisconsin. On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. KENNEDY. I announce that the Senator from Idaho (Mr. CHURCH), the Senator from Washington (Mr. MAGNUSON), the Senator from Connecticut (Mr. RIBICOFF), and the Senator from Georgia (Mr. RUSSELL) are absent on official business.

I further announce that the Senator from Hawaii (Mr. INOUYE), the Senator from Missouri (Mr. SYMINGTON), and the Senator from Georgia (Mr. TALMADGE), are necessarily absent.

I further announce that, if present and voting, the Senator from Idaho (Mr. CHURCH), the Senator from Hawaii (Mr. INOUYE), the Senator from Washington (Mr. MAGNUSON), the Senator from Georgia (Mr. RUSSELL), the Senator from Georgia (Mr. TALMADGE), the Senator from Missouri (Mr. SYMINGTON), and the Senator from Connecticut (Mr. RIBICOFF) would each vote "yea."

Mr. SCOTT. I announce that the Senator from Colorado (Mr. DOMINICK) is necessarily absent.

The Senator from Tennessee (Mr. BAKER) is absent because of death in his family.

If present and voting, the Senator from Colorado (Mr. DOMINICK) and the Senator from Tennessee (Mr. BAKER) would each vote "yea."

The result was announced—yeas 90, nays 0, as follows:

[No. 83 Leg.]

YEAS—90

Aiken	Cranston	Harris
Allen	Curtis	Hart
Allott	Dodd	Hartke
Anderson	Dole	Hatfield
Bayh	Eagleton	Holland
Bellmon	Eastland	Hollings
Bennett	Ellender	Hruska
Bible	Ervin	Hughes
Boggs	Fannin	Jackson
Brooke	Fong	Javits
Burdick	Fulbright	Jordan, N.C.
Byrd, Va.	Goldwater	Jordan, Idaho
Byrd, W. Va.	Goodell	Kennedy

NAYS—0

NOT VOTING—9

Baker	Inouye	Russell
Church	Magnuson	Symington
Dominick	Ribicoff	Talmadge

So Mr. PROXMIRE's amendment, as modified, was agreed to.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was agreed to.

Mr. McGEE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MANSFIELD. Mr. President, just to keep the record straight, the distinguished senior Senator from Georgia (Mr. RUSSELL), the President pro tempore of this body, would have voted in the affirmative had he been present, but he was absent on official business.

Mr. MONDALE. Mr. President, I call up my amendment which I submitted today as a modification to amendment No. 136.

The PRESIDING OFFICER. The amendment offered by the Senator from Minnesota will be stated.

The legislative clerk proceeded to read the amendment.

Mr. MONDALE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered; and, without objection, the amendment will be printed in the RECORD.

The amendment is as follows:

AMENDMENT NO. 146

On page 2, line 16, strike out "2,568,200,000;" and insert in lieu thereof "2,191,100,000;"

At the end of the bill add a new section as follows:

"SEC. 402 (a) None of the funds authorized to be appropriated by this Act may be expended in connection with the production or procurement of the nuclear aircraft carrier designated as CVAN-69; and no funds may be appropriated for any such purpose until after the Congress has completed a comprehensive study and investigation of the past and projected costs and effectiveness of attack aircraft carriers and their task forces and a thorough review of the considerations which went into the decision to maintain the present number of attack carriers. Such study and investigation shall, among other things, consider—

"1. What are the primary limited war missions of the attack carrier; what role, if any, does it have in strategic nuclear planning;

"2. To what extent and in what way is the force-level of on-station and back-up carriers related to potential targets and the number of sorties needed to destroy these targets;

"3. What is the justification for maintaining on continual deployment two carriers in the Mediterranean and from three to five in the Western Pacific;

"4. What is the overall attack carrier force level needed to carry out these primary missions;

"5. Does the present 'one for one' replacement policy for these carriers have the effect of maintaining or increasing this force level, in light of the fact that the newer carriers and their aircraft are more expensive and have far more capability than the older carriers which they are now replacing;

"6. Would a policy of replacing two of the oldest carriers with one modern carrier maintain a constant force level;

"7. How many, if any, attack carriers and carrier task forces are needed to back-up a carrier task force 'on-the-line';

"8. What efficiencies, such as the Polaris 'blue and gold' crew concept, can be utilized to increase the time in which a carrier can stay 'on-the-line';

"9. What type of military threats are faced by the attack carrier; what proportion of the costs of a carrier task force are allocated to carrier defense; what is the estimated effectiveness of carrier defense against various types and levels of threats;

"10. To what extent does the carrier's vulnerability affect its capacity to carry out its missions; what are the plausible contingencies in which carriers may be committed;

"11. What type of resources should be devoted to carrier defense, considering the range of threats, the costs and effectiveness of the defense, and the plausible contingencies in which a carrier can be effectively used;

"12. To what extent can land-based tactical air power substitute for attack carriers; to what extent should the role of the attack carrier be restricted to the initial stages of a conflict;

"13. What are the comparative systems costs for land-based and sea-based tactical air power;

"14. What is the comparative cost effectiveness of land-based and sea-based tactical air power;

"15. How is the attack carrier being used in support of American foreign policy; if there is a need for a 'show of force' in support of foreign policy commitments, can this need be met by smaller carriers or other types of ships?

"(b) In order to assist the Congress in carrying out such study and investigation, the Comptroller General of the United States shall review and make a report to the Congress on items number '8' and '13' in subsection 'a', above. He shall also review any studies which have been made, or may be made, by the Executive Branch which relate to the other items listed in subsection 'a', above. He shall provide summaries of such studies, together with any appropriate comments or questions, to the Congress. The report and summaries provided for by this subsection shall be furnished to the Congress not later than April 30, 1970."

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. MONDALE. I yield.

Mr. STENNIS. I am glad the Senator called up his amendment. That will permit us to start on it tomorrow. Even though we do not have controlled time now—and I do not think it wise to try to have an agreement now as to time—in the course of the debate I hope we can consider having a limitation on time.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. MONDALE. I yield.

ORDER OF BUSINESS

Mr. SCOTT. Mr. President, could the majority leader advise us as to the status of the pending bill and what his plans are for the remainder of the week?

Mr. MANSFIELD. Mr. President, in response to the question raised by the distinguished acting minority leader, there will be no further votes tonight, but the Senate will meet at 10 o'clock tomor-

row morning. I understand that at 10:15 the sponsors of the pending amendment will be ready to speak.

Those Senators who desire to go to the funeral services for our late and beloved colleague, Mr. Dirksen, at the National Presbyterian Church will leave the steps of the Capitol at about 12:15. The service, I understand, is at 1 p.m. We should be back at 2 p.m. During that period, the Senate will stand in recess subject to the call of the Chair, and it is anticipated that the debate will be resumed at approximately 2 o'clock tomorrow afternoon. It is to be hoped that we can make some more progress with the bill. I am pleased with the progress made today—a little faster would not hurt.

We will not meet on Thursday, because some of us will be going to Pekin, Ill.

On Friday, we will come in at 10 a.m. It is anticipated that we will stay late, and if sufficient progress is made, we will not meet on Saturday; but if sufficient progress is not made, we may be forced to meet on Saturday.

Mr. SCOTT. I suggest, if the majority leader approves, that at the time the casket is removed from the rotunda tomorrow to be taken to the church, Members be invited to accompany the casket as a guard of honor. Senators are invited to attend for that purpose, and it is hoped that they will do so.

Mr. MANSFIELD. Yes. It is my understanding that buses will be available and that there will be a police escort all the way. It would be a fine mark of respect to our late colleague if we could all do that.

S. 2875—INTRODUCTION OF A BILL TO AMEND THE OMNIBUS CRIME CONTROL AND SAFE STREETS ACT OF 1968

Mr. HRUSKA. Mr. President, I introduce a bill, the purpose of which is to provide financial assistance to States for the construction of correctional institutions and facilities. I ask that it be appropriately referred.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2875) to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide financial assistance to States for the construction of correctional institutions and facilities, introduced by Mr. HRUSKA, was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. HRUSKA. Mr. President, the Nation is engaged in a massive reexamination of its social programs. Tremendous sums are being spent by the Federal, State, and local governments to combat these ills. Concurrently, we have turned our attention and our resources to the problems of increasing crime and the protection of our citizens for, without an orderly society all else loses significance.

But one aspect of this problem represents a national disgrace to which relatively little in the way of additional effort and resources have been committed. I refer to the jails and the prisons of this country and to the juvenile training schools and detention facilities.

Experience has clearly demonstrated that far too many of these institutions corrupt rather than correct; contaminate rather than rehabilitate. In a great many instances, institutions are socially infectious breeding places which develop criminal careers. Too frequently, our jails and prisons are little more than human warehouses where idleness, homosexuality, and brutality are commonplace occurrences. In some institutions, the toughest, most hardened criminals gain power and control over other inmates and use this power to satisfy their own depraved desires.

When considering the conditions found in many of our jails and prisons, it is little wonder that rates of recidivism are so high. Confining men under these conditions can only serve to foster criminal behavior. So long as we permit recidivism to be the rule rather than the exception, crime will continue to increase as it has in the past.

Correcting criminal behavior is, and certainly should be, the primary goal of our jails and prisons. Unless we change the offender while he is incarcerated, the prospects for his returning to society as a law-abiding citizen are indeed remote. The endless cycle of arrest, imprisonment, release and rearrest has plagued us for too long. We must reverse this cycle. We must close down and eliminate these "schools of crime." We must begin to correct the problems which contribute to recidivism, or rates of crime will continue to increase.

Mr. Chief Justice Burger, in remarks before the American Bar Association's annual convention in Dallas, articulated his deep concern for reform of our Nation's penitentiaries and demonstrated his deep insight into the heart of the criminal justice system.

Mr. President, I ask unanimous consent that Chief Justice Burger's speech be printed in the RECORD following my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HRUSKA. Mr. President, some small effort at reform has been made. Under the Omnibus Crime Control and Safe Streets Act of 1968, resources are made available for the improvement of prison facilities. But they are not enough, for under the present provision of the act the bulk of the funds rightfully is committed to a wide range of law enforcement activities. Only token sums so far have been applied to correctional construction purposes.

In its corrections program the Law Enforcement Assistance Administration has appropriately given its highest priority to the development of community-based projects for the rehabilitation of juvenile youth, and adult offenders. Here is where the greatest immediate impact can be made in the improvement of correctional services, and it is in the community, of course, where we have the best hope of accomplishing the rehabilitation of offenders.

The costs of institutionalization are rising and already have reached the point where we can no longer afford this form of disposition purely for purposes of punishment. It costs as much as $6,000 to $9,000 to keep a juvenile or youth in an institution for 1 year, and as much as $3,000 or $4,000 for an adult offender. Quite properly, therefore, the Law Enforcement Assistance Administration has emphasized in its initial efforts the bolstering of probation and other community resources in order that the costs of institutionalization may be minimized.

But the hard, simple, fact is that for the protection of the public thousands of offenders must be sent to institutions each year. These institutions are the single most neglected element in the entire law enforcement process.

The President's Commission on Law Enforcement and Administration of Justice reported:

> Institutional corrections suffers from long and indiscriminate use simply for punishment and banishment, purposes which inspire in the system little imagination, hope, or effort to improve.

There are in this country approximately 220 State training schools for juveniles and an undetermined number of detention facilities. According to the State plans submitted to the Law Enforcement Assistance Administration under the terms of the Safe Streets Act, these facilities are inadequate for their purposes. But even more significantly, the very absence of detention facilities has resulted throughout the United States in the widespread use of jails for juvenile offenders.

One Midwestern State reported that more than 1,600 children annually were held in jail. In many of the jails it was impossible to separate the juveniles from the adults and there was no supervision on a 24-hour basis. None of these jail facilities had any rehabilitation program whatsoever.

A Western State reported that only two of its counties has any separate juvenile detention facilities and that as a result the juveniles in the other counties had to be housed in the jails. An Eastern State reported that although its statutes specifically forbid the holding of juveniles in jail, "in 115 of the 120 counties there are no other facilities."

The results of this practice must be regarded as the shame of the Nation. One State, for example, said:

> Because of the lack of suitable detention facilities children have been placed in situations that were not only unfit for confinement of animals but have resulted in suicides, injuries, being subjected to unsanitary conditions, and forced into contact with undesirable influences.

Still another State acknowledged that it was not uncommon to have dependent homeless youngsters confined in facilities adjacent to, or mingled with, adults. No attempt was made to provide segregated housing for sexual offenders or the mentally ill other than what might be available in the individual cells.

A recent survey by the National Council on Crime and Delinquency reflected that more than 100,000 juveniles are held in jails every year in the United States.

And the jails themselves constitute yet another disgraceful picture in the almost total neglect of the so-called correctional institutions of this country.

There are more than 3,000 county jails in the United States and an undetermined number of city jails, perhaps 10,000 in all.

Almost without exception these jails are lacking in any meaningful rehabilitative programs or facilities. All too many of them have long ago been condemned as totally unfit for their purpose.

An Eastern State has closed all but seven of its jails. But of these seven, none was built in this century and six of them are more than 100 years old.

One jurisdiction reported to the Law Enforcement Assistance Administration that its jails had "no separate facilities for housing females, either juvenile or adult."

Another State said that its jails are "on the whole, outdated and unfit for use."

The planning agency of a Southern State asserted that its jails "suffer from neglect, often promote unsafe and outright brutal practices and encourage many first offenders to become career criminals."

A Midwestern State planning agency concluded that—

> There is a consensus that local jails are in trouble. . . . Many county jails were built in the nineteenth century and few have modern facilities . . .

A neighboring State described its municipal and local jails facilities as "often structurally inadequate, overcrowded, unsafe and filthy." The planning agency found that in one jail of this particular State "the plumbing had backed into the cells of the prisoners discharging human feces on the floor and walls." In another jail, the prisoners slept on mats on top of the welded cages because of overcrowding and that the prisoners had an open fire burning on the cell block floor to keep warm. In the same State they found a juvenile being held in an isolation cell without a toilet, with consequent abhorrent results, and that he had actually burned his own shoes in an attempt to keep warm. The report of the planning agency concluded:

> Conditions were even worse in other places . . .

There are no words fit to describe the degraded conditions characteristic of the jails of this country. And it is a problem that we have too long shrunk from recognizing and taking the action necessary to resolve sufficiently to meet even minimum standards of human decency.

Then there are the prisons.

The National Council on Crime and Delinquency reports that there are 358 penal and correctional facilities for adults in the United States. Of these, 55 are maximum security, 124 medium, 103 minimum and 68 mixed.

The Council stated:

> Of the original institutions still in use, 61 were opened before 1900; 25 of these are now more than 100 years old. Of the dormitories or cell blocks now in use, 31 percent are more than 50 years old; 29 percent are between 25 and 50 years old; 20 percent are between 10 and 24 years old; 20 percent are less than 10 years old.

Many of these institutions share the same problems as the jails. The physical facilities do not meet even the minimum standards of human decency and suitable facilities for effective rehabilitation programs are almost totally lacking.

A Western State reported to the Law Enforcement Assistance Administration that its State penitentiary should be replaced, that it was "a mass care, multitiered cell physical plant geared to custody and not conducive to proper segregation of different types of offenders and corrective programs."

A Southern State commented concerning its penitentiary:

> The "cages" are all dormitory-type with beds closely grouped together and various belongings of the inmates placed around the beds. On rainy days and at night, the close proximity of the inmates presents explosive situations. Also, the open dorms afford no privacy for the inmates. This lack of privacy and overcrowding is particularly acute in the women's camp.

A Midwestern State described its two State maximum security institutions as "old and rundown." The main penitentiary was built in 1839. An adjoining State reported similarly—

> A continuing problem is the age of the major penitentiary . . . Some of the buildings still in use were completed in 1836.

Still another State summed up the common problem in simple terms:

> Penal facilities, adult and juvenile, are inadequate and overcrowded.

Considering the deplorable state of the penal institutions in this country, we can easily understand why the field of corrections has failed so miserably in its responsibility for the rehabilitation of offenders. We can understand why the majority of the persons released from these institutions again get into trouble, and why the same persons go back to prison time and time again.

It is time that the Nation faces up to the fact that the outdated and outworn institutions must be replaced, and that facilities must be created where they are presently lacking. The unpleasant truth is that for years to come we will continue to send hundreds of thousands of juveniles, youths, and adults to institutions of various kinds. If we are ever to make any significant inroads on the problems of crime and delinquency, we must establish a system of institutions where it is possible to provide modern and effective programs of rehabilitative treatment.

To achieve this goal will, of course, require substantial sums of money.

The average State, and the average county and city, simply do not have the tax resources necessary to accomplish the task unaided. Here again, as with other grave national problems, the Federal Government must provide financial assistance.

I am, therefore, today sending a bill to the desk which would provide this assistance. My bill would amend the Omnibus Crime Control and Safe Streets Act of 1968 to make available initially $100 million for direct grants to the States. Additional sums would be authorized for subsequent fiscal years.

The bill follows the same formula as in the Safe Streets Act. Eighty-five percent of the annual appropriation would go directly to the States in the form of block grants, based on the relative population of each State. The remaining funds would be allocated by the Administrators of the Law Enforcement Assistance Administration to projects where additional assistance is particularly urgent.

The States would obtain these funds in the same way as they now obtain block grants under the Safe Streets Act, by incorporating their requirements in the same comprehensive law enforcement plans that they now submit to the Law Enforcement Assistance Administration. The bill provides for certain assurances that the funds would be distributed equitably, as for example, that the counties and localities would receive at least 50 percent.

The projects to be funded under this amendment would meet certain basic criteria to be worked out jointly by the Law Enforcement Assistance Administration and the Federal Bureau of Prisons. These criteria are intended among other things to assure that the design of new facilities would be economical and provide adequately for rehabilitative treatment programs.

I am convinced that the Law Enforcement Assistance Administration provides the best procedure for administering the provisions of this bill. The machinery is already established and functioning. The States would retain the responsibility for their own planning and for setting their own priorities.

Also, the Law Enforcement Assistance Administration, under its existing authority, is already encouraging the development of modern correctional programs, which include prototypes and models for correctional institutions. The additional provisions contained in my bill fit very properly into this effort.

One of these provisions calls for the sharing of correctional facilities on a regional basis. This is very important. Communications and transportation have progressed to the point where it is no longer necessary for each jurisdiction to have separate and distinct jail facilities. Care must be taken to insure that modern techniques of administration can be employed. Duplicity must be avoided whenever and wherever possible. This goal can only be achieved if proper emphasis is placed on establishing regional jail facilities.

The plight of the juvenile facilities, the jails, and the prisons is shared by every State in the Union, and the situation is growing progressively worse. These institutions have already reached the point where they have what most experts consider to be a heavily negative effect on the Nation's drive to bring its problems of crime and delinquency under control.

I am hopeful therefore that this bill will receive the early consideration of the Congress. The condition of our correctional systems constitutes a national shame and a repudiation of our national ideals and goals. We must finally acknowledge and face up to this shame, and start to do something about it.

Mr. President, the bill is not lengthy. I ask unanimous consent that the text of the bill be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

EXHIBIT 1

A PROPOSAL: A NATIONAL CONFERENCE ON CORRECTIONAL PROBLEMS

(Remarks of Warren E. Burger, Chief Justice of the United States)

For many years we neglected the entire spectrum of criminal justice. Slowly but with increasing pace we have corrected procedural inequities. This emphasis has led us to commit large public resources to the fact-finding process—the litigation of criminal charges and issues. In time we must take stock of what we have done and see whether all of it is wise and useful and constructive.

Meanwhile we must soon turn increased attention and resources to the disposition of the guilty once the fact-finding process is over. Without effective correctional systems an increasing proportion of our population will become chronic criminals with no other way of life except the revolving door of crime, prison and more crime.

There are some problems of American life relating to the law and the fair administration of justice which judges in their decisional function cannot properly and ought not attempt to solve. That judges cannot solve a problem by judicial decision is no reason for judges to remain silent or to be passive spectators of life around us. Judges can help—in the sense that all lawyers can help—by contributing leadership, ideas and programs based on the unique experience our work provides, and we have a duty to do so.

Specifically, I speak of the problem of what we should do with those who are found to be guilty of criminal acts. This is one of Mankind's large unsolved and largely neglected problems.

I do not mean that everyone everywhere has neglected the correctional phase of criminal justice. Many important improvements have been made in the Federal system over the past 30 years or more. Some of the states have very superior correctional systems guided by dedicated and skilled men and women drawn from the social and behavioral disciplines and many whose skills derive from long experience. Indeed, it is with this corps of dedicated people that much of the hope for the future rests.

I need not say in mid-1969 that the problem of securing an orderly society within a system of ordered liberty, guided by fair concepts of justice, is one of the great priorities of our time. However, the disposition of convicted persons is a crucial priority within that primary priority. The day when lawyers and judges could confine themselves sedately to deeds, wills, trusts and matters of commerce is gone. They must increasingly devote their special skills and talents to the large problems of community and national concern.

A friend of mine expressed some surprise 8 or 10 years ago that I had become so deeply concerned with the administration of criminal justice and asked "why?" I answered with a question, in the common fashion of lawyers:

"If we do not solve what you call the problems of criminal justice; will anything else matter very much?"

As we prepare to welcome the Moon Astronauts in Los Angeles it may not be out of order to make the obvious comment that a society which can spend billions to place three men into a flawless moon landing operation ought to be able to enforce its laws, protect its people, and deal with its delinquents both before and after conviction. Being first in space does not prove anything about the validity of the social and legal institutions of either Russia or America—and it surely proves nothing about our systems of justice. Dealing with the human animal is a task far more complex than exploring space; there the mathematician gives us a degree of predictability which can never be possible when human beings are involved. Moreover, if Man could be "programmed" our race will have really been lost.

Immature societies, like immature people, sometimes tend to think and say that everything they have is "the best"; but we are now the oldest continuing republic on earth and we have no need to bolster our national ego. We can afford to take a hard look at all our institutions, to compare them with other societies and to learn from them as they have so often learned from us.

Let us look for just a moment at how we are dealing with those charged with crimes. Over a period of 30 years, with a sharp acceleration in recent years, we have afforded the accused offender the most elaborate procedures, and the most comprehensive system of trials, retrials, appeals and post conviction reviews of any society in the world. None can match us in these manifestations of concern for the accused.

If I were sure—and I am not sure either way—that all this was good for the accused in the large and long range sense that it helps him, I would be in favor of all of it. We should put the question: "What is the social utility of what is proposed?" By "social utility" we must mean simply that a process is useful to all of us and that it strikes a fair balance between Society and the individual. This is the keystone of a fair and decent system of justice. It is against this standard that social institutions must be judged.

I challenge the social utility of any system of criminal justice which allocates, as we now do, a disproportionate amount of our resources to the techniques of trials, appeals and post conviction remedies while it gravely neglects the correctional processes which follow a verdict of guilt.

I do not suggest we diminish in the slightest our efforts toward ensuring that in every criminal proceeding—trial or not—we have three competent and trained professionals: a skilled judge, a skilled prosecutor and a skilled defense advocate. This tripod must have three legs to stand. We must insist on this. What I do suggest is that we must not stop there.

The American Bar Association Criminal Justice Project will soon be drawing to a close. All but two of its 15 or 16 reports have been, or are ready to be printed. I believe this undertaking will in due time take its place as one of the great enterprises of the organized bar. If the bulk of these standards becomes part of the state and Federal administration of criminal justice we will have a much better system. Parenthetically it will reduce the work of the Supreme Court—a matter in which I now have an acute interest.

But splendid as these efforts are, they are not enough. No progress should ever really satisfy Man. No accomplishments should ever be regarded as completing any task. Each becomes a platform for the next step, and the Criminal Justice Project is surely no exception. I hope progress and events will soon render it obsolete.

We must not content ourselves, however, with lavishing great concern and expense and manpower on criminal trials. We must take a fresh look at our responsibility to society with respect to the guilty who are convicted. By that I do not mean to expand or enlarge the post-conviction remedies—let that be clear—except as to states which still fall short in this respect. Some improvements need to be made in the processing of post conviction claims and examination of such claims administratively—but that is another story for another day.

What I propose is this: that the American Bar Association take the leadership in a comprehensive and profound examination into our penal and correctional systems from beginning to end—parole, probation, prisons and related institutions, their staffs, their programs, their educational and vocational training, the standards and procedures for release. By this I mean a study at least as careful and comprehensive as the American Bar Association Criminal Justice Project. (1) We should explore the desirability of separating the sentencing from the fact-finding function; (2) we should explore more fully programs of limited confinement and work release; (3) we should explore teaching methods adapted to the abnormal psychology of the habitual offender; and (4) we should search for programs that will permit the reduction of sentences as incentives for prisoners who will educate and train themselves. The prospect should be held out to each that he can—literally—educate himself out of confinement, thus preparing him to make his living honestly, with pride in his own skills.

I have no program or plan. All I have is the profound conviction, which I believe most judges share, that there must be a better way to do it. There must be some way to make our correctional system into something other than a revolving door process which has made "recidivist" a household word in America.

Such a study will cost a great deal in time of busy lawyers, judges and others. It will require that the social and behavioral disciplines, as well as state and Federal prison administrators, and parole and probation officials, take part. Such a study will require considerable money, but when I observe what has been done in the Bail Projects, the National Defender Project, the American Bar Association Criminal Justice Project and others, I have no doubt the manpower will be a far greater problem than the money.

If there are any correctional experts, they are not the lawyers and judges. For this reason the American Bar Association should enlist every discipline which has something to contribute.

This great Convention of the American Bar Association opened appropriately with a Prayer Breakfast Sunday morning so that we could seek Divine guidance in all matters relating to our responsibilities as members of the Bar. Let us never forget that in His teaching the redemption of sinful men has a high place. If we accept this in our daily lives, we surely cannot fail to apply it to the correctional phase of criminal justice.

EXHIBIT 2

S. 2875

A bill to amend the Omnibus Crime Control and Safe Streets Act of 1968 to provide financial assistance to States for the construction of correctional institutions and facilities

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That 82 Stat. 197 is amended as follows:

SECTION 1. Parts E and F of Title I are redesigned Parts F and G and the sections renumbered accordingly.

SEC. 2. Add a new Part E as follows:

PART E—CORRECTIONAL CONSTRUCTION ADMINISTRATION

"SEC. 501. (a) The Administration shall, in accordance with the provisions of this Part, make grants to State agencies for the period beginning July 1, 1969, and ending June 30, 1972.

"(b) for the purpose of making such payments, there is authorized to be appropriated the sum of $100,000,000 for the fiscal year ending June 30, 1970, $150,000,000 for the fiscal year ending June 30, 1971, $200,000,000 for the fiscal year ending June 30, 1972, and $250,000,000 for the fiscal year ending June 30, 1973.

"SEC. 503. (a) Any State desiring to receive its allocation of Federal funds under this Part shall, consistent with such basic criteria as the Administration may establish under Section 504, incorporate its application in

the State plan provided in Section 303. The application in addition to the provisions of Section 303, shall:

"(1) set forth a comprehensive Statewide program for the renovation and construction of correctional institutions in the State under which at least 50 per centum of all Federal funds granted to State agencies under this Act for any fiscal year will be available to agencies of political subdivisions of such State;

"(2) provide satisfactory assurance that the control of funds granted under this Act and title to property derived therefrom shall be in a public agency for the uses and purposes provided in this Act and that a public agency will administer such funds and property;

"(3) provide assurances that the State agency will pay from non-Federal sources the remaining costs of such program;

"(4) provide assurances that projects assisted under this Act will incorporate innovations and techniques in the design of such facilities in order to improve the effectiveness of the correctional institutions within such States;

"(5) provide assurances that the personnel standards and programs of such facilities will reflect the best practice prevailing in the United States;

"(6) set forth policies and procedures designed to assure that Federal funds made available under this Act will be so used as not to supplant State or local funds, but to supplement and, to the extent practicable, to increase the amounts of such funds that would in the absence of such Federal funds be made available for the purpose of this Act;

"(7) set forth procedures under which the State agency shall not finally disapprove an application for funds from an appropriate agency of any political subdivision of such State without first affording such agency reasonable notice and opportunity for a hearing;

"(8) provide, where feasible and desirable, the sharing of correctional institutions and facilities on a regional basis either among the political subdivisons of a State or among the various States in a region;

"Sec. 504. As soon as practicable after enactment of this Act, the Administration shall, after consultation with the Federal Bureau of Prisons, by regulation prescribe basic criteria to be applied by the State planning agency under Section 503. In addition to other matters such basic criteria shall provide:

"(1) the general manner in which State planning agency shall determine priority of projects based upon (a) the relative need of the area within such State for correctional facilities, (b) the relative ability of the particular public agency in such area to support a program of construction of such facilities, and (c) the extent to which the project contributes to an equitable distribution of assistance under this Act within each State;

"(2) general standards of design, construction and equipment for correctional facilities for different types of offenders and in different locations.

"Sec. 505. Nothing contained in this Act shall be construed to authorize the making of any payment under this Act for the construction of facilities as a place of worship or religious instruction."

Sec. 2. (a) Subsection (f) of Part G—Definitions is amended to insert immediately after the first sentence, the following: "For correctional facility purposes, the term also includes the preparation of drawings and specifications for correctional facilities; altering, remodeling, improving or extending such facilities; and the inspection and supervision of the construction of such facilities. Such term does not include interests in land or off-site improvements."

(b) Part G—Definitions is amended to add the following subsections:

"(l) The term 'correctional institution' means any prison, jail, reformatory, work farm, detention center, community correctional center, regional correctional center, or other institution designed for the confinement or rehabilitation of individuals charged with or convicted of any criminal offense, including juvenile offenders.

"(m) The term 'correctional facilities' includes any buildings and related facilities, initial equipment, machinery, and utilities necessary or appropriate for correctional institution purposes."

Mr. KENNEDY. Mr. President, will the Senator yield?

Mr. HRUSKA. I am happy to yield to the Senator from Massachusetts.

Mr. KENNEDY. Mr. President, I am unfamiliar with the proposed legislation but I wish to commend the distinguished Senator from Nebraska for bringing this general area to the attention of the Senate.

I have the good fortune to serve on the Committee on the Judiciary with the distinguished Senator from Nebraska. Last spring we had an opportunity to visit what I think is one of the most ideal correctional institutions that I have had an opportunity to see. This particular institution is a Federal youth rehabilitation facility located in West Virginia, just outside Morgantown. It is a very fine, modern correctional institution and can serve as a model for the Nation.

At that time we visited the institution in the company of the former Attorney General, Ramsey Clark. From past experience I know of his great interest and concern about this entire area. I think the whole area of rehabilitation of offenders is long overdue for action by Congress and the Senate.

I wish to commend the Senator for drawing our attention to this dimension of the criminal justice system. As a member of the committee which will consider it, I hope to be able to work with him on this legislation because I know very well of his deep commitment in this field. This is an area in which all of us talk about doing something but where there remains a very great opportunity for action.

I thank the Senator.

Mr. HRUSKA. I thank the Senator from Massachusetts for his contribution.

The Senator will find upon examining the bill that it is a projection of some of the things discussed during the formulation of the omnibus crime bill of 1968. In that bill and the provisions of the Law Enforcement Administration Act, we touched peripherally on the subject of correctional institution, but only slightly. This is an effort based on a study of longer duration than the procedures and mechanics contained in the Law Enforcement Administration Act in the field of construction and improvement of those institutions.

The proposed bill will be found to be within that framework. Without it all we are doing is spending a tremendous sum today to detect and apprehend for crime, maintaining an elaborate system for charging those persons with crime, and convicting them with crime, and that is the end of the road.

The greater part of the jails in America today—I would say as many as one-third, but the exact number escapes me—are over 100 years old and few were built in this century. That is a terrible indictment in this field.

Mr. KENNEDY. I commend the Senator. The whole area of corrections, both within and without correctional institutions, is one in which there has not been enough attention. I think all of us are at fault for not working with greater industry in this area. The Senator from Nebraska has performed a very important service in bringing this matter to the attention of the Senate. I am hopeful that we can get consideration of this entire field in the Committee on the Judiciary and develop legislation in this area at an early time.

Again I commend the Senator from Nebraska.

Mr. HRUSKA. I thank the Senator for his generous remarks.

ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. KENNEDY. Mr. President, if there is no further business to come before the Senate I move, in accordance with the previous order, that the Senate stand in adjournment until 10 o'clock tomorrow morning.

The motion was agreed to; and (at 6 o'clock and 16 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, September 10, 1969, at 10 a.m.

HOUSE OF REPRESENTATIVES—*Tuesday, September 9, 1969*

The House met at 11:45 o'clock a.m.

Rev. Donald N. Duncan, First Baptist Church, Marietta, Ohio, offered the following prayer:

Father of all mankind, we thank You for our Nation, which has been built upon the principles of Jesus Christ. Help us to remember that we are not our brother's keeper, but our brother's brother. For these men of the Legislature, who will write laws to control all facets of life, we thank You. Make them sturdy in mind and spirit.

We thank You for our world. We pray for peace, but not peace at any price. The peace that will last must be a cooperative peace. Be with our men in service.

Give this Government a keen sense of fairness. A will to make change, without losing the sense of direction of life. Help each Member of the House of Representatives to have faith, courage, and hope.

Bless the President of our country and all who are involved in making our Nation stalwart. Keep us mindful of the weak. Help us to be proud of the strong. Bless all who are in mourning this day.

We put ourselves in Your hands. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MEMORIAL SERVICES FOR THE LATE HONORABLE EVERETT McKINLEY DIRKSEN

The SPEAKER. Pursuant to the provisions of House Resolution 531, the House will attend the memorial services for the late Honorable Everett McKinley Dirksen in the rotunda of the Capitol.

At the conclusion of the services the House will return to its Chamber.

The Clerk and the Sergeant at Arms, bearing the mace of the House, will head the procession.

The Chair, the majority and minority leaders, the majority and minority whips, and other Members appointed to the funeral committee will take places at the head of the column and the House will then proceed to the rotunda.

Thereupon, at 11:49 o'clock a.m., the Speaker and the Members of the House, preceded by the Clerk of the House of Representatives (Hon. W. Pat Jennings) and the Sergeant at Arms (Hon. Zeake W. Johnson, Jr.), bearing the mace of the House, proceeded to the rotunda of the Capitol.

At 12:35 o'clock p.m., the Members of the House returned to the House Chamber.

(For memorial services for the late Honorable Everett McKinley Dirksen, see proceedings of the Senate today.)

LEGISLATIVE PROGRAM

Mr. GERALD R. FORD. Mr. Speaker, I ask unanimous consent to proceed for 1 minute for the purpose of asking the distinguished majority leader the program for the remainder of this week and any other information concerning the business of the House.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the distinguished gentleman from Oklahoma.

Mr. ALBERT. Mr. Speaker, I am glad the distinguished minority leader has made this inquiry because all Members know that the death and funeral services of Senator Dirksen have caused us to change the program in several particulars.

As Members know, the astronauts will not be here this week.

We will go on with the program as scheduled, with this exception for this week. When we finish the general debate on the resolution providing for a constitutional amendment on presidential elections, we will adjourn over, whether we finish on Thursday or Friday. We are hopeful we may finish up on Thursday, in view of all the circumstances.

We will announce the program for next week later. But for the benefit of Members, I might say there will be interruptions in the continuation of consideration of the resolution to which I have referred because of other priority matters, one of which of course is suspension day on Monday. Another is that the astronauts have been invited to come on Tuesday of next week rather than tomorrow. Another is we have long intended to schedule the legislative appropriation bill for next Tuesday, and subject to interruptions resulting from these factors, we will proceed as speedily as possible to the conclusion of the consideration of the resolution on the constitutional amendment next week to finality.

Mr. GERALD R. FORD. May I ask the distinguished majority leader a further question? We are taking up this afternoon the two bills from the Committee on Interior and Insular Affairs. Will we take up the rule on the resolution for the change in the method of electing the President today or tomorrow?

Mr. ALBERT. It is our plan to take it up today, if we can get to it in a reasonable time.

Mr. GERALD R. FORD. I thank the distinguished majority leader.

SERVICES FOR THE LATE HONORABLE EVERETT M. DIRKSEN AT THE NATIONAL PRESBYTERIAN CHURCH

Mr. GERALD R. FORD. Mr. Speaker, may I advise Members planning to attend the services at the National Presbyterian Church on Nebraska Avenue tomorrow that there will be buses at the Capitol steps at 12 o'clock noon tomorrow for providing transportation to and from the church.

PERMISSION FOR SUBCOMMITTEE ON HOUSING, COMMITTEE ON BANKING AND CURRENCY, TO SIT DURING GENERAL DEBATE TODAY

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Subcommittee on Housing of the Committee on Banking and Currency may sit during general debate today.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

THE SMOTHERS BROTHERS COMEDY HOUR

(Mr. HOWARD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HOWARD. Mr. Speaker, tomorrow at 8 p.m., channel 5 will telecast "The Smothers Brothers Comedy Hour" show which the CBS television network recently refused to show, and which created a major controversy over the subject of TV censorship.

I urge all of my colleagues to watch this show, not so much to decide if they feel the show is worthy or not, but to decide if they feel that its content was so objectionable as to be subjected to censorship.

Mr. Robert D. Wood, president of CBS, in a letter to the Democratic Study Group, said in part that—

> CBS has an obligation to the audience—and to its sense of decency, propriety and morality.

Mr. Speaker, I urge everyone to watch this show and to then decide whether this action was responsible, or the result of the personal political philosophy of a few individuals in determining what the American people may or may not see.

I wish to stress that I believe that if any part of the show is indecent, improper, or immoral, then CBS was justified in censoring those portions. On the other hand, if, because of a political philosophy, this program was censored under the guise of "morality" then a great disservice has been done to the American people and American freedom.

I urge my colleagues to watch the show and then judge for yourselves.

PERSONAL ANNOUNCEMENT

(Mr. BINGHAM asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BINGHAM. Mr. Speaker, yesterday I was unavoidably absent from the House because of illness in my family. Had I been present I would have voted against the motion to recommit H.R. 11039, the bill to extend the Peace Corps, and in favor of the bill as amended.

U.N. SECURITY COUNCIL SHOULD DEMAND RELEASE OF TWO TWA HOSTAGES

(Mr. PUCINSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PUCINSKI. Mr. Speaker, I would like to call attention of the House to a letter which I sent to the Secretary of State yesterday, which appears in the CONGRESSIONAL RECORD on page 24741.

This letter urges Secretary Rogers to seek assistance from the United Nations Security Council to demand the immediate release by Syria of two American passengers who were taken hostage from a TWA airliner hijacked more than 10 days ago.

It might not seem very important. There are only two individuals. But the integrity of this country and the security of this Nation are at stake. More than 10 days have elapsed. Syria has taken these two passengers as prisoners and is holding them as hostages. This is the first time a nation has taken as hostages passengers removed from a hijacked commercial carrier.

This is an outrage against the dignity of the United States and an act of the most atrocious kind of international piracy we have ever seen. I hope my colleagues will join me in urging the Secretary to seek action through the United Nations. I believe the Security Council ought to be summoned, and I think the Security Council ought to demand safety for these two passengers and ought to demand their immediate release.

If we do not do this, I warn the Members, there is going to be more and more of this type of action. We have already seen the kidnaping of an American Ambassador, and we are witnessing the outrage against our three helicopter pilots in North Korea. If this country does not take action through the Security Council, we are going to see a serious escalation of this new kind of terrorism against American interests around the world. I hope my colleagues will join me in this plea.

PERMISSION FOR COMMITTEE ON RULES TO FILE PRIVILEGED REPORTS

Mr. COLMER. Mr. Speaker, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

PERSONAL ANNOUNCEMENT

(Mr. MORSE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MORSE. Mr. Speaker, due to a longstanding engagement away from the Capitol, I was unable to be on the floor to vote in favor of the Peace Corps Act, H.R. 11039.

The Peace Corps is a vital part of our efforts and the goals of our foreign policy: a better and mutual understanding between the United States and the developing countries; a closer communication and basic rapport between peoples that can lead to greater cooperation; the support and participation of the American people in meeting the urgent and basic human problems which challenge the future of civilization.

As a relatively young program, it has faced vastly complex and varied situations. It has undertaken a course virtually uncharted in our experience as a nation, without the benefit of past efforts or tradition. Its achievements have been significant, and its continued strength and success will be indicative of our commitment to the principles of human equality, dignity, and peace.

HURRICANE GERDA

(Mr. EDWARDS of Alabama asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. EDWARDS of Alabama. Mr. Speaker, at this very moment Hurricane Gerda is off the Atlantic coast threatening possible damage to heavily populated land areas of the United States. Hurricane watches went up a few days ago on the Georgia coast when Gerda was just a mere tropical storm. Now emergency plans are being formulated from Long Island to Maine to protect shipping, aircraft, homes, and other property. Residents of low-lying areas are being urged to move inland. Hopefully Gerda will blow out to sea.

We have just been through a devastating hurricane—Camille.

As Gerda moves up the Atlantic coast, we must ask ourselves, how long will it be before we have the necessary legislation to effectively help hurricane victims? How long will it be before we have a national plan to prevent great damage in advance of these killer hurricanes?

Solving these problems should have a high priority in this Congress. I urge prompt and early action.

AMERICAN PRISONERS OF WAR HELD BY NORTH VIETNAM OR VIETCONG

(Mr. DICKINSON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DICKINSON. Mr. Speaker, I previously sent out a message to all Members of the House pointing out that on Thursday of this week it would be my intention to take a special order in connection with our prisoners of war who are now held captive by North Vietnam. As is probably known by most of the Members of this House, we have over 1,300 men missing in action in Vietnam, of which only 450 are known to be prisoners. Yet, to this date, neither North Vietnam nor the Vietcong have revealed the names of those Americans they are holding prisoner.

I take this opportunity, Mr. Speaker, to inform the Members of the House, as I have by mail, that because of the change in the legislative schedule this week, I have asked for a special order for Wednesday of next week, September 17.

Notices will appear in the public press.

We expect the families of many of the POW's and those missing in action to be in attendance in the gallery for this special order. We expect 200 or 300 here.

We will follow this up with a reception at which the Joint Chiefs of Staff and other Government officials have been invited to attend, honoring the families of the missing in action and the prisoners of war.

Once again I should like to invite the Members of the House to participate in this special order with me and to honor the families of POW's and MIA's by being present at the reception.

THE CRUEL AND INHUMANE TREATMENT OF AMERICAN POW'S BY NORTH VIETNAM

(Mr. DON H. CLAUSEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DON H. CLAUSEN, Mr. Speaker, I want to take this opportunity to address myself to a situation that, for too long, we in the Congress have been altogether too silent on. I refer to the cruel and inhuman treatment afforded American prisoners-of-war by the Government of North Vietnam.

Since the outset of U.S. involvement in the war in Vietnam, the Government in the north, while disassociating itself with the conflict in the south, has taken custody of American prisoners, refused to even report their names or the exact number they hold, and, as confirmed by two who were recently released, these men are being subjected to the lowest forms of human degradation and suffering.

For a government that claims to be concerned about human suffering and interested in seeking a negotiated settlement of the conflict, North Vietnam's treatment of American servicemen raises serious doubts about their true intentions. Quite frankly, I hope the world is watching and I further believe that this tragic story should be told to the American people—they have a right to know.

In addition to the captives themselves, the real victims here are the families and loved ones of those who's fate now hangs in the balance. Not knowing whether their servicemen are dead or alive, these helpless victims represent the true agony of Vietnam.

To them, the relatives of our missing fighting men, I hereby pledge my full support to do everything I can to correct this human tragedy.

ADMINISTRATION POLICY OF NEGOTIATION, NOT CONFRONTATION IN VIETNAM

(Mr. FISH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FISH. Mr. Speaker, a news story that the United States will not initiate new military actions following the current 3-day cease-fire in Vietnam is the most welcome and if accurate is the most significant peace initiative to date. Let us call it what it is, and proclaim to the world that we are prepared to simply bring a stop to the shooting and killing.

Regardless of the reception in Hanoi to such action, the world will know that continuation of the war is up to the North Vietnamese.

The President is to be commended for his leadership in reversing our military strategy. No less significant is his assertion of decisionmaking by Washington and not by Saigon.

Limiting our military operations would be the most dramatic effort to deescalate. It would follow a reduction in B–52 flights and the start of troop withdrawals. It would follow steady progress during this year toward moving settlement of the issues from the battlefield to the political arena. It is consistent with administration policy of negotiation not confrontation.

PROVIDING FOR CONSIDERATION OF HOUSE JOINT RESOLUTION 247, RELATING TO THE ADMINISTRATION OF THE NATIONAL PARK SYSTEM

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 461 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 461

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution (H.J. Res. 247) relating to the administration of the national park system. After general debate, which shall be confined to the joint resolution and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the joint resolu-

tion shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the joint resolution for amendment, the Committee shall rise and report the joint resolution to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the joint resolution and amendments thereto to final passage without intervening motion except one motion to recommit.

CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

Mr. BOLLING. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 163]

Anderson, Ill.	Ford,	Powell
Ashbrook	William D.	Preyer, N.C.
Baring	Foreman	Purcell
Belcher	Frelinghuysen	Reuss
Blanton	Gaydos	Rooney, N.Y.
Boland	Giaimo	Roudebush
Cabell	Gubser	Scheuer
Cahill	Hungate	Shriver
Celler	Jacobs	Sikes
Clark	Karth	Smith, Calif.
Clay	Kirwan	Smith, Iowa
Collins	Landrum	Taft
Conyers	Lipscomb	Teague, Calif.
Cunningham	MacGregor	Teague, Tex.
Daddario	Mailliard	Tiernan
Davis, Ga.	Meeds	Tunney
Dawson	Melcher	Udall
Diggs	Meskill	Watson
Dwyer	Miller, Calif.	Widnall
Esch	Murphy, N.Y.	Wilson,
Fallon	Nix	Charles H.
Fisher	Pelly	Young
Foley	Pickle	

The SPEAKER pro tempore. On this rollcall 364 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PROVIDING FOR CONSIDERATION OF HOUSE JOINT RESOLUTION 247, RELATING TO THE ADMINISTRATION OF THE NATIONAL PARK SYSTEM

The SPEAKER pro tempore. The gentleman from Missouri is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the distinguished gentleman from Nebraska (Mr. MARTIN), pending which I yield myself such time as I may consume.

Mr. Speaker, while there is some controversy on the legislation made in order by this resolution, there is no controversy on the rule, so far as I know. It is a simple, open rule providing for 1 hour of general debate.

Mr. Speaker, I reserve the balance of my time.

Mr. MARTIN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this rule provides for 1 hour of debate, to be equally shared and controlled by both sides of the aisle.

The purpose of the joint resolution is to prohibit any overnight camping, or the erection of any temporary structure at any location within a national park which has not been previously designated as a regular campground.

Present law and existing regulations leave to the Secretary of the Interior the right, in his discretion, to issue a permit for group camping at park areas other than such designated locations.

The joint resolution removes this discretion and treats all persons wishing to use camping facilities equally. All may camp on a first-come, first-served basis at designated campgrounds. Other areas of the parks cannot be used for overnight camping.

Several exceptions are provided. Military use, including overnight camping is permitted, as is overnight use by U.S. park employees in the performance of their duties. Public overnight use is permitted for an emergency arising out of an act of God; that is, fire, flood, earthquake.

Mr. Speaker, I know of no objection to the rule.

Mr. Speaker, I reserve the balance of my time.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

PROVIDING FOR CONSIDERATION OF H.R. 471, TO HOLD IN TRUST CERTAIN LANDS FOR THE PUEBLO DE TAOS INDIANS IN NEW MEXICO

Mr. BOLLING. Mr. Speaker, I call up House Resolution 462 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES 462

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 471) to amend section 4 of the Act of May 31, 1933 (48 Stat. 108). After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interior and Insular Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER pro tempore. The gentleman from Missouri is recognized for 1 hour.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Nebraska (Mr. MARTIN), pending which I yield myself such time as I may consume.

Again, Mr. Speaker, there is some controversy on the bill made in order by this resolution, but I know of no controversy on the resolution itself. Therefore, I reserve the remainder of my time.

Mr. MARTIN. Mr. Speaker, I yield myself such time as I may consume.

House Resolution 462 provides for an open rule with 1 hour of debate for consideration of H.R. 471.

The purpose of the bill is to grant to the Pueblo de Taos Indians of New Mexico trust title to approximately 48,000 acres of federally owned land now a part of the Kit Carson National Forest. These lands were taken from the Indians without payment in 1906. The 48,000 acres which were conveyed are part of a larger tract of approximately 130,000 to which the Pueblo de Taos Indians have aboriginal title. This was confirmed by a decision of the Indian Claims Commission in 1965. The Indians attach great significance to this particular 48,000 acres and have urged the Government to return title to the land which the Indians now use rather than make a lump sum payment.

The importance of this tract of land to the Indians has long been recognized by the Government. Preservation of the land in its natural condition is said by the Indians to be essential to the protection of their religion. The Forest Service has stated that the transfer of the land to the Indians would not prejudice the administration of the remaining acreage in the Carson National Forest.

The bill transfers the land to the Indians and continues existing rights and uses now permitted on a part of the 48,000 acres so transferred. These rights include grazing permits granted by the Forest Service and recreation use by the public which have heretofore been granted with the approval of the Indians on a limited basis which will be continued.

The committee report makes clear that the committee does not consider this bill as a precedent for settling of claims by the conveyance of land rather than by money payment. The committee considers the Pueblo de Taos Indians to be a unique position in that their aboriginal title was extinguished without compensation. Also, the religious needs of the Indians with respect to this land have been recognized by the Federal Government for the past 63 years and that the Indians interest in the land includes preservation of their religion.

No additional Federal cost is anticipated through the passage of this bill. The Department of Interior supports the legislation. The Department of Agriculture opposes enactment of the bill believing that the land should remain a part of the national forest and that the Indians should continue to be permitted their special user rights. They foresee the attempt to use this legislation as a precedent in settling future Indian claims.

The Bureau of the Budget supports the Department of Agriculture in its opposition.

This bill is almost identical to H.R. 3306 which passed the House in the 90th Congress but died in the Senate.

Mr. BOLLING. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

RELATING TO THE ADMINISTRATION OF THE NATIONAL PARK SYSTEM

Mr. ASPINALL. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution (H.J. Res. 247) relating to the administration of the national park system.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Colorado.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution (H.J. Res. 247), with Mrs. GREEN of Oregon in the chair.

The Clerk read the title of the joint resolution.

By unanimous consent, the first reading of the joint resolution is dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Colorado (Mr. ASPINALL) will be recognized for 30 minutes, and the gentleman from Iowa (Mr. KYL) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Colorado.

Mr. ASPINALL. Madam Chairman, I yield myself 10 minutes.

Madam Chairman, as the gentleman from Missouri stated, there is some opposition to the legislation and those in charge of the time will endeavor to see to it that those who wish to speak in opposition have that right.

Madame Chairman, the Committee on Interior and Insular Affairs has carefully considered the legislation now before the House. In addition to the consideration given to House Joint Resolution 247 this year, the committee studied a comparable measure during the 90th Congress but time did not permit its consideration before adjournment.

House Joint Resolution 247 is not a difficult measure to understand. Its purpose is simply to provide basic statutory standards with respect to camping activities within the various units of the national park system. It does not prohibit camping, overnight occupancy, or the erection of temporary structures, but it limits them exclusively to areas regularly designated for that purpose.

Presently, there are no statutory standards for the guidance of the Secretary with regard to overnight use of national parks and recreation areas. In fact, he has general authority to manage and control all areas of the system and to regulate their use as he deems appropriate. The majority of the members of the committee feel that this discretionary authority is far too broad, particularly with respect to his authority to issue special permits to camp in areas that are otherwise unavailable for that purpose.

Madam Chairman, there are many good reasons why temporary campgrounds should be prohibited except in very extraordinary circumstances.

First, they can be menacing to public health, because they lack the usual water and sanitary facilities commonly found at all regularly designated camping areas;

Second, they place an undue burden upon those who are charged with the responsibility of providing protection and other administrative services for visitors;

Third, they can cause irreparable harm to the natural values of an area or, at best, they can require costly restoration; and

Fourth, and perhaps most important, they interfere with the normal public use of an area and with the enjoyment of that area by the public at large.

In fact, Madam Chairman, the National Park Service is so convinced of the validity of these arguments that it has denied some persons and groups permission to temporarily camp in areas not regularly available for overnight use. On some occasions, however, temporary campgrounds have been permitted notwithstanding the magnitude of these problems.

The members of the committee do not argue that special, temporary permits should be granted to all who applied. On the contrary, most members feel that these special privileges should be extended to no one or no group, because we feel that such permits have been and will continue to be detrimental to the national park program and contrary to the public interest.

House Joint Resolution 247, if enacted, would assure an equal opportunity for all persons and special privileges for none except in the extraordinary circumstances detailed in the resolution. It would prohibit the Secretary of the Interior from permitting anyone to be domiciled overnight in any area of any unit of the national park system which is not regularly designated for that purpose.

The exceptions to this general policy are carefully limited by the legislation. In the event that parklands should be essential for some temporary military or governmental use, appropriate arrangements would have to be made with the Secretary of the Interior. Similarly, in the event of some natural catastrophe—an earthquake, a hurricane, a flood, or the like—the Secretary could permit the establishment of temporary campgrounds. Before authorizing the use of any parklands for such temporary uses, the Secretary should explore all reasonable alternatives and should secure assurances that such uses will be truly temporary and not for an unduly extended period of time.

Another exception to this general policy relates to the back country camping. By definition, back country camping is located in remote areas where regularly designated campgrounds would be inappropriate and impractical. This legislation does not affect back country camping, but as it has been in the past, it will remain subject to reasonable regulation.

With these exceptions, this legislation, as recommended by our committee, limits camping, overnight occupancy, and the erection of temporary structures to areas: First, which are regularly designated as campgrounds; and, second, which are open to all persons on the same basis.

Because the Congress has the constitutional responsibility to make all rules and regulations respecting the territory and property of the United States, House Joint Resolution 247 attempts to carefully circumscribe the discretionary authority of the Secretary of the Interior. Since it restricts his authority, we cannot expect his enthusiastic endorsement of the measure, but I hasten to add that this administration has indicated—as did the past administration—that it does not object to the enactment of this legislation. Most of the members of the Committee on Interior and Insular Affairs feel that this legislation represents a reasonable measure of control over the property of the people of the United States.

Madam Chairman, House Joint Resolution 247 is one measure which did not originate with some ambitious bureaucrat. Its origin is here in this House. It is the product of a bipartisan group of Members of the House who are intimately familiar with national park matters and who are concerned about the future of these treasured areas. It was cosponsored by 14 Members of the Committee on Interior and Insular Affairs and by two of our former committee colleagues, Mr. MORTON and Mr. WHITE.

To be sure, we feel that more adequate camping facilities should be provided in our national parks and recreation areas. Regularly designated camping areas should be suitably located so as to assure the accommodation, health, and safety of park visitors without impairing the values for which the area was set aside as a part of the park system and without interferring with others wishing to use and enjoy these same outdoor areas.

In conclusion, Madam Chairman, we feel:

First, that House Joint Resolution 247 is a reasonable exercise of legislative control over the property of the United States;

Second, that it is consistent with the constitutional responsibility imposed on the Congress by article IV, section 3;

Third, that it is needed to assure the protection of park values from unnecessary, intensive intrusions; and

Fourth, that it is essential to assure all people that they will have an equal opportunity to use and enjoy their national parklands.

As chairman of the Committee on Interior and Insular Affairs, I feel that this legislation is most important. It protects the future of our parks against abuses. I feel that it merits your support and I recommend its enactment by the House.

Mr. TAYLOR. Madam Chairman, will the gentleman yield for the purpose of my seeking additional information?

Mr. ASPINALL. I yield to the distinguished gentleman from North Carolina, the chairman of the subcommittee which handled this legislation.

Mr. TAYLOR. Would the gentleman explain how this legislation relates to H.R. 1035 which the House passed earlier this year which deals with public lands in the District of Columbia?

Mr. ASPINALL. This legislation is not inconsistent with the bill H.R. 1035 which was approved by the House on June 11. Both bills could, and I believe should, be enacted into law, because they deal with different circumstances. H.R. 1035 abso-

lutely prohibits all camping and overnight occupancy on all Government property located in the District of Columbia—including the National Capital Parks. The legislation now before the House—House Joint Resolution 247—involves all units of the national park system—everywhere in the country—and it restricts camping to those areas designated for that purpose except in specified circumstances. Inasmuch as there are no regularly designated campgrounds in any of the national park areas located in Washington, D.C., House Joint Resolution 247 would have the effect of prohibiting camping and overnight occupancy on these parklands. H.R. 1035 goes one step further in that it prohibits even the designation of regular campgrounds for overnight use on any Government lands in the District of Columbia.

Mr. TAYLOR. If the gentleman will yield further, the gentleman indicated that back country camping would not be subject to the limitations in this legislation. I notice that the report of the Department of Justice suggests that that terminology is not sufficiently definite. Will you tell us precisely what is meant by the term back country camping?

Mr. ASPINALL. I do not believe that this term is vague; it is a term of art commonly understood in the field. It is defined in the "National Park Service Glossary of Commonly Used Terms" as meaning "a part or parts of a park beyond the main developed use areas and generally not accessible to vehicular travel. Back country is characteristically of primitive or wilderness nature, of considerable dimensions, and accessible, if at all, only by horse or foot trails or in some cases by unimproved roads."

I think that this pretty clearly designates the areas which we call back-country areas in our national parks.

The CHAIRMAN. The time of the gentleman from Colorado has expired.

Mr. ASPINALL. Madam Chairman, I yield myself 2 additional minutes.

Mr. TAYLOR. Madam Chairman, will the gentleman yield further?

Mr. ASPINALL. I yield further to the gentleman from North Carolina.

Mr. TAYLOR. In reading the dissenting views, I notice that it is suggested that by requiring designated camping areas to be open to all persons, House Joint Resolution 247 might be interpreted to prevent the National Park Service from designating areas for the exclusive use of groups. Would House Joint Resolution 247 have the effect of preventing a Scout group, for example, from using a campground?

Mr. ASPINALL. Madam Chairman, let me say first that most members of the committee do not feel that House Joint Resolution 247, as recommended, interferes with the designation of group camping areas, but the legislation does specify two requisites for campgrounds:

First, they must be regularly designated by the National Park Service as campgrounds; and

Second, they must be open to such use by all persons—that is, by all persons on the same basis.

There was some concern, however, that this language was ambiguous with respect to group campgrounds or campgrounds which are available exclusively for group use. Consequently, after the resolution was ordered reported, the committee reconsidered this specific issue and authorized a clarifying amendment to be offered at the appropriate time.

When offered, that amendment will make it clear that the Secretary may designate areas for group camping only, provided that they are available to all groups on the same basis. The language is carefully drafted to assure that all group camping areas are available for the use of any and all groups. This, of course, will not—and I emphasize this point—will not permit the Secretary to designate a temporary group campground in any unit of the national park system to exclusively accommodate a single group. It will enable him, or those he designates, to reserve a regularly designated group camping area for the use of groups or organizations making application in proper form.

The CHAIRMAN. The time of the gentleman from Colorado has again expired.

Mr. ASPINALL. Madam Chairman, I yield myself 1 additional minute.

Mr. TAYLOR. If the gentleman will yield further, I have one final question.

Throughout your presentation and in the resolution and report, there are references to "regularly designated campgrounds." For the purposes of legislative history, would you explain the meaning of that phrase?

Mr. ASPINALL. Madam Chairman, I would be happy to explain the phrase. When we refer to a "regularly designated campground" we mean an area in a unit of the national park system which is used for camping and overnight occupancy, because it is developed with that use in mind. Such an area would be equipped to provide required sanitary facilities, water, and the like.

The National Park Service publishes a list indicating the areas where campsites are available—these are "regularly designated campgrounds" within the meaning of the legislation. There are presently 83 units of the national park system which have regularly designated campgrounds, according to a 1969 publication entitled "Camping in the National Park System." Within these 83 units, there are approximately 365 group camps and roughly 25,000 camping spaces for public use.

Regularly designated campgrounds certainly are not permanent because circumstances may require that they be moved from time to time in order to preserve the outdoor values of the area, but they most certainly are not temporary. So we must keep this in mind.

Mr. TAYLOR. I thank the gentleman.

The CHAIRMAN. The gentleman from Colorado has consumed 13 minutes.

The gentleman from Iowa (Mr. KYL) is recognized.

Mr. KYL. Madam Chairman, I yield myself such time as I may consume.

Madam Chairman, my friend, who is the distinguished chairman of the House Committee on Interior and Insular Affairs, has done an excellent job of explaining what this bill does. It will probably be said by some that it is an unusual bill, that it restricts certain Americans to do things which they might want to do. There may be even more serious charges leveled at the bill.

I rise in support of House Joint Resolution 247, relating to the administration of the national park system.

The purpose of this legislation is to limit the discretion of the Secretary of the Interior to permit camping, overnight occupancy, or the erection of temporary shelters or other structures within the national park system. The legislation provides that the Secretary of the Interior in his administration of our national parks may permit camping and overnight occupancy only in those areas regularly designated for individual or group camping and in other specific instances named in the bill.

There is no question of the need for this legislation. The need was dramatized by the "Resurrection City" or "camp-in" which took place on the Mall here in Washington, D.C., last year. The subject matter of this bill was debated long before that event. Whether or not you or I agree with the objectives or purposes of that event is not important to this legislation. What is important is that it was that event which clearly demonstrated the lack of basic statutory standards with respect to camping or overnight occupancy in the administration of our national park system. It was that event which clearly indicated a threat to the values of our national parks system. The random designation of camping areas in the national park system, can eventually destroy the national park system.

The fact that our national park system can be destroyed by the random designation of camping areas within the system is dramatically demonstrated by the fact that it cost the taxpayers of the United States in excess of $1 million to recover from the issuance of a permit by the Secretary of the Interior to permit camping on the Mall for a period of 6 weeks last year. We cannot permit a similar situation to occur on other lands or property administered by the National Park Service and the Department of the Interior.

The values of our national park system are national assets which belong to all the people of the United States. It is the responsibility of Congress to protect these values for all the people of the United States. House Joint Resolution 247 does exactly this, it assures the preservation and protection of the values of our national park system in accordance with the purposes for which they were originally established.

I urge all of my colleagues to support the passage of this legislation.

Mr. ASPINALL. Madam Chairman, I yield 5 minutes to the gentleman from New York (Mr. RYAN).

Mr. RYAN. Madam Chairman, I rise in opposition to this resolution, and I refer the Members to the dissenting views that several of us who are members of the Interior and Insular Affairs Committee have expressed in opposition to House Joint Resolution 247 as they appear in the report.

In my view, this resolution is unnecessary and unwise and, by infringing upon fundamental freedoms, raises serious constitutional questions.

It is perfectly clear that this resolution is a product of the adverse reaction by the Congress to last year's Resurrection City. Had it not been for Resurrection City, this bill would not be before the House. In its efforts to prevent future Resurrection Cities, Congress should not ignore the constitutional rights of all Americans.

This resoluton is unnecessary. It has not been requested by the Secretary of the Interior or the Director of the National Park Service. As a matter of fact, last year in a letter dated June 15, 1968, commenting upon a similar resolution, the Deputy Attorney General, Warren Christopher, stated, and I quote:

In view of the fact that present statutory authority and regulations appear to be adequate we question the need for adoption of this resolution.

Then this year, this June 11, despite the opposition of some of us, the House did pass the bill, H.R. 1035, which prohibits overnight occupancy or camping on property owned by the U.S. Government or the District of Columbia government in the District of Columbia. That bill was obviously intended to prevent future Resurrection Cities, as this one is. The House has already acted, and I suggest that this resolution is simply legislative overkill.

Furthermore, let us look at the effect of this resolution. It would prevent, for instance, groups such as the Boy Scouts of America from making application to the Department of the Interior for special permission to camp on undesignated areas of our national parks.

The Director of the National Park Service testified before our committee that more than 100 such applications were made to him in 1968 alone. One example was a request from the Boy Scout Council to camp out on the historic battlefield at Yorktown. Why should the Congress pass legislation preventing the Secretary from having the discretion to grant a permit for Boy Scout encampments?

The House ought to approach the problem of regulating the use of our national parks without emotion and without denying to the Secretary of the Interior the flexibility that he needs for the efficient administration of our national parks.

In reality this resolution is an after-the-fact reprimand of the former Secretary of the Interior for granting the permit to use West Potomac Park last year to the the Poor People's Campaign. Its passage would unwisely tie the hands of all future Secretaries of the Interior. Congress ought to have enough confidence in the wisdom of the person who has been designated by the President to be Secretary of the Interior, a Cabinet position, to permit him the flexibility and authority to handle administrative matters which are properly within his province.

Moreover, as I pointed out, this resolution is unduly restrictive of the freedoms guaranteed by our Constitution, and it may impose a prior restraint upon the rights guaranteed in the Bill of Rights.

Congress shall make no law abridging the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

Restrictions upon camping and overnight occupancy on national park land in the District of Columbia may well inhibit the exercise of the right to assemble peaceably and to petition for redress of grievances.

Publicly owned land and parks in the Nation's Capital should be available under reasonable regulations for the purpose of peaceable assembly and petitioning the Congress. Those deprived Americans, who cannot afford the luxuries of a Washington hotel or motel which are available to lobbyists for vested interests, should not be forced to forfeit these rights.

All people, rich and poor alike, should have an equal opportunity to lobby for laws which will meet their needs. It has been said that the problems of this Nation can be solved through political channels within the framework of our Government, and I believe that to be true. But I also believe that Congress should not, as this resolution does, block channels for peaceful protest.

This is one of a series of resolutions which have been introduced in the Congress in an attempt to prevent the recurrence of the Poor People's Campaign. Perhaps there may be some fear that, if the spotlight of another Poor People's Campaign or a similar event is thrown upon Congress, it may reveal our failures to deal with the fundamental problems which confront our society, the need to enact meaningful legislation to deal with the problems of want, hunger, poverty, and discrimination.

If Congress really wants to eliminate future Resurrection Cities, then let us eliminate the underlying conditions which have brought so many millions of people in our society to the point of living in despair without hope. This resolution should be defeated.

I include at this point in the RECORD the dissenting views which were filed by Congressman BURTON, of California, Congressman KASTENMEIER, Congresswoman MINK, and myself.

DISSENTING VIEWS

We believe that House Joint Resolution 247 is unnecessary, unwise and raises grave constitutional issues.

This resolution would prohibit camping, overnight occupancy, and the erection of temporary shelters in areas under the jurisdiction of the National Park Service except in those areas which are regularly designated for such purposes.

Legislation has not been requested by the Secretary of the Interior or the Director of the National Park Service. The Department of Justice in a letter commenting upon a similar resolution introduced in the 90th Congress and dated July 15, 1968, from the Deputy Attorney General, Warren Christopher, to the chairman of the Committee on Interior and Insular Affairs stated: "In view of the fact that present statutory authority and regulations appear to be adequate we question the need for adoption of this resolution."

Existing law gives the Secretary of the Interior general authority to issue rules and regulations concerning use and management of park and other areas under the jurisdiction of the National Park Service. In sections 2.5 and 50.27 of title 36 of the Code of Federal Regulations camping is now permitted only in designated locations.

This resolution would take away the flexibility needed by the Secretary of the Interior to administer efficiently the Nation's parks. A statutory prohibition on camping in all areas not regularly designated for such purposes may handicap the Department of the Interior in administering our national park system.

First, it would restrict the educational and recreational use of our national parks by groups such as the Boy Scouts. The Director of the National Park Service testified in 1968 that annually there are between 100 and 150 requests for permission to camp in parts of the national park system that are not regularly designated for camping. An example was a request from the Boy Scouts Council to camp out on the battleground at Yorktown. This resolution would make such a camp out impossible, for it would make it necessary for the Secretary of the Interior to designate the battleground site as a regular camping area and thus raise the prospect of endangering the condition of the site as a historic landmark.

Second, it would prevent the use of nondesignated areas in an emergency situation except an emergency arising out of an act of God. The committee rejected an amendment incorporating language recommended by the Department of the Interior excepting "an emergency as determined by the official of the National Park Service in charge of the area involved." It is apparent that the committee does not intend to permit the Secretary to have any discretion.

Third, by requiring that designated camping areas "be open to such use by all persons," the resolution creates a potential administrative tangle. This is not a nondiscriminatory provision. Existing regulations provide for the use of camping sites on a first-come, first-served basis and only to the extent that the applicant can reasonably be accommodated in the particular area. This is already nondiscriminatory. By the additional language, the resolution would prevent the National Park Service from granting special permits to groups requesting the exclusive use of regularly designated camping areas for a certain period. For instance, it might make it impossible for a Boy Scout troop to be together in a camp site.

This resolution was originally drafted in response to the poor people's campaign of 1968 and, according to its sponsors, with the intent of preventing a future Resurrection City. It is an after the fact reprimand of the former Secretary of the Interior for granting the use of West Potomac Park for Resurrection City.

We believe the Department of the Interior and the National Park Service should be commended for its handling of the poor people's campaign. The use of West Potomac Park was, in fact, a demonstration of the right of the people peaceably to assemble and to petition Congress as guaranteed in the Bill of Rights of the Constitution.

In a period of confrontation politics often marked by violence, it is to the credit of the administration then in office and the leadership of the Poor People's Campaign that a confrontation did not occur.

The impression has been created that this resolution will punish demonstrators or those who might seize and occupy portions of the national park system. It does not. It is directed solely at the Secretary of the Interior, making him a law violator if he grants a permit in an area other than one regularly designated. It would impose a statutory prohibition upon an act which should be a matter within the administrative authority of the Secretary.

It is with the possible encroachment of fundamental freedoms that this resolution raises grave constitutional questions. The first amendment of the Bill of Rights states that "Congress shall make no law * * * abridging * * * the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

The prohibitions upon camping, overnight occupancy, and the erection of a temporary structure may be in effect a prior restraint upon the exercise of first amendment rights, inhibiting expression before the fact. There are already special regulations governing camping in the National Capital parks which provide a permit may be denied if "the event will present a clear and present danger to the public health or safety." (36 CFR 50.19C)

Why should not the public parks in the Nation's Capital be available under reasonable regulations for peaceable assembly and the petitioning of Congress?

This resolution would deprive American citizens of the opportunity to use land acquired and maintained by public funds as a place of assembly. It tells the poor, the deprived and the oppressed, who do not have $15 or $20 per night for an air-conditioned Washington hotel or motel, that they will be restricted in lobbying for laws necessary to meet their needs.

During past summers our Nation has witnessed "civil disorders" involving people for whom America has failed to provide hope of sharing her abundance. And each time, as national leaders decried the violence, they repeated again and again that violence was not the answer to economic and social ills—that there were legitimate means of social protest in our democracy—that functioning mechanisms for redress of grievances exist within the framework of our Government.

House Joint Resolution 247 is only one of a series of resolutions that have been introduced in an attempt to block a recurrence of the poor people's campaign. Perhaps it is feared that, if the poor people's campaign comes back to Washington, it might put the spotlight back on the failures of Congress.

Instead of reacting by infringement upon the Bill of Rights, the Congress should attack the underlying conditions of want and hunger and enact meaningful legislation to eliminate poverty.

WILLIAM F. RYAN.
PHILLIP BURTON.
PATSY T. MINK.
ROBERT W. KASTENMEIER.

Mr. KYL. Madam Chairman, I yield such time as he may require to the gentleman from Pennsylvania (Mr. SAYLOR).

Mr. SAYLOR. Madam Chairman, I rise in support of House Joint Resolution 247, relating to the administration to the national park system.

The purpose of this legislation is to guarantee to the American people that the values of our national park system and other lands over which the National Park Service and the Department of the Interior exercise control will be protected and preserved in accordance with the purpose for which they were originally established.

To accomplish this purpose, House Joint Resolution 247 limits the authority of the Secretary of the Interior to permit camping, overnight occupancy, or the erection of any temporary shelter or other structure for such purpose, to those areas of the national park system which are regularly designated for such purposes and to those areas so designated which are open to use by all persons or all groups.

This legislation seeks to prevent the occurrence of "Resurrection Cities" within the national parks system or areas so administered by limiting the discretionary authority of the Secretary of the Interior to issue camping permits to areas not designated or otherwise suitable for camping or temporary occupancy. Congress must exercise this responsibility to protect these values in light of the fact that it cost the American people in excess of $1 million as a result of the "camp-in" on West Potomac Park on the Mall here in Washington, D.C., for a period of 6 weeks, just last year. Therefore, this limitation on the authority of the Secretary of the Interior is necessary to protect and preserve the values of our national parks and areas so administered.

This legislation is not an attempt to rebuke any individual or group in any way. Nor does it, in my opinion, encroach upon the fundamental right of the people to peaceably assemble and petition the Government for a redress of grievances. House Joint Resolution 247 is responsible and constructive legislation to protect the values and assets of this Nation which belong to all the people. The overriding national interest is what is really involved in this legislation and I urge my colleagues to support its passage.

Mr. ASPINALL. Madam Chairman, I yield 4 minutes to the gentlewoman from Hawaii (Mrs. MINK).

Mrs. MINK. Madam Chairman, House Joint Resolution 247 in my opinion is an unfortunate reaction against the decision made by the past administration to authorize use of certain lands in Washington, D.C., for the purpose of housing the Poor People's Campaign last year.

I believe it is an overreaction prompted by a disagreement with the judgment of the previous administration on this matter.

The issue before this Congress is not whether the White House and the Secretary of the Interior were correct in the exercise of their discretion or whether they were incorrect. The issue before the House in House Joint Resolution 247 is whether, because some disagree with the past judgment of the previous administration, the discretion to exercise that judgment ought to be removed to avoid for all future time all such uses because some may again be criticized.

This bill not only prohibits all overnight uses of all public lands under the jurisdiction of the national parks administration in the District of Columbia which have not previously been designated as campsites, but it also extends this prohibition throughout the country and affects uses of all national parks lands.

It is my view that not only is House Joint Resolution 247 unnecessary to the efficient administration of our national parks, but also it could actually lessen this efficiency. Existing legislation gives the Secretary of the Interior authority to issue rules and regulations, and existing regulations now permit camping only in designated locations except under the conditions of issuance of special permits. Flexibility in administration permits the Department of the Interior to issue special permits for camping in areas not regularly designated.

For example, Boy Scout troops frequently request permission to establish encampments in park areas with special significance for them, because of a current project, but which would not be suitable for designation as a permanent campsite. House Joint Resolution 247 would force the Secretary of the Interior either to refuse permission to the Boy Scouts or other organizations making similar requests, or to designate the area under consideration as a regular campsite,

I believe this resolution is intended as a reprimand to the former Secretary of the Interior for granting the use of West Potomac Park in Washington, D.C., as a campsite for citizens participating in the Poor People's Campaign of 1968. This House Joint Resolution 247 does not punish demonstrators or those who might illegally seize and occupy portions of the national park system. Instead, it is aimed solely and directly at the authority of the Secretary of the Interior. It would make him guilty of violating the law if he grants a permit for camping within an undesignated area. His judgment is no longer trusted. I believe this lack of confidence in a member of the President's Cabinet is unjustified, and I am opposed to the present resolution.

Madam Chairman, the first amendment of the Bill of Rights states:

> Congress shall make no law . . . abridging . . . the right of the people peaceably to assemble, and to petition the government for a redress of grievances.

There are already special regulations governing camping in the National Capital parks which provide a permit may be denied if "the event will present a clear and present danger to the public health or safety."

Why should not the public parks in the Nation's Capital and throughout this country be available under reasonable regulations for peaceable assembly and the petitioning of Congress if the Secretary of the Interior so finds?

Why should not the President of the United States together with his Cabinet officer, the Secretary of the Interior, be charged with the determination of this reasonableness? I believe they should retain this discretion and, therefore, I oppose this resolution.

Mr. ASPINALL. Madam Chairman, I yield 5 minutes to the gentleman from North Carolina (Mr. TAYLOR), the chairman of the subcommittee and the gentleman handling this legislation.

Madam Chairman, will the gentleman yield?

Mr. TAYLOR. I yield to the gentleman from Colorado.

Mr. ASPINALL. Madam Chairman, a statement was made by the previous speaker as to the reason for the introduction of the legislation.

I want it distinctly understood that I was one of the main sponsors of this legislation and one of those who sought that it be drafted, and I asked my colleagues to join in its sponsorship with me. It was not intended to reprimand anyone whatsoever. The fact is the legislation was introduced for the purpose of aiding the Secretary of the Interior in the furtherance of his administrative

obligations, and not to hurt him nor to handicap him nor to reprimand him, but to aid him, so his final authority would be well designated.

Mr. TAYLOR. I thank the gentleman.

Madam Chairman, this legislation was cosponsored by 16 Members of this House—Members representing districts from all parts of the Nation and people with different political beliefs and different backgrounds. No one believes more than we do in the Bill of Rights. We do not feel that this legislation impairs, in any way, the right of free speech, or the right of people peaceably to assemble, or the right to petition the Government for the redress of grievances. Those rights are basic to our system of government and should never be unjustly denied. House Joint Resolution 247 does not restrict those rights; it does not involve those rights; it merely involves parklands and how they should be used with respect to overnight use. It operates just like other regulations affecting parklands in that it has as its objective protecting those areas for the public, for their use and enjoyment, for all time.

This legislation, like a comparable measure introduced during the 90th Congress, was thoroughly considered by the Subcommittee on National Parks and Recreation.

House Joint Resolution 247 seeks to exercise a reasonable measure of legislative control over the use of our national parklands. In essence, this measure provides basic statutory standards with respect to camping, overnight occupancy, and the erection of temporary shelters in units of the national park system.

In establishing these standards, House Joint Resolution 247 says to all people:

First, that camping and overnight occupancy will continue to be permissable in regularly designated campgrounds open to all on the same terms;

Second, that camping may be permitted in the isolated back country, where few people trod, because the regular designation of campgrounds would be impracticable; and

Third, that camping, overnight occupancy, and the construction of temporary shelters may be permitted when such use is essential for governmental or military purposes or when emergencies arising from a natural disaster require the temporary accommodation of dislocated people.

Fourth, an amendment was approved by the Interior Committee after the bill had been reported out with the understanding that the amendment would be presented as a committee amendment on the House floor. This amendment would deal only with designated group camping areas. It makes certain that group camping areas will be continued and that all groups will be treated alike on a first come, first serve basis, just as will individuals. Thirty-three parks in our Nation now have group camping areas which are used by Boy Scout groups and other groups. These areas are usually operated in connection with a regular camping area and are equipped for the parking of a bus and the serving of a group of campers.

In operation, House Joint Resolution 247 will not handicap the administration of our national park lands. It will provide him with the necessary mechanism to deny requests for special permits for extraordinary privileges to camp in areas unsuitable for overnight occupancy or temporary residential use.

Experience has shown us that the broad general authority granted to the Secretary by existing law can result in significant damage to the values in park areas and can disrupt other public uses of such areas. We will not soon forget the costly restoration caused by the special use permit issued for the so-called Resurrection City nor will the public tolerate the administration of the park lands in such a way as to provide special privileges for the few to the detriment of all others. House Joint Resolution 247 cannot undo the physical damage to the Mall nor the psychological and political damage to the cause of conservation that resulted from this imprudent administrative action, but it will preclude the Secretary from issuing permits in the future for camping, overnight occupancy, or for the erection of temporary shelters except in certain specified instances.

As one Member of the House and as chairman of the Subcommittee on National Parks and Recreation, I recommend the enactment of House Joint Resolution 247, as amended.

Mr. GROSS. Madam Chairman, will the gentleman yield?

Mr. TAYLOR. I am glad to yield to the gentleman from Iowa.

Mr. GROSS. How much has the Department of the Interior collected from the leaders of the Southern Christian Leadership Conference for the misuse of that land down along the Potomac River and in the Mall area?

Mr. TAYLOR. The gentleman from Colorado may have that information.

Mr. ASPINALL. Madam Chairman, if the gentleman from North Carolina will yield to me, we have not been able to collect anything. There is a forfeited bond in the amount of $5,000, which was credited to the Treasury.

Mr. GROSS. Did the gentleman say the bond was forfeited in this case?

Mr. ASPINALL. It would be expected it would be forfeited.

Mr. GROSS. If it had been effected, it would be forfeited?

Mr. ASPINALL. That is right.

Mr. GROSS. It was my understanding that it cost some $80,000 just to resod the area used by the so-called Resurrection City.

Mr. GRAY. Madam Chairman, will the gentleman yield to me?

Mr. TAYLOR. I am glad to yield to the gentleman from Illinois.

Mr. GRAY. I might be able to shed some light on the question propounded by my friend from Iowa.

A $5,000 bond was forfeited, and the Government recouped a little over $20,000 on the sale of used lumber.

Out of a half million to a million dollars worth of damage, the taxpayers have recouped approximately $25,000.

Mr. GROSS. This resolution is intended to put a stop to the outrage of the taxpayers being left holding the bag with only $25,000 as against the damage of up to $1 million.

That is what this resolution is all about; is it not—to put a stop to this kind of business?

Mr. TAYLOR. The gentleman is exactly correct. I agree with his interpretation of the bill.

Mr. DENNIS. Madam Chairman, will the gentleman yield?

Mr. TAYLOR. I am glad to yield to the gentleman.

Mr. DENNIS. I am conscious of the fact that this was probably covered while I was out of the Chamber by the chairman, but I am a fellow who likes to go camping once in a while in the back country, as they say. As I understand it, right now I could have a campsite permit in the national parks and let them know where I am going in general, but I would not camp in the places marked as campgrounds necessarily but would camp when I got tired. As I understand it, under section 2 of this act my privilege in that regard, as it now exists, is in no wise circumscribed or changed. Is that correct?

Mr. TAYLOR. The gentleman is correct. This legislation does not in any way restrict the present use concerning camping in the back country.

Mr. DENNIS. I thank the gentleman.

The CHAIRMAN. If there are no further requests for time, the Clerk will read.

The Clerk read as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the portions of the national park system and miscellaneous area, as defined in section 1(c), title 16, United States Code, that are open to the general public, the Secretary of the Interior shall not permit camping or overnight occupancy or the erection of any temporary shelter or other structure in connection therewith by any person or group of persons except:

(a) in areas that are regularly designated for such purposes and that are open to such use by all persons, or

(b) by military personnel when necessary for national security purposes in accordance with arrangements made with the Secretary of the Interior, or

(c) by employees or officials of the United States or other public agency in the performance of their official duties in accordance with arrangements made with the Secretary of the Interior.

COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will report the committee amendments to section 1.

The Clerk read as follows:

Committee amendments: On page 2, line 9, change the period to a comma and add the word "or"

On page 2, following line 9, add a new subsection as follows:

"(d) in case of an emergency arising out of an act of God."

The committee amendments were agreed to.

AMENDMENT OFFERED BY MR. ASPINALL

Mr. ASPINALL. Madam Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ASPINALL: On page 2, line 2, after "or", insert ", in the case of areas designated for group camping only, are open to such use by all groups, or".

Mr. ASPINALL. As was explained earlier, Madam Chairman, subsequent to

the completion of its consideration of House Joint Resolution 247, some concern was expressed with respect to group campgrounds and the effect that this legislation might have on them. As the Members will recall, there are two requirements which must be met before overnight use can be permitted under the terms of this legislation:

First, they must be regularly designated campgrounds; and

Second, they must be open to such use by all persons.

While it was generally felt that this did not interfere with the regular designation of campgrounds for the exclusive use of groups, most Members agreed that any possible ambiguity should be removed. For this reason the committee considered the proposed amendment and authorized it to be offered as a committee amendment.

The thrust of the amendment is to authorize the Secretary to continue to designate campgrounds for the exclusive use of groups so long as:

First, they are regularly designated group campgrounds; and

Second, they are open to all groups on the same basis.

This amendment would not permit the temporary designation of a camping area for the exclusive use of any group, but it does recognize the fact that there are presently some 365 regularly designated group campgrounds in various units of the national park system which are reserved from time to time for group use exclusively. The members of the committee feel that it is appropriate to permit such areas to be exclusively used for a reasonable length of time by groups making application for their use in the usual manner. The approval of this amendment by the House will assure adequate authority for that purpose.

With that explanation, Madam Chairman, I urge the adoption of the amendment.

Mr. SAYLOR. Madam Chairman, the Members on this side of the aisle support the amendment which has been offered by the gentleman from Colorado.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Colorado (Mr. ASPINALL).

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 2. The provisions of section 1 shall not apply to camping or overnight occupancy incidental to back country use of any portion of the national park system and miscellaneous areas.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mrs. GREEN of Oregon, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the joint resolution (H.J. Res. 247) relating to the administration of the national park system, she reported the joint resolution back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the joint resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. RYAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 334, nays 55, not voting 41, as follows:

So the joint resolution was passed.

The Clerk announced the following pairs:

Mr. Rooney of Pennsylvania with Mr. Cahill.
Mr. Sikes with Mr. Ashbrook.
Mr. Miller of California with Mr. Lipscomb.
Mr. Kirwan with Mr. Ayres.
Mr. Charles H. Wilson with Mr. Gubser.
Mr. Daddario with Mr. Meskill.
Mr. Giaimo with Mr. Nix.
Mr. Fallon with Mr. Frelinghuysen.
Mr. Pickle with Mr. Roudebush.
Mr. Reuss with Mr. Dawson.
Mr. Smith of Iowa with Mrs. Dwyer.
Mr. Davis of Georgia with Mr. Talcott.
Mr. Cabell with Mr. Collins.

Mr. Young with Mr. MacGregor.
Mr. Tiernan with Mr. Diggs.
Mr. Tunney with Mr. Conyers.
Mr. Hungate with Mr. Esch.
Mr. Blanton with Mr. Purcell.
Mr. Pepper with Mr. Shriver.
Mr. Teague of Texas with Mr. Landrum.

Messrs. CELLER and FRIEDEL changed their votes from "yea" to "nay."

The result of the vote was announced as above recorded.

The doors were opened.

A motion to reconsider was laid on the table.

TO HOLD IN TRUST CERTAIN LANDS FOR THE PUEBLO DE TAOS INDIANS IN NEW MEXICO

Mr. ASPINALL. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 471) to amend section 4 of the act of May 31, 1933 (48 Stat. 108).

The SPEAKER. The question is on the motion offered by the gentleman from Colorado.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 471, with Mrs. GREEN of Oregon in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Colorado (Mr. ASPINALL) will be recognized for 30 minutes and the gentleman from Pennsylvania (Mr. SAYLOR) will be recognized for 30 minutes.

The Chair recognizes the gentleman from Colorado (Mr. ASPINALL).

Mr. ASPINALL. Madam Chairman, I yield myself 13 minutes.

Madam Chairman, this is substantially the same bill that was passed by the House in June 1968. It was debated under a 1-hour rule, and had bipartisan support. There was no opposition to the bill at that time. The bill died in the other body, with the expiration of the 90th Congress. Conditions have not changed, and the Committee on Interior and Insular Affairs recommends that the bill be passed again by the 91st Congress.

The purpose of the bill is to return to the Taos Indians in New Mexico a trust title to 48,000 acres of land that were taken from them in 1906 by mistake. The land was taken, without compensation, by an Executive order that included it in the national forest system. It was mistakenly thought at that time to be public domain, but in fact the land belonged to the Indians.

In 1965 the Taos Indians recovered a judgment in the Indian Claims Commission for the value of these 48,000 acres, plus an additional 82,000 acres, making a total of 130,000 acres. The value of the land has not yet been determined.

The 48,000 acres covered by the bill are particularly important to the Indians, and they want these 48,000 acres to be returned to them rather than be paid for their value. If the land is returned, the judgment which the United States must pay will be reduced accordingly.

The importance of the land to the Indians is not questioned. It is essential to the maintenance of their culture and their religion. In spite of the erroneous taking in 1906, the Indians have never ceased using the land. In fact, one of the reasons for including the land in the national forest was to protect the Indians from intrusion by the white man. Moreover, in 1933 Congress recognized the Indians' need for the land and provided for the issuance to the Indians for a special-use permit for a large part of the area.

The Taos Indians have lived in their present pueblo since the year 1400. They are a sedentary people, and have continually used and occupied a well-defined area surrounding the pueblo for farming, grazing, hunting, gathering, and other purposes. Because of the 7,000-foot elevation and a 100-day growing season, the Indians have relied less on farming than on hunting and gathering. They are a conservative people and are resistant to change. They value their Indian culture, their Indian religion, and their traditional way of life. They insist on preserving them.

When the Spaniards came to this continent in the 16th century, they encroached on some of the lowlands of the Taos Indians along the Rio Grande, but the Spaniards left the Taos Indians relatively undisturbed in their aboriginal use and occupancy area. When the United States acquired sovereignty over New Mexico by the Treaty of Guadalupe Hidalgo on February 2, 1848, the Taos Indians were the owners of all of the lands which they then used and occupied exclusively.

In 1906 the United States took 130,000 acres of the Taos Indians lands for inclusion in the Carson National Forest. The taking was by Executive order of the President. The Indians were not consulted, they were not paid, and they did not agree to the taking. These 130,000 acres include 48,000 acres in the Blue Lake area which are most important to the Indians, particularly from the standpoint of their relgion. It is these 48,000 acres which the Indians want back.

The Indians have been persistent and unrelenting in their efforts to recover their land. In the early days of the national forest, the Indians were given exclusive use of the Blue Lake area when the Forest Service set it aside for grazing by the Indians. The Indians were dissatisfied with this arrangement, and in 1912, the Secretary of the Interior proposed to include the area in an Executive order reservation for the Indians. The Department of Agriculture objected, pointing out that the Indians already had exclusive use of the area.

Under a 1924 statute, a Pueblo Lands Board was established to confirm the titles of non-Indians to certain lands, which are not involved here, which had been occupied in good faith by non-Indians. The Pueblo Lands Board extinguished the Indian title to land appraised at $458,520, but awarded the Indian only $76,128. The Indians offered to waive payment of $297,000 on the understanding that they would be given title to the Blue Lake area, which they so greatly desired. A bill providing for the issuance of a patent to the Indians was introduced in the 72d Congress, but did not pass.

The Indians then sought from the Forest Service a cooperative agreement giving them exclusive use of the area. An agreement was signed in 1927, but it did not give exclusive use.

The Indians were not satisfied, and in 1928 the matter came before Congress. The Forest Service opposed a grant of title to the Indians but recognized the special interest of the Indians in the Blue Lake area. The acting chief forester pointed out that the Indians have a peculiar interest, and, to some degree, equity in the area.

In 1932 another bill was introduced in Congress to patent the lands to the Pueblo, but it also was opposed by the Forest Service. This time there was a compromise and the act of May 31, 1933, was enacted. It provided for issuance to the Indians of a 50-year special-use permit. The special-use permit was intended to safeguard the interests of the Indians by giving them the right to occupy and use the land and resources for their personal use and benefit. The Indians thought their use rights would be exclusive, but the Forest Service thought differently.

Although this act was approved in 1933, a special-use permit was not issued until 1940 because of continuing controversy between the Forest Service and the Indians over its terms, particularly the desire of the Indians for exclusive use. The Indians have never been satisfied with the permit, and friction between them and the Forest Service has continued.

The controversy centers around the need of the Indians to have exclusive use of the area in order to protect their Indian culture and religion. Their religion is based on nature, is secret, and demands complete privacy. For that reason the Indians have insisted that the Forest Service issue no permit to enter the area unless the permit is countersigned by the Pueblo chief. The Forest Service objected and until recently insisted on permitting recreational use of the area by the public. It is this recreational use of the area by the public that threatens the interest of the Indians.

Bills with respect to this area were introduced in 1955, 1957, 1959, 1965, and 1967.

The land can be returned to the Indians without impairing any Federal program. It will continue to be managed for conservation purposes, but administration will be by the Secretary of the Interior instead of the Secretary of Agriculture. The watershed will be fully protected. The land will be maintained in its natural condition and administered in a manner that is consistent with the wilderness which it adjoins. Transfer of the 48,000 acres will not affect the administration of the national forest, which contains 1.5 million acres.

No water rights will be affected by the bill.

Only seven grazing permits are in effect and they are protected by the bill.

The recreational use of the area is

minimal and would continue to be minimal even if this bill were not passed.

Timber harvesting is not permitted or contemplated.

The last administration strongly supported the bill and the present administration strongly supports it. In spite of this strong administration support, the Forest Service has continued to oppose the bill. I believe their objections can be easily answered.

Their first argument in opposition is that the needs of the Indians can be met by a special-use permit, and that a transfer of title to the land is not necessary. This argument is based on a false premise. The Indian needs cannot be met by a special-use permit. We have had more than 60 years of strife and conflict between the Forest Service and the Indians, and the conflict will continue unless the land is restored to the Indians.

This argument works better in reverse. The resources of the land can be adequately conserved and protected by the Secretary of the Interior, if the lands are returned to the Indians, and no Federal or public program will be impaired. So why not let the Indians have back the land which they once owned and have continued to use? Who will be hurt? No one.

Another argument is that the enactment of the bill may set an undesirable precedent and cause other Indian tribes to seek a return of land rather than the payment of money in settlement of their claims. There are several answers to this argument. First, after careful search we have found no other case like the Taos case. It is unique. The land involved is essential to Indian culture and religion; the Indians are actually using the land; and the special need of the Indians has been recognized by the Government throughout the past 63 years. Although the Forest Service says that it believes other tribes might make similar demands, it cites no facts to support its belief.

A second answer is that the committee report expressly states that the committee will not regard the enactment of this bill as a precedent. As a general proposition, the established policy of compensating Indian tribes with money rather than land is sound.

A third answer is that this particular land can be returned to the Indians without prejudicing in any way the administration of the national forest system, and without altering in any way the conservation of the physical resource. Is the Forest Service willing to admit that other forest areas can be similarly handled without damage to the national forest system?

Another objection raised by the Forest Service is that subsection 4(c), which permits the Taos Pueblo to purchase a relinquishment of outstanding grazing permits, would be a recognition that grazing permittees have vested rights that can be bought and sold. This objection was met by a committee amendment stating that the purchase of a relinquishment of a grazing permit shall not be regarded as a recognition of any property right of the permittee in the land or its resources. Moreover, the committee report expressly states that existing law recognizes no real property interest in a grazing permittee, and reaffirms this existing law.

I should also point out that this provision will have no relevance to the question of grazing fee levels, which are now being studied by the administration. As an economic fact, the value of a grazing permit is reflected in the sale price of base ranch property when a ranch is sold. This is undisputed. As a legal fact, it is equally clear that a permittee has no real property interest, and that a permit can be canceled without compensation. Section 4(c) is consistent both with the economic facts and with the legal facts. Let me repeat: the purchase of a relinquishment of a grazing permit by the Taos Indians has nothing to do with the amount of the grazing fee charged. In fact, after the purchase the Indians will pay no grazing fee at all because the land will be theirs.

The issue before us is simple: Do the Indians or the Forest Service have the greater need for this land? The Indian needs have not been met adequately by the special-use permit from the Forest Service. We have had 60 years of conflict and of dissatisfaction. The Forest Service has identified no Federal need that would be prejudiced by the enactment of the bill. From the standpoint of the Government and the public interest, the conservation values of the area can be fully protected by the Secretary of the Interior under Indian ownership, and the bill requires such protection to be maintained. The Forest Service may, in fact, continue to provide conservation services in the form of disease, insect, and fire control.

Simple justice requires that the Indians be given title to the land when their need is great, when no public purpose other than conservation of the resources is involved, and when the resource can be protected and conserved as effectively by the Secretary of the Interior as by the Secretary of Agriculture.

I urge enactment of the bill.

Let me make this statement: To some people the amount of 48,000 acres of land seems to be a tremendous amount of land for religious purposes. But remember that we are talking here about a different kind of culture than most of us recognize, the trees, the rivulets, the plants, and even the rock formations hold religious inspiration to the people of this particular tribe. They have used the area for almost 600 years. They lost it simply in the overenthusiasm of the creation of the national forests. They lost it without any effort on the part of the Government to find out their real title. It would appear to anyone who understands Indians and understands their willingness to meet the equities involved, to take the land in the place of the cash award that was given to them by the judicial procedures, it seems to us that their position is justifiable and more than equitable.

Mr. EDMONDSON. Madam Chairman, will the gentleman yield?

Mr. ASPINALL. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. I thank the chairman for yielding. I think he has made a splendid and comprehensive argument for the bill. To me the most moving part of his argument were the closing sentences of his remarks, because in them he has recognized the basic argument that is present for this bill and is difficult to convey. He has put it in very fine words indeed.

The report of the Department of the Interior makes it very, very clear that the right of this Indian tribe to exclusive use and possession of this property has been recognized successively by the Government of Spain, by the Government of Mexico, and by the Government of the United States by treaty, very specifically and clearly.

Now we have a court decision reemphasizing and restating that right and title in the Indians. It seems to me we do nothing but honor our own treaty commitments and equity and justice when we enact this bill. I hope it will be enacted overwhelmingly in this body.

Mr. ASPINALL. Madam Chairman, I thank my colleague, the gentleman from Oklahoma, for his statement.

Mr. SAYLOR. Madam Chairman, I rise in opposition to H.R. 471, a bill which conveys approximately 48,000 acres of the Carson National Forest, in the State of New Mexico, in trust for the exclusive use of the Pueblo de Taos Indians of New Mexico.

I oppose this legislation with full knowledge that I supported similar legislation in the 90th Congress. However, after a careful reappraisal of the merits of this legislation, I must oppose its passage and I urge my colleagues to oppose its adoption.

H.R. 471, if enacted, will without question establish some undesirable precedents in settling Indian claims. The bill also raises the issue of double compensation to these Indians, and in my opinion, raises serious questions as to the soundness of the Indian Claims Commission interlocutory order which provides the basis of this legislation.

Since 1880 when Congress allowed the first Indian claim for compensation, there has followed a multitude of Indian claims. On August 13, 1946, Congress established the Indian Claims Commission with a mandate to settle all just and equitable Indian tribal claims against the United States. Five years after the filing deadline, some 370 claims representing approximately 350,000 Indians had been filed, asking for 1.5 billion acres of land or 75 percent of the Nation's total land areas before the admission of the States of Alaska and Hawaii. As early as 1963, the United States has paid approximately $70 million in such claims. Additional claims paid within the last 6 years takes this figure well above the sum of $100 million. One can only speculate as to the total amount to be paid to the Indians from the number of claims filed before the Indian Claims Commission, which is listed in its authority to award only a money judgment.

However, this legislation which will convey lands of the United States in trust to the Pueblo de Taos Indians, is in fact, as these Indians believe, a return or reconveyance of these lands to

the Pueblo de Taos Indians. At the same time, these Indians are also seeking monetary compensation for other lands before the Indian Claims Commission.

Settlement of the Pueblo de Taos Indian land claims is one of the most vexed ancient of Indian land claims. As far as I am able to determine, bills have been introduced in the Congress of the United States at least a dozen times or more to resolve this claim. In the 72d Congress, the act of May 31, 1933, was passed granting to the Pueblo de Taos Indians a 50-year renewable permit to use the lands in question. The granting of this permit, I am advised, was in partial settlement of the Pueblo de Taos land claims. In addition, the act of May 31, 1933, also authorized the appropriation of $84,707.09, for payment of the liability of the United States under the act of June 7, 1924, which also involved lands claimed by the Pueblo de Taos Indians.

The purpose of the act of June 7, 1924, was to quiet title to lands within Pueblo Indian land grants. The Pueblo Lands Board, acting pursuant to its authority under the act of June 7, 1924, found that the total value of the Pueblo grant lands to which title was extinguished was $458,520.61. The Pueblo Land Board awarded $76,128.85. The $84,707.29 awarded by the act of May 31, 1933, made payment to the Pueblo de Taos Indians of $160,835.94, and left a balance of $297,684.67.

I submit that the 73d Congress paid the bill by giving a 50-year permit which was accepted at that time by the Indians as full settlement.

Nobody has appeared before our committee, then or now, and has denied that this was full payment.

Mr. EDMONDSON. Madam Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the gentleman from Oklahoma.

Mr. EDMONDSON. My own recollection of the testimony of the Indians on that point was that the use and possession which had been granted under that permit was not a satisfactory settlement because it was not an exclusive use, and that the religion of the Pueblo de Taos Indians required that it be an exclusive use of the sacred areas, and that because they are permitting others to go in—campers, hikers, and so on—they simply have not satisfied the basic and fundamental requirements of the religious practice of this tribe; which it seems to me they have been fairly unanimous in informing our committee is their position.

Mr. SAYLOR. That is correct. The gentleman has reiterated just what I have tried to tell the Members that they settled it once but now the present Indian people say that because of what has happened it was not settled. This is a matter of hindsight.

Mr. HALEY. Madame Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the gentleman from Florida, the chairman of the subcommittee and my distinguished friend, who I might say has probably done more for the American Indians than any other Member of Congress. He and the gentleman from South Dakota, Congressman BERRY, have been two of the outstanding members of this committee and most interested in taking care of the problems of the Indians before our committee. I am glad to yield to the gentleman.

Mr. HALEY. Madam Chairman, I thank my good friend for yielding to me.

Of course, the gentleman from Florida hopes that he can do just a little bit more for the Indians with the passage of this bill, but let me call attention to the fact that practically every treaty entered into between the United States and Indians was supposed to be some part of a final settlement, but here Congress comes along, for the first time in the history of our Nation, and establishes a court—the Congress of the United States establishes a court—to do justice to these early Americans. So the Congress at the time of establishing it did not think all of these claims had been adjudicated.

Mr. SAYLOR. No. I might say to my colleague and good friend that when we established the Indian Claims Commission we certainly did not expect to dig up all of the claims that had never been presented and certainly we expected to give some credence to the fact that Congress in the past had settled some of these claims.

Mr. DINGELL. Madam Chairman, will the gentleman yield to me?

Mr. SAYLOR. I am glad to yield to the gentleman from Michigan.

Mr. DINGELL. I would like to point out that if what my good friend from Florida says is true, this bill will not satisfy the Indians in question, either. I note here that on pages 4 and 5 of the bill the Indians do not get fee title to the land at all. Rather it is set up for purposes compatible with their preservation as a wilderness. In addition to this, it says that the Secretary of the Interior shall be responsible for the establishment and maintenance of conservation measures for these lands, including without limitation protection of forests from fire, disease, insects, or trespass; prevention or elimination of erosion, damaging land use, or stream pollution; and maintenance of stream flow and sanitary conditions; and the Secretary is authorized to contract with the Secretary of Agriculture for any services or materials deemed necessary to institute or carry out any of such measures. So the Indians will not get their land under this. The Indians may think so, but in point of fact they will only get this bill. However, in this bill it will do a number of other things, also, that the Indians are probably not even aware of.

Mr. SAYLOR. The gentleman is absolutely correct. And we do not know whether the Federal Government will take an appeal from the interlocutory decree or not, but the committee has refused to legislate on this basis before.

From the information available to me, the Pueblo de Taos Indians waived their rights to their other land claims in lieu of a patent to the area claimed in this legislation. It was precisely this waiver that precipitated the inclusion of section 4 in the act of May 31, 1933 which granted the issue of a 50-year renewable permit in lieu of the patent requested by the Indians as a final settlement.

In order that the record is clear as to the content of section 4 of the act of May 31, 1933, I insert the same here in my remarks:

SEC. 4. That for the purpose of safeguarding the interests and welfare of the tribe of Indians known as the Pueblo de Taos of New Mexico in the certain lands hereinafter described, upon which lands said Indians depend for water supply, forage for their domestic livestock, wood and timber for their personal use and as the scene of certain of their religious ceremonials, the Secretary of Agriculture may and he hereby is authorized and directed to designate and segregate said lands, which shall not thereafter be subject to entry under the land laws of the United States, and to thereafter grant to said Pueblo de Taos, upon application of the Governor and council thereof, a permit to occupy said lands and use the resources thereof for the personal use and benefit of said tribe of Indians for a period of fifty years, with provision for subsequent renewals if the use and occupancy by said tribe of Indians shall continue, the provisions of the permit are met and the continued protection of the watershed is required by public interest. Such permit shall specifically provide for and safeguard all rights and equities hitherto established and enjoyed by said tribe of Indians under any contracts or agreements hitherto existing, shall authorize the free use of wood, forage, and lands for the personal or tribal needs of said Indians, shall define the conditions under which natural resources under the control of the Department of Agriculture not needed by said Indians shall be made available for commercial use by the Indians or others, and shall establish necessary and proper safeguards for the efficient supervision and operation of the area for national forest purposes and all other purposes hereinstated, the area referred to being described as follows:

Beginning at the northeast corner of the Pueblo de Taos grant, thence northeasterly along the divide between Rio Pueblo de Taos and Rio Lucero and along the divide between Rio Pueblo de Taos and Red River to a point a half mile east of Rio Pueblo de Taos; thence southwesterly on a line half mile east of Rio Pueblo de Taos and parallel thereto to the northwest corner of township 25 north, range 15 east; thence south on the west boundary of township 25 north, range 15 east, to the divide between Rio Pueblo de Taos and Rio Fernandez de Taos; thence westerly along the divide to the east boundary of the Pueblo de Taos grant; thence north to the point of beginning; containing approximately thirty thousand acres, more or less.

I am further advised that it was contemplated in the passage of the act of May 31, 1933, that subsequent renewals of the permit would equal the balance claimed of $297,684.67, and therefore, the claim or debt due the Pueblo de Taos Indians was paid as far as Congress was concerned.

If the granting of the permit by the act of May 31, 1938, was in partial settlement of the Pueblo de Taos land claims, then passage of H.R. 471 would constitute double compensation. On this basis, Madam Chairman, the contention that this legislation involves double compensation to the Pueblo de Taos Indians does merit consideration.

H.R. 471 will, if passed, provide us with at least three undesirable precedents. First, it establishes the precedent of substituting payment in kind or land in lieu

of monetary awards for judgments rendered by the Indian Claims Commission. If Congress had intended this policy to be established then it could and should have provided for this in the legislation creating the Indian Claims Commission. Second, the bill authorizes the Pueblo de Taos Indians to obtain the relinquishment by purchase of non-Indian grazing permits in 16,000 acres not covered by the existing permit. The Forest Service and the Bureau of Land Management of the Department of the Interior have consistently maintained before our committee that grazing permits have no vested rights or value which can be bought and sold. H.R. 471, if passed, will establish this undesirable precedent.

Third, the passage of H.R. 471 will be a precedent for the granting of forest lands or other Federal lands in settlement of their claims or provide a basis for increasing monetary awards of the Indian Claims Commission. I am advised that because of the passage of similar legislation by the House in the last Congress numerous tribes or Pueblos are considering the return of lands on the basis that such lands were subject to their aboriginal use and occupancy and necessary for the fulfillment of their religious practices. Already the newspapers of New Mexico have printed the possibility of such claim by the Santa Clara Indians and the Sandia Pueblo with possible additional claims from the Mescalero Indians and the Navajos. I am also advised that a drafting service has been requested of the Department of the Interior to grant the Havasupai Indians 70,000 acres of the Kaibab National Forest and 110,000 acres of the Grand Canyon National Monument and National Park on the basis of aboriginal use.

The history behind this legislation is too lengthy to attempt any summary of it at this time. However, it is interesting to note that the case made for this legislation is based upon the findings of fact and opinion of the Indian Claims Commission entered on September 8, 1965, in an interlocutory order, in the case of the Pueblo of Taos against the United States of America. The Commission determined that the Pueblo of Taos Indians were entitled to compensation on two separate and distinct claims. The first claim found that the Indians had established aboriginal title on the basis of use and occupancy of 130,000 acres which was extinguished by the United States in 1906. In the second claim, the Commission found that the Indians had recognized title by way of patent to 17,360 acres which was extinguished by the United States in 1933 and compensation in the sum of $297,684.67 was due the Indians less the value of the use permit covering 32,000 acres of the 48,000 acres involved in H.R. 471.

The finding of the Indian Claims Commission that these Indians had aboriginal title to 130,000 acres of land by reason of use and occupancy is most interesting in light of its finding of fact No. 18 in which the Commission found that the Indians "offered little proof other than a general statement that the date of taking was around 1906" as to these aboriginal lands. Certainly the Commission should have required further evidence on this point in light of their additional findings of facts Nos. 9 and 14 which recite the true historical facts as encountered by the Spanish when they entered the Rio Grande Valley in the 16th Century and found the Pueblo Indians to be a sedentary people who lived in villages or fixed communities. Further evidence is also required as to the taking of the 130,000 acres when the historical facts also indicate that the Spaniards adopted the policy of fixing pueblo boundaries to areas comprising approximately 17,712 acres. It is extremely difficult to justify in my own mind such findings of fact by the Commission when the same Commission also concludes in finding No. 17, that in 1850 the total Taos Indian population of approximately 400 people were allegedly using and occupying a total acreage claim in excess of 300,000 acres.

Madam Chairman, these inconsistent findings on the part of the Indian Claims Commission raises serious doubts in my mind as to the soundness of the interlocutory order. Moreover, the Commission also finds that the grant of 17,360 acres to the Pueblo of Taos by Spain is not a limitation on their claim to aboriginal title to the area. Yet the Commission fails to discuss the effect of the Act of December 22, 1958, in which Congress confirmed both town claims and pueblo land claims in the county of Taos, N. Mex., among others.

Madam Chairman, Congress has failed to enact the legislation before this body on numerous occasions in the past for reasons which I have attempted to point out. It is for these reasons that I oppose the passage of H.R. 471.

The CHAIRMAN. The gentleman from Pennsylvania has consumed 20 minutes.

Mr. ASPINALL. Madam Chairman, I yield myself 30 seconds.

Madam Chairman, in response to the argument of the gentleman from Pennsylvania, may I state:

First. The Indian Claims Commission decided by an order dated September 8, 1965, in Docket No. 357 that the Taos Indians had aboriginal Indian title to some 130,000 acres of land, which are described in the Commission's findings of fact. It also decided that the title was extinguished in 1906, and that the Indians have not been paid. The Commission then ordered the case to proceed to a determination of the value of the land in order that a money judgment may be issued, but this has not yet been done.

Second. The 130,000 acres covered by the Commission's order include the 48,000 acres described in H.R. 471. This is shown by plotting on a map the boundaries of the area described in the Commission's findings of fact, and then by plotting on the same map the boundaries of the area described in H.R. 471. The area described in the bill is entirely within the area described by the Commission. Therefore, the Commission has formally and specifically determined that the Indians have not been paid for the 48,000 acres in question.

Third. Incidentally, if H.R. 471 is not enacted, the Commission will in due course enter a judgment against the United States for the value of this land. If the bill is enacted the judgment will be reduced by the value of the 48,000 acres.

Fourth. When the gentleman from Pennsylvania argues that the Indians have been paid for the land, he is in reality arguing that the Commission's finding of fact was wrong. The finding was made almost 4 years ago, and the Department of Justice did not appeal. Moreover, the floor of the House is not the proper place to examine into the correctness of a judicial decision of this kind. Indian claims litigation is highly technical and complicated. If an error is made, the Court of Claims is the proper place to correct it. The Department of Justice did not appeal this decision and apparently was satisfied that the decision was correct.

Insofar as the gentleman's argument is based on an analysis of the Commission's findings of fact, I do not propose to debate that kind of an issue here. I should point out, however, that the issue was not raised last year either in committee or on the floor. It was not raised this year during committee consideration of the bill. The gentleman from Pennsylvania did not disclose to me before this debate the basis for this contention. Nevertheless, when I became aware of his position, I asked the committee counsel for a careful review of the Commission's decision, and I can assure my colleagues that I am completely satisfied that nothing in the decision or in the findings of fact casts any doubt on the correctness of the decision. The Commission's decision is clear and unambiguous. The Taos Indians have been paid for other land that is not involved here, but they have not been paid for this land.

Mr. ASPINALL. Madam Chairman, I yield 5 minutes to the gentleman from Michigan (Mr. DINGELL.)

Mr. DINGELL. Madam Chairman, this is a very difficult bill to oppose. I have great fondness and affection for my good friend, the gentleman from Colorado, the chairman of the distinguished Committee on Interior and Insular Affairs, from which the bill originates.

It is always with a great deal of concern that I oppose legislation that the distinguished gentleman from Colorado has brought before this body.

Madam Chairman, it is very difficult to defend the things that have happened to the Indians over the years in the taking of their lands, and it is also very difficult to defend a number of other actions which this Nation has taken against our Indian people, but the fact of the matter is, as the gentleman from Pennsylvania (Mr. SAYLOR) has so well pointed out, this legislation is going to afford one tribe double compensation. There is, in addition to affording double compensation, a matter which I believe should concern all of us here in that it is going to establish dangerous and bad precedents such as have already been pointed out by my good friend, the gentleman from Pennsylvania, not the least of which will be the precedent that the national forests shall become devices to be disposed of in large blocks for settle-

ments of monetary claims awarded by the Indian Claims Commission.

Madam Chairman, I intend to offer an amendment which I believe will go a long way toward settling or meeting the legitimate and just complaints of the Indians concerned here. It will give them, for all intents and purposes, total, exclusive, and complete use of the area in which they assert religious interest. It will afford protection for watersheds and water rights of persons in the areas, and it will still afford a measure of protection of the land to assure that it will be protected against hazardous fire, insects, and other dangers which would threaten, not only the land and its use, but also the rights and the interests of the Indians therein.

I would point out that this bill, if passed and enacted into law, will be followed very shortly by a number of substantially similar bills giving substantial tracts of national forests and public domain land to the Santa Clara Indians; to give the Navajos Mount Taylor and Navajo Mountain; to give the Mescaleros significant tracts of land, give the Hava Supai Indians some 70,000 acres in Kaibab National Forest, and 110,000 acres in Grand Canyon National Park, and Grand Canyon National Monument.

The Hopis will assert claims for the San Francisco Peaks.

The San Carlos Indians are going to claim minerals in the north end of the Santa Theresa division of the Coronado National Forest.

This matter was adjudicated a long time ago.

In 1906 it was found by the Indian Claims Commission that the Taos Indians were entitled to compensation for two claims: First, Aboriginal title to 130,000 acres. It was found that this was extinguished in 1906; and, the second claim by patent to some 17,360 acres which was extinguished in 1933 and that compensation was due the Indians in the sum of $297,684 less the value of a use permit which is now under discussion in 32,000 acres of the 48,000 acres involved here.

Because of a controversy involving the lands here, a special use permit was issued the Taos Indians for the land in question.

I think it would be well that this body understand what was said by the special attorney for the Taos Indians when he was discussing this matter and informed that the above-mentioned agreement had been approved by the free and voluntary action of the members of the Indian tribe.

He said as follows:

> The agreement meets nearly every reasonable requirement that the Indians can have and yet leaves the administration of the area in the hands of the Forest Office so that they can care for and preserve the same for all time. As I see it, this arrangement is a much better one than if the area had been set aside to the Pueblo by act of Congress, granting, for the purpose of argument, that the latter could have been accomplished, which I very seriously doubt.
>
> There are a few of the Taos Indians that still feel that this land is rightfully theirs and that the same should have been set aside to them without restriction, but I believe that the more intelligent of them realize that this agreement is the most that they could hope for and are satisfied to have it so.

As a matter of fact, the study of the history of the area will indicate that some of the Taos Indians concerned were actually glad to have this set aside as part of the national forest because at the time they felt they could not establish any reasonable and viable claim to the land in question.

Going further, let us listen to the remarks of Mr. Herbert J. Hagerman, special commissioner to negotiate with the Indians. He said this:

> As to the Blue Lake area—I have to say this: The area contains the watershed at the head of both the Indian and non-Indian water supply of the Taos region. The people of Taos do not wish this area patented to the Indians. I see no good reason why it should be. It is now administered effectively as a part of the Carson National Forest. The Indians already have grazing privileges as well as rights to cut firewood, and the effective use of the lake for certain annual ceremonies. A continuation of the present arrangement should be acceptable to everybody.

Madam Chairman, the answer to this legislation is that it is bad legislation. It sets up a bad precedent and opens the national forest to raids by any number of interests, including good faith claims by Indians who wish to redress grievances perpetrated long ago but which were quieted and abated by judicial action and by action of the Indians Claims Settlement Commission.

This legislation should be defeated, or at best it should be substituted for by the amendment which I will offer later by which I am trying to protect the rights of the Indians and yet protect the rights of the people of the United States.

Mr. KYL. Madam Chairman, I yield 5 minutes to the gentleman from South Dakota (Mr. BERRY).

Mr. BERRY. Madam Chairman, I rise in support of the bill, H.R. 471, which is a bill to give trust title to this property, to 48,000 acres to the Pueblo de Taos Indians of New Mexico.

We have had some opposition on the floor today from not only our side of the committee, but also from the other side, giving as their reason that this legislation may establish some sort of precedent. We recognize the voice of Esau and the hand of Jacob in this opposition.

As it has been pointed out by our chairman so ably, the land was taken from these Indian people in 1906 by an Executive order.

Then in 1933, as has been pointed out, Congress attempted to ease its conscience, or the conscience of the Federal Government, by giving to the Indians a 50-year renewable easement. But this was without the consent of the Indians, and I think this is a point that should be clearly understood—without the consent of the Indians—and it has never been approved by the Indians. They have never been satisfied with this permit because they have had considerable interference in their religious practices because of the adverse use of the land. They have constantly sought to have these lands returned so that they can use them without interference from the outside. That is exactly what this bill is all about.

During the hearings on the legislation witnesses were asked to address themselves to the main issue of the legislation; namely, first, Do the Indians have a need for this land? Can their need be met adequately by a continuation of the special-use permit rather than by conveyance of trust titles? Third, is a trust title necessary to meet their needs, and would any public program be impaired by the conveyance of a trust title?

The response to these issues was overwhelmingly in favor of the Taos Indians.

As has been pointed out, in 1965 the Claims Commission made a money determination, but the Indians have asked that they have their land back rather than the money, because this is their religion; this is their church, and I think that their religious beliefs and ceremonies, while they may seem strange to us, by the same token our religious ceremonies and beliefs may seem equally strange to them. We do not go into any other church and build campfires. We do not leave debris in any other church. But this is what the organizations, the Sierra Club and the so-called conservationists, would like to have you believe, that we, the public, are entitled to do, even though they are dealing with the Indian's church and the religion of these people.

Madam Chairman, the argument presented during the hearings that this legislation will set undesirable precedents are spurious. There will be no great change in the administration of these lands by the transfer in trust of these lands. The bill merely substitutes the Department of the Interior for the Department of Agriculture's administration of these lands.

The House Committee on Interior and Insular Affairs, with I think one exception, have determined that the equities in this case are on the side of the Indians, and they have again brought this bill to the floor in order that this Congress may have an opportunity to rectify a wrong that was done originally in 1906. I hope that this Committee and this Congress and this House will support the Committee on Interior and Insular Affairs in its decision to protect the rights of these first Americans.

Mr. ASPINALL. Madam Chairman, I yield 4 minutes to the gentleman from Arizona (Mr. UDALL).

Mr. UDALL. Madam Chairman, it grieves me to see a man who has contributed so much to America, my distinguished colleague from Pennsylvania—it grieves me to see him go so wrong. We heard a lot of talk about precedent here this afternoon, and I would suggest that you never set a bad precedent when you do what is right.

Mark Twain once said—and I saw this quotation on someone's wall not too long ago:

> Do what is right. You will please some people and astonish all the rest.

Mr. SAYLOR. Madam Chairman, will the gentleman yield?

Mr. UDALL. I yield to the gentleman from Pennsylvania.

Mr. SAYLOR. Madam Chairman, I want to say, I did just that. I reversed my position from last year. I finally saw the error of my ways.

Mr. UDALL. I would say to the gentleman from Pennsylvania, I have had some

experience with changing my mind on questions too, so I feel keenly the dilemma in which the gentleman finds himself, but I have always tried to follow the leadership of the gentleman, as frequently as I could, and I was touched and moved as I read this morning the CONGRESSIONAL RECORD from last year, when the gentleman made the speech to which he referred.

Madam Chairman, I just want to refer to a portion of the gentleman's speech again, because the oratory moved me again when I read it. This is what the gentleman from Pennsylvania said last year in this very Chamber when he was supporting this bill. He said he supported the bill "as a matter of simple justice." He also said, and I continue to quote:

> The Pueblo de Taos Indians need this land more than the Forest Service needs it. A conveyance in trust to the Pueblo de Taos Indians will not prejudice sound conservation management of the lands . . . the enactment of this will not set a precedent for compensating the Indians with land instead of money in Indian Claims Commission cases.

The gentleman from Pennsylvania gave the reason for that when he said:

> There is no other claims case like the Taos-Blue Lake case.

The facts today are exactly the same facts as they were a year ago when the House passed this bill by an overwhelming vote, but because the gentleman from Pennsylvania is held in such high regard in this Chamber and he made such a persuasive speech on that occasion, I want to continue to quote him for a minute. This may pain the gentleman somewhat, but it hurts me more than it hurts the gentleman to have these words of wisdom quoted, only to have them rejected by their author. The gentleman from Pennsylvania said:

> I also want to reject the idea that the enactment of this legislation would in some way be regarded as a threat to the integrity of the national forest system. National forest lands are disposed of every year when the disposition is in furtherance of the conservation program. A transfer of the Blue Lake area from a national forest reserve to an Indian reserve, with explicit provisions for conservation management, is in furtherance of the conservation program and at the same time a belated amends for a wrong committed 60 years ago.

These were the words of the gentleman in June of 1968.

Madam Chairman, the facts are the same today as they were then. I certainly believe with the great majority of the members of the Committee on Interior and Insular Affairs that we must do justice in this case, and we must pass the bill once again, as we did last year.

Mr. EDMONDSON. Madam Chairman, will the gentleman yield?

Mr. UDALL. I yield to the gentleman from Oklahoma.

Mr. EDMONDSON. Madam Chairman, I listened to the gentleman from Arizona read these words of wisdom from the past from the gentleman from Pennsylvania. My heart has been stirred by the eloquence of those words, just as the gentleman's heart was moved. Would the gentleman not agree with me also that on that previous occasion the gentleman from Pennsylvania put a little more heart and a little more really moving spirit into what he had to say then than he did when he was in the well today?

Mr. UDALL. I would have to agree. I have been a student of oratory and I have followed many Members as they speak, and I can testify that the gentleman from Pennsylvania did appear to have more enthusiasm and spirit when he gave the speech a year ago than when he gave the speech today, even though the speech he delivered today was superb.

Mr. SAYLOR. Madam Chairman, will the gentleman yield?

Mr. UDALL. I yield to the gentleman from Pennsylvania.

Mr. SAYLOR. Madam Chairman, I would like to thank my colleague, the gentleman from Arizona, for having had the courage to remind me of my own remarks, but I would like to remind the gentleman that a year ago in June, when I made that speech, I had a real fight going with the Forest Service. As the result of that speech, the gentleman would be surprised at the change the Forest Service has seen fit to make. So even though I have been seeing the wisdom of changing my views, that speech was so good that it convinced the U.S. Forest Service to change some of its views. So all is not lost even though I have changed my position.

I am delighted to have the House know once again that a year ago I was very persuasive. As I say, I hope I am just as persuasive today.

Mr. UDALL. Madam Chairman, I thank the gentleman from Pennsylvania for his contribution.

I am reminded of one of the eulogies we heard here yesterday of the late Senator from Illinois. He was quoted as saying on one occasion that he was a man of principle and one of his first principles was flexibility. So perhaps that is appropriate to the gentleman from Pennsylvania.

I note in closing that one of the Representatives from the State of New Mexico indicated to me he was going to support this legislation. I think this should have some considerable weight in our deliberations.

Madam Chairman, I urge the support of this bill.

Mr. SAYLOR. Madam Chairman, I yield 5 minutes to the gentleman from South Dakota (Mr. REIFEL).

Mr. REIFEL. Madam Chairman, I thank my good friend for giving me this time. As the ranking minority member of the Interior Subcommittee on Appropriations, with the distinguished chairwoman of our subcommittee, the gentlewoman from Washington (Mrs. HANSEN), I have had frequent conversations with representatives of the people from the Taos Pueblo.

In each of those instances, of course, out of their warm feeling for the consideration of the Members of this body, and this committee, they have expressed their high regard for the chairman of the full Committee on Interior and Insular Affairs, the gentleman from Colorado (Mr. ASPINALL), and the chairman of the Subcommittee on Indian Affairs, the gentleman from Florida (Mr. HALEY), a gentleman who has not a single Indian in his district and yet is one of the champions for Indian welfare and Indian well-being. They have also had the highest words of praise for the fine support which was provided by the ranking minority member of the full Committee on Interior and Insular Affairs, as he was quoted just a few minutes ago by the gentleman from Arizona (Mr. UDALL), because the gentleman from Pennsylvania (Mr. SAYLOR), too, has no Indians in his district but at the same time is one of the champions for what is good for America and what is helpful to Indian Americans.

Of course, much has been said in the course of this debate with respect to precedent. There is a precedent connected with this legislation, which is really the essence of what is attempted to be done; that is, so far as the Taos Pueblo people are concerned they are the beneficiaries of a spiritual relationship with their Maker which is older than that of the Judeo Christian religions to which many of us belong, the formal organizations with their cathedrals and other lesser edifices to provide an opportunity to express their relationship to their Creator. There are few in our land who have this kind of continuous direct relationship with their Creator, and among these are the Taos Pueblos. They look upon their land as the halls of a cathedral in which they may stand, in the valleys looking to the mountains and the skies of that great State of New Mexico, to pray, beseech, and thank their Creator.

That is all that this legislation is attempting to do—not to give a 50-year lease to a piece of land on the basis of which they might in that period have this privilege, but, as this legislation attempts to do, to provide in perpetuity a place where they may stand on their mother soil and pray to their God as they have from time immemorial.

That is all that is being asked here. This is recognized by the chairman of the Committee on Interior and Insular Affairs, the gentleman from Colorado (Mr. ASPINALL), and the chairman of the Indian Affairs Subcommittee, the gentleman from Florida (Mr. HALEY), and my colleague, the gentleman from South Dakota (Mr. BERRY), and as it was recognized by the distinguished gentleman from Pennsylvania, even last year.

Madam Chairman, it is interesting to note, just as a piece of side information, that this agency of the Government, the Forest Service, you know, is full of chiefs. There is the Chief Forester and all the rest of them are deputy chiefs. Now, really it would not hurt the chiefs to give a few Indians a little bit of land that is now in the national forest.

Mr. ASPINALL. Madam Chairman, I yield the balance of the time on the majority side to the gentleman from Florida (Mr. HALEY), the chairman of the subcommittee.

Mr. HALEY. Madam Chairman, this bill restores to the Taos Pueblo in New Mexico the trust title to 48,000 acres of land that were taken from them in 1906 by an Executive order which put the lands in a national forest. The Indians did not agree to the taking, they were not paid for the land, and they want their land back. It is only fair that they get it.

Restoration of the land to the Indians will right a wrong in the only manner that is acceptable to the Indians, and it will not affect adversely the conservation program of the United States. Ordinary principles of fairness and equity require this action.

The governor of the Taos Pueblo, a secretary of the Pueblo, and two senior council members appeared before the Subcommittee on Indian Affairs in support of this bill. They are proud descendants of a proud people. The Taos Indians have maintained their pueblo life in the original Taos Pueblo since the year 1400, long before the white man arrived. All of us who heard the four leaders were impressed with their dignity, their sincerity, and the fairness of their request. They are asking only for something which was theirs and which they continue to believe is theirs.

The Pueblo Indians are noted for their peaceful ways. They are friendly. They do not bother others, but in turn they expect others to leave them alone. They value their Pueblo society and they want to preserve it.

They do not have much in the way of wordly goods. They live frugally. They have little cash income.

The Taos Indians are a closely knit group, and religion permeates their communal life. The Blue Lake area is the most holy symbol of their ancient religion, and the symbolism attaches to the entire watershed. The watershed is the source of their life. Although the nature of their religion is secret, it is clear that if the area were extensively used for recreation by the public it would be desecrated in the eyes of the Indians.

In 1933 Congress authorized the Secretary of Agriculture to issue to the Taos Pueblo a special-use permit for approximately 32,000 acres in the Blue Lake area. The Indians thought the special-use permit gave them an exclusive use, and it did insofar as timber and forage were concerned. The admission of non-Indians for recreational use, however, has been a constant source of conflict between the Indians and the Forest Service. The Forest Service administration of the Blue Lake area has exerted a continuing pressure on the religious use of the land of the Pueblo. Religious privacy has been constantly jeopardized.

This bill amends the 1933 act by substituting for the special-use permit on 32,000 acres a trust title to 48,000 acres of land. In other words, the Indians will get a trust title to the land, and the land will become a part of their reservation. The enlargement of the area from 32,000 acres to 48,000 acres describes more accurately the land the Indians actually use and need.

The transfer of the lands from a national forest reservation to an Indian reservation will not affect the management of the land for conservation purposes. The Indians want the land to be retained in its natural condition, and the bill so requires. Except for traditional Indian uses such as religious ceremonials, hunting, fishing, forage, and wood for personal use, the land must be maintained as a wilderness. This is a limitation which the Indians sought because it reflects their intended use and because it should dispel any idea that they want to exploit the natural resources for purposes of private gain. Moreover, the bill requires the land to be administered in accordance with sound conservation practices, and the Secretary of the Interior may enter into an agreement with the Secretary of Agriculture providing for the services of the Forest Service in this respect. The interest of the United States in the conservation of the resource is therefore fully protected.

Seven grazing permits are now outstanding on portions of the land. The annual fees paid for the permits are about $340. The bill provides that the permittees may renew their permits under regulations of the Forest Service to the same extent they could have been renewed prior to enactment of the bill. The Pueblo, however, may purchase relinquishments of the grazing permits. This provision is not intended to recognize the permits as a property interest. They are not property rights. The Indians desire, however, to liquidate the permits in an orderly way, and this provision of the bill authorizes the use of tribal funds for this purpose.

The bill also provides that the Indian Claims Commission will determine the extent to which the value of the interest in the land conveyed should be set off against the claim of the Taos Indians which is still pending. This is a standard setoff provision that is carried in all similar bills. Incidentally, this provision of the bill will result in reducing the financial liability of the United States to the Indians in the claims litigation. This is not, however, a reason for enacting the bill. The bill is fully justified on its merits.

The CHAIRMAN. The time of the gentleman from Florida has expired. All time has expired.

The Clerk will read.

The Clerk read as follows:

H.R. 471

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4 of the Act of May 31, 1933 (48 Stat. 108), providing for the protection of the watershed within the Carson National Forest for the Pueblo de Taos Indians in New Mexico, be and hereby is amended to read as follows:

"SEC. 4. (a) That, for the purpose of safeguarding the interests and welfare of the tribe of Indians known as the Pueblo de Taos of New Mexico, the following described lands and improvements thereon, upon which said Indians depend and have depended since time immemorial for water supply, forage for their domestic livestock, wood and timber for their personal use, and as the scene of certain religious ceremonials, are hereby declared to be held by the United States in trust for the Pueblo de Taos:

"Beginning at the southeast corner of the Tenorio tract on the north boundary of the Taos Pueblo grant in section 22, township 26 north, range 13 east;

"thence northwesterly and northeasterly along the east boundary of the Tenorio tract to the point where it intersects the boundary of the Lucero de Godoi or Antonio Martinez Grant;

"thence following the boundary of the Lucero de Godoi Grant northeasterly, southeasterly and northerly to station 76 on the east boundary of the survey of the Lucero de Godoi Grant according to the March 1894 survey by United States Deputy Surveyor John H. Walker as approved by the United States Surveyor's Office, Santa Fe, New Mexico, on November 23, 1894;

"thence east 0.85 mile long the south boundary of the Wheeler Peak Wilderness, according to the description dated July 1, 1965, and reported to Congress pursuant to section 3(a)(1) of the Wilderness Act (Public Law 88–577);

"thence northeast approximately 0.25 mile to the top of an unnamed peak (which is approximately 0.38 mile southeasterly from Lew Wallace Peak);

"thence northwesterly 1.63 miles along the ridgetop through Lew Wallace Peak to Old Mike Peak;

"thence easterly and northeasterly along the ridgetop of the divide between the Red River and the Rio Pueblo de Taos to station numbered 109 of said 1894 survey, at the juncture of the divide with the west boundary of the Beaubien and Miranda Grant, New Mexico (commonly known as the Maxwell Grant), according to the official resurvey of said grant executed during July and August 1923 by United States Surveyor Glen Haste and approved by the General Land Office, Washington, District of Columbia, on April 28, 1926;

"thence southeasterly, southwesterly, and southerly along the west boundary of the Maxwell grant to the north line of unsurveyed section 33, township 26 north, range 15 east;

"thence southerly to the north boundary of fractional township 25 north, range 15 east;

"thence southerly and southwesterly through sections 4, 9, 8, and 7, township 25 north, range 15 east to the southwest corner of said section 7;

"thence westerly along the divide between the Rio Pueblo de Taos and Rio Fernandez de Taos to the east boundary of the Taos Pueblo grant;

"thence north to the northeast corner of the Taos Pueblo grant.

"(b) The lands held in trust pursuant to this section shall be a part of the Pueblo de Taos Reservation, and shall be administered under the laws and regulations applicable to other trust Indian lands: *Provided,* That the Pueblo de Taos Indians shall use the lands for traditional purposes only, such as religious ceremonials, hunting and fishing, a source of water, forage for their domestic livestock, and wood, timber, and other natural resources for their personal use, all subject to such regulations or conservation purposes as the Secretary of the Interior may prescribe. Except for such uses, the lands shall remain forever wild and shall be maintained as a wilderness as defined in section 2(c) of the Act of September 3, 1964 (78 Stat. 890). With the consent of the tribe, but not otherwise, nonmembers of the tribe may be permitted to enter the lands for purposes compatible with their preservation as a wilderness. The Secretary of the Interior shall be responsible for the establishment and maintenance of conservation measures for these lands, including, without limitation, protection of forests from fire, disease, insects or trespass; prevention or elimination of erosion, damaging land use, or stream pollution; and maintenance of streamflow and sanitary conditions; and the Secretary is authorized to contract with the Secretary of Agriculture for any services or materials deemed necessary to institute or carry out any of such measures.

"(c) Lessees or permittees of lands described in subsection (a) which are not included in the lands described in the Act of May 31, 1933, shall be given the opportunity to renew their leases or permits under rules and regulations of the Secretary of the Interior to the same extent and in the same manner that such leases or permits could have been renewed if this Act had not been enacted; but the Pueblo de Taos may obtain

the relinquishment of any or all of such leases or permits from the lessees or permittees under such terms and conditions as may be mutually agreeable. The Secretary of the Interior is authorized to disburse, from the tribal funds in the Treasury of the United States to the credit of said tribe, so much thereof as may be necessary to pay for such relinquishments and for the purchase of any rights or improvements on said lands owned by non-Indans.

"(d) The Indian Claims Commission is directed to determine in accordance with the provisions of section 2 of the Act of August 13, 1946 (60 Stat. 1049, 1050), the extent to which the value of the interest in land conveyed by this Act should be credited to the United States or should be set off against any claim of the Taos Indians against the United States."

Mr. SAYLOR (during the reading). Madam Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will report the committee amendments:

The Clerk read as follows:

Committee amendments:

Page 4, line 2, strike out "Fernandez" and insert "Fernando".

Page 4, line 5, strike out "grant." and insert "grant;".

Page 4, between lines 5 and 6, insert a new paragraph as follows:

"thence west to the point of beginning; containing approximately 48,000 acres, more or less".

Page 4, line 14, strike out "or" and insert "for".

Page 5, line 21, after the period insert a new sentence as follows: "The authority to pay for the relinquishment of a permit pursuant to this subsection shall not be regarded as a recognition of any property right of the permittee in the land or its resources".

Page 6, line 4, strike out "States." and insert "States".

Page 6, after line 4, insert a new subsection (e) as follows:

"(e) Nothing in this section shall impair any vested water right."

The committee amendments were agreed to.

AMENDMENT OFFERED BY MR. DINGELL

Mr. DINGELL. Madam Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DINGELL: Strike out all after the enacting clause of H.R. 471 and insert in lieu thereof the following:

"That (a) for the purposes of safeguarding the interests and welfare of the tribe of Indians known as the Pueblo de Taos of New Mexico, the following described lands are hereby designated for addition to and as a part of the Wheeler Peak Wilderness, Carson National Forest, New Mexico:

"Beginning at a point on Old Mike Peak on the southeast boundary of the Wheeler Peak Wilderness; thence easterly along the crest of the ridge dividing Red River from the Rio Pueblo de Taos to its interception with the west boundary of the Beaubien and Miranda Grant (Maxwell Grant);

"thence southeasterly along the west boundary of the aforesaid grant to the crest of the ridge between the Bonita Park drainage and the Rio Pueblo de Taos;

"thence southward along the crest of the aforesaid ridge to the junction of the Witt Park drainage and the Rio Pueblo de Taos;

"thence northwesterly along the crest of the ridge forming the south boundary of the Waterbird Lake drainage to its interception with the crest of the ridge between the Rio Lucero and the Rio Pueblo de Taos;

"thence northerly along the crest of the aforesaid ridge to the point of beginning on Old Mike Peak, containing approximately 4,600 acres, more or less.

"(b) Subject to the provisions of subsection (c) of this section, the area added to the Wheeler Peak Wilderness by this Act shall be administered by the Secretary of Agriculture in accordance with the provisions of the Wilderness Act governing areas designated by that Act as 'wilderness'.

"(c) The following described portion of the Wheeler Peak Wilderness as enlarged by this Act, containing approximately 1,640 acres, more or less, is hereby segregated for the exclusive use of the Pueblo:

"Beginning at a point where National Forest System Trail Numbered 90 intercepts the crest of the ridge between the Rio Lucero and the Rio Pueblo de Taos south of Old Mike Peak;

"thence easterly along trail Numbered 90 to a point approximately 0.1 mile south of Red Dome;

"thence southeasterly to an unnamed lake approximately 0.5 mile southeast of Red Dome;

"thence southerly along the drain from the aforesaid lake to its junction with the Rio Pueblo de Taos;

"thence southeasterly along the Rio Pueblo de Taos to the nose of the ridge forming the south boundary of the Star Lake drainage;

"thence westerly along the crest of the aforesaid ridge to its interception with the crest of the ridge between the Rio Lucero and Rio Pueblo de Taos;

"thence northerly along the crest of the aforesaid ridge to its interception with the National Forest System Trail Numbered 50;

"thence northerly along aforesaid trail Numbered 50 to its departure to the west from aforesaid ridge; and

"thence northerly along the crest of the aforesaid ridge to its interception with National Forest System Trail Numbered 90 and the point of beginning.

"The Secretary of Agriculture shall (1) administer this portion of the Wheeler Peak Wilderness for the exclusive use of the Pueblo de Taos Indians in connection with their religious ceremonials; (2) remove all structures from the portion and discontinue trail maintenance therein; (3) not authorize persons who are not members of the Pueblo de Taos Tribe to enter the described portion: *Provided*, That the Secretary shall continue to be responsible for protection of the area from fire, insects, and disease, and employees of the Forest Service may enter the area for these purposes: *Provided further*, That law enforcement officers may enter the area in performance of official duties.

"SEC. 2. Section 4 of the Act of May 31, 1933 (48 Stat. 108), providing for the protection of the watershed within the Carson National Forest for the Pueblo de Taos Indians in New Mexico, is hereby amended by amending the description of the area referred to in that section to read as follows:

"Beginning at the northeast corner of the Taos Pueblo Grant;

"thence west along north boundary of aforesaid Grant to its interception with the southeast corner of the Tenorio Tract;

"then northwesterly and northeasterly along the east boundary of the Tenorio Tract to the point where it intersects the boundary of the Lucero de Godoi or Antonio Martinez Grant;

"thence following the boundary of the Lucero de Godoi Grant northeasterly, southeasterly, and northerly to station 76 on the east boundary of the survey of the Lucero de Godoi Grant according to the March 1894 survey by United States Deputy Surveyor John H. Walker, as approved by the United States Surveyor's Office, Sante Fe, New Mexico, on November 23, 1894;

"thence east .85 mile along the south boundary of the Wheeler Peak Wilderness according to the description dated July 1, 1965, and reported to Congress pursuant to section 3(a)(1) of the Wilderness Act (78 Stat. 891) to intersection with the crest of the ridge between the Rio Lucero and the Rio Pueblo de Taos;

"thence southerly along aforesaid crest to its interception with the ridge forming the south boundary of Waterbird Lake drainage;

"thence southeasterly along aforesaid ridge to junction of Witt Park drain and the Rio Pueblo de Taos;

"thence easterly along the Witt Park drain to a point ½ mile from the Rio Pueblo de Taos;

"thence southwesterly along a line ½ mile east of the Rio Pueblo de Taos and parallel to it to the northeast corner of section 1, township 25 north, range 14 east;

"thence southward along the township line to the east quarter corner of section 13, township 25 north, range 14 east, on crest of ridge dividing the Rio Pueblo de Taos from the Rio Fernando de Taos;

"thence westerly along aforesaid ridge to its interception with the east boundary of the Taos Pueblo Grant;

"thence northerly to the point of beginning containing approximately 34,500 acres, more or less.

"SEC. 3. The Secretary of Agriculture is hereby directed to amend the permit granted to the Pueblo de Taos Indians pursuant to section 4 of the Act of May 31, 1933 (48 Stat. 108), to provide that:

"(a) The description of the area under permit to the Pueblo de Taos shall conform with the description of the area described in section 2 of this Act.

"(b) The Secretary shall make timber, forage, and wood available without charge in the entire permit area as amended by this Act for personal or tribal community needs of the members of the Pueblo or the Pueblo community in such manner that does not impair the watershed.

"(c) Through extension and improvement of the forest and other vegetative cover in the permit area the Secretary shall manage the area in accordance with accepted watershed management principles so as to provide optimum quantities and quality of water from the area for the benefit of the Pueblo de Taos Indians and others dependent on the Rio Pueblo de Taos and Rio Lucerno for water.

"(d) Other provisions of the existing permit shall apply to the entire permit area as amended by this Act.

"SEC. 4. The Indian Claims Commission is directed to determine in accordance with the provisions of section 2 of the Act of August 13, 1946 (60 Stat. 1050), the extent to which the value to the Pueblo de Taos of the provisions of this Act as well as the value of the Carson National Forest permit pursuant to section 4 of the Act of May 31, 1933 (48 Stat. 108), should be credited to the United States or should be set off against any claim of the Pueblo de Taos against the United States."

Mr. ASPINALL (during the reading). Madam Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Colorado?

There was no objection.

Mr. DINGELL. Madam Chairman, this is the amendment I mentioned earlier in my remarks during general debate, and when I said that at the proper time I would offer an amendment which would afford full protection to the religious concern of the Indian people involved here. This is the amendment. What it does is to set up the same kind of protection for the land as does the bill before us. It affords the Indians every right that they would have under the proposed bill except for title, and it does not get into the question of grazing.

It preserves the national forests of our Nation from the establishment of an unwise precedent; that is, giving away title to portions of the great national forests, a treasure which is for the protection, for the enjoyment, and for the opportunity of all of the people, and yet it affords full and complete protection to the Indian people with regard to their religious ceremonies and their opportunities to engage in worship.

It affords protection for the land, protection for the water, protection for persons both Indian and non-Indian, who would use the waters which are generated by precipitation in the area concerned.

I believe it is a good amendment. I think it is a humane amendment. I think it is an amendment which protects the interests of the Indians, and which protects the interests of all of the people in their national forests. It certainly is an amendment which merits careful consideration, particularly in view of the fairly doubtful nature of the claims which have been asserted up to this time. It does avoid the principle and the practice of double compensation to Indians who have already had their claims extinguished by cash awards and by the establishment of grazing rights and other special use rights in the national forests for which they signed in full faith and in the spirit of fair agreement with the Government of this Nation.

It reflects the intentions and the attitudes of the persons who have been involved in this matter, both Indian and non-Indian, that certain protection should be afforded to the Indians. As I have indicated, it avoids giving away our great national forests, something which I have always vigorously opposed, and something which this Congress has always supported.

It is my hope that this body will adopt the amendment. I believe it is humane, I believe it is fair, and I believe it is just.

Madam Chairman, I yield back the balance of my time.

Mr. ASPINALL. Madam Chairman, I rise in opposition to the amendment.

Madam Chairman, what this amendment really does is that it takes the bill of the other body without any study on the part of the committee having jurisdiction in this body, and substitutes the other body's bill for the bill that we have worked upon before the Committee on Internal and Insular Affairs for a considerable length of time.

The amendment enlarges the Wheeler Park Wilderness Area by 4,600 acres; 1,640 acres of this 4,600 acres were segregated for the exclusive use of the Pueblo.

The present special-use permit which the Indians have under the 1933 act is enlarged from 32,000 acres to 34,500 acres. This figure, plus the 1,640 acres of exclusive use, totals 36,140 acres. This compares with 48,000 acres in the House bill.

The major differences between the House bill and the Dingell amendment are:

First, the House bill gives the Indians trust title to 48,000 acres. The Dingell amendment gives them only a special-use permit to 36,140 acres, with exclusive use of only 1,640 acres of the total. This has meant controversy in the past, and undoubtedly it will continue controversy in the future.

Second, the House bill puts administrative authority over the trust title in the Secretary of the Interior. The Dingell amendment would leave complete fee title and administration in—the fee title in the Federal Government just the same as the House bill, but leaves the administration in the Department of Agriculture.

The Dingell amendment will not resolve the longstanding controversy between the Indians and the Forest Service. I made reference to this a minute ago.

It gives the Indians very little more than they have now. It does not recognize the fact, first, that the Indians have a legitimate and demonstrated need for title to the land, and, second, all conservation values, and all Federal program interests, can be protected by the Secretary of the Interior under an Indian trust title as well as they can be protected by the Secretary of Agriculture through the Forest Service.

Madam Chairman, I may as well be honest with my colleagues—undoubtedly, if the other body handles this legislation, they will pass something like the bill that has been introduced by the senior Senator from New Mexico.

This, then, would mean that there would have to be a committee of conference, and at that time, after study, we will be able then to give consideration to what is proposed in this amendment. Until that time, I do not believe that the House is in a position to act favorably on the amendment and I would ask for its defeat.

The CHAIRMAN. The time of the gentleman has expired.

The question is on the amendment offered by the gentleman from Michigan (Mr. DINGELL) in the nature of a substitute.

The amendment was rejected.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mrs. GREEN of Oregon, Chairman of the Committee of the Whole House on the State of the Union, reported that that Commitee having had under consideration the bill (H.R. 471) to amend section 4 of the act of May 31, 1933 (48 Stat. 108), pursuant to House Resolution 462, she reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment?

If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

AUTHORITY FOR SPEAKER TO DECLARE RECESS TOMORROW

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that it may be in order at any time tomorrow for the Speaker to declare a recess, subject to the call of the Chair.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

Mr. GROSS. Mr. Speaker, reserving the right to object, do I understand that this is in connection with the funeral services for the late Senator Dirksen?

Mr. ALBERT. That is correct.

Mr. GROSS. That is, in Washington?

Mr. ALBERT. Yes.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

PROVIDING FOR CONSIDERATION OF HOUSE JOINT RESOLUTION 681, ELECTORAL COLLEGE REFORM

Mr. COLMER. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 491 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 491

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the White House on the State of the Union for the consideration of the joint resolution (H.J. Res. 681) proposing an amendment to the Constitution of the United States relating to the election of the President and Vice President. After general debate, which shall be confined to the joint resolution and shall continue not to exceed six hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on the Judiciary, the joint resolution shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the joint resolution for amendment, the Committee shall rise and report the joint resolution to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the joint resolution and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Mississippi is recognized for 1 hour.

Mr. COLMER. Mr. Speaker, I yield the customary 30 minutes to the very able and distinguished gentleman from California (Mr. SMITH), pending which I yield myself such time as I may consume.

Mr. Speaker, more than 150 years ago the Founding Fathers of our country

set up a scheme or plan for the election of a President and Vice President. In their wisdom, they saw fit to establish the electoral college. The scheme that these wise men had in mind was to select good men as electors based upon the number of Representatives in the House of Representatives and the number of Senators. These men were to be selected because they would be known to be good, honest and wise men. They would meet in a so-called electoral college and select candidates for President and Vice President. That was before the development of the party system.

After the growth of the party system, that procedure was more or less changed, for the parties would meet in convention, select their candidates, and present their candidates to the country.

However, with the growth of the party system, there arose a wide demand to reform the electoral college system. There is considerable demand to wipe out the electoral college entirely and select the President and the Vice President by a so-called popular or direct vote. In other words, we would elect the President and Vice President as we elect the Members of both branches of the Congress. This system has been advocated for some time. It has great popular appeal. I am not so sure in my own mind that it is the best system, notwithstanding the fact that I know it has popular appeal and I know that most Members of the Congress who have given insufficient thought to some of the possible consequences of the plan are inclined to embrace the popular election theme.

So the Committee on the Judiciary, headed by the very able and distinguished and powerful advocate, the gentleman from New York (Mr. CELLER), has brought out a resolution that would provide for the popular vote election method of electing a President and a Vice President. As I say, I have some reservations about it. I had not intended to talk at this time on the matter, but the situation has arisen which is now such that I have to present the matter.

I understand the President of the United States, I might say to my friends on the left side of the aisle, has endorsed a different plan, one that I believe is popularly known as the proportionate plan.

There are some of us who feel that possibly another plan would be equally as good if not better, and that plan is the one that is advocated now, and as I understand it, was proposed in the Committee on the Judiciary on a bipartisan basis by the gentleman from Texas (Mr. DOWDY) and the gentleman from Virginia (Mr. POFF), as well as the gentleman from Indiana (Mr. DENNIS). They are very able students of the Constitution, who believe, of course, in the American system.

That plan briefly would provide that the electoral college, in effect, would be retained, or the substance of it, and that a candidate for the Presidency would get the electoral vote of the various congressional districts that he carried, and the candidate who got the most votes in the whole State would get the two votes represented by the Members of the other body, the Senators.

In that way we would pretty largely achieve the reform that is needed. I think there is room for some change. So that plan will be presented here by these gentlemen when we get into consideration of the resolution itself. I think it has much merit.

I do not want to get personal, but I see here two able gentlemen, the gentleman from California (Mr. HOLIFIELD), who is a Representative from, I believe, the State with the second largest number of electoral votes, and the gentleman from New York (Mr. CELLER), the author of this bill, who is a Representative from the State of New York which has the greatest number of electoral votes.

Let us consider the effect of this substitute plan in respect to the last election. I do not know what the number was, but we will say for illustration that Mr. Nixon carried 25 of the congressional districts of New York. He would get those 25 electoral votes plus the two senatorial votes, the majority of that State's vote, and therefore would carry the State.

There was a third candidate, Mr. Wallace. If Mr. Wallace had carried two congressional districts in New York he would have gotten two electoral votes.

The same thing, of course, would apply to the great State of California and to the other States of the Union.

We have heard a lot of complaint in the past, and I believe with some justification—again not becoming personal—that the larger States, like the one represented by the gentleman from California (Mr. HOLIFIELD) and the one represented by the gentleman from New York (Mr. CELLER) and the one represented by the gentleman from Texas, and so on, because of the larger electoral vote under the present system were able to control the nominations and the elections.

That is certainly true under the system advocated by the Judiciary Committee, wherein the larger populated States like New York, California, Texas, Massachusetts, and so on would have a popular vote so powerful and numerous that they would be able to control the elections.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. COLMER. I am happy to yield to my friend the majority leader.

Mr. ALBERT. Would that not be true under a situation where the winner would take all, more than it would under a situation where every candidate got his share of the popular vote? In other words, he would get the entire New York delegation, and New York would be much more persuasive in its ability to feel its candidates might be elected, with the winner taking the entire State electoral college vote.

Mr. COLMER. If I understand my friend, and I am not quite sure I did, that is one of the evils which is sought to be corrected by this proposed substitute resolution.

Under the present system, in the State of New York, with its great metropolitan center and its great populous vote, if Mr. Humphrey had received 10 more votes or 1 more vote than Mr. Nixon got in that State, then Mr. Humphrey would get all of the electoral votes. I think that is the point my friend was trying to make. In other words, it is a case of winner take all.

Under the substitute plan to be offered here, which is a modification of the one I understand President Nixon has recommended, that would not be true. Each candidate would get the electoral vote that he was entitled to rather than winner taking all.

Now, I do not want to be sectional nor do I want to be anti city or pro rural. However, my State, the State represented, in my judgment, sir, by the able majority leader the gentleman from Oklahoma (Mr. ALBERT), the State represented by the gentleman from South Dakota (Mr. BERRY), and the gentleman from Iowa (Mr. GROSS), and a number of the other smaller States, if I analyze this thing correctly, in my judgment, would suffer as a result of the passage of this so-called popular or direct vote election amendment.

Mr. Speaker, there is another aspect involved here that I want to touch on just briefly; namely, that the advocates of this direct vote election method say they want the people to express their will. Yet they provide in their resolution for a 40-percent figure. The candidate receiving 40 percent of the popular vote would be the man who was elected. If you are going to adopt this plan, then it would seem to me logical and reasonable that you should make it 51 percent or 50 percent plus of those voting. In other words, the man who is elected as President should get a majority of the vote if you are going to follow that scheme.

Now, Mr. Speaker, passing on to another facet of this committee proposal briefly, this is the question of the opportunity for corruption and for contest.

Now, can you imagine what would happen if there became a contest under this so-called popular plan in New York, California, Mississippi, North Carolina, or one or more States where corruption were charged to have occurred in one or more counties or or in one or more precincts, and where that went on in several States?

It seems to me that you are running the risk of having the Presidential election suspended in limbo, as it were there, while all of this investigation into the charges of corruption was made. We could have some serious trouble in this country while we were waiting for these charges of corruption to be decided. There are a number of other things that I could go into here, but I am not going to take any further time on this resolution.

The rule, undoubtedly, will be adopted for the consideration of the resolution amending the Constitution. I am informed and believe—as a matter of fact I have reason to know—that the alternate plan suggested will be germane, will be offered and will be debated. I do not want to array, I repeat, the small States against the large ones. But I do want to say to you gentlemen who are advocating this committee plan that if you really want some reform legislation, if you want to amend the Constitution and if you want to get away from what you cite as the present evils, you had better give careful thought to this matter. I say this, first, because it is going to take a

two-thirds vote here and in the other body to adopt the resolution and then it is going to take three-fourths of your States to ratify it before it becomes a part of the Constitution in order to achieve your objective of some reform.

Mr. Speaker, I am going to predict here and now that even though we pass this resolution by a two-thirds vote in this body, it is going to run into serious trouble over in the other body and that you are going to find those Senators over there representing the smaller States lining up in opposition to this plan of a popular election. But if you survive that hurdle, then you have got to go to your State legislatures and get the three-fourths vote. In other words, I believe it has been figured that if 13 States fail to ratify the amendment, it fails. These small States like Utah, Nevada, Delaware, Alabama, South Carolina, and a substantial number of other States with relatively small populations are not going to give up the advantage they now enjoy to the more populous States with their great metropolitan centers.

The whole philosophy and traditions of this great country are involved. Under the committee plan, the country could well come to be dominated by the big cities.

So I want to repeat, Mr. Speaker, if you want to reform the present system you had better give serious thought to the plan that I mentioned earlier that is to be offered, as I understand it, jointly by the gentleman from Texas (Mr. DOWDY), and the gentleman from Virginia (Mr. POFF), otherwise you may go through here for the next 2 or 3 years and then wind up with no change in your present system.

Mr. Speaker, I know we are all interested in the perpetuation of this young Republic and our system. I know that you want to see something done, something that is practical, and something that has a reasonable chance of becoming the law of the land. So as we go through here in the next 6 hours, after this rule is adopted, of general debate, and then the debate upon the substitute, we had better most seriously consider this matter.

Mr. Speaker, I reserve the balance of my time.

The SPEAKER. The gentleman from Mississippi has consumed 27 minutes.

The Chairman now recognizes the gentleman from California (Mr. SMITH).

Mr. SMITH of California. Mr. Speaker, I yield myself 15 minutes.

Mr. Speaker, House Resolution 491 provides an open rule with 6 hours of debate for the consideration of House Joint Resolution 681, the presidential election reform measure.

Although the rule does not state anything about germaneness of substitutes and other proposals, it is my understanding, and it was the understanding of the members of the Committee on Rules, that all substitutes which have presently been printed will be germane under this open rule, and that amendments to those substitutes will also be germane.

The purpose of the joint resolution is to amend the Constitution to abolish the electoral college. Substituted for it is a system of direct popular election of the President and Vice President.

The present election system provides that each State appoints a number of electors equal to the total number of Senators and Representatives to which it is entitled. These electors meet in December in their respective States to elect the President and Vice President. If no candidate receives a majority, the House of Representatives, with each State delegation casting one vote, elects the President from the three persons receiving the most votes, and the Senate chooses the Vice President.

Several recent elections, particularly that of last year, have shown that some change in the system may be necessary.

The Judiciary Committee, by a vote of 29 to 6, has reported House Joint Resolution 681, a constitutional amendment providing for: First, elimination of the electoral college; second, substitution of a direct popular election; and, third, a runoff election if no candidate receives at least 40 percent in the first election.

Before the committee were a number of other, alternative proposals; the district, the proportional, and the automatic electoral vote systems. These were all rejected.

The committee believes that only a direct popular election system will remove all the objections and defects in the present system.

Section I provides for the direct election of both the President and Vice President, who will run jointly. The people of the District of Columbia, as well as those of the several States, are eligible to cast votes.

Section 2 provides that electors for President and Vice President in each State shall have the same qualifications as are required for electors of the most numerous branch of the State legislature. Any State may adopt less restrictive residence requirements for voting for President and Vice President, and Congress retains authority to set uniform residence requirements.

Section 3 provides the major change in the manner of election. A system of direct popular election is instituted. Each elector shall cast one vote for one slate of candidates. If one slate receives at least 40 percent of the total popular vote cast, and has more than any other slate, such persons shall be elected. If no slate receives a total of 40 percent of the total vote, a run-off election shall be held between the two slates receiving the most votes.

Section 4 provides that the times, places, and manner of holding a presidential election and any run-off election, and requirements for entitlement of a candidate to inclusion on the ballot shall be set by the several States. But this is not what it seems because Congress reserves the power to, by law, make or alter such regulations adopted by the several States. Congress is also empowered to set the date of the original election and the run-off election which are to be uniform. Congress also retains power to set the manner in which results of the elections shall be ascertained and declared.

Section 5 empowers Congress to provide, by law, for the case of death or withdrawal of a candidate, before the election, and of the President-elect or Vice President-elect.

The amendment is to become effective one year after the 21st day of January following its ratification by three-fourths—38—of the States within 7 years from the date of its submission by the Congress.

The committee report discusses the advisability of providing for election of a slate of candidates with less than 50 percent of the vote, and if a lesser figure is desirable, what percentage should be selected. It notes that by law a simple plurality wins most U.S. elections. However, a figure of at least 40 percent was selected to insure that the elected candidate would have a sufficient mandate. Suggestions of 45 percent and 35 percent were considered and rejected.

The committee also believes that the 40-percent figure will make the likelihood of a runoff election extremely remote, based upon past election history.

While the States retain primary jurisdiction over the ballot, the Congress expressly retains power to deal with any problems which might arise. State laws could be superseded by uniform Federal standards with the provisions of section 4. In many respects, this authority, if exercised, would result in as big a change in our presidential election system as the switch to a direct popular vote.

The committee finds that the stated major objections to the direct election plan—First, a possible aid to the proliferation of political parties; and, second, the possible destruction of our federal system of government—do not outweigh what it is believes is the fundamental opjection to all other possible changes—that each would allow the election as President of a candidate who failed to win the popular vote.

The gentleman from Colorado (Mr. ROGERS) has filed additional views. He believes that the 40-percent provision is too low. He favors increasing it to 45 percent.

The gentleman from New York (Mr. RYAN) has filed additional views. He supports the idea of uniform national standards of voter qualification, covering age and residency in national elections. He also believes that the votes for Vice President should be cast separately, not one joint vote for the two-man slate. Finally, he believes that U.S. citizens in Puerto Rico, Guam, and the Virgin Islands should be allowed to vote.

The gentleman from Illinois (Mr. MCCLORY) has filed additional views. He opposes the 40-percent figure, and supports a lower one—35 percent as less likely to require any runoff elections or permit the rise of third parties. He also suggests that rather than have each State legislature approve the constitutional amendment, each State should elect a convention to ratify it. He believes this would be quicker and insure ratification in time for the 1972 elections.

The gentleman from New Jersey (Mr. SANDMAN) agrees with the gentleman from Illinois (Mr. MCCLORY) in opposing the 40-percent figure; he supports a simple plurality rule.

The gentleman from Virginia (Mr. POFF) has filed separate views. He has a substitute which he may offer as an amendment. It provides for an automatic apportionment of electoral votes in proportion to the popular vote in each State. A majority of the electoral vote would be necessary for election. If no candidate receives a majority of the electoral vote, then, if any candidate received a plurality and at least 40 percent of the popular vote, he would be elected. If no candidate receives at least 40 percent of the popular vote then the Congress would jointly choose the President and Vice President from the top two slates, with each Member having one vote.

The gentleman from Texas (Mr. DOWDY) has filed minority views. He believes this joint resolution proposes a fundamental change in our system of government—one he opposes. He favors the district system embodied in House Joint Resolution 791. He also notes that under the direct popular election system 33 smaller States would lose political power in presidential elections. Some of these will surely oppose the amendment, probably enough to kill the amendment.

The gentleman from Alabama (Mr. FLOWERS) and the gentleman from South Carolina (Mr. MANN) concur in Mr. DOWDY's views objecting to the direct election system. They favor the proportional election plan and want to insure that the States retain control over voter qualifications.

The gentleman from Michigan (Mr. HUTCHINSON) has filed views supporting Mr. POFF's substitute. He points out how fundamentally different the direct popular election system is from that created by the framers of our Constitution—and how far along the road it goes in changing our federal system of government. He opposes this while agreeing that the present election system must be corrected. He believes Mr. POFF's substitute successfully does this.

The gentleman from Indiana (Mr. DENNIS) has filed individual views supporting the position taken by Mr. POFF and Mr. HUTCHINSON concerning the great change the proposal will work on our system of government. He favors either a district plan or an automatic electoral vote plan.

Personally I think we should have some changes in the electoral college system. I will state in all honesty that the hearings, which covered, I believe, 4 days, and at which 10 or 11 learned witnesses testified, were among the most interesting that I have ever participated in, and I must admit that after hearing the sage remarks of these gentlemen, I came to the conclusion that even though we might need some changes, maybe our forefathers did not do so bad when they wrote our Constitution 182 years ago. We would probably live to do something better, but we have gone through all these years and the system has worked, even though we had some frightening experiences when the House selected a couple of Presidents.

At any rate, I have attempted to mention what this bill contains. I would hope that the Members would listen to the debate, which, of course, because of the breakup in the schedule, will be periodical. But I, for one, have found it to be one of the most interesting discussions of any measure I have ever heard in the Rules Committee.

Mr. McCLORY. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman from Illinois.

Mr. McCLORY. I thank the gentleman for yielding. I want to compliment the gentleman and the committee for allocating 6 hours of general debate on this historic subject. It is my understanding that the full debate which we will have here in the House of Representatives will be the first which has occurred for almost 150 years. Electoral college reform may be the single most important legislative subject which the Congress will consider at this session.

As the gentleman knows, I have two amendments which I will offer which are intended to be in support of the direct election plan as recommended by the committee. These amendments relate to subjects which the gentleman in the well has touched upon in the course of discussing this issue.

First of all, I want to express appreciation to the committee for the generous recommendation of 6 hours for the general debate and also the open rule which will permit opportunity to improve and clarify this constitutional amendment.

May I say briefly that one of my amendments would reduce the minimum requirement for the election of the President in a direct popular election from 40 percent to 35 percent. There are two main reasons for this. One is to avoid the probability of general runoff elections. I have had some computer studies made based upon the existing historical facts which show that a runoff election is very remote if we reduce the minimum required figure to 35 percent, whereas the incidence of a runoff is greatly increased if we hold to the 40-percent requirement.

Also I want to emphasize the other amendment which would provide an alternative method of submitting this constitutional amendment to State conventions instead of to the State legislatures for ratification. Many of those who support the amendment for direct popular election question whether three-fourths of the State legislatures will ever ratify the amendment even though we get two-thirds support in the House and in the Senate. I think there is a real doubt as to whether such requisite support could be obtained. But I wish to point out that the Constitution also authorizes us to submit such constitutional changes to State conventions for ratification.

The State conventions would consist of representatives or delegates selected by the people. In my opinion they would reflect more accurately the popular will with regard to this subject. Anyone who has taken a poll in his district knows, and the professional pollsters also know, that the people overwhelmingly favor a plan for the direct popular election of the President and Vice President. In response to this popular sentiment I am confident that State conventions would ratify such a constitutional change promptly.

May I say that when the 21st amendment was ratified by the State convention method, the job was completed in about 10 months. That is one of the speediest ratifications in history.

The SPEAKER. The time of the gentleman from California has expired.

Mr. SMITH of California. Mr. Speaker, I yield myself 2 additional minutes.

Mr. McCLORY. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman from Illinois.

Mr. McCLORY. Mr. Speaker, I thank the gentleman from California for yielding me this additional time.

Mr. Speaker, I had wanted to apprise the Members at this time of the proposals which I will make, and I had about completed what I wanted to say. I am communicating with each Member by letter. Also, I invite the attention of the Members to the additional views set forth in the committee report. In the course of the full debate and also when we reach the amending stage, I expect to propose these two amendments for which I urge your most earnest consideration.

Again, I want to emphasize that these are in support of the direct popular election plan. Indeed, I am a sponsor of the constitutional change which the House is going to consider, but I do think that these two technical changes, as perhaps we might refer to them, will increase the chances of ratification and will improve the practical operation of the amendment if passed by both the House and the Senate and ratified by the people.

Mr. Speaker, I thank the gentleman from California for yielding.

Mr. SMITH of California. Mr. Speaker, I have no further requests for time. I reserve the balance of my time.

Mr. Speaker, I urge the adoption of the rule.

Mr. BERRY. Mr. Speaker, it is my intention to support an amendment to the bill under consideration which would provide a district plan for the election of the President and Vice President of the United States, rather than the proposal to abolish the electoral college and amend the Constitution to provide for the election of the President and Vice President by a direct vote.

Referring to election by direct vote, one Member of the House pointed out that this is not electoral reform, it is merely political transformation. It flies squarely in the face of the most basic precept of the Constitution—a Union of sovereign States. I agree completely.

The district plan is not a new proposal, but in my judgment, it is certainly the best. First, it would preserve the electoral college, but would require that electors be chosen from single congressional districts within each State, with two electors representing the senatorial delegation of the State running at large.

If no candidate received the requisite number of electoral votes, election would be by a joint session of the Senate and the House of Representatives with the Members voting as individuals.

The district plan is patterned along the lines of our congressional districts in which each voter could vote for three electors, the entitlement being the same as his representation in Congress: two Senators and a Representative. Presently the citizen casts his votes for all of the electors on the ballot, and depending

upon the population of his State, he has considerably more "vote power" if he lives in a small State. For example, a South Dakotan casts a vote for four electors while a New Yorker can vote for 43 electors. The district plan equalizes the power of the vote. It is the only plan which will do away with the "winner take all" system while at the same time provide an improved method of contingency election. Another result would be the elimination of the balance of power leverage on large blocks of electoral votes.

The people are as much entitled to choose their representative electors by single-Member districts as they are entitled to choose their Representatives by congressional districts. I know of no way by which people can be represented in proportion to their numbers except by single-Member districts.

Mr. COLMER. Mr. Speaker, I yield 3 minutes to the gentleman from New York (Mr. CELLER).

Mr. Speaker, will the gentleman from New York yield?

Mr. CELLER. I yield to the gentleman from Mississippi.

Mr. COLMER. Mr. Speaker, I want personally to apologize to the gentleman from New York for using so much time myself, but I understood the gentleman from New York wanted only 3 minutes. However, if he wishes additional time, I will try to get the gentleman some more time if he wants it.

Mr. CELLER. Mr. Speaker, I thank the gentleman from Mississippi.

Mr. Speaker, Victor Hugo once said:

When the time for an idea has come nothing can stop it.

The time for the idea of changing our method of electing the President and the Vice President has indeed come, and nothing, I can assure Members, can stop it.

The rule will make in order consideration of a proposed constitutional amendment providing for a direct vote of the President and Vice President and will do away with the present electoral college system.

Our present electoral system was born at a time when this country's population was only 4 million, of which 700,000 were Negro slaves and more than 2.3 million were white women and children. Only about 100,000 people lived beyond the Appalachian Mountains. Only five cities had a population in excess of 10,000 souls. Horseback, wagon, stagecoach, boat, and foot were the main modes of transportation. To go from Boston to New York was a journey of from 3 to 6 days, from New York to Philadelphia 2 or more days. Newspapers usually were distributed on a weekly basis and had limited circulation and contained mostly local news.

Small wonder that such an election apparatus applicable to horse and buggy days is ill suited to the present TV jet age. The time for change has indeed come.

The electoral system—we can no longer embalm it from further decay.

I cannot, in the short space of time allotted me, indicate all the evils inherent in the electoral system, but let me point out the following:

Thrice in our history the winner of the popular vote was declared the loser. An unwelcome candidate occupied the White House. This is as unsporting as it is dangerous. All the successful candidate can do is to bite his nails in anger. He is very much like Sancho Panza in Don Quixote. He is presented with a very sumptuous meal, and he is about to relish it, when it is taken away from him.

There has been no major debate on this subject, no full stage debate in this House, since 1826, almost 150 years ago.

The adoption of this rule will usher in, therefore, the very important historical event, an amendment to the Constitution that will permit the Nation to vote directly for President and Vice President with no intervention of the so-called elite electoral college.

This direct election follows the theory and principle of one-man, one-vote.

This amendment has the approval of such disparate organizations as the AFL–CIO and the U.S. Chamber of Commerce, as well as the American Bar Association, the Federal Bar Association, and many other organizations.

I am quite sure after the debate the Members will fall in line and vote, more than two-thirds of this body, for this historic amendment.

Mr. SMITH of California. Mr. Speaker, I have one additional request for time, by the gentleman from Indiana (Mr. DENNIS), and I yield him 3 minutes.

Mr. DENNIS. Mr. Speaker, I merely wish to take this opportunity to advise the membership, as has already been done by mail, that among the amendments to be offered will be a bipartisanly sponsored amendment which will be offered by the gentleman from Texas (Mr. DOWDY) and myself, which basically will present what is known as a district plan type of amendment as a substitute.

We have already communicated with the membership on this matter by mail, enclosing a copy of House Joint Resolution 791, which with one change is the amendment which we will offer. Basically, it is what one might call an automatic district plan which abolishes the elector as a person but retains the electoral vote of each State, assigning two votes to the candidate who carries the State and the others according to the candidate who carries the several electoral districts within the State.

Rather than the present contingency election provision, it provides that if no one receives an electoral majority, the decision will be made by a joint session of the House and Senate voting as individuals.

Mr. Speaker, I ask unanimous consent to insert at the end of my remarks a printed copy of that bill with the necessary changes inserted therein, and I ask the membership to give it their attention prior to the debate.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

The matter referred to is as follows:

H.J. RES. 791

Joint resolution proposing an amendment to the Constitution of the United States relating to the election of the President and Vice President

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, to be valid only if ratified by the legislatures of three-fourths of the several States within seven years after the date of final passage of this joint resolution:

"ARTICLE —

"SECTION 1. In each State and in the District constituting the seat of Government of the United States (hereafter in this article referred to as the 'District') an election shall be held in which the people thereof shall vote for President and Vice President. Each voter shall cast a single vote for two persons (referred to in this article as a 'presidential candidacy') who have consented to the joining of their names as candidates for the offices of President and Vice President. No person may consent that his name appear with that of more than one other person or as a candidate for both offices. Both of the persons comprising a presidential candidacy may not be residents of the same State nor may both of them be residents of the District. No person constitutionally ineligible to the office of President shall be eligible to that of Vice President.

"SEC. 2. Each State shall be entitled to a number of electoral votes for President and Vice President equal to the whole number of Senators and Representatives to which such State may be entitled in the Congress. The District shall be entitled to a number of electoral votes equal to the whole number of Senators and Representatives in Congress to which the District would be entitled if it were a State, but in no event more than the least populous State. Each State shall establish a number of electoral districts equal to the number of Representatives to which such State is entitled in the Congress. The Congress shall establish in the District a number of electoral districts equal to the number by which the electoral votes of the District exceed two. Electoral districts within each State or the District shall be, insofar as practicable, of compact territory, and shall be of contiguous territory, and shall contain substantially equal numbers of inhabitants. Electoral districts in a State or the District shall be reapportioned following each decennial census, and shall not thereafter be altered until another decennial census of the United States has been taken.

"The presidential candidacy which receives the greatest number of popular votes in a State or in the District shall receive two of the electoral votes of such State or of the District. For each electoral district in which a presidential candidacy receives the greatest number of popular votes, it shall receive one electoral vote.

"SEC. 3. Within forty-five days after the election, the official custodian of the election returns of each State and of the District shall prepare, sign, certify, and transmit sealed to the seat of the Government of the United States, directed to the President of the Senate, a list of all presidential candidacies for which popular votes are cast in such State or in the District, together with the number of popular votes received by each presidential candidacy in such State or in the District and in each electoral district therein.

"SEC. 4. On such day between the 3d day and the 20th day of January following the election as Congress may provide by law, the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the electoral

votes shall then be counted. The persons comprising the presidential candidacy receiving a majority of the electoral votes shall be the President and the Vice President. If no presidential candidacy receives a majority, then from the presidential candidacies having the two highest numbers of electoral votes, the Senate and House of Representatives together, each Member having one vote, shall choose immediately, by ballot, a presidential candidacy. A majority of the whole number of Senators and Representatives shall be necessary to a choice.

"SEC. 5. The place and manner of holding any election under section 1 in a State shall be prescribed by the legislature thereof. The place and manner of holding such an election in the District shall be prescribed by Congress. An election held under section 1 shall be held on a day which is uniform throughout the United States, determined in such manner as the Congress shall by law prescribe.

"SEC. 6. The voters in such elections in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature, except that the legislature of any State may prescribe less restrictive residence qualifications for voting for presidential candidacies. Congress shall prescribe by law the qualifications for voters in the District of Columbia.

"SEC. 7. The Congress shall have power to enforce this article by appropriate legislation. The Congress may by law provide procedures to be followed in case of (1) the death, disability, or withdrawal of a candidate on or before the time of an election under this article, (2) a tie in the popular vote in a State or in the District or in an electoral district which affects the number of electoral votes received by a presidential candidacy, or (3) the death of both the President-elect and the Vice President-elect.

"SEC. 8. This article shall take effect one year after the 21st day of January following its ratification."

Mr. COLMER. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

THE LATE HONORABLE WILLIAM PATRICK FAY

(Mr. BURKE of Massachusetts asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BURKE of Massachusetts. Mr. Speaker, I rise to voice my shock and sorrow at the sudden and untimely death of the Honorable William Patrick Fay, the very popular and distinguished Irish Ambassador to the United States.

Ambassador Fay will be remembered especially for his hard-working manner as a veteran diplomat, having served as chargé d'affaires in Belgium, Norway, and Sweden, and Ambassador to France and Canada before coming to Washington. Born in Dublin, Mr. Fay received his education at Clongowes Wood College and at the National University of Ireland, where he received his law degree.

It was my happy privilege to meet the Ambassador on several occasions and his friendliness and warmth stands out in my memory. The Republic of Ireland has lost a cultured, highly honored, and gracious diplomat. I consider it a privilege to add my praise to his memory and I offer my heartfelt sympathy to the sorrowing members of his family.

Mr. Speaker, I submit for the RECORD the following biographical news articles on Ambassador Fay:

[From the Washington (D.C.) Star, Sept. 8, 1969]

WILLIAM PATRICK FAY, 60, IRISH AMBASSADOR, DIES

William Patrick Fay, 60, the popular Irish ambassador to the United States, died yesterday in Dublin after surgery. He had returned to Ireland last month on sick leave.

Mr. Fay had been stationed here since 1964, and was known as a courtly host and gracious entertainer. He and his wife, Lilian, presided at numerous parties and dinners at the first embassy residence owned by the Irish government here at 2244 S St. NW.

Mr. Fay was born in Dublin. He was educated at Clongowes Wood College and earned a law degree at the National University of Ireland. He practiced law in Ireland from 1931 to 1937 when he joined the Irish government's Attorney General's Department.

In 1941 he joined the Irish Foreign Service, serving in Dublin, London and Brussels. He held diplomatic posts in Sweden and Norway in 1950, and then became legal adviser to the Irish Department of External Affairs in Dublin.

From 1954 to 1960, Mr. Fay served as Irish ambassador to France, and also headed the Irish delegation to the Organization for European Economic Cooperation in Paris, until he was appointed ambassador to Canada in 1960, a post he held until 1964.

He was a member of the Metropolitan Club and the John Carroll Society and was an honorary member of the Friendly sons of St. Patrick of Washington. Mr. Fay had been awarded the Grand Cross of the Royal Order of the Phoenix by the Greek government and the Grand Cross of the Legion of Honor by the French government.

He is survived by his wife.

A requiem mass will be celebrated at St. Matthew's Cathedral by Patrick Cardinal O'Boyle at 11 a.m. tomorrow.

The Irish chancery, 2234 Massachusetts Ave. NW., will have a condolence book open today through Wednesday from 11 a.m. to 1 p.m. and from 3 p.m. to 5 p.m. daily.

[From the Boston (Mass.) Globe, Sept. 8, 1969]

ERIN'S U.S. ENVOY. W. P. FAY, AT 61

DUBLIN, IRELAND.—William Patrick Fay, the Irish Republic's ambassador to the United States, died Sunday in Dublin. He was 60.

Fay, who had served in Washington since 1964, had returned from Washington for a gall bladder operation.

He was a veteran diplomat, having served as charge d'affaires in Belgium, Norway and Sweden and ambassador to France and Canada before going to Washington.

Born in Dublin, he was educated at the Jesuit College of Clongowes Wood and University College, Dublin, and practiced law before entering the diplomatic service in 1937.

[From the Washington (D.C.) Post, Sept. 8, 1969]

WILLIAM P. FAY, AMBASSADOR, DIES IN IRELAND

William Patrick Fay, 60, Ireland's ambassador to the United States, died yesterday in Dublin after surgery. He had returned to Ireland on sick leave several weeks ago.

Mr. Fay, first stationed here in April, 1964, was known as a hard worker, and particularly as a courtly host and gracious entertainer.

Like previous Irish ambassadors, he was accorded certain special privileges, regularly presenting fresh shamrocks to the President on St. Patrick's Day.

He and his wife Lilian decorated their house at 2244 S St. NW as the first embassy residence owned by the Dublin government in Washington.

Mr. Fay was born in Dublin and educated at Clongowes Wood College and at the National University of Ireland, where he earned a law degree.

Called to the Irish bar in 1931, he practiced until 1937 when he joined the Attorney General's department in the Irish government.

In 1941, he joined the Irish foreign service, serving in Dublin, London and Brussels. He was appointed minister plenipotentiary to Sweden and Norway in 1950.

In 1951, he became assistant secretary and legal adviser to the Irish Department of External Affairs in Dublin, and in 1954, he was appointed ambassador to France.

At the same time, Mr. Fay served as head of the permanent Irish delegation to the Organization for European Economic Cooperation, continuing in that post until designated ambassador to Canada.

When he left Paris for Ottawa, he was awarded the Grand Cross of the Legion of Honor by the French government and the Grand Cross of the Royal Order of the Phoenix by the Greek government, for his work with the OEEC.

He was a member of the John Carroll Society and the Metropolitan Club and an honorary member of the Society of the Friendly Sons of St. Patrick of Washington.

He is survived by his wife.

A Requiem Mass at St. Matthew's Cathedral will be celebrated by Patrick Cardinal O'Boyle Tuesday at 11 a.m. A condolence book will be open at the embassy, 2234 Massachusetts Ave. NW, today through Wednesday from 11 a.m. to 1 p.m. and from 3 to 5 p.m.

Mr. McCORMACK. Mr. Speaker, the death on September 7, 1969, of the Honorable William P. Fay, while home in Ireland for medical treatment and surgery, leaves a deep feeling of sorrow and sadness with the people of the country he served so well for many years, but also with countless of thousands of American friends and admirers.

As Ambassador from Ireland to the United States, Ambassador Fay served his country with outstanding ability, with dignity, distinction, grace and courage.

The friendship between Ireland and the United States has always been close. Under Ambassador Fay that friendship has been strengthened.

Ambassador Fay possessed by his Godgiven talents and his years of experience, those qualifications that made him a superb diplomat.

During his period of service as Ambassador for Ireland, there developed between us a friendship that I valued very much, and shall always treasure.

Mrs. McCormack joins with me in expressing and extending to Mrs. Fay our profound sympathy in her bereavement.

GENERAL LEAVE TO EXTEND REMARKS

Mr. BURKE of Massachusetts. Mr. Speaker, I further ask unanimous consent that all Members may have 5 legislative days to extend their remarks with reference to Hon. William Patrick Fay.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

THE 12TH ANNUAL STEUBEN PARADE

(Mr. ADDABBO asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ADDABBO. Mr. Speaker, on September 20, 1969, more than 15,000 Americans will march up Fifth Avenue and participate in the 12th annual Steuben parade.

Public officials, dignitaries, and millions of Americans of German descent will celebrate and pay tribute to those who have contributed so much to our Nation. This year's celebration will be particularly significant because it coincides with the celebration of the 50th anniversary of the Steuben Society and the passage by the House of Representatives on September 4, 1969, of House Joint Resolution 250, sponsored by our distinguished colleague from Ohio, the Honorable MICHAEL A. FEIGHAN, calling upon the President of the United States to proclaim September 17, 1969, General von Steuben Memorial Day.

The tradition of Gen. Friedrick Wilhelm von Steuben has kept the Steuben Society of America strong and dedicated to the highest ideals of freedom and justice for all in this Nation. The history of General von Steuben's deeds following his arrival at our shores on December 1, 1777, is a record for all who love our country to be proud of and to remember. He was heroic in the battle to win independence for America; he joined with Gen. George Washington at Valley Forge to bolster and help organize our fighting men; he distinguished himself in the Battles of Monmouth and Yorktown; he issued regulations for the training of American troops, and he is credited with the proposal to establish the U.S. Military Academy at West Point.

The Steuben parade is organized and sponsored by the German-American Committee of Greater New York which represents approximately 400 societies and organizations through its affiliated Steuben Parade Committee. It is a joint undertaking by all these groups which are dedicated to continuing the memory of General von Steuben, to honoring the scores of German immigrants who have been leaders and statesmen of American history from the battle for our independence down to the present day and to display the pride of our citizens of German descent in that history.

Floats, bands, and entertainers will be on hand as every segment of the German-American community is represented in this stirring celebration. A great deal of work and time has gone into planning this parade and there will also be a companion parade in the city of Chicago.

Among the many honored guests who will review the New York parade will be Staats-sekretaer Prof. Dr. Carl Kastens of Chancellor Kiesinger's office; Gov. Nelson Rockefeller; Mayor John V. Lindsay; Consul General Klaus Curtius, of the Federal Republic of Germany; Dr. Heinrich A. Gleissner, of the Republic of Austria; and New York Supreme Court justice, the Honorable Albert H. Bosch, former national chairman of the Steuben Society, who also serves as general chairman for the golden jubilee of the Steuben Society. Justice Bosch was my distinguished predecessor in the U.S. House of Representatives for the Seventh District of New York.

Grand marshal of the Steuben parade is the Honorable William E. Ringel, an outstanding justice of the criminal court of the city of New York, and this will be his 12th parade in addition to many other worthwhile endeavors. The general chairmen of the parade are Gustave I. Jahr and George Pape and together with the Honorable George J. Balbach, judge in charge of Queens County for the criminal court of the city of New York, have done an outstanding job in coordinating the events for the parade, with Hellmuth G. Dippel as honorary chairman.

Special mention should also be made of the successful efforts of Mr. Ward Lange, national chairman of the Steuben Society and Edward J. Sussmann, national secretary. Under their direction the society organized a drive to obtain recognition from the Congress of General Steuben Memorial Day. This is Mr. Lange's seventh term as national chairman of the society and he has earned the respect of all who know him.

The trademark for the parade will be the blue cornflower which is so common in Germany and a cornflower queen, Miss Evelyn Maier, of Elmhurst, will reign over the parade from atop the Cornflower Queen-Miss German America float. The President of the United States will send a representative to review the parade and the Army, Navy, Air Force, and Coast Guard will be represented by bands, troops, and color guards.

The 12th annual Steuben parade promises to be an exciting and stimulating day and I know that my colleagues in the House join with me in wishing our friends of German descent a successful celebration and in commending them for their outstanding contribution to our society.

DIRECT ELECTION WILL HURT MINORITIES

(Mr. CLAY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CLAY. Mr. Speaker, the Rules Committee has reported out a proposed constitutional amendment that would abolish the electoral college and replace it with direct popular election of the President. This radical alteration in our electoral process will occasion harmful ramifications throughout our governmental system and within our society as well. Too little attention has been given to the effect of electoral reform on the public influence of minorities, the groups who need political leverage the most. I hope this report will serve to illustrate both the fundamental and necessary nature of the electoral college and to indicate the dangerous consequences overzealous reform will have on the position of minority groups in American political life.

Minor electoral reform is necessary. While the chances for serious consideration of an alternative plan are slight, I am also submitting my own reform proposal which would preserve the traditional organization of our electoral machinery while eliminating the present loopholes and dangers.

With the advent of George Wallace's American independent movement and the close popular returns of the 1960 and 1968 elections, the electoral college is presently suffering another chronic flurry of abuse from both congressional and private sources. The special commission on election reform of the American Bar Association, for instance, in advocating direct election, declared the electoral college to be, "archaic, undemocratic, complex, ambiguous, indirect, and dangerous." Part of this criticism may be valid, but all of it cannot negate the fact that the electoral college has served the Nation well, and that it has come to be a more fundamental aspect of our political system than many detractors care to realize or to acknowledge.

The college is not an archaic appendix—it cannot be removed without inducing grave problems throughout the entire governmental structure. Much of our system of political balances and alinements has evolved around it, and its sudden removal will create dangerous consequences for all the remaining parts. There is obvious need for reform to insure that the present system is not thwarted by faithless electors and to provide for a better method of contingent election, but a major alteration of the college will not result in an assured advancement of the commonweal and could, to the contrary, cause unexpected realinements of power in our political system. The theoretical advantages of stringent majoritarianism are more than offset by the possibilities of damaging our basic political institutions such as the two-party system.

The contemporary situation must also be considered in proposing electoral reform. The present system maximizes the importance of the urban regions and especially of the high-cohesion minority groups, which have gravitated to our cities and which are able to command attention as the potential "swing vote" in a close election. Considering the immense needs of our cities and the unrest within their black communities, it would seem a foolish and potentially tragic action to institute, under the banner of perfecting democracy, a system that might perceptively diminish urban influence in national politics.

There are four main reform proposals: the automatic, district, and proportional plans, and direct election. The first merely modifies the existing process and entails the automatic operation of the electoral college by abolishing the office of elector. The unit rule would be written into the Constitution. A majority or 40 percent of the electoral votes would be needed to win, contingent election of the President would be by a joint session of Congress, and the President and Vice President would be voted for as a team. Since this proposal modifies and perfects rather than transforms, the existing plan, it is the only one that would not seriously damage the political influence

of the urban minorities. It merely sanctions what is already custom. The district plan would give each congressional district—or special electoral district—one electoral vote. Two electors would also be selected at large from each State. The proportional plan would distribute a State's electoral votes in accordance with the percentage of the popular vote each candidate received, thus eliminating the unit rule. Generally, 40 percent of the electoral votes is considered to be sufficient for election. Direct election would abolish the electoral college altogether. If no candidate received a majority of the popular vote, a runoff between the top two candidates would be held.

Despite the superficial appeal of direct election, it is of dubious value. It would require abolishing a part of a system of balances that has always worked well. Under direct election, we would be, without sufficient cause, setting out upon an untried path that could lead anywhere. The one certain result of direct election would be to lessen the influence of the minorities at a time when their needs are urgent and critical.

Regardless of the endless lamentation over the inefficiency of the college, it has actually been surprisingly accurate. In 45 presidential elections, only in 1888 did the college itself create a minority President, and even in that election the electoral winner was the popular loser by less than 1 percent of the vote. In the elections of 1844, 1848, 1880, 1892, 1916, 1948, 1960, and 1968 the popular vote margin was less than 5 percent, yet in every case the popular winner was the electoral victor. Thus, it is obvious that the possibility of a minority President is stronger in theory than in reality. This, in turn, raises the question of whether the need for reform is truly urgent or worth the risks. As then Senator Kennedy noted in 1956 when defending the traditional unit rule:

> It is not only the unit vote for the Presidency we are talking about, but a whole solar system of governmental power. If it is proposed to change the balance of power of one of the elements of the solar system, it is necessary to consider the others.

This justified fear of deleterious effects throughout the political system and particularly to our two-party system is hopefully adequate to kill the chances for direct election or for any other proposal containing significant alterations of our present system.

Although our political philosophy tends to promote a strong majoritarianism among its adherents, if out of 75 million votes, someone won by only 100,000, it would be difficult to insist that he was truly more representative of the Nation than his opponent. At some point returns can be so large and the differences so small that the popular margin may not be meaningful. It is in a situation like this where microscopic margins have little significance that the college is most likely to elect a "minority" President. So long as the distortions within our system do not persistently or maliciously contradict the popular will, and, in fact, help to insure by the unit rule that someone will receive a majority of the electoral votes, there seems little reason for attacking them. With only three exceptions, 1824, 1876, and 1888, the overall electoral process has functioned as though we already were using direct election.

If the popular vote distortions in our system did nothing but accurately reflect the popular will and aid in producing an electoral majority, then they might, in truth, be superfluous. However, the influence of the college on national politics extends much farther. The present system forces the parties to compete most intensely for the large, urban States where most of the self-conscious ethnic groups have clustered. In a close presidential race it is most likely that the election will be decided in one of these large, heterogeneous States, and at this point solid support from a large minority community, like the blacks, could be decisive. As a result the executive branch usually needs to be very responsive to urban and minority needs. This has caused the major parties to take on a duel character, a presidential one with its base in the liberal urban centers and a congressional one, deriving its support from the less urban, moderate-conservative regions.

The liberal-conservative division between the President and the Congress is enhanced by the basic nature and rules of the legislative branch. While the States have begun reapportionment as a result of Baker against Carr, 1962, there has, of course, been no alteration in the Senate where the rural regions are overly represented. The Senate, in fact, where Alaska and New York have equal membership, belies the argument that our system is predicated on a strict belief in "one man, one vote." This situation, combined with the House seniority and committee systems, gives the Congress, at best, a moderate disposition. Also, some academic circles insist reapportionment has not really aided the liberals since it has given much new power to the more conservative white suburbs. Thus, the President and the Congress generally tend to balance each other, with the Executive acting as the spokesman for urban minority groups.

While large urban States would still be well represented in a direct election, the decisive influence gained through the use of the unit rule, which allows, in effect, every vote in a State to be cast for a single candidate, would disappear, especially since the urban States are well divided between the two major parties. If a State could no longer swing a large bloc of votes, its ethnic minority groups would lose the primary political lever through which they are able to command the attention of the national parties and of the Presidency. This lessening of urban influence would be even greater under the district or proportional reform plans. Without the ability to swing large blocs of votes, a minority even as large as the blacks could be nearly ignored in national politics. In one obtuse stroke, we would be severing the minorities' main connection with the mainstream of American political life. Furthermore, the President would no longer need to be an urban, liberal lobby, giving more influence to the conservative elements in the Congress.

Richard Nixon would seem to be a major flaw in the theory that the President generally acts as a liberal influence, but even he could not abandon entirely the strategy of appealing to the urban regions, and his very narrow victory is a demonstration of just how dangerous any significant deviation from the traditional campaign procedure, generated by the college, is. Also, the 1968 election was exceptional due to the Vietnam issue which transcended normal voting patterns. The greatest difficulty with the present system is the uncertainty that the high population density regions will remain liberal with the ever increasing growth of the white suburbs, which are often politically conservative.

Advocates of direct election note that while the present system awards blacks in the urban areas with significant political leverage, it sacrifices many black votes in the single-party regions of the South. Under direct election these "lost" votes would be added to the national returns, but the problem remains that 10 million black votes in a national election might not have as much effect as swinging New York State's 43 electoral votes does today. Furthermore, the present system may be haltingly forcing the creation of a two-party system in the South under which the blacks there, too, could gain a position of significance. This may occur because while the South retains, under the present system, more leverage than it might have under a direct voting scheme, its power in comparison to the urban, Northern States is now such that it is no longer crucial to the Democrats. Thus, most Democrats have not been willing to compromise on many issues with the southern wing of the party, and this has been a factor in the reappearance of the Republicans in this region. Republican competition, the Voting Rights Act of 1965, and black voter registration drives could eventually put the large black communities in a position to swing or control State and local elections. Recent black victories show this trend has already begun.

A Southern Regional Council report asserts that only the black vote kept Florida, Arkansas, Tennessee, and Virginia from going Republican in 1964. Southern urbanization and industrialization might also tend to promote a more competitive system. Under the district or proportional plans, however, the South would gain greatly in influence, forcing the Democrats to make concessions to the conservatives, and allowing the South to revert back into a single party region. Under the present system southern politics may be undergoing some gradual but basic alterations that conceivably could lead to blacks wielding much more political influence than they have in the North. Even if these changes do not come about, the electoral college still gives the blacks more political leverage than they could expect under any of the reform plans.

Although advocating maintenance of the present system on the basis that it aids minority groups may seem crass, it makes good political sense and fits well into our political philosophy. Ethnic politics has traditionally been a method of forcing and hurrying social accept-

ance of minority groups. Certainly, black social progress is analogous to the use and protection of black political rights and influence. In addition, we want as much of society beyond the majority as possible represented in our political life. The present system does this by allowing the minority groups to bargain with the major parties and thus to feel like an important part of the political system. Insisting on strict application of the "one man, one vote" doctrine under direct election, necessarily negates this and could easily lead to a tyranny of the majority. Only so long as minorities have an influential voice in the major parties will there be little incentive to form separate, racially oriented political groups. Thus the present electoral process works to keep the ethnic groups within the framework of the major parties and thereby benefits the entire political structure.

The present situation is not flawless. There are several modifications of the existing machinery that are generally acknowledged to be necessary to insure the proper functioning of the electoral process. While only nine of over 15,000 electoral votes have been cast in opposition to the will of the people, this in itself argues for the abolition of independent electors in favor of an automatic system. Until this is done, there remains the danger that electors will begin to think for themselves in a tight election. As early as 1826 a Senate committee noted:

> Electors have degenerated into mere agents, in a case which requires no agency, and where the agent must be useless, if he is faithful, and dangerous if he is not.

Removal of the electors would bring the people a big step closer to direct election by eliminating the barrier between the popular vote and the electoral college totals. This step is already implied by the use in over 30 States of the presidential short ballot, which does not even list the names of the candidates for elector. The automatic system would also remove the present right of the State legislatures to appoint all electors or have them chosen in any manner they choose.

Other needed changes include having a joint session of the Congress elect the President and Vice President, selecting both as a team, if no pair receives a certain percentage of the electoral votes. As for objections to putting the unit rule into the Constitution, it should be noted that for most of our history this custom has been a basic aspect of the elective process and that in a democracy there must be a point where the "winner takes all" since the Presidency cannot be shared. The unit rule also works to insure that somebody will receive a majority of the electoral votes by tending to convert a small popular plurality into a significant electoral victory. While the unit rule may allow the majority to "use" the minority's votes and not just to negate them, the present system, with its balances and opportunities for political leverage, offers far more protection from a tyranny of the majority than does unchecked direct election.

The present system has always made it difficult for a splinter party to be successful. With the college all a third party can usually hope to do is to spoil the election for another candidate. Even if the new party polled 25 percent of the vote it might win few or no electoral votes. However, a regionally centered third party, like George Wallace's, might exploit the electoral system by winning enough votes to put the election into the House. This threat could be countered under the present system by lowering the necessary number of electoral votes from a majority to either 45 percent or 40 percent. The failure of any candidates to receive 50 percent of the electoral vote would occur only when there is a third party, and this rule would be effective in limiting third party activity in the first place. Since it would now be nearly impossible to force a contingent election, this provision would act as a harmless brake, and would help to insure some candidate a true majority of the electoral vote. Under the reform systems, however, a 40 percent plurality rule might encourage third parties to campaign seriously, for even a small party could easily garner several electoral votes or a few percent of the popular vote.

There are strong objections to each of the three major reform proposals in contrast to the automatic system. One of the principal arguments against direct election is the possibility that it might produce a plethora of splinter parties. When a candidate loses at a party convention, he usually loses on his issues. Thus, the party platform is contrary to the loser's views. Someone in this position, who feels he might receive a significant portion of the popular vote would be under great pressure to keep fighting. Considering the magnitude of the preconvention campaigns, it would not be impossible for a candidate to extend his private effort into November. Thus, last year there might have been five men running: Nixon, Humphrey, McCarthy, Rockefeller, and Wallace.

The South, with its low voter turnout, holds more power now than it would with direct election, and could be expected to oppose it. Likewise, the 35 smallest States, which enjoy a proportional advantage in the college because of the three-vote minimum allotted to each State, might fear their influence would decline even more under direct election.

The strongest objection to the proportional plan is that the one-party regions would become crucial since the important factor would be the margin of victory in each State rather than the State's electoral vote total. Those States with healthy competitive systems would become the least important, since their electoral votes would be evenly divided between the candidates. If the Democrats were able to reassert themselves in the South, that party would gain a very tight hold on the Presidency. This would occur because a landslide victory in Georgia might be worth more that close victories in New York, California, and Illinois. The lead produced by the South would be nearly impossible for the Republicans, or whoever ultimately lost the one-party areas, to overcome. A national party that could no longer elect a President might not survive, confronting our political system with another kind of threat: the evolution of a one-party system.

The proportional plan does not remedy the inequalities caused by differences in voter turnout, and it appears to be just as vulnerable to a regionally centered third party as the present process. Finally, this plan still does not eliminate the possibility of a minority President.

The Supreme Court reapportionment decision might make the adoption of the district plan more feasible in the future, but the plan is still imperfect. One major problem is that it is not necessarily more responsive to the popular vote than the present system since the use of the unit rule is merely shifted from the State level to the congressional districts. A single-vote win in one district would be just as valuable as a landslide victory in another, and factors such as a voter turnout would still be ignored. Thus, this system too retains the possibility of a minority President.

Another problem is the absence of a tradition of equitable districting of the States. The temptation to create favorable electoral districts would be enormous, and with sufficient ingenuity, Baker against Carr might be circumvented.

Since the urban regions would split their votes between the major candidates, the South and other "safe" areas would become crucial for victory. Minority groups would suffer, for while geographically concentrated communities might win several votes, they would no longer be able to swing a bloc of 30 or 40. This loss in political influence, accompanied by an electoral system that stresses regional community unity, might help to reinforce the geographic-racial separatism already present in our cities. Thus, societal effects of the district plan could become as damaging as the political realinements it would bring about.

The district plan makes it easy for a third party to win electoral votes, and to deadlock the college. This plan also gives the President the same electoral base as the Congress, not only weakening the concept of separation of power, but also threatening to upset the rural-conservative, urban-liberal balance.

In considering these and any plans, the presumption must always be against a basic change unless the common welfare is clearly and safely benefited. This is the case only with the automatic reform proposal; all the others are too sweeping and endanger our traditional political orientations. Those who support radical reform must be prepared for radical consequences. The electoral college needs a minor operation, not vivisection.

America has the oldest written Constitution still in operation. This unprecedented longevity can be attributed to our wise temperance in tampering with basic political institutions, especially after a delicate set of balances and customs have grown up around them. Abolishing the electoral college would be perhaps the most fundamental alteration to the Constitution in its long history.

Previous amendments have merely aimed at perfecting that document; direct election would be the first major step toward restructuring it. Any such change in an elementary institution like the Presidency creates a precedent that threatens the integrity of the entire Constitution as the solid foundation of our law and government. Those who agitate against the academic and theoretical injustices of the electoral college would do better to protest the real, physical injustices in our society. The intense division among the college's critics as to which reform plan should be instituted in its place reveals that none of the sweeping proposals is very suitable. The electoral college harms no one; it helps many to stay within the traditional framework of American political life. Until this situation is reversed, it is in our essental interests to oppose direct election and the other major proposals, and to support in their stead a minimal automatic plan.

A SITUATION AT DISTRICT OF COLUMBIA GENERAL HOSPITAL

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROGERS of Florida. Mr. Speaker, there exists a situation at District of Columbia General Hospital which holds dangerous implications for every member of the Congress and every citizen of this Nation.

It was reported this morning that a group of doctors at District of Columbia General were threatening to "admit every soul who comes to the door" unless certain demands were met.

I am not yet familiar with the demands made by these doctors or the merits of these demands. But I do know that similar situations have already taken place in New York, Boston, Chicago, Philadelphia, and other cities because staff personnel have finally reached the point where they feel the hospital's system of service has about broken down due to a lack of personnel, lack of facilities, lack of finance, lack of attention, and lack of equipment.

I doubt if there is a Member here who is exempt from dire problems of health service in his district.

And I am at a loss to think of a more bitter irony than doctors "threatening" to admit all those who need attention to a hospital unless something is done.

Had I not heard of other such incidents I would be shocked. I am still discouraged that despite the fact that the President, Health, Education, and Welfare Secretary Finch and Dr. Egeberg all recognize the crisis that today exists in the health field. I am discouraged because there is little hope that the administration is mounting a crusade against disease, illness, and inadequate health delivery.

On the contrary, I have seen a report indicating that the administration has decided to lower the priority of health within HEW behind education and welfare.

Yet I am sure that of the people who need help at District of Columbia General and every other hospital in this Nation, there are many who are uneducated and below the poverty level.

Last month I spoke to the national convention of the American Hospital Association and told those in attendance that the hospital is the symbol of health crisis in this Nation today.

The example of District of Columbia General is a vivid example.

Think for a second what has been said of the District of Columbia General situation. People who need help are being turned away. What greater indictment of our health delivery system could be possible?

I would like at this time to call for the administration to re-examine its list of priorities in HEW. I would call upon the administration to set a course of action which would result in a national effort to correct the gross inadequacies and inequities of health service in this Nation today.

One of the doctors said he would not want his wife or child to be treated the way patients are treated at District of Columbia General.

Well, those patients are someone's wife or child or father. And unless we do something about it, similar situations will bring home the message in every district in this Nation.

IS THE UNITED STATES BEING SQUEEZED OUT OF WORLD MARKETS?

(Mr. MIZE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. MIZE. Mr. Speaker, one of the most serious problems encountered by this administration is the rapid evaporation of our favorable balance of trade. For many years, Americans have depended upon a commercial trade surplus to offset expensive, dollar-draining programs of aid and military assistance throughout the world. As humanitarians, we have promoted programs such as food for peace, the Alliance for Progress, and the Marshall plan.

But now, as each day passes, U.S. opportunities overseas become more limited. The collective security of our allies and ourselves has become a much heavier burden. Programs of industrial development with private capital abroad have become a more serious drain on our economy. All these difficulties are the result, in large part, of the shrinking trade balance which traditionally has offset overseas expenditures by Government and private citizens.

From the early 1960's to the present, our trade surplus has diminished by 80 percent—and the trend has yet to be reversed.

Mr. Speaker, Secretary of Commerce Maurice H. Stans is acutely aware of these difficulties. In an interview published in the September 8 issue of U.S. News & World Report, Mr. Stans outlines his views on the challenges we must face up to in trade. His "open table" policy could be a first step toward reversal of a trend already long underway when this administration took office.

Because of the extreme importance of Mr. Stans' observations, I insert the U.S. News & World Report interview in the RECORD at this point:

INTERVIEW WITH MAURICE H. STANS, SECRETARY OF COMMERCE: "IS UNITED STATES BEING SQUEEZED OUT OF WORLD MARKETS?"

Q. Mr. Secretary, are you worried about what's happening in U.S. foreign trade?

A. Yes, I am. In the early 1960s, this country was going blithely along with a trade balance in its favor of 5 billion to 6 billion dollars a year—that is, the U.S. sold that much more abroad than it bought.

Now, quite abruptly, that favorable balance has almost disappeared. In 1968, it fell to less than a billion dollars, and there is no present sign that it will be any better this year, or even in 1970.

Q. Is that because sales of U.S. goods abroad are lagging?

A. No, that isn't the real problem. Exports have done fairly well in recent years. They have been increasing at a rate of 8 or 9 per cent a year. But imports have been growing far faster than that. Last year, for instance, they rose by 24 percent, while our exports rose only 10 per cent.

Q. Does this have an impact on business and jobs in the United States?

A. Yes. Take the textile industry as an example. Some studies I have seen show that if imports of textiles and apparel continue to grow at the present rate there could be a loss of 100,000 jobs a year in this country. That would be serious, particularly because many of these displaced workers would be from the black minority. So we would face not only economic problems but social problems, too.

Q. Why has the gap been narrowing between what we buy from other countries and what we sell to them?

A. There are several reasons:

One, of course, is the inflation, we have had in the U.S. the past few years. This has made it more attractive to import goods from countries where wage rates—and thus selling prices—are lower.

For another thing, Americans seem to like the idea of buying imported things. There is a little touch of glamour attached to products made abroad.

Also, other countries have modernized their manufacturing capabilities to the point where they can compete with us rather well in world markets.

Q. But aren't U.S. industries modernizing, too?

A. Yes. We are ahead in technology in some areas, but not significantly ahead in such products as radios, TV sets, typewriters and some household appliances.

A great many consumer items, and some industrial products—including machine tools—are made as efficiently and as well in other countries as they are here, and often other countries have the advantage of lower wage costs.

There are only a few industries in which our technology is so far ahead of that of other nations that we can still outdistance them in world trade. Those fields include aircraft, computers, some chemical products. But on the broad range of manufactured goods, exporters in other countries have the edge on us, not only because of lower wages but because of tax and credit advantages.

Q. What about farm products—can we still compete on those?

A. Yes, to a great extent—but competition is getting stiffer. Agricultural products make up approximately 20 per cent of U.S. foreign shipments each year. That is certainly important to our farm population in terms of jobs and income. In recent years, the rate of agricultural exports has not been increasing.

Q. Are we losing our over-all position in world markets?

A. Yes, to some extent. It has been a slow downward drift.

Over the past eight years, the U.S. share of world export trade has fallen from a level of 21 per cent of the total to about 19 per cent.

Q. Does this whole trade problem threaten to get out of hand?

A. No, I don't see it getting to the stage of crisis. But we don't want it to get any worse.

In the Department of Commerce, we are taking steps to restore our trade balance, and we hope that over the next four or five years we can rebuild it significantly.

Q. Will that be done by boosting exports—selling more goods abroad—or by asking Americans to cut down on what they buy overseas?

A. By increasing exports. We do not believe that the answer to the trade gap is to hold back on imports of foreign products into this country, except in highly unusual cases where special factors apply.

We must induce more American companies to realize that there is profit to be made by exporting, and that the feared difficulties of language, foreign exchange and differing trade customs are easily surmounted. The Department of Commerce and the State Department are both able to be of real help in guiding our producers into foreign markets.

Q. Do we have to control inflation as a first step?

A. That is vitally important, of course, but it is only one element in the picture. If we can slow down the inflationary spiral, that will automatically help to keep imports in check, because domestic prices will be more competitive. This would also help to widen our range of exports.

But we need to do much, much more than that. For example, this country needs a better means of financing exports. U.S. exporters today are not at all competitive in the financing terms they can offer buyers in other countries—and it is essential that they should be competitive. In our Department, we are spending a lot of time on this problem, working with Henry Kearns, the president of the Export-Import Bank, and with the Federal Reserve Board.

Q. What are other countries doing to help increase their own foreign trade?

A. Among other things, they are providing larger amounts of credit for their exporters for longer periods of time, and often at lower interest rates than are available to exporters in the U.S.

Q. Does this mean that governments of some countries subsidize exports?

A. Yes, in some cases. There is a tendency aboard to hold down interest rates on money that finances exports, regardless of the movement of money rates in their domestic economy.

In the U.S. we don't do that. Export-financing costs here follow the movement of our interest rates, so at a time like the present, when interest rates are the highest in years, U.S. companies that want to sell abroad are at a deep disadvantage.

Q. Should we follow the pattern set by our competitors and subsidize interest rates for American firms that sell things abroad?

A. I think we have to be competitive with other countries, and if that means subsidizing interest rates, then we should find a way to do it.

Q. Should we also provide tax credits for exporters?

A. That is a matter we are studying. There are several ways in which our Government could help exporters through direct tax credits or tax deductions. Some of these steps could be taken without any new laws; others would require action by Congress. We are not prepared to say yet which might be the most feasible. Before the end of the year, however, we are hoping to find ways in which the tax system can be used to benefit exporters.

HOW BORDER TAXES HURT

Q. Do U.S. exporters run into problems from taxes in foreign countries where they sell goods?

A. Yes. A particular problem is the growth of border taxes abroad—taxes on goods moving into a country. An American company that wants to market its products in a country with a border tax has to pay that levy if it wants to make the sale.

In many European countries, these border taxes are a reflection of value-added taxes, imposed at various stages of the manufacturing process. There are plans now in the Common Market to get those European countries together on a uniform value-added tax on all manufactured goods, at about 15 per cent of the total price of the goods. That tax would apply to citizens of the countries involved. But U.S. exporters who wanted to sell within the Common Market would have to pay the same 15 per cent when their goods entered a member country, even though they already were priced to include our domestic taxes.

The disadvantage faced by an American producer is even more evident in dealing with a third country. A competitor in a country with a 15 per cent border tax receives a refund of that tax from his government on all exports to another country. The American company gets no such refund of the domestic taxes it pays.

All of this is the result of a major difference between tax systems. In the U. S., we collect most of the taxes by direct levies on corporations and individuals. In Europe, a high proportion of revenues is collected on merchandise, and it is these so-called indirect taxes that are reflected in the border-tax rates that are assessed on imports and rebated on exports.

We in the Commerce Department are coming to the conclusion that there should be serious study of a value-added tax in the U. S. as a partial substitute for other types of excises and income taxes.

Q. Have you made such a recommendation?

A. We have not as yet. But we want to study this possibility further with the Treasury Department to be able to make a recommendation, pro or con, at an early date.

OTHER HURDLES FOR UNITED STATES

Q. Besides taxes, are there other things that cut the flow of U. S. goods into foreign countries?

A. Yes, besides tariffs there are a great many kinds of nontariff barriers that restrict trade.

Q. What are some of them?

A. One example is the restrictions other countries put on the purchases of products by their government agencies or by nationalized industries. These tend to effectively shut out American goods.

Then, in addition, many countries put difficult technical requirements on imports for the purpose of regulating health or safety. In some cases, foreign governments actually subsidize exports by one means or another. And there are hundreds of other nontariff barriers that impede our exports.

Q. Do we in the U. S. have some of these nontariff barriers, too?

A. Yes, we have some restrictions on imports that are highly criticized by other nations. The "Buy America" law is one. But this Act specifies very clearly the exact measure of disadvantage a foreign company has in selling to the U.S. Government or its agencies. No other country has the equivalent of this law, and in most countries such transactions are foreclosed to American producers by local administrative procedures.

By and large, we do not have anywhere near the trade restrictions that other countries have, and that makes for a lack or reciprocity in our trading relationships.

Q. In your recent travels abroad trying to get trade barriers lifted, what attitudes have you found?

A. Governments of most countries agree that these bars to trade ought to be eliminated, or at least considerably reduced.

On behalf of the U.S., I have proposed what we call an "open-table policy"—a suggestion that we put all the facts about trade barriers and restrictions out in the open and try to find ways to reduce their number and their impact. In almost every case, this proposal has been welcomed, and steps are under way now to set up meetings at which these things can be explored.

Q. What about the Japanese? Are they cooperating?

A. The Japanese Government has not endorsed the principle as wholeheartedly as some other countries. Japan has more than 120 different quantitative restrictions on imports. Those restrictions are in violation of their commitment under the General Agreement on Tariffs and Trade—the so-called GATT agreement.

On the other hand, our own trade difficulties with Japan have been related in large measure to timing. We have been pressing them for some time to cut trade barriers and to make it easier for our people to invest there. They have set up a timetable, but it is much too slow, particularly since our trade balance with Japan last year was a negative 1.1 billion dollars, and probably will rise to a negative 1.5 billion this year.

On the positive side, for the long term, I believe the Japanese are slowly coming to the conclusion that their position as a major world power requires them to assume a greater degree of international reciprocity, and thus to modify some of their trade restrictions.

Q. Since a major trade worry now centers on textile imports from Japan, are you proposing some special kinds of voluntary import restraints?

A. Yes. We have proposed that an international agreement be negotiated with key exporting countries as a solution of this problem. Our concern over textile imports involves not only Japan but a number of other countries in the Far East and elsewhere. President Nixon and his Administration recognize it as a unique type of problem that requires a special approach. The situation is this:

For certain kinds of textiles and apparel, mostly from synthetic fibers and wool, the U.S. is the only open market in the world. Every other major nation has put restrictions on imports of those items. As a result, the producing countries all are directing their output toward the U.S., and are increasing their capacity at an outstanding rate. This has brought a tidal wave of imports that the domestic industry simply hasn't been able to combat. Just on apparel from synthetic fibers, U.S. imports from Japan were up 51 per cent in the first six months of 1969, compared with the same months last year.

Q. Has this posed a critical problem for textile manufacturers here?

A. Yes. The labor organizations are greatly exercised at the loss of employment and the necessity for closing plants in some communities. And producing companies are finding their profit margins shrinking. Wage rates here are several times as high as those of our large overseas competitors.

Q. What can be done about it?

A. We think it can be handled by an orderly system of marketing. We are telling textile producers in Japan and elsewhere: "We do not ask you to reduce the level of your shipments to the U.S. We are willing to accept the 1968 level and even permit an increase, year by year, as our total market grows. No one in your country need lose a job and no one in the U.S. need be forced out of work."

In other words, we are seeking to hold imports to a moderate rate of growth, rather

than permitting the massive increases that have been taking place in the past few years.

Q. Why not work through GATT and get the countries that have put barriers on imports of textiles across their own borders to reduce those barriers, so the U.S. doesn't have to absorb the whole flood?

A. None of the countries we have talked to is willing to do that. They feel that a degree of protection is necessary for their own industries.

Here, obviously, is a perfect example of the unworkability of an absolute free-trade policy. There is no really free-trade country in the world. Every nation has some barriers to trade, over and above tariff walls, to protect what it considers its long-term interests.

So the U.S. has to face the textile problem on that same basis, and find a way to moderate the rate of imports. This unusual situation does not contradict President Nixon's basic belief in a freer trade policy.

Q. Are there other products besides textiles where manufacturers are demanding protection from foreign imports?

A. Yes. Congress has been getting complaints from producers of shoes, steel, electronics, flat glass and other items. In some of these instances, adjustments to the import problem might be made by the industries concerned. But I believe that we need better legislation than now exists to help companies that are clearly harmed by excessive imports.

Q. Isn't there an "escape clause" in existing law that is supposed to help companies that are being hurt?

A. Yes, but that provision is ineffective. The law is so tightly written that no company up to now has been able to qualify for aid.

Q. What changes do you propose?

A. The President should be given more authority to adjust tariffs in such cases, and access to financial and other assistance should be liberalized for a company and its workers who are clearly being harmed by excessive imports.

Q. More and more American companies are setting up plants in other countries to manufacture goods for the foreign market. Doesn't income from those subsidiaries help offset a falling-off in exports from the U.S.?

A. Yes, to a degree—and this source of income will grow increasingly significant as time goes on.

However, many American companies with subsidiaries overseas that were originally created just to supply foreign markets now are finding it profitable to send some of their merchandise back to the United States. In the future, it may be necessary for more U.S. companies, in their own interest, to move into the low-wage areas of the world and produce for the U.S. market. This is a matter of great concern to us, because it means exporting jobs to other countries.

Q. How much has that meant so far in taking jobs away from American workers?

A. There is really no way to document that or quantify it. We are in an expanding economy with high employment, so it is difficult to measure this kind of loss. But, as a result of more and more U.S. companies moving into the low-wage areas of the word, we do know that we are suffering a definite loss of job opportunities—now and for the future.

WHERE EXPORTS WILL GROW

Q. In what fields of U.S. industry do you foresee the greatest growth of exports in days ahead?

A. We have identified 17 categories of American manufacturing in which we see the greatest opportunity for export growth. At the top of this list is commercial aircraft, in which the U.S. has pre-eminence in the world. Next are computers and high-technology components in electronics. Chemicals are high on the list, and there are others, such as nuclear power plants, telecommunications systems, instrumentation and measuring devices, materials-handling equipment, and so on.

Q. What else is our Government doing, in addition to trying to increase exports, to improve our balance of payments with other countries?

A. The Commerce Department has the responsibility in two other areas which directly affect our payments balance. One has to do with travel, the other with investments by U.S. companies overseas.

In the case of travel, the U.S. presently has a "travel gap" of about 2 billion dollars a year. That is the amount that Americans spend in other countries in excess of what people from other countries spend here.

We are pushing an active campaign to induce more people abroad to visit the United States. We are expanding the program this year to induce travel agencies to offer flat-price package and group tours to foreigners to visit the U.S., and we are trying to get business and professional groups from other countries to hold conventions in this country.

In the case of direct control over foreign investments, we recognize that this is not a desirable long-range program. We want to eliminate it. We are continuing it now only because of the current stringency in the balance of payments.

Under present controls, the amount of American investment that will be permitted overseas in 1969 is about 3.35 billion dollars. That is in terms of actual net investment, which will be augmented, of course, by money that can be raised by American companies in foreign markets.

This limit is not a severe impediment to business in the present economic climate. As soon as the balance-of-payments situation permits, the Administration will want to remove the remaining controls on overseas investment.

Q. In the meantime, should measures be taken to restrict American travel abroad?

A. As you know, the Johnson Administration proposed some restrictive measures, and even taxes on spending by U.S. travelers abroad. President Nixon has decided against any proposals of this type.

We would very much like the American people to see their own country first. But, beyond exhortations of that type, we have no plans to make it more difficult for Americans to travel to other countries.

TRIP TO SOUTHEAST ASIA

(Mr. DENNIS asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DENNIS. Mr. Speaker, I have just completed a trip to Southeast Asia with two of my colleagues, the gentleman from Indiana, EARL LANDGREBE, and the gentleman from Wyoming, JOHN WOLD. We made this trip at our own expense during the congressional recess. We visited South Vietnam, Laos, Taiwan, South Korea, Japan, and Hong Kong.

On our trip we talked with many people, civilian and military, official and unofficial, native and American. We made a conscientious effort to expose ourselves to all points of view.

Within the inevitable limitations of time, opportunity, and language, I believe that we reasonably accomplished this objective.

Without claiming to be any sort of expert I have come, as a result of our trip, to at least some tentative and general conclusions as to our situation in South Vietnam. These conclusions I should like to share with my constituents, my colleagues, and my Government.

First. Our troops have the military situation basically well under control, and any enemy offensive could be, and would be, defeated.

Second. The enemy has suffered heavy casualties, and the unsuccessful Tet offensive also cost him popular support. His present indiscriminate guerrilla attacks are costing him additionally in popular support.

Third. It remains true, nevertheless, that we are faced by an active enemy all over the country. Guerrilla warfare is widespread; large areas remain hostile and unpacified. The areas which are pacified and those which are not pacified still shift from time to time.

Fourth. The ARVN—Army of the Republic of Vietnam—troops are improving. Our military men are unanimous in praise of the 1st ARVN Division, which they say is as good as any American division. Most ARVN divisions are not that good, however. Desertions, lack of motivation, and lack of leadership remain serious ARVN problems.

Fifth. The morale of our own troops in the field is good, and their performance is high. There is some skepticism about what we are actually accomplishing, and about the ability and performance of our allies. There is some dissatisfaction with the restrictive ground rules under which the war is being fought.

Sixth. The present Government of South Vietnam is the most viable government since the days of Diem. President Thieu is a patriot, according to his lights, and is, I believe, making a real effort to establish a stable government. Land reform is underway with some prospect of success. In general, the governmental situation is slowly improving.

Seventh. The Government of Vietnam still has a long way to go. It lacks widespread popular support, partly because the average Vietnamese peasant is basically locally and not nationally minded, and because the average Vietnamese politician is factionally and not nationally oriented.

Thieu has difficulty obtaining a broadly based Cabinet, even when he tries to do so. There are a substantial number of non-Communist political prisoners. Inflation and corruption are serious problems. American foreign aid is at present an absolutely necessary prop to the economy.

Eighth. To date the North Vietnamese have, on balance, shown more drive, cohesiveness, unity, and purpose than the South Vietnamese Government has shown. This is partly due, no doubt, to totalitarian terror. Ho killed many people in the north and the migrations have been to the south, not in the other direction.

This motivation is due also, however, to a more dedicated and convinced leadership based on a mixture of communism and nationalism which has had, and has, considerable strength and appeal.

Ninth. The civilian population has suffered and is suffering severely as a result of the war. There are many refugees, populations have been moved and up-

rooted. Sometimes they have later been repatriated. There have been many civilian casualties, caused by both sides.

Those we have caused have been generally unintentional, an inevitable by-product of waging war. We have found it necessary, for military reasons, to subject wide areas of the South Vietnamese countryside to aerial bombardment.

The enemy, on the other hand, has made, and still makes, many indiscriminate and deliberate terroristic attacks upon civilian centers of population and carries out assassinations of local officials. The city of Hue was in large part destroyed as a result of the enemy's Tet offensive.

Tenth. There are too many Americans in Saigon. Our presence in such numbers has an inflationary effect on the economy, and an unsettling effect upon the social structure.

Eleventh. Most of our official American personnel, both civilian and military, are dedicated, hard-working individuals. They believe that they are performing a worthwhile task, and with a reasonable chance of success. They are not overly optimistic, but they are hopeful. It is a fact that they are engaged in a gargantuan task of waging a war and, at the same time, rebuilding and restructuring a government and an entire society.

There are those—including some non-official Americans on the scene—who think the effort is doomed to failure. This is true particularly as long as we work through and with what they regard as an unpopular and corrupt government.

Many Vietnamese appear to be indifferent; while others give heartening cooperation. The American officials believe that, given time, they have a fighting chance to win through.

Twelfth. In my judgment—given this point in time and circumstance—President Nixon's apparent policy of gradual American withdrawal and gradual Vietnamization of the war is probably the only practical course which we can follow.

An all-out effort for military victory could still be successfully made—but it is not now politically feasible. The question would still remain, What do you have, once you have got it?

Immediate and unilateral withdrawal, on the other hand, would cause a military and political collapse in South Vietnam, followed by chaos. This would probably lead to a Communist takeover with an attendant political bloodbath. All of this would necessarily mean that the blood, lives and treasure expended in Vietnam had been expended in vain.

The gradual withdrawal policy is by no means a happy one in itself, and no one can be sure that it can or will be successful. I believe—as an honest estimate—that this process of gradual withdrawal, even vigorously and single-mindedly pursued, will take from a minimum of 2 years to possibly a period of 4 years to complete with any reasonable prospect of success. Any lower estimate I regard as wishful thinking.

However, I believe further that there is a reasonable chance that, given sufficient time, a viable, friendly, and non-Communist government can be achieved in South Vietnam which can survive and which can be of benefit to its people and to the world. The assistance of American air, logistic, and economic support will be necessary for the foreseeable future, but without the use of American combat ground forces.

I believe that this objective is worth working for. It holds forth a fair prospect for future peaceful progress in Southeast Asia, such as is now apparent in Taipei and in South Korea. This policy is much to be preferred to the defeat and despair which, I believe, would result from an immediate withdrawal and from the Communist takeover which would follow. We cannot base an American policy upon the acceptance of such a prospect.

The American people are faced with a difficult situation; but we can find the strength and wisdom to resolve it, and I think that we must do this.

POSTAL REFORM IS THE ISSUE: WHAT IS BEHIND THE FRANTIC PUSH FOR CORPORATION PLAN?

(Mr. DULSKI asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DULSKI. Mr. Speaker, some 2,000 civic, business, and government leaders from across the country are gathered here in Washington for Postal Forum III.

But it sounds like more of the same.

Part of the gigantic and well-heeled effort to jam one particular postal reform proposal down the throats of Congress and the American people.

Let me make it clear again—as I have tried on repeated occasions in the past year—I believe sincerely that the Nation's postal system needs a massive reorganization. No one can be more convinced of the need for major postal reform than I am, based on my close association with the Department over the past decade.

I am not wearing blinders, however, as the top brass in our new Post Office Department seem to be doing. They are vigorously committeed—and have been since the day they took office beginning last January—that the only solution is to convert the Post Office Department into a public corporation.

They consider this is the great panacea and they are quite reluctant to take into account any shortcomings which have been pointed out in their own proposal.

For myself, I say once again, I am for postal reform.

Over the objections of the Postmaster General, who went to the highest levels of Government to thwart my efforts, I started full-scale public hearings on postal reform before our full Committee on Post Office and Civil Service last April 22.

Those hearings would still be going on if I had waited for the Postmaster General and his staff to give the "go signal."

I missed only 1 of the 35 days of hearings over the period of nearly 4 months and I believe I know a little about the problems of the postal system and what we might do about them.

What is more, I looked at the issue at hand—the need for postal reform.

I did not wear blinders that saw the issue as simply whether or not we should convert to a corporation. That is not the issue. That is simply one of the possible solutions.

I noticed on the postal forum schedule yesterday that Jim Hagerty was moderator for a "panel of experts" to answer questions on postal reform. Did you notice the names of the panelists? Postmaster General Blount, his Deputy, and his Assistant Postmasters General. All on one side of the issue.

So you see the Department recognizes only one solution to the problems of the postal system. Otherwise they would have included some panelists who have other views.

In our committee hearings we heard from all sides while still giving Mr. Blount more time than anyone else.

But when our committee goes into executive session shortly you can rest assurred that we are going to act on the basis of all the testimony.

I have not closed my mind on alternates. I have not closed my mind on details. I introduced my own postal reform bill last January—it was the most comprehensive measure ever presented to the Congress up to that time. But, I also am the first to admit that it is not perfect in ever detail. I offered my bill for consideration on its merits—as it should be.

Indeed I sometimes wonder just what is behind this well-heeled, high-powered effort to create a corporation. Who stands to benefit? Certainly not the individual citizens—they are going to have to carry the burden of a healthy increase in mail rates, on the order of 12 or 15 cents for a first-class letter—maybe more.

There is real reason to wonder why the sponsors of the corporation plan are making this desperate effort to obtain the vigorous backing of top executives around the country to push the corporation plan through the Congress.

I refer specifically to the hard-handed demands for support made upon the airlines. It should be remembered, of course, that the airlines are subject to the whims and the regulations of the administration in connection with their routes and rates.

Indeed, if the corporation plan is such a good approach, why are they pushing the panic button in this all-out lobbying effort? There must be more to this great procorporation concept push than appears on the surface.

As I said a moment ago, I introduced H.R. 4 back in January, which is an alternate way to bring about the same ultimate broad reform of the postal system. Some of my friends suggested that we form a public committee to support H.R. 4—shades of the O'Brien-Morton committee for the postal corporation concept.

But I have refused to be a party to such lobbying. I am letting my bill stand on its merits. That's the way I presented it to our committee and that is the way I want it considered.

Incidentally, I was intrigued at the way in which Postmaster Blount tried to rationalize his campaign Monday with President Nixon's demand for a 75-percent cutback in Government construction work.

While explaining to the postal forum the amount of capital construction and financing that is urgently needed by the postal system, Mr. Blount, made this observation:

> The Post Office building program, of course, will be affected by the President's effort to fight inflation by reducing the amount of government construction. It is another indication of how important it is for us to find a better way of capital financing.

This statement causes a person to wonder further just what is involved. Even the President should wonder—notwithstanding the interesting pow-wow which he had with Mr. Blount and the O'Brien-Morton team in California a few days ago.

OPERATION ENTERPRISE

(Mr. BUSH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BUSH. Mr. Speaker, too little has been said about the success that has been achieved by the Small Business Administration in the area of minority entrepreneurship. Instead it has become fashionable to criticize the SBA for its lack of direction or lack of funding to minorities. Too many have failed to realize the importance of the private sector in any effective program and by doing so have shown their lack of faith in the dedication of the American people toward each other. They have also vastly underestimated the catalytic role that a conscientious agency—in spite of limited funding—like the SBA can play in providing initatives and technical experience to the minority small business community.

Clearly the time has come to spotlight this Administration's positive approach in maximizing private sector participation and to illuminate a movement that has developed within SBA over the past year in concert with the thrust of this policy.

I will use as an example a program developed by the Small Business Administration in Houston. By grabbing the initiative and rolling up their sleeves, my constituents, black and white, did something about minority entrepreneurship.

Convinced that the needs of the minority community forms the only real foundation for any effective program, a group of concerned citizens met. Listening and hearing their needs Operation Enterprise was born.

On September 9, 1968, Operation Enterprise was launched as a Houston project with full community endorsement.

To help you visualize the scope of community interest and participation, here are the organizations involved in Operation Enterprise and basically what they are doing to support it:

First, a consortium of 27 major Houston banks: Funds totaling $7,400,000 set aside for soft loans to minority members.

Second, office of the mayor, Business Resource Development Center: Provides SBA with quarters for screening and interviewing applicants and assists in public relations activity relative to Operation Enterprise.

Third, business round table: A racially mixed organization, meeting regularly and sponsored by the Houston Citizens Chamber of Commerce, from whose members the concept of Operation Enterprise developed.

Fourth, Rotary Club of Houston: The formation of RAMP—Rotary Assistance to Management Personnel—volunteer management assistance to minority communities.

Fifth, Houston chapter of Texas Society of CPA's: Conducting seminars and general education session to assist applicants in understanding and preparation of applications for financial assistance.

Sixth, Harvard Business School Alumni Club: Works in conjunction with BRDC in assisting in special management problems of minority businessmen.

The Houston Legal Foundation: Provides facilities for three outreach offices in the target areas for interviewing applicants.

Eight, SCORE—Service Corps of Retired Executives: SBA sponsored management assistance group.

Ninth, SBA: Providing banks with guarantees on loans made through Operation Enterprise.

The point in listing the above organizations is to emphatically present the extent of community involvement. SBA has merely acted as a catalyst and provided direction when needed. The obvious question is, "Has it been successful?"

The project began September 9, 1968. It has been in operation 1 year. Here are the results:

City of Houston only: 81 loans to minority group members approved; value, $1,094,800—77 percent Negro, 23 percent Mexican-American; 71 percent of dollars from banks; 14 percent of dollars for new businesses; 20 percent of dollars for business ownership change; 66 percent of dollars for existing businesses; and 150 new jobs created.

Currently there are 24 applications in the processing stage valued at $537,500.

Now compare this to the preceding year—September 1967 to September 1968. In the 37 county region, including Houston 19 loans to minority group members approved—value $220,700.

The increased performance and impact on Houston's target areas through Operation Enterprise is dramatic.

This is what can be accomplished by total involvement.

Much has been said about lack of funds for SBA—prudent budgeting of available funds was required during this past 12 months' activity of Operation Enterprise, but note the way bankers have rallied to the cause. Too little is being said about the technique of utilizing the private sector's resources.

Much has been said about too few recipients of loans to minorities. Admittedly, much more can and will be accomplished this year, but let us not pretend every member of the minority is a potential entrepreneur—nor is the majority. It takes a special type of individual to be a successful independent businessman. So, let us not play simply with numbers.

Finally, much has been said about a lack of direction within SBA. New programs are not necessarily the answer. Within their existing act there is a multitude of possibilities—a veritable warehouse of ammunition waiting for use. So what is wrong with the field offices? By lifting their sights and applying ingenuity along with some blood, sweat, and tears, field offices should lead the way in creative Federal management, on a local level responsive to local needs.

Here then for the serious consideration of this House are examples providing the much sought-after prototype positive action—moving minority businessmen from economic serfdom to economic dignity.

I cannot in all good conscience permit the blatant rape of a well-conceived and legislated agency to continue without defense. It is time to accent the positive and move with speed and confidence.

THE PROGRAM INFORMATION ACT

(Mr. ROTH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROTH. Mr. Speaker, the lack of meaningful program information is most harmful to those most in need. Facing the current maze of Federal aid programs, and without a single, Government-wide catalog, a large city or heavily endowed college can afford a full-time grantsman—or perhaps even a full staff—to ferret out information on which programs really are funded and which programs really are tailored to a particular need. A small town, a tiny county, or a small State school cannot afford such a luxury. The system now is inequitable. Those who need the money are left out in the cold.

Currently, dozens of Government offices and agencies publish dozens of catalogs, and most of these, to be quite frank, are little more than public relations documents. Occasionally they do more harm than good, for they sometimes advertise programs for which no funding exists. A single Government-wide catalog, updated monthly, with facts, figures, guidelines, and contacts, would enable the small college, the small city, the average person back home to have access to information about all Federal aid programs.

Unfortunately, that situation does not exist now. Time and time again, in sorting through replies to a questionnaire I sent out to administrators across the country, I found statements like the following:

> Full information is now available only to those who already have money enough to hire it searched out. (From a State college in New England.)

> Perhaps worst of all is the fact that local governments must be "in" with Federal department thinking and language to get funds. Most programs are too competitive, meaning the "in" cities get the funds. (From a county planner in Georgia.)

> Our budget simply doesn't allow the best aids, the commercial catalogs. (From a small western college.)

> Perhaps the most helpful tool for all who are involved in Federal assistance on a State or local level would be the publication of a catalog similar to that which Rep. Roth has

inserted in the CONGRESSIONAL RECORD. If this type of catalog could become the "bible," probably substantial savings could be made by ending much of the brochure and catalog production of the various Federal departments and agencies. (From a State planner in Vermont.)

A city has no other way of knowing what assistance is available to it, except to hire a consultant and hope he knows all the programs. (From an official in the District of Columbia.)

Because I could not agree with these people more, Mr. Speaker, I urge my distinguished colleagues to press for adoption of the Program Information Act, H.R. 338, which would require the President to publish an annual catalog of all Federal aid programs and to update the catalog monthly.

I will discuss this subject again tomorrow.

IN MEMORY OF BILL BAGGS

(Mr. PEPPER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. PEPPER. Mr. Speaker, it was my sad duty to call to the attention of our colleagues on April 21 the untimely death of the brilliant editor of the Miami News, William C. Baggs. Recently a memorial service was conducted to honor this dedicated newsman and on that occasion an eloquent tribute was paid to him by his great friend and fellow newspaperman, Mr. Harry S. Ashmore. I wish at this time to call to our colleagues' attention and insert in the RECORD the Miami News account of this memorial service on Sunday, August 10, and the fitting tribute which Mr. Ashmore made to Bill Baggs on that occasion:

PEACE ALTAR DEDICATED TO BAGGS AT MEMORIAL

Hundreds of friends of Bill Baggs—black and white, the high and the humble—gathered yesterday afternoon at a Coconut Grove Negro church to dedicate an altar in his honor.

They heard Harry Ashmore, Baggs' longtime friend and his companion on two peace-seeking missions to Hanoi, recall him as a man who "literally created a worldwide network of friends and supporters by doing what came naturally . . . He acquired personal loyalty on a wholesale basis and he gave it in return."

"I doubt that the case for ending the war in Vietnam ever was made more elequently than he made it in our long private audience with Ho Chi Minh," said Ashmore, "and, in turn, in the inner reaches of the U.S. State Department. Our failures made no dent in his massive stubbornness; for him the effort to damp down the miserable conflict would end only with his death."

Baggs, 48, late editor of The Miami News, died last Jan. 7 after being stricken with flu and pneumonia.

Canon Theodore Gibson, rector of Christ Episcopal Church and one of Baggs' closest friends, arranged yesterday's service at his church on an Episcopalian feast day—The Day of Transfiguration—because "Bill helped to transfigure Miami by bringing blacks and whites together in a spirit of good will and cooperation."

Ashmore, who won a Pulitzer Prize as editor of the Little Rock, Ark., paper during that city's integration crisis, recalled that Baggs "would not suffer the denial of any black man's dignity and condescension was not in him."

Baggs, a native of Georgia, was a long-time leader for civil rights and equality.

Ashmore now is executive director of the Center for the Study of Democratic Institutions, of which Baggs was a director. Ashmore suggested that "whatever tangible things" are done in Baggs' memory should "reflect his abiding concern with justice tempered by love . . . and the most appropriate place to do him honor is among the blacks, who still have a long lonely way to go."

Others participating in the service included The Rt. Rev. bishop of the Episcopal Diocese of South Florida; the Rev. Theodore J. Jones, vicar of St. Christopher's Church; TV newscaster Ralph Renick; Dr. Joseph Narot, spiritual leader of Temple Israel and chief of the area's rabbinical association; Garth Reeves, editor of the weekly Miami Times; and Martin Clark, president of Burdines.

Mrs. Baggs and the Baggs' two sons, Craig and Mahoney, attended the service.

The portable altar was described in the special printed program in these words:

"Despite its profound purpose, the Memorial Altar is simple in appearance, for Bill Baggs is remembered as an outwardly simple person, but one of profound depth. The altar is of African mahogany, wood of rare quality; Bill Baggs' friends knew that he shunned show adornment, that he admired rather plain articles of good quality, and that he considered fine wood to be one of nature's most pleasing gifts.

"The pastor could have selected any number of symbols for the front of the altar. He chose the letters "PX," the symbol used by the early Christians to signify "pax" or peace. His friends believe that Bill Baggs who devoted his greatest skills and energies to the search for peace—peace among the races, peace among the nations—might have made the same selection."

REMARKS BY HARRY S. ASHMORE

About the time the Miami News began pulling itself together to move to the Herald building, Bill Baggs started referring to "our little portable newspaper." He recalled that he had been through all this before, when the staff decamped from the old building on the bayfront, and he made it clear that he regarded portability as a personal imposition.

He complained that he had barely survived the attack of nostalgia brought on by cleaning out his desk the first time around. It was a slow and frequently painful business, sorting through the drawersful of indecipherable notes, forgotten clippings, unprintable photographs, unanswered letters, and obscene objects d'art that served as mementos of an active and untidy life. Now new accretions had formed, and he had to do it all over again.

"Cleaning out a man's desk," he told me, "is an office that ought to be carried out posthumously, by an understanding friend."

In a way this is the office many of us here have been performing in the months since we lost Bill. Miss Myrt Rathner, the stalwart guardian at the editorial gate, has turned to us when she picked up some skein that connected our special interests and his. And Louis Hector, handling the legal end, has discovered how various and wide-ranging those interests were.

A man who had accumulated more honors than money, and had not yet reached fifty, could hardly have been expected to have acquired retainers. But Bill had them—an assortment of the less fortunate who had helped him in some way, or had earned a measure of his capacious pity, and so he had conducted his own eccentric, cut-rate Community Chest, and, characteristically, had said nothing about it.

But the money he gave away was the least part of the bounty he quietly spread around. He functioned in Miami as an ombudsman long before anyone in these parts had heard that now-fashionable word—taking up as a personal cause the individual and collective injustices unearthed by the *News'* reporters, or called to his attention by readers he might never see in person.

Sometimes he responded with the cutting edge of his signed column, or the heavy artillery of the editorial page, and some of those battles made journalistic history with their high charge of moral indignation and their leavening of humor. There were other times when his reaction was a private telephone call to one of the remarkable array of persons in high places who could be counted on to listen to him with affection and respect. There is no record to tell us the full extent of those private interventions, for which neither he nor his newspaper received public credit. To my knowledge they were frequent, and effective, and they went on right up to his final illness.

Most of you are familiar with the triumphs and failures and high style of Bill's career on the *News*. I met him shortly after World War II, when Ralph McGill rescued him from exile in the northern latitudes of Carolina and persuaded Jim Cox to give him a spot where he would at least be in reach of cracker country. It was a natural, and perhaps a necessary affinity. John Popham of the Chattanooga *Times* is an expert on what Bill called Uncle Remus matters, and when he first saw the News' gangling young columnist he grabbed my arm and exclaimed: "My God—that boy's got a real cracker face!" And so he had, and so it remained long after he had set it off with a seersucker suit and made it familiar to heads of state from Washington to Hanoi.

I remember sitting with him at lunch in the roof garden atop the Intercontinental Hotel in Geneva overlooking the palace of the old League of Nations. With us were the editor of Le Monde of Paris, a member of the British House of Lords, a South African bishop, a Pakistani general, a Rumanian ambassador, a princess of royal Loatian blood, and a Polish justice of the International Court at the Hague. Bill peered at the company over those Old Grandad glasses he affected, and said, "Your highness and gentlemen, I can tell you one thing—we're a long way from Colquitt, Georgia."

We were, and we weren't. The mischievous Huck Finn character who plagued his beloved grandparents in the little South Georgia town lived on in the sophisticated journalist who became the lion of the Washington cocktail circuit—at least during the seasons when the Democrats were in power. He accorded respect to those he thought had earned it, but he was without awe. So it was that he treated everyone he met as an equal, the high and the low, even that considerable company of scoundrels and knaves with whom he chose to do public and private battle.

I had as much trouble prying him loose from happy pidgin-English conversations with Cambodian pedicab drivers as I did getting him across a hotel lobby full of United States senators. He could be sharp, he freely and indiscriminately indulged his needling sense of the ridiculous, and I often complained that he had the nerve of a burglar, which led him into outrageous intrusions into the privacy of friends and foes alike. For ten years after I moved to California he never recognized the three hours time difference between Miami and Santa Barbara, and on a thousand mornings I was jerked out of bed before dawn by the telephone, to have my outraged cursing greeted by his delighted laughter.

He was gifted with what can only be described by an old cliche, infectious humor, and it became a tool of his trade, and an invaluable asset in the extracurricular activities in which we became engaged as practitioners of what has been called private diplomacy. He literally created a worldwide

network of friends and supporters by doing what came naturally. Sitting in a bar one day with Ambassador Nugroho, a dignified Indonesian diplomat who, like most of his countrymen, has only one name, Bill leaned over and said, "Mr. Ambassador, you pose a serious problem for me. What do I do when I like a man so much I want to call him by his first name, and he hasn't got one?" The Ambassador beamed and replied, "Just call me Nug!" Bill roared with delight and hugged the Indonesian, who replied in kind. Months later, in Hanoi, where Nug then served as head of his country's mission, our recently-acquired old friend made his embassy's communications facilities available to us to send out North Vietnam's first response to President Johnson's cut-back on the bombing.

He could turn the coin over, and argue a good cause with relentless earnestness. I doubt that the case for ending the war in Vietnam was ever made more eloquently than he made it in our long private audience with Ho Chi Minh, and, in turn, in the inner reaches of the State Department. Our failures made no dent in his massive stubborness; for him, the effort to damp down the miserable conflict would end only with his death.

He acquired personal loyalty on a wholesale basis, and he gave it in return. As a result, he suffered more than most, and his sense of tragedy ran deep. Bill not only considered Jack Kennedy a personal friend, but saw in the late President the embodiment of his own hopes for a gay and enlightened span of national government, and the assassin's bullet in Dallas wounded him grievously. In Hanoi we received the news of the death of another old friend and harbinger of hope, Martin Luther King, and we mourned him together on a bizarre plane flight half way around the world to a Washington closed down by curfew in the wake of race riots. In New York a few weeks later, I saw Bill off to St. Patrick's where he stood midnight vigil by the bier of Robert Kennedy—and this was a deep grief he would take with him to his own grave. Perhaps the most painful of the mortuary offices I have performed for him came when, as he had requested, I went out to Hickory Hill to deliver a single red rose to Ethel Kennedy as she awaited the birth of her slain husband's last child.

He wore his religion lightly, but he never ceased to needle me about my own skeptical ways. A knee I had banged up on our second journey to North Vietnam required surgery, and when I joined him in Chicago for the Democratic Convention last summer I was hobbling on a heavy cane. My condition, I suggested, had obvious utility, since the cane would be useful in fending off the Chicago police, and might earn me safe passage among the militant demonstrators as a man suffering from a peace wound. "They'll never believe it," he said. "You might as well tell them you got the bad knee kneeling in cold churches."

It wouldn't have been too far off the mark, at that. Early one Sunday morning in Hanoi, when the American bombers were still pounding away at the suburbs, he routed me out of bed and insisted that I come with him on a mission of great urgency. It was too early even for our escorts and interpreters, and we walked alone down the deserted streets of the city to a shabby Buddhist temple he had noticed the day before. In Communist North Vietnam religious practice is largely an indulgence of the aged, and the temple was deserted except for a very old woman who scuttled away from the altar. Bill took her place, knelt, and recited a version of the Episcopal liturgy, while a benign Buddha looked down across the flickering candles. Early next morning came word that Lyndon Johnson had cleared the skies of bombers north of the nineteenth parallel.

He had an unfailing interest in children, and these, too, he treated as equals, and they responded in kind. I am sure his sons, Craig and Mahoney, have already found comfort in their memories of long, rambling conversations laced with laughter. But they may not know how proud he was of them, how to young people all over the world he bragged about Craig's growing size and Mahoney's skill at chess. His love for his boys, and for their mother, warmed these anecdotes, and made them a kind of international currency that took him past barriers of language, custom and culture and into the family circle of people who looked upon Americans as beings from another world.

So it was with the blacks. They were his friends, and always had been, even back in the distant South Georgia days when inequality of the races was assumed and segregation was as much a way of life as the summer heat. He would not suffer the denial of any black man's human dignity, and condescension was not in him. So the long struggle for justice for the Negro minority that began here in our familiar Southern precincts, and was destined to spread across the nation and beyond, was for him, as it was for me, not an abstraction but a family affair. Black men were our friends; they shared our past and, in truth, our blood; and if thin-lipped men accused us of the high crime of loving Negroes we were honored to plead guilty.

The great crusade for Negro rights has become a grim contest, but it never seemed so to Bill. As he took part in it there was laughter, and grace, and a sort of instant communion with even the toughest of the new breed of militants. Again, it was a question of equality—not equality ritualized, but equality assumed, bolstered by simple courtesy, and applied in the ordinary affairs of daily life. "We have arrived," he once told an agitated Negro demonstrator, "when we can get mad at each other for reasons that have nothing to do with the color of our skins. That works for you as well as for me." It was, then, no wonder that when racial tensions neared flashpoint here in Dade somebody usually sent for Bill Baggs; the blacks knew he would settle for nothing less than justice, and the whites knew that he wouldn't hesitate to lean on his black friends to remind them that justice is a two-way street.

I hope that whatever tangible things may be done in Bill's memory will reflect his abiding concern with justice tempered by love. This, I think, is what religion meant to him. And the most appropriate place to do him honor is among the blacks, who still have a long, lonely way to go. The walls are coming down now, and there's a new black pride—but, welcome as it is, the new day brings new demands upon both races for compassion and understanding.

Bill already has many monuments, and not the least of them is present here today. I think in many ways the proudest day of his life came when Theodore Gibson was ordained a canon of that one-time white citadel, the Episcopal Diocese of South Florida. And certainly the most moving moment in mine came when I stood outside the cathedral while thousands of Bill's mourners filed away, and heard Canon Gibson say: "I owe Bill Baggs my life—more than that, much more, for he saved my faith. I had become frustrated and bitter. I could find no evidence of that love I had been taught in the name of Jesus, I could see no sign that the people who ran Miami would even recognize the plight of my people. And so I began to hate, to lump white people together and hate them all, and it ate away at me like acid until I thought I had no right to wear the cloth. I was at the point of leaving the church when I met Bill Baggs. It wasn't so much what he did, but the way he was, that showed me that there is still love and grace in the world, and that a man who is not blind or afraid can find it if he looks. He restored my faith, and as long as I live Bill Baggs lives in me."

THE LATE HONORABLE DANIEL J. RONAN

The SPEAKER. Under previous order of the House, the gentleman from Illinois (Mr. ROSTENKOWSKI) is recognized for 60 minutes.

Mr. ROSTENKOWSKI. Mr. Speaker, I am deeply grieved as I join with distinguished colleagues who eulogize today the life and accomplishments of a truly great political leader—the Honorable DAN RONAN, Representative from the Sixth District of Illinois. Words alone cannot fully express the omnibus contributions that this man made to his constituents over the past 20 years in all levels of government.

Active in politics since his youth, DAN RONAN commenced his elective political career in 1948, when at the age of 34 years old he won election to the Illinois General Assembly. DAN'S tenure in this body was limited to 3 years because in 1951, he was elected alderman from Chicago's 30th ward. He served in the Chicago City Council from 1951 to 1965. During the 14-year period DAN had the honor of serving as chairman of the traffic and public safety committee and chairman of the important building and zoning committee. As a State representative and alderman, DAN was a champion for the cause of social justice and equality for all persons without regard for their race, color, or creed. He was a leader in the fight for strong laws regulating the sale and distribution of narcotics.

In 1964, DAN RONAN embarked on the road to higher public office when he was elected, overwhelmingly, to the U.S. House of Representatives from the Sixth District of Illinois. In the House he was chosen to serve as a member of the Interstate and Foreign Commerce Committee and its Subcommittee on Transportation and Aeronautics. As a member of this important committee, DAN labored quietly but effectively to promote the best interests of Chicago, the transportation hub of the world; and of Illinois, the center of our Nation's commerce. He was instrumental in having rescinded an arbitrary order of the Federal Aviation Administration prohibiting direct commercial airplane service to our great city and the Midwest from Washington National Airport. During his all-too-brief tenure in the Congress, he was recognized by Democrats and Republicans alike for his careful deliberations and fair decisions which were always rendered in favor of the people he represented.

Essentially, DAN RONAN was a private man. He willingly worked in the background lending his considerable efforts and talents to others without expecting, in fact preferring not to share in the legislative limelight. His capacity to listen to all sides of a question or problem and his quiet manner in asserting his own views won DAN a legion of friends. It was these attributes that gained him his wide popularity as a political leader and contributed greatly to his effectiveness as a public official.

My heart goes out to his wonderful mother and his two sisters. But, in addition to their great loss, his constituents have lost a dedicated public servant, the country has lost an able Congressman, and I have lost a close personal friend.

Mr. ANNUNZIO. Mr. Speaker, will the gentleman yield?

Mr. ROSTENKOWSKI. I yield to my distinguished colleague, the gentleman from Illinois (Mr. ANNUNZIO).

Mr. ANNUNZIO. I thank the gentleman for yielding.

Mr. Speaker, I rise today to pay tribute to the late Honorable DANIEL J. RONAN, who represented the Sixth District of Illinois in the Congress of the United States during the 89th, 90th, and 91th Congresses. DAN RONAN was not only my colleague, but a dear friend for over 25 years.

DAN RONAN died unexpectedly on August 13, 1969. His loss is a tremendous loss personally for me and my family, and for hundreds and thousands of Chicagoans who knew him, and who respected and admired his outstanding record of dedicated public service.

As secretary-treasurer of the Illinois CIO Political Action Committee, I met DAN RONAN in 1948 during his first try for public office. He was elected then, and again in 1950, as a member of the house of representatives in the Illinois State Legislature.

From that day to this, he was like a member of my own family. The people of his community elected him as their alderman from 1951 to 1965 and ward committeeman for the 30th ward from 1959 to 1969. As an alderman in the City Council of Chicago, he served as chairman of the powerful committee on building and zoning, and in this capacity, he did an outstanding job in protecting the rights of our citizens under the zoning laws of the city of Chicago.

During the 5 years he served in the U.S. Congress, he was a member of the Interstate and Foreign Commerce Committee and led the successful fight by the Chicago congressional delegation against an order by the Federal Aviation Administration halting nonstop plane service between Chicago and Washington's National Airport.

When he was only 4 years old, DAN RONAN's father died. Despite this tragic loss, DAN, in the best of American traditions, assumed responsibility, worked hard, and grew up to become one of the most respected members of his community and a powerful voice in the Congress of the United States.

He was a graduate of St. Ignatius High School and Loyola University where he earned a B.A. degree in economics and political history. He also had done postgraduate work at Loyola University from 1939 to 1941 and again from 1947 to 1948.

During World War II, he served 42 months with the U.S. Air Force as a cryptographer in the China-Burma-India Theater.

Three of our outstanding veterans organizations, the American Legion, the AMVETS, and the Veterans of Foreign Wars, were proud to list DAN RONAN as one of their members.

Congressman RONAN was also affiliated with the Knights of Columbus and with other civic organizations.

DAN RONAN was a quiet and unassuming man, who had great insight and a profound understanding of the American political scene. He had a ready smile, and a quip that fitted every circumstance. This unique faculty was appreciated by all who knew him, for when seriousness prevailed in a room, he knew how to get everyone smiling again.

As a legislator in the House of Representatives, DAN firmly believed that it was the duty of political officials and elected representatives of Government to alleviate the plight and suffering of the poor and disadvantaged through enactment of far-reaching legislation to provide better housing, better education, more jobs, and more opportunities for all of our people. He was a genuine American in every sense of the word who stanchly supported the democratic principles established by our Founding Fathers.

DAN RONAN's death leaves a void in our community which will be difficult to fill, but his family and his friends can be proud of the tremendous contribution he made on behalf of the little people of America.

I have lost a real pal and a genuine friend, and his family has lost a dedicated son and brother. DAN is survived by his mother, Mrs. Justina Ronan, his two sisters, Mrs. Betty Dlouhy and Mrs. Eileen Burke, two nephews and a niece.

Those of us who had the privilege of knowing DAN RONAN as a friend and colleague for so many years deeply mourn his passing, and our hearts go out to his bereaved family.

Mrs. Annunzio joins me in extending our heartfelt sympathy to the members of DAN RONAN's family on their great loss.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. ROSTENKOWSKI. I yield to the gentleman from Oklahoma.

Mr. ALBERT. Mr. Speaker, I join my colleagues from Illinois and other Members of the House in associating myself with the tribute which my friend, the gentleman from Illinois (Mr. ROSTENKOWSKI) has made to the life and service of a wonderful man and friend, DAN RONAN. DAN quickly endeared himself to all the Members of the House. His service here, though relatively brief, was outstanding. He served on the Committee on Interstate and Foreign Commerce. He worked quietly but effectively and has made an imprint on the House and on every Member of the House that will long endure. He was one of the most cooperative colleagues I have ever known.

I am happy to say that DANNY was my friend. He was as kind and considerate, as gentlemanly and as compassionate as any man I have ever known. I shall miss this wonderful friend, this able legislator, this great human being.

My heart goes out to his mother and sisters and to his friends who must be numbered in legions. May the Heavenly Father be with them in their sorrow.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. ROSTENKOWSKI. I yield to our distinguished Speaker.

Mr. McCORMACK. Mr. Speaker, while I have already expressed my words of deep sympathy in the passing of our late colleague and friend, Congressman DANIEL J. RONAN, I want to join with my friend, the gentleman from Illinois (Mr. ROSTENKOWSKI), and the other Members of the Illinois delegation, in again expressing my keen regrets and to say how deeply I feel in his passing.

DAN RONAN, as has been stated—and in which I thoroughly concur—enjoyed the complete respect and confidence of his colleagues, whether they were Democrat or Republican. He was a very effective Member of the House, taking his work in committee seriously and taking the deliberations on the floor of the House equally seriously. He was one who wielded a powerful imprint by his wisdom and his advice and by his sound judgment, particularly in connection with the consideration of bills that came before one of the most prominent committees of the House, of which he was a member, the Committee on Interstate and Foreign Commerce.

DAN RONAN possessed unusual qualifications. His outlook on life was noble, uplifting and inspiring. His was a very attractive personality—always pleasant—and always with a smile on his face, that made a powerful impression upon his colleagues.

When I received word of his death, I was shocked, and I know my colleagues are shocked, as well as countless of thousands of his friends both in and outside of his congressional district were shocked.

I immediately made a telephone call to one of his sisters to convey to his mother and his sisters not only my shock but Mrs. McCormack's as well.

DAN RONAN had a very fine and refreshing outlook—not only on life—but as a legislator. He was always found supporting progressive legislation that was in the best interest of the people of our country and particularly in the interest of the little fellow, if I might refer to some people in that way, and those who might be forgotten.

DAN RONAN thought of the sick and the afflicted and the underprivileged. He thought of those who were persecuted. He thought of those whose economic outlook on life was an adverse one and he was always trying, by and through voting for progressive legislation to bring hope and confidence in the minds of people through such progressive legislation. One could enumerate so many bills.

His years of service in this body—cut short by death—were productive and constructive. And while they were not many years in terms of service to this body, he did make his marked imprint upon the legislative history of this body.

The people of his district are justified in feeling proud of the service that DAN RONAN rendered for them as well as for the people of the State of Illinois. He always reflected great credit upon them.

Mrs. McCormack joins with me in expressing and extending to his dear mother and to his two sisters our deep sympathy in their great loss and sorrow.

Mr. ROSTENKOWSKI. Mr. Speaker, I yield to the gentleman from Illinois (Mr. PRICE).

Mr. PRICE of Illinois. Mr. Speaker, the passing of DAN RONAN came as a great shock to me. Only the day before he and others of our colleagues were gathered in the House restaurant as we were wont to do frequently during an afternoon session.

DAN RONAN was an effective Member of the House of Representatives. He was an effective member of the great committee to which he was assigned, the Committee on Interstate and Foreign Commerce. He enjoyed his work on that committee. He had a quick and a pleasant wit about him. He could bring a laugh at the proper moment to relieve many a tense situation.

He was well trained for his position here in the House as a former member of the Illinois General Assembly and as a member of the city council of the great city of Chicago. His political philosophy was progressive, and he indicated this in the great compassion that he showed for his fellow man.

His voting record was one that showed that uppermost in his mind was, as the great Speaker of this House, the gentleman from Massachusetts (Mr. MCCORMACK), just stated, his interest in the underprivileged and those who needed help most. He was a great legislator, an able legislator, and those of us who were close to him shall miss him greatly.

Mrs. Price joins me in extending our deepest sympathy to his mother and to his two sisters.

Mr. PUCINSKI. Mr. Speaker, will the gentleman yield?
